been under the special charge of Mr. Charles Schuman, who has labored hard for a long time to make it a success. He has met with many difficulties, far greater than would be supposed by any one not familiar with the work to be done and the delicate nature of its management."

SIBYLLINE LEAVES.

HINTS TO WOODSMEN.

THE sportsman can, if need be, forego nearly every appliance of civilization, and by learning the ways of the savages, live and enjoy life as the savages do. The bark of the birch or hemlock will make him a shanty and furnish him with clean plates and cups, which need no washing after use; cedar roots will supply twine and rope; he can bake his fish and bread in the ashes and broil his meat on a stick, and provided he only has sufficiently warm clothing, a trusty gun, a hatchet, matches, and compass, he has the measure of his necessities full. Waiving luxurious comforts, it is always desirable to travel as lightly as possible and as little encumbered, especially if the tramp be long and continuous and not broken by occasional temporary camps. Nevertheless, experience teaches that the trouble of carrying an extra pair of walking-boots, or at least a pair of moccasins or easy shoes, is well repaid. The least inconvenient dress is a woollen overshirt with pockets, worn as a blouse and fastened around the waist with a sash or belt. The toe of a stocking fitted into the shirt makes a good pocket, if you have none already. A heavy Hudson's Bay or Canadian overcoat, with hood, serves as coat, blanket, pillow, and cap combined. Always carry plenty of twine and large needles. If a piece of your clothing is torn out, patch it with anything available. The legs of a boot make the best possible seat for a pair of trousers, and can be as easily fitted as woollen stuff. If your felt hat is too loose, put a stick under the band and give it a half turn. If you want a candle-stick make a loop of birch bark and slip the ends into the slit, and then insert your tallow dip. If you wish a torch, take sheets of birch bark and slip them in the slit. A pine knot is better than either where no danger is apprehended from fire. If your matches are wet, and it rains heavily you can find bits of dry punk in the excrescences under the bark of birch and maple trees, flash powder into lint or tow and then ignite the punk. Either fire powder from your gun or use a flint and steel. If lost in a hardwood forest and can find no water, one can generally get sap enough for a drink by cutting a chip out of a maple or birch and making a spout to let it flow clean of the trunk. Water can be obtained by digging a hole into a marshy spot and filling it with grass. Then take a piece of elder, pipe-stem, or any hollow tube and setting it perpendicularly upon the grass, pack the earth around it. Then apply suction with the lips and you will get water enough to assuage thirst. Carry your matches in a vulcanized rubber box to prevent wetting; or a bottle will answer. There are a thousand little devices and resorts which one learns by experience, and which occur to him naturally when required, but are difficult to inventory for others' use. For provisions, one must be governed by circumstances. Tea, flour, ham, salt pork, soda powders, salt and pepper in quantities required, are all that is necessary. Never carry ground coffee; it is bulky and will impregnate the other stuff with its aroma, especially when wet. Borden's condensed coffee takes no room and is a luxury indeed. Dessicated food of all kinds is compact, and goes a great ways. Pickles and onions are a desirable addendum and an excellent relish. We are writing for those who propose "roughing it" in earnest. Of course, for ordinary camping out one may add as many luxuries as he likes, and the greatest of these is a camp kit of tin ware, such as is sold by Lalance & Grosjean, of Beekman street, New York. This contains knives, forks, spoons, cups, plates, broiler, frying-pan, teapot, pepper and salt box, syrup and tea caddies, sufficient for five or six persons, all fitting nicely together in a large water-pail, the whole costing about \$12 and weighing nine pounds. The old army knife-fork-and-spoon combined is very convenient to carry. Always take blankets and warm clothing when it is possible, and a change of under and outer clothing. One's cast-off suits are the best, as they can be thrown away in the end of the journey, leaving the party less weight to carry home with them.

Of miscellaneous articles for a party who intend to remain much in camp, we take the following list from Hallock's "Fishing Tourist," which seems to be nearly complete:

Rods, reels, lines, flies, bait-hooks, trolling tackle, gaffs, landing net, bait-box, float.

Woollen and rubber overcoats, old shoes, rubber leggings, extra boots, slippers, or moccasins.

Hatchet, knife, pistol and cartridges, screw-driver, awl, pliers, gimlet, whetstone, twine, wire, rope, leather straps, tacks, needles, pins, thread, wax, scissors, paper, pencil, rubber.

Compass, matches, fuse, candles, spring balance, cork-screw, pocket pistol, field-glass.

Soap, towels, comb, sponge, looking-glass, goggles, linen and flannel rags and raw cotton, to be used for cuts, wounds, cleaning guns, mending, &c.

Pipes, tobacco, maps, diarrhoea mixture, cathartic pills, salve, court-plaster, ammonia, sweet oil, and a mixture of tar and oil as a preventive against flies and other insects.

One India-rubber bag to hold the "kit" is a desirable ad-

dition to an outfit, as it makes a portable package and keeps its contents always dry.

Having now prepared the amateur woodsman for an expedition to the woods, we shall in our next advise him how to organize his company, select his camp sites, and make his camp, with a view to greatest comfort and enjoyment, supplementing the same with papers upon general woodcraft and the method of learning and understanding the same.

THE GAME OF COLORADO.

PROBABLY there is no section of the world where the more desirable and edible species of wild game exist in such variety as in Colorado. This wonderful country has been known for three-quarters of a century to the old trappers and "mountain men" of the Far West, but it is only recently that the spread of settlements and the means of railway communication have brought it to the knowledge and reach of the mere sportsman. Seventeen years ago we of the FOREST AND STREAM accompanied old Bill Bend and Chas. Fitzpatrick, then the Indian Agent for the Comanches and Kiowas, to the South Park, Rocky Mountains, via the "Arkansaw trail," and we can therefore bear testimony, in some limited degree, to the extraordinary game resources of the territory as it then was, and compare them with the conditions of to-day. It is to one of these old mountain men of ancient renown that we wrote recently for a brief statement in detail of the game resources of Colorado, and through him we are enabled to present the very complete and reliable summary which we print in another part of this paper, the value of which will be best appreciated by those who are most competent to enjoy the benefits that may be derived from the information.

MONEY PRIZES AT CREEDMOOR.

WE have received several letters endorsing our views as to the policy of offering money prizes for competition at Creedmoor, and have selected these that follow for publication.—[ED. F. AND S.]

EDITOR FOREST AND STREAM:—

Your remarks in regard to the prizes at Creedmoor are quite opportune. Let us endeavor in every way to stimulate a liking for manly sports, and deprive such amusements of the debasing idea "that there is money in them." The exceedingly delicate line which divides the "amateur" from the "professional" becomes so fine in fact as to be quite undistinguishable when money is the reward of the victor. Let us have then cups, medals, rifles, badges, anything and everything as prizes at Creedmoor, but no money. This is not only my idea but that of many who have shot at NEW YORK, October 12th. "CREEDMOOR."

EDITOR OF FOREST AND STREAM:—

I am glad to have seen in your columns an editorial about offering money as a prize at Creedmoor, and that you are adverse to it. We could have expected nothing else from your excellent paper, which is trying its best not only to cultivate all out of door amusements, but to deprive them of their gambling proclivities. I am very certain that at least the American portion of the members of the Rifle Association have set their faces against these money prizes, and think the officers of the Association are of the same opinion. I for one would like to hear their ideas on the subject. Shooting both as a soldier and sportsman, I think I have had a fair opportunity of knowing the sentiment of my friends in regard to this important question, and think they are all of the idea that the less money enters into this question of prizes at Creedmoor the better for the association. SEARGENT.

NEW YORK, October 13th.

[The remarks of our correspondent "Sergeant" would seem to intimate when he writes "the American portion of the Association," &c., that the other members of the association not Americans are desirous of having money prizes; we are pleased to assure him of the contrary from the receipt of the following.]—ED.

EDITOR FOREST AND STREAM:—

DEAR SIR: I have shot at Wimbledon, and was perhaps among the first who used that range. I most freely endorse your ideas of removing all money from the rifle shooting at Creedmoor. In England I know vigorous efforts have been made to pluck out the gambling spirit which unfortunately has seized on so many people there, and that more than once the prize committees of Wimbledon have regarded money prizes as an evil, and have made efforts to substitute cups, medals, &c., for them. As we have but just started the matter in the United States let us begin right and have a clear record. Knowing the trouble money prizes have caused in England, I trust we will not fall into the same mistake here. EX-WIMBLEDON.

EARLY MATINS.—One of the most curious examples of the apparently trifling pursuits of scientific men was exhibited a few years ago by one of the most esteemed members of the Academy of Science of Paris, M. Dureau de la Malle. He was anxious to ascertain at what hour different birds began their morning song. He, therefore, from the first of May to the sixth of July, made observations which he regularly published. It appears that for thirty years this vigilant naturalist went to bed at seven o'clock in the evening and rose at midnight, during the spring and summer, and that this eccentric habit was for scientific purposes. It seems that the concert is opened about one o'clock by the chaffinch, and that the sparrow is the laziest bird, not leaving his rest until five o'clock; in the intermediate hours, at marked intervals, which M. de Malle has carefully noted down, other birds commence their natural melodies. He has shown that on more than one occasion the different birds have mistaken artificial light for the dawning of day, and that a solar lamp has often awakened the little choristers.

SPECIMENS OF FISH WANTED.

PROFESSOR Agassiz desires information in regard to the following species of fish, and would like specimens sent to him, to the Museum of Comparative Zoology, at Cambridge. Questions of locality having much to do with the interest attached to these subjects, where specimens are caught should always be distinctly stated. The range of fish can only be satisfactorily understood in this way. It seems highly probable that a number of fishes, formerly living in more southern waters, are working their way northward. The list of fishes most wanted differing very much as to their common names, Mr. Agassiz uses the scientific nomenclature. From the New York Times we copy the names of the fish required by Agassiz:

Diodon Geometricus.—De Kay says that this is a Southern fish, not yet observed north of New York. It is quite common on the reefs of Florida, but this year I have obtained specimens at Penikese Island, and even at Nahant, north of Cape Cod!

Histiophorus Americanus.—Cuvier, who first described this species, refers it to the tropical latitudes of the Atlantic. It is common about Cuba. This year I obtained several specimens at Penikese Island. I suspect this species to be the same as the *H. Belone*.

Sphyroena Vulgaris.—Not mentioned by De Kay, unless his *sphyroena borealis* be the same species.

Tetraodon Lavigatus.—Only seen once by De Kay, who does not say from what region he obtained it. This fish is common in the Southern Atlantic and in the Gulf of Mexico; also frequently found in South Carolina.

Monocanthus Cuspicauda.—Not mentioned by De Kay.

Palinurus Perciformis.—De Kay says it is an occasional visitor on our coast.

Micropogon Undulatus.—De Kay says that it is found in New Orleans and Charleston. I have myself seen specimens from the Gulf of Mexico, and from South Carolina.

Elops Saurus.—Common in the South Atlantic, and not uncommon at Charleston, S. C. De Kay saw it once in New York.

Argentina Glossodonta.—De Kay, under the name *Butirinus Vulpes*, says this fish does not occur within the limits of New York. You sent me some very fine ones, and I know that Prof. Baird obtained some in the Sound.

News from Abroad.

THE prime necessity of the sportsman, when there are birds is, of course, to have a gun and dogs, and in the same way, "when foxes are to be found, what would be the use of them?" asks the Englishman, "if hunting horses are wanting?" Now, the Horse Committee, commonly known as "Lord Roseherz's Committee," having set their wise heads together (through act of Parliament) to inquire into the number of horses in Great Britain, Scotland, Ireland and Wales, with the idea of discovering whether horses were becoming scarce or not, came, it seems, to the conclusion "that the alleged scarcity of horses was very much overrated, and that though horses in England had risen in price there was no real dearth of horses."

This assertion, it seems, is flatly contradicted.irate correspondents to leading English journals declare that good hunters are almost impossible to find, or when found, such prices are asked for them as to render their acquisition only within the reach of an archmillionaire. Ireland, it is asserted, has been drained of her hunters, "Yorkshire has been sucked dry," and foreigners have bought up all the good brood mares in such numbers that the equine fountain head has been sapped. Fox hunting in England has always been a most expensive sport, and many votaries of this most glorious amusement, with increasing cost of horses and keep of hounds, have been forced to abandon it. Somewhat exclusive in character this augmentation in the cost of hunters may make fox hunting even more prescribed. Essentially a national amusement and the basis of real English sport, we should be loath to hear of its curtailment. Englishmen are a little apt to grumble at times, and to cast fearful horoscopes of the future, so we are rather inclined to think that the complaints of want of horses is somewhat exaggerated. It would be with no little feeling of sadness that we would take up an English paper in this year, or in ten years to come, if the names of the Quorn, or the Pytchlog, or Melton Mowbray hunts were not chronicled. We fancy that coals and hunters will disappear both together from England some of these days, but not in the next twenty-five thousand years or so. To remedy this want of good hunting horses quite an excellent suggestion is made, and that is that every hunt should provide farmers in the neighborhood with good stock for the gratuitous use of such tenant-farmers as would breed hunting animals.

—We can record no improvement in the grouse. To have to pay some \$4,500 for the rental of a Scotch moor—one of the best in Scotland, and to kill only fifty brace of grouse on it—is paying rather a high price for birds. Even enthusiastic sportsmen going to Norway have met with no better sport. The same epidemic seems to have seized on the grouse there. Last year Norway afforded admirable sport, and immense bags were made. Perhaps like England, in Norway the birds were overshot. In Norway, however, the sportsmen may get an elk, and bear are by no means uncommon. If the feathered game are wanting in England and Scotland, stags are not in the same category. In Inverness Mr. Winans had killed, up to the close of last month, 104 stags. This looks a trifle like slaughter.

—The English cricket season is now fast drawing to a close, and the only match worthy of record—one between Mr. Graces' eleven and a Kent eleven—strange to say, the two great champions were laid low with feeble scores. There was also one between amateur cricketers and an eleven of cricket *criticasters* (to adopt Charles Reade's word) which resulted in the most ignominious defeat of the critics, only confirming the old idea that a man can write most

learnedly on what constitutes a good boot-jack, treating it in the most æsthetic way, constructing boot-jacks from his inner consciousness, though utterly incapable of sawing out a real boot-jack.

—Now, in the pleasant autumn weather of merrie England, under the spreading oaks, across the green lawn, speed the arrows, and the targets of gold are thickly studded with the shafts. Pleasant autumn weather? Not always. Just as an example of pluck and endurance, showing that English ladies will not melt like sugar, here we see that the Mersey bowmen, almost all of them women, shot eight dozen arrows in a furious and gusty day, a drizzling rain falling all the time. Imitate that if you dare, ye frailer American ladies! Whether by courtesy, or not, when one reads the names of the winners, the ladies at the English archery meeting always carry off the prizes. There is a contest now going on in regard to length of range; a distance of 100 yards would seem to us quite a long range, but it is being advocated. It is argued that as all things must have had a precedent, that it was Robin Hood's shooting distance, and that if Robin Hood, or Friar Tuck, or Little John had attempted to get a fat buck in Sherwood Forest at a less range, they probably would have had no venison pastry for their suppers. When next year, as we sincerely hope, archery will be introduced and our ladies may draw their bows, we will be satisfied with less distances.

The Horse and the Course.

—The American Jockey Club held the second day of the autumn meeting at Jerome Park, on October 8th. The weather was delightful, the track rather heavy and the attendance unusually large for an "off" day. Those who enjoy racing as an amusement will always find it to their advantage to visit Jerome Park on a quiet day, so as to avoid the immense crowds and inconveniences attending them. The first race was for a purse of \$500. Seven horses started; distance one mile and five-eighths. True Blue won easily by ten lengths. Warlike second. Time, 2:57½. The second race, the Hunter stakes, distance, one mile and three-quarters, for three-year-old fillies, which brought to the post two, Katie Pease and Lizzie Lucas, was an exciting match. They ran together neck and neck, Lizzie Lucas finally winning by a length. Time, 3:17½. The third race was for the Maturity stakes, for four-year-olds; distance three miles. Four horses started. Mate led all the way round and came in the winner in 5:51. The fourth race was for a purse of \$500, for two-year-olds; distance, five furlongs. After several false starts, they all jumped off together to a fairly even start, King Amadeus leading, with the others close up. On coming past the stand the race resulted in a match between McDaniel's entry by Asteroid, and Amadeus, the former winning by the shortest of heads in 1:06½. The fifth race was a handicap steeplechase; distance about two miles and a half over an excellent imitation of a hunting course. The horses started evenly, going at slow pace, Duffy leading, George West second, but on going over the stone wall a little to the right of the stand his horse struck his near fore foot on the top of the wall, throwing his rider and rolling over him, but fortunately the jockey was scarcely hurt at all, and in a minute or so walked to the stand. Duffy continued on over the course and finally won in 5:55.

—The American Jockey Club held its third day of the Autumn meeting at Jerome Park, Fordham, on October 11th. The day was fine, the attendance large and fashionable, perfect order and decorum were observed everywhere, and altogether it teaches the old country a lesson so far as respectability, good feeling, and politeness are concerned. The first race was the Annual Sweepstakes for three year olds of \$300 each; distance, two miles. Only two horses came to the post—Tom Bowling and Mart Jordan. Tom Bowling won in a canter, and Mart Jordan, with his head between his fore-legs, 120 yards behind. Time 3:37½. The second race was the Grand National Sweepstakes of \$100 each, half forfeit, with \$1,000 added by the club; distance two miles and a quarter. Four horses started—Harry Bassett, Preakness, Fellowcraft and Galway. Harry Bassett took the lead, but failed to keep it, as Preakness came past the post an easy winner by three lengths. The third race was the Champagne Stakes for two year olds, \$100 each and \$500 added by the club; distance three-quarters of a mile. Ten youngsters came to the post. They all started pretty evenly, and ran together at a fine racing pace all the way round, and on coming up the homestretch three of them were abreast, and on passing the post the judges decided Grinstead first, Dublin second, Weathercock third. Time 1:17½. The fourth race was for a purse of \$700, mile heats. There were seven horses started. First heat, Minnie Mc won and Springbok second. Time 1:48½. Second heat the horses reversed, Springbok first, Minnie Mc second, the others distanced. Time 1:48. Third heat, the start was very even, the filly and the colt running side by side, but the pace of the colt was too strong for the filly, Springbok winning easily. Time 1:48½. The fifth race was a Sweepstakes, \$50 each, with a piece of plate of the value of \$300 given by the club, members of the club to ride, welter weights; distance one mile and an eighth. Three horses started—Gray Planet, Stockwood and Village Blacksmith. The members of the club rode extremely well, showing good judgment and skill, and notwithstanding the apparent unconcern on the part of the people, taking into consideration the weight of the riders, it was one of the best if not the best ridden race of the day. Gray Planet won and was ridden by Mr. Purdy. Mr. D. J. Bannatyne

rode the second horse, Stockwood, and Mr. J. Wadsworth rode Village Blacksmith. The distance apart of the three horses at the finish was scarcely two and a half lengths.

—The Fleetwood Park four year old colt race took place on October 8th, and was a very private affair. The Sweepstakes, for four year old colts, mile heats, best three in five, in harness, for a \$1,000 purse, was won by D. Mace's Midletown, winning the three last heats in 2:53, 2:53½, 2:44.

—The Beacon Park commenced their autumn meeting on the grounds near Boston on October 8th, but owing to the cold weather the attendance was very small. The first race was for horses of the three minute class, and was won by the bay gelding Howard Snow. On October 9th the first race was for 2:30 horses, which was postponed from October 7th on account of the darkness, Frank Palmer and Rex Patchen having each one heat, and Fanny two. The fifth heat was won by Fanny, Rex Patchen taking the second money, Frank Palmer the third, and Rowe's Tommy the fourth. The second race was for horses that never beat 2:40. Eight horses started. Stenly won the race, Pearl taking second money and Flora third. Time—2:41½, 2:41, 2:40, 2:39. Third race, 2:35 horses; five horses started. The first heat was won by John F. Russell in 2:40, and the last three by Brown Kenney in 2:38, 2:38, and 2:37½. October 10th there was a much larger attendance, and the trotting was excellent. The race for 2:50 horses was won by Howard Snow, beating Modoc Chief, Eddy, Gray Eagle, Tontine Bell, Peter Simple, and Thought in the same order. Time—2:40½, 2:43½, 2:42, 2:43. Eddy took the second money, and Tontine Bell the third. The race for 2:31 horses was a grand exhibition of fair trotting. Colonel Moulton won the first heat in 2:35, and Rex Patchen the last three in 2:32½, 2:34, and 2:34. Mr. Rowe, of Hartford, protested against the third heat being given to Patchen, and declared he would outstart his (Rowe's) horse Tommy for another heat. The judges were unanimous in awarding him the heat, and upon Mr. Rowe's refusing to start in the last heat, enforced the rule laid down for such cases, and expelled both horse and owner from all National Association tracks.

—About four thousand persons attended the America races at Poughkeepsie October 9th. The first race was for a purse of \$800, which was carried off by Gulnare, who won the first, third, and fourth heats, Jupiter winning the second. Time—2:44, 2:41½, 2:41½, 2:43½. The purse of \$1,200 was won by Tom Keeler in three straight heats. Time—2:31½, 2:31½, 2:30½. October 10th, Tanner Boy won the postponed race in 2:34½. In the three minute race Mystery won the first heat and Rifleman the three next. Time—2:54, 2:52, 2:52, 2:52. The 2:50 race was won in three straight heats by White Cloud. Time—2:41½, 2:40½, 2:41½. The 2:25 race was won in three straight heats by Crown Prince. Time—2:32, 2:32½, 2:30½.

—At the Winchester (Va.) Fair, October 9th, Mr. S. D. Long's sorrel filly won the running race and took the premiums. Mr. John F. Sower's three year old colt Buckskin won the trotting race. At the start of the first race Mr. Upton G. Long, of Cumberland, Md., was thrown from his horse and fatally injured. The horse shied the track, jumped the fence, pitched him over head foremost, and fell upon him as he landed on the opposite side, breaking all his left ribs. He died that evening. Mr. Long is the second rider this horse (Harkaway) has killed within a year. The fair of the Agricultural Society closed to-day, October 10th, with the trial of speed racing. T. Collin's Lady Alice won the trotting race, best three heats in five, and took the \$200 premium. The best time made was 2:43. In the running race to-day Upton G. Long's horse Harkaway, who killed his owner yesterday, won the best two in three mile heats, and took the \$100 premium. Time—1:57.

—October 10th was the sixth and last day of the Nashville (Tenn.) Blood Horse Association. The weather was clear and pleasant, and the track in splendid condition. The attendance was large. The first race was for the Maxwell House stakes for three year olds, mile heats. Four horses started. Nellie Green won. Time—1:48, 1:46½, 1:45½. The second race was for the Association purse of \$300, mile heats. Planchette won. Time—1:45, 1:45½. The time of the first heat was the fastest ever made over the Nashville course. The third race was for the Association Purse, mile and a quarter dash. Lamp won in 2:14½.

PITTSBURG, Oct. 9.—The races to-day were well attended. The trotting race for a purse of \$1,250 was won by Tom Britton in three straight heats. Time 2:39½, 2:37, 2:38.

HOW TO MANAGE A HORSE.—A beautiful and high-spirited horse would never allow a shoe to be put on his feet or any person to handle his feet. In an attempt to shoe such a horse recently he resisted all efforts, kicked aside everything but an anvil, and came near killing himself against that, and finally was brought back to his stable unshod. This defect was just on the eve of consigning him to the plow, where he might work barefoot, when an officer in our service, lately returned from Mexico, took a cord about the size of a common bed-cord, put it in the mouth of the horse like a bit, and tied it tightly on the animal's head, passed his left ear under the string, not painfully tight, but tight enough to keep the ear down and the cord in its place. This done, he patted the horse gently on the side of the head and commanded him to follow, and instantly the horse obeyed, perfectly subdued, and as gentle and obedient as a well-trained dog, suffering his feet to be lifted with entire impunity, acting in all respects like an old stager. The gentleman who thus furnished this exceedingly simple means of subduing a very dangerous propensity intimated that it is practiced in Mexico and South America in the management of wild horses.—*Commercial Advertiser.*

THOROUGH-BRED HORSES.

THE word "thorough-bred" has an artificial and a natural, a technical and a practical, significance. Technically considered, the thorough-bred horse is one whose pedigree can be traced back through imported stock to the English stud-books and through these to the East, whence the modern English thorough-bred horse ancestrally came. This is what I call the artificial or technical significance of the word "thorough-bred." It does not prove that a horse is a good animal, for many, both in this country and in England, whose pedigree can be traced back to an Arabian source, are comparatively of little value. In England you can find hundreds of "weedy" colts, with neither lungs nor legs able to stand the necessary work to fit them for a race, or, indeed, of any considerable value any way; and the same is true with us. To buy a horse simply because he has a long and noble pedigree is to buy as a fool buyeth. And especially does this hold true in the case of breeding; for which purpose, none but the best specimens of the family you desire to cross with should be purchased. A poor horse is a poor horse the world over, in all families, and in spite of pedigree. A good animal with a good pedigree is what the breeder needs; and this rule should be closely adhered to. To vary from this principle is to risk all.

Beyond this technical sense, the word "thorough-bred" has another and practical significance, which I will now explain. In the practical sense, the word stands for and symbolizes certain indispensable qualities which give value to the animal, and decide his rank and place in the grade to which he belongs. Among these may be mentioned beauty of form, toughness of bone and muscular structure, vivacity and docility of temperament, intelligence, and above all, perhaps, in value, the *power of endurance, and the desire to do*; what horsemen express by the word "game." All pedigrees are worthless save as they indicate and warrant that the horse with the noble ancestry is noble himself. It is a help to the judgment, as to the value of a colt, to know that its dame is a Star mare; because a Star mare is a daughter of American Star; and American Star was sired by Henry, who ran against Eclipse in the famous match between the North and South. To a breeder such a pedigree is of the utmost value, because it is a guarantee that the colt out of such a mare will have, to some extent at least, the noble qualities which made his ancestors famous. Now, then, the question comes back to us, "what makes a thorough-bred?" And I say, that, for all practical purposes a horse which has a certain perfection of form, a certain degree of intelligence, the power to do great deeds when called upon, together with the high courage to attempt and to actually perform them, is a thorough-bred horse. That is my answer to the question; and I think that it will recommend itself to the common sense of the reader. Observe, then, what are the facts of the case as connected with the trotting-horse. The facts are these: that, beginning with Dutchman, and coming down through Lady Suffolk, Flora Temple, George M. Patchen, Ethan Allen, Dexter, and Goldsmith's Maid, we have had for the last fifty years, in this country, a race of horses of trotting action, of as fine a spirit, and as great powers of endurance, as any that were ever bred. In perfection of structure, in symmetrical adjustment of all the parts, in intelligence,—that surest proof of good breeding—in dauntless resolution that stopped not short of death itself in the hour of supreme performance, these horses, and countless others like them, were, I claim, second to none that ever delighted the eye and made proud the heart of man. I hold that it is unjust to these noble horses, to call them of vulgar or basely tainted blood. They were kings and queens in that order of life to which they belonged, and proved their royal qualities on many a contested field, when the lookers-on stood breathless. I object, both on the ground of sentiment and proper classification, to such a definition of thorough-bred, that, in order to be just to the one class of horses, one must be unjust to the other. Where they are equal in performance, they should be equal in honor. Who shall say that Old Topgallant, when he went against Whalebone four mile heats, and trotted them in 11:16, 10:06, 11:17, and 12:15; that is, making his sixteen miles in forty-five minutes and forty-four seconds, which is just 2:52½ to the mile, and that, too, when he was twenty-two years of age,—is not worthy to stand beside Eclipse, or Henry, or any other horse that ever ran a race? There is a right and wrong to this thing; and, for one, I assert that the nomenclature is faulty, and the classification vicious, which covers Longfellow and Harry Bassett with laurel, and leaves Dexter and Goldsmith's Maid without a spray. There are, therefore, as I understand the merits of the case, two great families of thorough-bred horses, instead of one, in this country. The one is the thorough-bred running-horse; the other is the thorough-bred trotting-horse. The time has come for horsemen to understand this, and no longer be fretted by a classification applicable only to a country where the trotting-horse is not known or honored. The English stud-books are sufficient for England, where the running-horse embodies all excellence; but they are entirely insufficient in this country, where the trotting-horse finds his ancestry, his birthplace, and the field of his glory. There is, therefore, in this country a family of horses possessing the very qualities for which the English running-horse has so long been noted, and in as great a degree, as the history of their performances show, but which are distinguished from the English thorough-bred by their style of going; and to this family, by every law and rule of justice, the same honorable nomenclature should be given.—*From Mr. Murray's Book on "The Perfect Horse."*

—Dr. Willett in a lecture the other night, told a droll story of himself. He said that at one time, when he was a connoisseur in bird-stuffing, he used to criticise other people's bird-stuffing severely. Walking with a gentleman one day, he stopped at a window where a gigantic owl was exhibited. "You see," said the doctor to his friend, "there is a magnificent bird utterly ruined by unskillful stuffing. Notice the mounting! Execrable isn't it? No living owl ever roosted in that position. And the eyes are fully a third larger than any owl ever possessed." At this moment the stuffed bird raised one foot and solemnly blinked at his critic, who said very little more about stuffed birds that afternoon.

—The woodchuck of New England and the Middle States is the eastern representative of the well-known prairie dog, and somewhat resembles it.

Yachting and Boating.

HIGH WATER, FOR THE WEEK.

DATE.	BOSTON.	NEW YORK.	CHARLST'N.

—The New York Yacht Squadron races commenced on October 9th. A more lovely or beautiful day for yachting could not have been selected. The arrangements on the part of the regatta committee were all carried out with decision and promptness, and the yachts in magnificent trim, showed themselves the glorious living and animated beings they professed to imitate. The prizes consisted of cups and purses presented by Commodore Bennett.

1. Cup of the value of \$1,000, to be sailed for by schooner yachts belonging to any organized yacht club, from an anchorage off Owl's Head, New York harbor, to and around the light ship on Five Fathom Bank, off Cape May, New Jersey, and return to Sandy Hook light ship.

11. Three purses, of the value of \$1,000, \$250, and \$250 respectively, to be sailed for over the same course, upon the same day, and open to the following classes of vessels hailing from any port in the United States:

First—Pilot boats.

Second—Working schooners of not less than twenty-five nor over 300 tons, old measurement.

Third—Schooner smacks.

In this race the first vessel arriving at the winning post to take a purse of \$1,000; the first vessel arriving of each of the other two classes to take a purse of \$250. No class, however, to win more than one purse.

THE ORDER OF STARTING.—The start was effected at twelve minutes past three o'clock, from the stakeboat off Owl's Head, and the time of the leading boats passing the Southwest Spit was as follows:

	H. M. S.
Yacht Clio.....	4 23 50
Yacht Enchantress.....	4 26 55
Yacht Alarm.....	4 28 45
Yacht Dreadnaught.....	4 29 09
Schooner Van Name.....	4 29 32
Yacht Eva.....	4 29 44
Pilot boat Mary E. Fish, No. 4.....	4 34 32
Pilot boat Widgeon, No. 10.....	4 35 02
Schooner Reindeer.....	4 35 26
Pilot boat Thomas S. Negus, No. 1.....	4 36 14
Smack Wallace Blackford.....	4 37 05
Pilot boat James W. Elwell, No. 7.....	4 39 06
Pilot boat Edmund Blunt, No. 2.....	4 39 36

Five yachts, two schooners, five pilot boats and one smack contested in their different classes. The small yachts Clio and Eva were on the east and west line off Owl's Head. The Dreadnaught, Alarm and Enchantress were on a line fifty yards further up the bay, while the pilot boats, schooners and smacks were lying side by side a little above. Soon after three o'clock the signal was given to start, and in an instant all sails were set, and they started down the bay towards the Narrows. It was really a splendid sight, the sky a deep blue, the wind blowing a fresh breeze and the yachts dashing along over the white-top green waves; the *tout ensemble* was indeed charming. The following is the order of passing buoy number eight and one-half, just inside of Sandy Hook: The Clio at 4:24 P. M., Enchantress, Alarm, Dreadnaught; schooners Van Name, Eva; pilot boats, Mary E. Fish and Widgeon; schooner Reindeer, pilot boats Edmund Blunt and James W. Elwell. After passing the buoy it was necessary to tack twice in order to clear Sandy Hook, after which they had a straightway course for the light ship off Cape May, ninety miles distant. The boats passed the Highlands in the same order that they did buoy number eight and one-half, except that the Eva again got ahead of the Van Name and the pilot boat Negus passed the schooner Reindeer. By this time the wind was well to the eastward, and the yachts were bowling along at a dozen knots an hour with the wind on the port quarter, the little Clio leading in gallant style and being well to windward.

The yachts, pilot-boats, schooners, and smacks continued on their course all night, the Enchantress rounding the Lightship at 1h. 57m. Several hours afterwards she fell into the trough of the sea and was nearly meeting with a sad accident. As it was she split her jib; but nothing daunted she made her way back again, beating and tacking, and arrived at Sandy Hook Lightship at 6 hours 12 minutes, winning the \$1,000 cup for yachts and making the entire distance, from Sandy Hook to Cape May, of about 247 miles, in 39 hours. The balloon-jib of the Alarm and the staysail of the Dreadnaught were out of order. Similar misfortunes had occasioned slight delay to other yachts, and nearly all had been obliged to reef their mainsails. Of the pilot-boats, the Negus had taken the first place, with the Widgeon second, the Fish third, the Elwell fourth, and the Blunt last. The race home was a "beat dead to windward" and progress was necessarily slow. The Negus increased the gap behind her. The Elwell overhauled and passed the Fish, and bade fair to obtain soon a similar position with relation to the Widgeon. The fishing smacks and working schooners were not to be seen, but as there was no interest in their race, it mattered little. The remaining yachts were a long distance astern, and at about 8 A. M. the wind died out completely and left nearly all the racers becalmed within a few miles of the goal. The Negus had, however, obtained a position favorable and drifted across the line at 8:49:30 Saturday morning. It was 12:33:30 when the Widgeon crossed the line. The Fish did not arrive till 7:40 P. M., and the Elwell's time was 8:35. Then came the yacht Dreadnaught at 8:38, and the remainder of the fleet drifted about several hours longer before accom-

plishing the few miles intervening between themselves and the lightship. Of the working schooners the Van Name arrived first, thus winning the \$250 prize awarded to the winning schooner.

—The representatives of the Regatta Committee stationed on Sanday Hook Lightship to time the returning vessels in the great races, make the following report:—

	H. M. S.
October 11—Enchantress.....	6 12 00 A. M.
Thomas S. Negus.....	8 49 30 A. M.
Widgeon.....	12 33 30 P. M.
Mary E. Fish.....	7 40 00 P. M.
James W. Elwell.....	8 25 00 P. M.
Dreadnaught.....	8 30 00 P. M.
Edmund E. Blunt.....	9 44 00 P. M.
William H. Van Name.....	10 52 00 P. M.
Wallace Blackford.....	11 44 00 P. M.
October 12—Clio.....	1 22 00 A. M.

—The challenge of Mr. J. F. Loubat, owner of the Enchantress, to Mr. A. B. Stockwell, owner of the Dreadnaught, to sail from Sandy Hook Lightship to and around Five Fathom Bank Lightship and return, for the Cape May Challenge Cup (now held by the Dreadnaught), was accepted by the latter gentleman. Owing to the Dreadnaught's splitting her sails, and receiving other damage in the late ocean regatta, it will be impossible for her to compete for the cup. The Enchantress will sail over the course and claim the cup.

—The Brooklyn Yacht club held their annual pleasure sailing match and clam-bake on October 8th. Owing to the genial kindness and princely hospitality of the popular Ex-Mayor Godfrey C. Gunther, the members and friends of the club enjoyed themselves in right royal style, at his marine residence, Unionville, Long Island. The yachts Sophia, Tate, Qui Vive, Undine, Emma T., Sadie, and Terrible, made a beautiful start from the club house, foot of Court street, under the command of Commodore Jacob Voorhees, arriving at the anchorage opposite the mansion in excellent order. The first yacht received a prize pennant, which was won by the Sophia, and singular to say, there was a prize for the last yacht, which was conceded to the Emma T. The clam-bake, toasting, and speech-making lasted until five o'clock, and with many thanks to the host for his cordial good fellowship and generosity, the yachts started homewards, and thus ended one of the pleasantest parties that ever sailed out of New York bay, and an elegant closing of the Brooklyn Yacht Club season.

—The New Jersey Yacht Club held their first autumn regatta, on October 9th. The course was from a stake-boat off the club house, Hoboken, to a stake-boat off Fort Washington Point and return. As all the boats belonging to the club are sloops, they were arranged as first and second class sloops and cat-boats. The members were very tardy as not more than one-half of the sloop owners were on hand. At twelve o'clock the wind slackened a little, and the yachts made all preparation for the race. They were the first-class sloops Emily, D. Temple; Eugenie, J. B. Sewall; Vinnie, Capt. De Guion; Royer, Capt. Roselle; second class sloops, G. W. Dilks, Commodore Noble; Charm, Commodore Ketchum; catriggers, Ripple, A. Hen-nion; Julia, G. W. McMillan; Kitten, E. Vail; Sophia, R. Havens. The signal gun was not fired until two o'clock P. M. The Emily took the lead; the sea was running very high, but none of the other yachts thought it safe to spread much sail, and were running under reefed mainsail and jib. The second and third class yachts got under weigh from the anchorage at the firing of the second signal gun. The cat-rigged boats were reefed as close as possible. The wind died away at four o'clock, when the yachts were about half way to Fort Washington. The Emily was still leading a mile and a half and was forced to put about owing to the hull in the wind; the rest of the yachts did likewise, when they slowly drifted homewards.

—The National Amateur Regatta of Philadelphia took place on the Schuylkill river, on October 7th and 8th. The wind and weather on the first day were very disagreeable, making the water lumpy and unfit for scull racing. The first contest was a four-oared race to be rowed in heats, one and a half miles and return, consisting of the following clubs and crews: The Analostan, of Washington; the Friendship, of New York; the Vesper, Quaker City, and Crescent, of Philadelphia; the Nassau, of New York, and the Argonauta, of Bergen Point, N. J. In the first heat the Analostans of Washington and the Friendship of New York got into line. At the start both crews took the water together, the Analostans starting with a rapid stroke and won the heat in 9 minutes 45 seconds. The Friendships ran foul of a canal boat and upset, the crew swimming ashore. In the second heat three Philadelphia clubs started—the Crescents, Vespers, and Quaker City. At the start the Vespers were left behind, claiming they were not ready, but eventually rowed over the course. The Quaker City and Crescents fouled. After considerable time had been spent talking, the umpire declared the Vespers distanced, decided a foul against the Crescents, and ordered the Quakers to row over the course. The third heat was between the Nassaus of New York and the Argonautas of Bergen Point, N. J. The Nassau crew was composed of Frank G. Brown, bow; Walker, No. 2; Montgomery, No. 3; and Oliver Johnson, stroke. The Argonauta crew was Ed. Smith, bow; Walter Mann, No. 2; Stephenson, No. 3; and Eldred, stroke. Night was now coming on rapidly, and after a hard struggle the Argonautas crossed the line three boats lengths ahead of the Nassaus in 8 minutes 16 seconds.

The second day was beautiful and the water in excel-

lent condition for making fast time. The first heat was between Watts, of the Undine Club of Baltimore, Lavens, of the Pennsylvania of Pennsylvania, and Blake, of the Atalanta of New York. The heat was well contested, and was won by Watts in 10 minutes 3 seconds, Blake and Lavens coming in together about a boat's length behind Watts. The course was the same as the day before—one mile and a half, straight away. The second heat was rowed by Dr. Withers of the Atalantas, and Edward Smith of the Argonautas, Bergen Point. Mulrey, of the Scharf Club, of Pittsburg, who was to row in this heat did not appear. This heat was won by Smith in 10 minutes 14 seconds, beating the Dr. by twenty-nine seconds. The third heat was a walk over for Pleasonton, of the Bachelors, of Philadelphia, Courtenay, of the Union Springs not being able to procure a boat, and his own being unfit for use, owing to the manner in which she had been hacked by some ruffians on Monday night, who broke into the Vesper's house. In the fourth heat Le Roy, of the Atalantas, Parsons, of the Riversides, of Rochester, and Myers, of the Nassaus, contested. Myers won the heat in 9 minutes 38 seconds, beating Parsons by nine minutes. The man was distanced. The final heat for four-oared shells was next rowed. The contestants were the Argonautas, the Analostans, and the Quakers. This race was splendidly contested by the Baltimoreans and the Bergen Pointers, but the Argonautas succeeded in carrying off the prize. The race was won in 8 minutes and 36 seconds, the Analostans coming in seven seconds later and the Quakers following thirty-three seconds later. The four-oared race was succeeded by the pair and double sculls. For this the Argonautas, the Vespers and Crescents, both clubs of Philadelphia, struggled for victory. The race was won by the Crescents, the stroke of the Vespers falling in his boat from dizziness in the head when the chances of winning were almost within reach. The Argonautas had no chance from the start. The day's sport terminated with the victors, who were victors in the trial heats, coming together. Myers, Watts and Pleasonton were the competitors. Myers won easily in 10 minutes 84 seconds, Watts following in 10 minutes, 35 seconds, and Pleasonton distanced.

The prizes consist of a silver cup for the single scull race, a beautifully embossed fruit epergne for the double scull race; but the gem is the challenge vase for the four-oared race, which is a large boat-shaped cup with Neptune and Victory emblematically carved on the prow and stern. On either side is an accurate and elaborate representation of a four-oared shell. Mr. Wilkes of the *Spirit of the Times* gives an appropriate silver cup engraved and carefully carved, of the value of \$250.

—The New York Rowing Club will row a sculler's race for the Leland Medal, on Saturday, October 18.

—The Palisade and Vesper crews will run an eight-oared barge race on the Hudson, at Yonkers, October 23d; distance, three miles straight away.

—The Executive Committee of the National Amateur Rowing Association meet at the Astor House to-morrow evening at 8 P. M.

—James Ten Eyck has challenged William Scharff to row at Peekskill on the Hudson, for \$500 a side. W. Scharff has accepted the challenge, and an early date will be selected for the race.

—The Logan four-oared crew of St. John, N. B. have challenged the Ross Foley crew of Halifax to row at either place for \$200 or \$400 a side.

—It was at one time a curiosity when fruit was bloomed in fall, and generally it was attributed to a remarkably open and moderate season. Now it is well understood to be the result of the fall of the leaf before the time nature had fixed for it in her ordinary course. It is on this account that grape vines suffer so much from mildew, and the pear from leaf-blight. The leaves injured so long before their proper time, the regular order of nature is interfered with, and either the flowering is too premature to result in fruitfulness, or the general health is affected in some other way. The good cultivator of fruit trees is therefore very particular about the retention of the leaves till late in the season, and neither caterpillars, blights or mildews are allowed to operate if he can help it.—*German-town Telegraph*.

RARE WINES.—There are some wines which very few people drink, not only because they are scarce and dear, but because, they have a smack that is not to the general taste. Lacrima Christi is sipped by travelers at Naples, but how many flasks of it do British cellars contain? The white wine of Jurancon, sacred to the memory of the kings of Navarre, and always loved by Henry the Fourth of France, cannot be bought. Every drop is bespoken, years before, by far-sighted Legitimist consumers. It is hard, even at Vienna or Presburg, to buy one of those quaint bottles, of white glass and bulbous shape, that hold an imperial pint of imperial Tokay. It is dearer, bulk for bulk, than any wine in the world. It is almost as strong as French brandy, almost as substantial as a syrup, and is in fact only a very superior raisin wine, luscious and cloying. But it is a Porphyrogenite, born to grandeur. Those who grow the grapes are princes, whose Hungarian territories are administered by prefects and councils, and those who buy the wonderful wines are kings and kaisers, whose august demands leave only a handful of flasks to be scrambled for by the outside public. So, in a less degree, with Prince Metternich's Cabinet Johannisberg, monarch of Rhine wines, the best of which scorns to find purchasers not commemorated in the courtly Almanac de Gotha, but pseudo specimens of which, at about two napoleons a bottle, are to be had at Rhineland hotels and Paris restaurants, in quantities that would make a thoughtful man marvel at the fertility of the few stony acres of the historical vineyard.—*All the Year Round*.

Shot Gun and Rifle.

GAME IN SEASON FOR OCTOBER.

Moose, *Alces Malchis*.) Caribou, *Tarandus Rangifer*.)
 Elk or Wapiti, *Cervus Canadensis*.) Red Deer, *Caracus Virginianus*.)
 Rabbits, common Brown and Grey.) Squirrels, Red Black and Gray.)
 Wild Turkey, *Meleagris gallopavo*.) Quail, *Oxyechus Virginiana*.)
 Woodcock, *Scolopax rusticola*.) Pinnated Grouse, *Tetrao Cupido*.)
 Ruffed Grouse, *Tetrao umbellus*.) Curlew, *Numenius Arguata*.)
 Esquimaux Curlew, *Numenius borealis*.) Sandpipers, *Tringina*.)
 Pigeons, and all kinds of Wild Fowl

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—The ruffed grouse, known as the partridge in New England, and as the pheasant in the Middle States, is now in full prime, and his noisy whirr is heard in the woods among the crisp and falling leaves, as he rises suddenly before the rustling tread of the well-trained dog, and darts like a shooting star into the thicket. There is no music sweeter to the sportsman, but it requires a true aim and steady nerves to bring down your bird when he plunges headlong through the yielding branches, making noise enough for a dozen of his size. It is only by accident that a stranger to the ground he is shooting over comes upon his birds; but if, when he goes to the country, he will employ some youngster who was "raised thar," and knows where every "partridge" was hatched out and brooded, he will save much time in beating the bush, for the birds seldom wander far from their native place unless they have been disturbed and scattered by much hunting. The places where they are most likely to be found are near old roads, around deserted clearings, near running streams, and in swales and damp but not marshy places, though the locality depends upon the season and the food the birds are hunting for, whether whortleberries, beech-nuts, alder buds or laurel buds. It is not uncommon for ruffed grouse to take to trees, nor to kill every bird in a covey by properly following them up with a well-trained dog and treeing them one after another. This in answer to a correspondent's question.

—Quail, *Oxyechus Virginianus*, familiarly known as Bob White, is a great favorite with the sportsman. Bevy of full grown young birds and their parents are now to be found in the stubble fields, where an experienced hunter will make sad havoc among any particular flock when he becomes acquainted with their haunts. The quails prefer to inhabit localities in the immediate vicinity of thickets composed of low bushes, into which they retreat when alarmed. The true home of this species is in the Middle and Southern States, Massachusetts being its limit, and even in the more northern sections of this State they suffer much during some winters. If a heavy fall of snow occurs the quails, as is their constant habit, burrow beneath it for warmth; let this happen in unusually mild weather when the snow is moist upon the surface, it too often chances in our variable climate that the thermometer suddenly falls far below zero and the weather grows intensely cold in a few hours. This change forms a crust which is so thick and solid that it cannot be penetrated by the imprisoned birds, and consequently if the cold continues they perish miserably. Entire flocks are thus destroyed, and in some winters they become nearly exterminated; but in favorable summers they increase rapidly, and soon repopulate the country. Yet we should carefully protect them by law during the breeding season, as the poor quails will be driven from the North if man, as well as nature, conspires against them.

—Quail shooting is said to have been very fair until within the past week along Overpeck creek, near Leonia, two miles south of Englewood, New Jersey. At Tennaflay and other localities adjacent an increase in the number of quail has been noticed, showing that the protective laws have done good.

—Black bears are fat at this season, and the easiest way to come it over Bruin is to watch beside the fields of ripening corn for his appearance, for *Ursus Americanus* is fond of the yellow succulent ears, and as soon as the first frosty nights occur he sallies forth under the gleaming harvest moon to forage. Unfortunately for the uniform success of his expeditions, the husbandman "who owns the place" is aware of his proclivities, and lies in wait with a shot-gun crammed with slugs, and sends a rude but warm greeting into his shaggy carcass. Although this may seem tame sport at first, yet one must possess tolerably steady nerves and some patience to sit perfectly quiet for an hour or two listening for the tramp and the snuffing of a huge ungainly fellow which, ordinarily harmless, is a tough customer at close quarters if wounded. Then, when the great brute does appear at last, looking three times larger in the moonlight than he really is, it requires, especially on the part of a novice, a clear head and a firm hand to kill him, even with a shot gun. When a rifle is used, it is fifty to one that a man will not bag the first bear he encounters by moonlight.

—It is fine gun shooting black and gray squirrels, now that the groves of hickory, oak and chestnut are showering down their treasures of nuts, and the sprightly little animals are gathering on mountain and hillside their plentiful stores. Many sportsmen are not aware that the glossy black squirrels which are found so abundantly in some portions of Michigan are only a variety of the gray species. This is a fact, however, and could a sufficient number of specimens be procured so as to exhibit all the varieties of color in the

pelage, it would be exceedingly difficult to determine where the gray leaves off and the black begins. This is but one instance of many where we find extremes of color in some individuals, yet with such a perfect gradation in others that no one who is at all conversant with natural history, would hesitate to consider them as one species.

—A Philadelphia friend who is a veteran hunter of an almost world-wide experience, notices in the last issue of "FOREST AND STREAM" an allusion to the old practice of clearing a stopped gun nipple by driving a pointed stick into it and pulling the trigger, and says "I have been doing it for thirty years at least, on the Delaware!" Nothing new to him, that's sure; but there are youngsters growing up, dear Mr. R., perhaps too old to be your grand-children, but nevertheless having much to learn, especially in the craft of the huntsman, to whom our humble information may be new and serviceable. And as we hope to include a large number of the rising generation among our readers, as well as a given number of inept and amateurs of maturer age, we shall print our paper chiefly for their benefit. What we wish of our dear old veteran friends is merely to direct our utterances, and set us right if we go astray. And our success, we are not too proud to admit, depends much upon their co-operation.

—Snipe still occur in the meadows, but will soon depart, although stragglers often remain quite late, even in New England, and we have known them to start up from the grass on inundated meadows when the ice was stiff enough to bear the weight of a man. The great mass of sandpipers (*Tringinae*) have gone South, but the little dunlin remains, his family being the last to migrate. For fear that some sportsmen may not recognize the species, we will state that it is of about the size of the grass bird (*T. maculata*), but has a slightly curved bill. It is gray in color above, white beneath, with the breast streaked with dark markings. This is the autumnal plumage; in spring the back is red and there is a black band across the breast. They now frequent the shore in considerable numbers, and are quite fat. These have a wide distribution, being found on both sides of the Atlantic.

—J. U. Gregory, naval agent at Quebec, acknowledges to having bagged 17½ brace of snipe on the 2d inst., at Chateau Richer, sixteen miles below the city. Just at this season there is good shooting on Crane Island, Sorel, and on the north side of the island of Orleans, in the St. Lawrence. Sportsmen can run down in a steamer from Quebec without trouble. At Chateau Richer there is fair hotel accommodation, but poor elsewhere.

—The sharp-tailed grouse (*Pedioetes phasianellus*), to which our Western correspondents frequently allude, is closely allied to the pinnated grouse, or prairie hen, which it much resembles in habits, and might possibly be mistaken for it by a casual observer. Hybrids between the two are not rare, though it is believed by most naturalists that they never reproduce.

—Ruffed grouse and pinnated grouse are in considerable abundance. There is a fair showing of plover, snipe, and yellow legs, and a few dozen blue-winged teal.

—Saddles of venison begin to appear in front of the principal restaurants.

—Woodcock, *Philohela minor*, have generally taken to the highlands and may be found among the low growth of birches on hillsides.

—Wild pigeons may now be found flocking to the grain fields, and are readily shot.

—A few canvas backs and red heads arrived in market last Monday, being the first invoice of the season.

—There was a goodly number of gentleman at the fine farm of Mr. Ditmars, Flat bush, L. I., last week, to participate in a sweepstake for a double barrel breech-loading shot gun, added to which was a small entrance fee. The birds were of better quality than usual, and the shooting scarcely up to the average. Dr. A. Robins and Hicks tied, and as they could not divide one gun, they settled it amicably between them. The following is the summary. Seven birds each, twenty-one yards rise and eighty boundary:—

Ditmars.....	1 1 1 0 1 0 1,	J. Lott.....	1 1 1 1 0 1 0,
A. Lott.....	1 1 0 1 0 1 1,	O. Wingate.....	1 1 0 1 1 0 1,
C. Bennett.....	1 1 0 1 0 1 0,	Capt. E.....	1 1 0 1 0 1 0,
D. A.....	1 1 1 1 0 1 0,	Bird.....	1 1 0 1 1 0 1,
Baslar.....	1 1 0 1 1 0 1,	Schar.....	1 1 0 1 0 1 0,
Dr. W.....	1 1 0 1 1 0 1,	Krawner.....	1 1 1 0 1 0 0,
Russell.....	1 1 1 0 1 0 0,	Robins.....	1 1 1 0 1 1,
Bayler.....	1 1 1 0 1 0 1,	Redon.....	1 1 1 0 1 0 1,
Hicks.....	1 1 1 0 1 1,	Furman.....	1 1 0 1 1 0 1,
Burrow.....	1 1 1 0 1 0,		

—There will be a grand pigeon shooting tournament, open to all, held at Toronto, Canada, on December 2d, under the auspices and management of the gentlemen connected with the Toronto shooting clubs. The gentlemen who have attached their names to this announcement are men of probity and honor, and the tournament will be conducted with fairness and decision. Every shooter will furnish twenty-five pigeons, and shoot at twenty-one; H and T ground traps; any size gun; twenty-one yards rise; eighty boundary; not more than 1½ oz. shot. All entries to be made before 11 o'clock Monday night, December 1st, with Mr. Jos. Taylor, Colborne street, Toronto. The prizes will consist of \$1000 in gold. The best shot \$300; second, \$200; third, \$100, and so on until the thirteenth. The Junior Gun Club of Toronto, will give a gold medal to the winner of the first prize. Committee of management: Jas. Ross Espe, Pres. T. S. C.; W. H. Coen, Pres. I. G. C.; John Maughan, Toronto and I. G. C.

—With regard to deer hunting, a well-informed and experienced correspondent calls our attention to the fact that

the deer of Florida are governed in their times of feeding "by the moon," and accepting his statements as truth gathered from personal investigations, we would like to inquire of the many expert hunters who read this paper, if they have remarked the same peculiarity throughout the North and West, and if so, whether they can 'explain' or account for the habit? This gentleman writes:—

"When I first attempted to hunt deer I was almost always unsuccessful, rarely being able even to see one, I was informed by the hunters that I did not go out at the right time. Upon questioning them they told me that the deer were governed in their time of feeding by the moon. An hour before moonrise the animals arose from their beds or came out of the hummocks to feed upon the grass in the clearings, or in the pine woods, continuing until after the moon was up. An hour before the moon Southed (i. e. attained its highest altitude) they did the same thing, and also when it was directly beneath the earth, making in all eight hours feeding time. At first I laughed at this as an old hunter's notion, for although it is easy to understand why the deer should feed at those times when the moon rises near night and sets near morning, it is difficult to perceive why they should conform to the same rule through all the varying phases. But after three seasons' experience I am obliged to acknowledge that as far as my observation extends this theory is correct. The deer are certainly seen feeding much more frequently during these stated periods than at others. Of course one occasionally meets a straggling animal at other hours, but I never found any number on their feet at any other time. All the hunters with whom I have conversed also confirm this. Another singular fact is that the great horned owls hoot at the feeding time of the deer, even it be broad daylight. I have observed this fact on many occasions, and the hunter when they hear the owls, say "now the deer are feeding."

—Mr. I. I. Hite, who keeps a pleasant boarding house at Mellonville, Florida, sends the following letter, which contains some facts that may be useful to tourists the coming winter:—

Our winters here are like the last fifteen days of May, and the first fifteen days of June with you. We are now planting out gardens just as your people do in May and June.

I expect to be fixed to lodge thirty persons comfortably. The Orange House now for rent at \$1,500 is out from Mellonville boat landing, two miles. It will lodge about thirty nicely. The Brock House on the Enterprise side of the Lake Monroe, (five miles wide) will lodge eighty or one hundred upon a squeeze. Boats can be had here to Indian River, sixty-five miles, where there are a number of boats for hire. G. S. Hardee, Esq., City Point, (P. O.) Indian River, Florida, and others down there keep boats and other conveyances. Steamers run from here to Salt Lake, fifty miles; from Salt Lake to Sand Point, six miles by hack, or wagon. Sail boats connect there. Hunters and explorers can go to any point south of this. By December there will be another small steamer going 200 miles south of this, just for the benefit of winter boarders in this section.

There is good hunting from Mellonville, Orange Co., out by land south of this for 150 miles. It is a beautiful country. At Orlando, twenty-four miles from here by hack, or possibly stage by December 1st, there is a hotel. Men here get into their saddles at 1 o'clock and are back by dark with their game hanging across their horses. Wild turkeys, and opossums come up into Mellonville. Two miles from here a few days since an old man and a boy were fishing and a large wolf passed within thirty steps and did not even look at them. Bear and black six foot panthers are plenty within six miles of Mellonville. The mouths of creeks coming into Lake Monroe are splendid fishing places. I. I. H.

A correspondent gives his experience in the use of the Canadian moccasin, which tallies with that of all gentlemen who have worn them:—

EDITOR FOREST AND STREAM:—

I have tried almost everything in the way of boots and shoes, for life in the woods; Napoleon high top boots, canvas shoes, rubber boots, and the like, but all without success, but last summer while spending some weeks in Canada, I invested in a pair of moccasin-boots, or shoe packs, as they are more frequently called, and such ease as I have enjoyed in my tramps since, can hardly be described. The boots that I possess are made of tanned deer skin, reach almost to the knee, and are tied with thongs of the same material, without which they would hardly keep in position. I was obliged to have heels and an extra sole added afterwards, as the material being very thin made me immediately aware of all sharp stones or sticks in the path. They are very light, seeming almost like a stocking rather than a boot, and need a little oil occasionally, but I can hardly agree with you that they are "almost impervious to water." A good pair of shoe packs costs about \$4.00 in Canada. Messrs. H. & H. Merrell, 290 Notre Dame street, Montreal, would supply them, as although in the dry goods business, they are true sportsmen, and more obliging gentlemen cannot be found in Canada. T. S. S.

If T. S. S. will refer again to our article, he will notice we spoke of *Caribou* hide, and not deer skin, as being impervious to water. The essential oil of the caribou hide is so considerable in quantity as to be a natural preservative and a protection from wet.

CHARMS FOR ANIMALS.—A tongue taken from a living fox was thought to prevent disease of any kind attacking the fortunate possessor. The slough of an adder hung on the rafters of a house renders insuring that house unnecessary; a house-leek in the roof makes it proof against the lightning's flash. When a Northamptonshire henwife sees a hen, she is particular that the nest contains an odd number of eggs, and is careful to mark each egg with a small black cross, to save it from four-footed poachers. A large stone having a natural hole through it, hung outside a cow house, prevents the cattle having the nightmare; and farmers of the fifteenth century thought their beasts secure against murrain if marked with the mark of a saint, for one Thomas Egliston was paid ninepence for putting St. Wilfrid's mark upon sixteen oxen belonging to Cardinal Langley, Bishop of Durham, to the intent that they might escape such a visitation. A Norfolk man boasted that no mishap could chance to his horse so long as he wore something he had tied round its neck; a curious urchin stole the charm, which turned out to be the thumb of an old leather glove, containing a copy of the Lord's Prayer. Not long ago a valuable horse, belonging to a well-to-do farmer at Crewkerne, was so ill that two veterinary surgeons were summoned to consult as to what should be done. Upon examining the patient, they found something tied round the animal's neck, and making inquiry, were told by the farmer's wife that she and her husband agreed that the horse was bewitched, and she had therefore tied one of her garters round its neck to break the spell.—*Chambers' Journal*.

—Later developments indicate that the first suspicion that Captain Hall died from poison was well founded. Notwithstanding the efforts of Secor Robeson to prevent the public from obtaining correct information, the truth must eventually be known.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

COAST FISH. Bluefish, Skipjack, Horse Mackerel, Black Bass, (*Alicopterus nig* and *archigan*.) (two species.) Spanish Mackerel, (*Cero maculatum*.) Pickerel, (*Esox reticulatus*.) Weakfish, Squetaug (Trout) Otolli-Pike perch, (*Lucioperca Americana*.) thus.)

BAYS AND ESTUARIES. Striped Bass, Rockfish. (*Labrax lineatus*.)

—The angler's season for this part of the country is nearly at an end, and those indefatigable whippers of rivers and streams who never tire of fishing, must needs go South hereafter, or lay up their rods and fly-books until spring. And there are just such men the country over—thoroughbred sportsmen, too, who have no taste for shooting, yet delight in the wild-woods as much as the hunter, and are just as serviceable in camp or on the route. If these men do not actually despise "gunning," they are nevertheless so wedded to their favorite pastime, and so indifferent toward the germain proclivities of their friends, that it is impossible to induce them by the most seductive appeals to lay down the basket and the rod and take up the rifle and the gun. For their idiosyncrasies we have an intuitive sympathy; and, when "Othello's occupation's gone" hereabouts, we will open to his desire new realms in fishdom that will gratify by the novelty of scene and species, and add immensely to his fund of experience.

The fish of the South and semi-tropical waters are but little known even to tourists and valetudinarians who sojourn in Florida during the winter, and yet the varieties of fish life there are almost infinite, and among them all are many that afford excellent sport to the most fastidious and high-toned angler. To southern waters, therefore, we shall devote especial attention the coming winter, and we assure our readers that the fund of information at our immediate disposal, and from which we shall liberally draw, will be most worthy of their careful attention and appreciation. It is of a character and kind not to be found in books, unless, perchance in some few surviving copies of that very much needed and not sufficiently prized work of C. E. Whitehead, Esq., Secretary of the New York Sportsmen's Club, long since out of print. We have in for the next issue of this paper a sort of preliminary chapter, introductory to what is forthcoming; and very pleasant it will be, when the winter snows are wreathing the fences and gables, and the genial fires are blazing on one's hearth (something seldom seen these days, by the way), to read of pleasant experiences among the trailing vines and flaring flowers that grow under the sunny skies of Florida. Perhaps many a gentleman of leisure, whose attention has only been attracted toward the pole in mid summer, may be induced in these winter days to turn some wistful glances toward the South, and having made up his mind to journey, and taken his cue from the instructions obtained from FOREST AND STREAM, gather up his paraphernalia and impedimenta and take steamer for Savannah and beyond.

We trust that proprietors of hotels and steamship lines will feel it to their advantage to make their routes and accommodations known to sportsmen through our columns. It will be our object to provide for the comfort of those who put confidence in our advice, and we shall desire to designate such localities and means of communication as may serve them best. And just here, not from any mercenary motive, but from personal experience most gratifying, we wish to recommend to the attention of tourists the hotel of the Messrs. Peterman, at Palatka, Florida, whose advertisement appears in our columns. Florida is not famous for its superb hostelry, but this is not only luxurious, but will serve as a central headquarters for sportsmen who wish to visit the accessible parts of Florida. Intending visitors would do well to engage rooms now for the season.

—We have anticipated the coming months a little, and at once take the back track to Maine. Or rather, we are permitted to-day to inspect a souvenir of the season from the waters of the Oquossoc Club in Maine. What a sight for an angler's eyes to behold, even to an appetite cloyed by the summer's surfeit! It was the genial secretary of the club who sent for us, R. G. Allerton, Esq., him of the rubber boots and outfits—well-known to anglers. On tiptoe, with a tread subdued and soft, we silently approached the sarcophagus that was placed in site in the center of his store. (It always makes one feel solemn to approach one's bier). The receptacle that encircled the dead was full five feet long by two and-a-half in width, and was surrounded by a cordon of gentlemen mourners with liquid eyes and watering mouths. Slowly they lifted the winding sheet; the sheet was straight and smooth enough—lifted it from the beautiful defunct, and there lay stretched out in liveried array three dozen monster trout! They were as beautiful in death as in life, and "none knew them but to love them." The largest weighed eight pounds and a quarter, and the balance a sum total of forty-two pounds, which indicates a fair average even for Maine waters. The jury that "sat on" that case were inclined to bring in a verdict of "killed out of season," but the testimony of reliable witnesses proved that in the place where they had been taken, their capture was lawful.

An eight pound trout is something to behold; the sight is marvellous to country lads who have been trained on fingerlings. But after all we are glad that nature has ordained that trout shall not be whales. Any specimen over a pound in weight lacks that rare delicacy and lithe beauty which makes the race attractive, and as for that logy old eight-pounder that lay among the others, it seemed to be invested with a grossness of a fat old dowa-

ger tricked out in all her fanciful tawdry and glaring colors. We believe it is conceded that a monster trout is not so gamey as one of average size, say a pound in weight, and if we could have our own way, we would obtain an injunction upon those big fish which every now and again intrude themselves upon the skilful attention of our Moose-luckmaguntic and Mollychuckamunk friends.

—The St. John river, New Brunswick, Canada, was never so low as now. Above Fredericton 40,000,000 feet of logs are high and dry in the river bed. At Fort Kent sixty miles above Grand Falls, people cross the river dry shod on the stones left above water.

—The blue fish and seines have almost swept the South and Jamaica bays of other fish, and the principal sport left for anglers in this vicinity is for striped bass at Hell Gate, East river. A few weak fish are taken at intervals.

—There is good sheephead fishing at the mouth of the Potomac.

SALMON TROUT PROPAGATION.—The Rochester Union of the 3d says:

The United States Revenue Cutter Chase is to call at Charlotte this afternoon and leave this evening for Cape Vincent, carrying to that port Seth Green and eight men in his employ, who will go prepared to engage in the salmon trout fishery. There are some half a dozen or more places on the Islands at the foot of Lake Ontario where fishermen are employed in taking the salmon trout, all within twenty miles of Cape Vincent. Mr. Green under an arrangement with these fishermen, puts one or more men with each boat who secure the spawn when they capture the fish. A small boat is sent by Mr. Green from one station to another, which gathers the spawn and carries them into Cape Vincent. From that place they will be brought to Charlotte and taken to the State hatching house in Caledonia and developed, and thence they will be distributed through the lakes of the State the coming winter.

The taking of the spawn of this excellent fish begins about the 15th of October and continues about one month. This is a perilous season to be navigating the lake in small craft, and the process is attended by considerable hardship.

—Nearly two millions of salmon eggs, taken from California waters, are on their way to the Atlantic seaboard, to be placed in hatching houses on the Delaware, Schuylkill, Susquehanna, and James rivers.

Military News.

IN accordance with the provisions of an act passed at the last session of Congress, a Board of army officers has been organized to adopt plans and to take measures for the building and establishment of a regular military prison. This Board comprises Colonel Nelson A. Miles, Fifth Infantry; Lieut. Col. Wm. H. French, Second Artillery; Major Thomas F. Barr, Judge Advocate; the Rev. E. C. Wines of New York, Secretary National Prison Association, and Z. R. Brockaway, of Detroit. The passage of this military prison act was an important measure for the army, and the establishment of a special prison for the incarceration of all criminals of the army is something the service has long needed. The Government, for want of a military prison, is now forced to use the State prisons nearest the various posts of the army for this purpose, and by this means has lost direct control over this class of its men. In almost every other department of the army the service is under the direct charge of its officers and governed by its military laws; the establishment of a military prison, therefore, is an exceedingly wise measure, and a matter too long delayed by Congress. We trust the Board will act speedily, and provide at some central portion of the country a building adequate in every respect for the purposes for which it is intended.

—The leave of absence of Col. George L. Andrews, of the Twenty-fifth Infantry, which had expired, has been extended six months; of Captain May H. Stacey, Twelfth Infantry, for four months; Colonel P. R. DeTrobiano, Thirteenth Infantry, has been granted one year's leave, to go across the sea; also Second Lieutenant Wm. L. English for six months with similar permission. First Lieut. John W. Hannay, Third Infantry, has received an extension of just 42 days to "go beyond the sea."

—Surgeons James C. McKee and Warren Webster have been relieved in the Department of the East and ordered to report for duty in the Department of California. Surgeon Chas. H. Alden is dispensed with in the Department of the Lakes, and will now dispense medicines and attend to the surgery of the Department of Columbia, or in the vicinity where a few Modocs were suspended a few days since.

—The headquarters of Companies G and K, Second Infantry, have been charged from Mobile to Mt. Vernon Barracks, Ala. Five companies of the Eighth and six companies of the Ninth Infantry, under General Bradley, have returned from the Northern Pacific survey. The return of these troops had nothing to do with the downfall of the Northern Pacific in Wall street.

—The ground of encampments have expired, and the troops are gradually going into winter quarters. Companies D and I of the Seventh Cavalry, have gone into quarters at Fort Totten, D. T., and like other portions of the army are preparing for the winter's blasts. The army boys on some portions of the plains have a rough time of it during the winter months, and no one can begin to estimate the amount of their sufferings.

—First Lieut. and Brevet Maj. Lafayette Hammond, Adjutant of the Twenty-third Infantry, died at Fort Yuma, California, Sept. 6th, after a long illness. Major Hammond served and held many responsible positions during the war, and was an officer of rare excellence and highly esteemed

in the army. He was physically imposing in his bearing and one of the handsomest officers of the service.

—First Lieut. Woodruff, a promising young officer of the Engineer corps, was one of the victims to the ravages of the yellow fever at Shreveport, La., Oct. 1st. On Sept. 10th he returned to Shreveport from the service of the important undertaking, in process, of removing the Red river rafts, which have so long obstructed navigation, not being warned of the epidemic. Instead of fleeing from the danger, as most of the panic-stricken citizens were then doing, he joined the Howard Association and faithfully devoted himself to the care of the sick; but not being acclimated, he, too, after a week, was stricken with the disease, and two weeks later died.

—Captain Seneca H. Norton, of the Second Cavalry, following the illustrious example set by some of the Government officials, not long since undertook to apply to his own personal use a small detachment of the cavalry of the army, comprising four enlisted men and four horses, by employing them in drawing material, etc., to be used in the construction of a quartz mill at Cherry creek, Montana, in the net proceeds of which mill he was pecuniarily interested. Now the Government has not the least objection, we presume, to any of its poorly paid officers making fortunes rapidly, if they can, by legitimate means, nor does it even object to their adding to their small means by Wall street speculations, etc. It, however, has many serious objections to its officers using United States property in so doing, and if it come to light in the army, the officer found guilty has to suffer the consequences. The dignity of the army must be sustained, even if the dignity of the Government suffers in many of its civic departments by similar transactions. Captain Norton therefore has been tried, found guilty of the charge of "conduct to the prejudice of good order and discipline," and sentenced to "be suspended from rank and command until December, 1873, and to forfeit fifty dollars of his pay per month, for six months."

—Colonel Ronald McKenzie, Fourth Cavalry, has been granted a three months' leave on surgeon's certificate of disability. We presume therefore the dashing "McKenzie raids" along the Rio Grande will cease until this officer again resumes command.

Art and Drama.

NEW York the last week was crowded with dramatic representations. All classes of society, not only the theatre goers, but the church goers, joined, it would seem, in an unusual turn out for evening entertainments and mid day matinees. The weather has been simply superb, and way toward midnight the principal thoroughfares of our great city, especially in the vicinity of Union Square, were crowded with animated groups on their way home, discussing the merits of the new opera stars, or the grandeur of the Evangelical Alliance. Our city with these influences, joined with the balmy night air, resembled a southern European capitol, under the excitement of some great national upheaval, a centennial anniversary for instance, or an inauguration of a new sovereign. We venture to predict, that this "holiday work," will materially improve the excellent sanitary condition of the city—will show that it has driven dull care from many aching brows, opened a brighter future to the nervous and hypochondriacal invalid, stimulated intellectual enquiry, and made our citizens and our innumerable visitors better, and consequently happier. Altogether, New York has presented an unrivaled front in all matters that pertain to intellectual enjoyment, and moral culture; verily we gradually approach our destiny, of being the true metropolitan center of civilization.

No marked sensations are to be recorded immediately relating to our dramatic world. The managers of the two grand operas have at last brought all their forces into the field, and the companies are as strong as possible, and alike presenting the most varied excellencies, and certainly most evenly balanced in merit. All that can be obtained, that is soul-stirring, and truly sublime from combinations of the human voice, and musical instruments, is presented to perfection. The audiences are large, but present no real enthusiasm. Not a lady's eye through the whole routine of opera representations up to date, has beamed as brilliantly at Nilsson or Tamberlik, as it beamed at the "last opening" of the fall fashions. This fact was illustrated when the audience at the Academy of Music was informed that Miss Nilsson was "indisposed," and that her place at a "moment's warning," would be undertaken by Signora Torriani. This was a disappointment, for the audience had decided it was "the thing" to admire Nilsson, so they were at seas as to their treatment of the gallant lady, who had under such adverse circumstances come to the rescue. The first act of "Lucia de Lammermoor" was gone through with—the hearers listless—the ladies busied themselves with talking innocent gossip, the gentlemen yawned, because they thought it was safe to do so.

But on went the gallant Torriani, conscious of her real merit, and evidently determined to improve an unexpected first-class opportunity. The result was, that the audience was forced to attend at the opening of the second act—once daring to admire, the wall of suspicion broke down, and all became enthusiastic, and "Lucia" was never more satisfactorily given under the Strakosch management.

Miss Nilsson we fear is becoming indifferent from over praise and attention, and there is a cold wind blowing over

the heated atmosphere of Tamberlik. By and by, a New York opera audience will judge for itself.

The light opera is making progress at the Olympic theatre, under the management of Mrs. Oates. Her personation of *Clarrette* in "Madame Angot's Child," would be considered perfect, but for the impressions made by Bateman's artists. Looked upon as her own rendition, it is unequalled on the comic opera stage. The "Grand Duchess" consequently will prove a deserved success. We are more and more satisfied that opera bouffe is to become the national musical amusement. It is an advance on the best efforts of minstrelsy, and is really up to the popular taste. In time we will have a heartfelt and understanding audience for the grand opera—say in two hundred years. Over a century of trying has not succeeded in England to accomplish this result, but we are more mercurial, and consequently sooner learn to love and understand foreign airs, than do the stolid English.

We called the attention some week or two ago, to the injury Verdi was doing in the way of ruining voices. An illustration is at our disposal where high notes, and ignorance of professors were combined for that result. A Miss Jennie Bull (a fearful name for a successful singer, for you can't Italianize it), is to appear at a concert in Rochester, her native city. This young lady commenced taking lessons from a local professor who decided her voice to be a soprano, and practiced her on the high notes; the result was a severe headache whenever she sang. A residence in Italy led to the discovery of a new register, and Miss Bull's voice was called a mezzo soprano. But a new professor of more scientific attainments and more practical knowledge than his predecessors, was finally invoked, and discovering the errors of her former training, he changed the whole routine, and she turns out to be a most lovely contralto, her enthusiastic admirer claiming that she will be a legitimate successor of Alboni!

The Magazines.

INDIAN SUMMER.

The Indian Summer bathes the northern zone,
And, o'er the earth its gorgeous vesture flings,
In jewelled grandeur, like to tropic wings;
And ever through the lustrous aisles there sings
A wandering air in wondrous monotone.

A liquid ruby sprent with amethyst;
So richer far than silk of samarcand,
Shone coral yet so bright on golden strand
As these fair touches of thy glowing wand,
That brim like glories through the Indian mist?

—Canadian Monthly.

FALLS OF THE ZAMBESI.

The Falls of the Zambesi, or Victoria Falls, as Livingstone calls them, have been formed by a crack or fissure in the hard, black, basaltic rock at right angles across the bed of the river. The old bed below the falls is still plainly indicated, and green with grass and trees. The chasm which extends along the entire front of the falls, and into which the water leaps, is about two hundred and sixty feet in depth, to the surface of the boiling and foaming water. The falls during the dry season are nearly a mile in extent, their line broken here and there by rocks and islands. In the wet season their length is increased by about a half a mile or more, and then the volume of water which pours over the falls is immense.

The water on the west side of the falls, as it descends into the chasm, is collected in a narrow channel twenty or thirty yards wide, and flows toward the east at a right angle with the course of the stream above the falls. That on the east side flows through a similarly narrow channel toward the west. These two streams meet and unite in a fearful boiling whirlpool, before they find an outlet through a fissure of the rock at right angles with that of the fall, at about eleven hundred and seventy yards from the western end of the chasm, and six hundred from the eastern end. The Zambesi, which spreads to such a breadth above the falls, is now compressed in a channel not more than twenty or thirty yards in width, and of no doubt almost inconceivable depth.

The surface of the country is of the same level below the fall as above it, and the river continues in its course through a deep cañon, continually taking abrupt turns in its way—in fact, forming a series of connected and perfectly defined letter S's. This cañon is not worn or cut by the action of the water. It is a split or crack in the rock. Its walls go sheer down, "without any projecting crag or symptom of stratification or dislocation."

The immense steam-columns which continually ascend above the falls become condensed at an immense height, and descend in a perpetual shower of fine rain, which, beating against the face of the perpendicular rock, runs down in tiny streams, only to be swept back again by the upward-rushing vapor before they have reached the bottom. This rain gives life and verdancy to the evergreen groves, in whose branches, however, no bird ever sings or builds its nest.—Mrs. E. B. Duffey, in *To-day*.

SIX-TOED ARABS.

IN the second number of the *Zeitschrift für Ethnologie* for 1873, Baron Von Maltzan gives an account of his travels in Arabia, and states that there are still many spots of which nothing is known beyond what Ptolemy was able to tell us. Baron von Maltzan selected the most southern extremity of the peninsula, which is as yet a *tabula rasa* on our maps, for the scene of his explorations. He draws attention to the artistic skill exhibited by these people in statuary and carving, before they fell under the rule of their Mahomedan conquerors from Central Arabia, when all their earlier civilization was rudely checked and their language superseded, while they were then also first driven to adopt a nomadic mode of life. In spite, however, of amalgamation with Central Arabian elements, the population of South Arabia still admits of division into two distinct peoples, the

Sabäer and the Himyarites, the former of whom have light yellow skins, while the latter, whose name he derives from *Hamr*, red, are so dark-skinned as to be generally classed amongst the black races. Baron Maltzan observed a curious physical character in the family of the Himyarite rulers of the Fodli, or Ozmani-State, many of whom, both males and females, had six fingers and six toes on both hands and feet. This peculiarity is looked upon by the people at large as a special mark of blue blood, and prized accordingly by the possessors. It would seem that the practice of forming consanguineous marriages, which prevails in the Fodli, as in other ruling houses, may of itself explain, as a mere case of hereditary recurrence, the appearance of this physiological character in numerous and remote members of the family.

A friend who has traveled extensively in the west tells us, that though that part of our country is the home of the live-fence, he finds more well-managed osage hedges in Pennsylvania than there. As a general rule, he says, after planting they are neglected, and become nuisances, in many cases bearing balls; or where "plashing" has been resorted to in order to thicken up the naked places, they become very wide—immense thick masses of green foliage—which no good farmer here would think of enduring.

Though we are not prepared to believe that there are no good osage-orange hedges in the west—indeed we believe they are as numerous in proportion to population and settlement as they are in the east—still we know many of the Pennsylvania hedges are commendable, and only wish that the care and attention they receive was more common. It is impossible to have a good hedge unless they are trimmed up to a triangular or conical shape, so that the base is much wider than the top; and then the trimming should be done twice a year—early in July and early in September. This of course requires labor; but it is impossible to get a good osage hedge without labor, and it is as well for those who purpose to plant hedges to understand this, and to calculate beforehand whether they can afford to give the labor required. Those who have hedges planted should see now to the fall trimming.—*Germantown Telegraph*.

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

THE BIRDS OF FLORIDA. By C. T. Maynard. Five plates drawn and colored from nature. By Helen S. Fairley, Salem Naturalist's Agency. Boston: Estes & Lauriat. New York: Dodd & Mead. We have received the two first parts of "Birds of Florida." It is in large quarto form, printed upon clear good paper, with wide margin, and, when bound will make a very valuable addition to the selection of the library of ornithology. The work is to be issued in twelve parts, at one dollar a part. The numbers before us, as a work of artistic merit are unexceptional in style, finish, historical correctness, and fidelity to life. Everything relating to the Birds of Florida is here plainly and concisely given. For this valuable collection and history of the birds of this interesting section of country we are indebted to the indefatigable and enthusiastic studies of the author. In the prosecution of these investigations Mr. Maynard has visited all parts of Florida, including the keys and everglades, and devoted much of his time during a period of three years to the exclusive study of the feathered tribes and their peculiar habits. In this work are given full information of quite a number of birds of entirely new species, and others heretofore unknown to the general reader.

THE TOURMALINE: Its relation as a gem; its wonderful physical properties, &c., with four illustrations in colors. 12mo. By Dr. Hamlin. Boston: James R. Osgood, & Co.

This is an intensely interesting work upon a subject but little known to our general readers. Probably but few persons, when asked, could readily give the true definition, and tell us much of the wonderful history of the gem *Tourmaline*. In the pleasant, quiet town of Paris, Maine, there is a mountain called Mount Mica. This shrine of many modern pilgrims was known years ago only to a few of the natives of Holland; to them it had a history and an interest unknown even in those days to but few favored ones. In the Eighteenth century, however, it seems that Mount Mica was not a sealed cave to the old Dutch navigators; they possessed the *open sesame* to its treasures, and not a few sparkling gems added to the rare wealth of their collections of curiosities. Prominent among their rare and beautiful gems sparkled the *Tourmaline* of Mount Mica. Dr. Hamlin gives us much interesting matter now for the first time placed before the reading public. He says that this location has already yielded "more than one hundred crystals, which would be considered rare and remarkable specimens, and that no other deposit in the world yet known, has yielded tourmalines of such variety of color." This work contains illustrations of these crystals, showing their brilliancy of color &c., as well as a story of great interest, equal to a romance, and far better, for it is all true.

PENRIDDOCKE. By Hamilton Aicde. Boston: James R. Osgood & Co.

This is a tale of the present time and of old English and continental life. There is within the pages of this book much amusing variety, both novel and startling. The hero—though to our mind he is not much of a hero, not half so well made up as the heroine, Elizabeth—makes his way into the garden, where he finds, according to the book, Elizabeth Penridocke, "seated on a three-legged stool, leaning her elbows on her knees, and her chin on her hand, with a plate of chicken bones, parings of cheese and pudding on the ground before her." Our hero and Elizabeth have the following colloquy upon rats, which conveys an idea of the quaint character of the work:—

"And now tell me, for I am really curious to know—what are you doing here with that plate? I see neither cat nor dog."

"I should hope not, indeed!" replied Elizabeth, swallowing the bait, and with more animation in her tone than I had observed. She then pointed to a hole in the boards, in a corner of the shed just opposite to her. "Look there! She won't come out, though, while you stand here. Go outside the door, and watch from there."

I obeyed, and Elizabeth began a low cooing whistle. For nearly minute this produced no results; then from my post of observation, I perceived a long gray whisker protrude from the hole, followed by a sensitive nose, that sniffed cautiously from right to left, and, finally, the body belonging to it, that of a very large old rat, appeared, followed by three young ones. They all gathered round the plate at Elizabeth's feet, and then began a family repast which was really curious to watch. The mother permitted her progeny to devour up the pudding and cheese parings as they chose; but the bones she selected, dividing the small ones with impartiality among her young, and keeping the big ones, which required tougher teeth, for herself. I, whose ideas of a rat were inseparable from a terrier, and who had never seen one at Beaumanoir but in either a fugitive or a bellicose attitude, was astonished quite as much as I was entertained by a peep into the domestic interior. Elizabeth half turned her head towards me with a smile; and putting her

finger to her lips, she produced from her pocket an egg, which as soon as the plate was cleared, she placed there. The old rat raised herself on her hind legs, leant over the edge of the plate and smelt the egg. Having satisfied herself, she carefully raised it in her fore-paws, and as carefully deposited it on the floor. Then she rolled it along as a mar rolls a barrel, to her hole; but now came the difficult part of the operation. Evidently there was a drop of four or five inches from the flooring to the ground beneath, which the astute animal was conscious might smash the egg. She, therefore, descended first; and, standing on her hind-legs, one of the young rats pushed the egg towards her, and she raised it in her fore-paws. I never saw any thing more cleverly done, and could not resist an exclamation, which sent the three juniors scampering down their hole at a pace which must have somewhat imperilled the egg, I fear.

LECTURES AND SERMONS. By Rev. W. Morley Punshon. Boston: Estes & Lauriat.

We have received this book though the politeness of some friend; did we know to whom we are indebted for it, we would with pleasure give him credit. It is a passable book; and the frontispiece is said "to look like the author." It probably does him justice. Judging from it, we think Mr. Punshon a good man, possessed of a good share of intellect, with ordinary powers and ability. His delineation of character is sometimes good, but generally more natural to the life, than possessing that great quality, by some sermonizers called "rhetoric." But that Rev. Mr. Punshon is greatly superior to many other intelligent pastors and teachers of the present time, we cannot see much evidence in the book before us. His sermons are simply very good specimens of the kind, and will be found improving and healthful to many readers.

DETAIL COTTAGE AND CONSTRUCTIVE ARCHITECTURE.—New York: A. I. Bicknell & Co., Architectural Book Publishers.

We have received from the publishers the above very valuable work upon architectural cottage designs, and many other styles of building adapted to the wants of the building community. For some time past there has been most sensibly felt the want of just such a work. It is new and very original in many of its designs, very picturesque and simple in its working details, which are plainly laid down and easily understood by almost any intelligent builder. These plans are all reduced to the working scale of the operative builder. The work contains seventy-five large lithographic plates, some of them tinted, done in beautiful style, showing a great variety of elevations and designs entirely new, with elaborate and plain cornice, brackets, windows, window-caps, doors, piazzas, porches, and bay windows; also dormer windows, observatories, towers, chimney-tops, balconies, scroll work, stair-building, and other designs of exquisite finish. It has forty-five elevations, perspective plans and specifications of plans of most modern style; eighteen elevations for summer cottages never before given to the public. This new and original work is now just published and placed in the market in fine large, royal quarto form at the exceedingly low price of \$10.00.

STRANGERS AND PILGRIMS. By Miss Braddon. New York: Harper & Bro's Class Select Novels.

Many women think, if we are to judge them by their actions, that they can do just as they please with any man they call husband after marriage. And they sometimes admit that marriage is a decided failure. Such women have strange conceptions of right and wrong, and judged by a standard of their own creation in such cases, must be chargeable with the lamentable failure of their married life. Lord Paulin may not be an immaculate my Lord; he is homely, and very unattractive in person, "long, lank and gawky," for a lord; yet we conceive him to have been quite as good as the average run of lords, and under ordinary circumstances would have made any reasonable woman happy. We do not think our lady Elizabeth Luttrell, would have been a happier woman in wedlock had she been the wife of Mr. Forde; on the contrary she would have been simply very unhappy. But we do not propose to tell our readers all about this readable story in a short notice, but refer them to the work itself for the final solution of this social question of the day.

ARTHUR BONNICASTLE. By J. G. Holland. New York, Scribner, Armstrong & Co. 1 V. 1. 12 Mo. Illustrated with twelve full illustrations by Mary A. Hallock.

We have carefully read Arthur Bonnicastle, (a practice we pursue with every book we notice) and can say with the utmost confidence that it is the very best of the later works of Dr. Holland. To accord this work meager praise, would be doing an injustice to a book that should be read by every one. Reader, you cannot lightly skim over this volume, as most readers are wont to do with many of the books of the times, whose only merit is in their binding, and when you open the same you find *nil* within. Arthur Bonnicastle will be heard, and he will hold you in complete fascination from beginning to the end. One continued string, an endless chain of sparkling gems runs through this book, which you are fairly in love with before you have read twenty-five pages of this truly American novel. As a portraiture of character this book ranks as an authority, and in the handling of adverse and perplexing philosophical questions and theories. As a story of a life we like it; as it is romantic, lively, spicy, graceful in high conception, pure in deep thought, and while it sometimes makes strong appeals to the imagination, it is exceedingly tender in style and sentiment, always elevating—and never grovelling. In a word, it is a rare work, and as an American novel, we cannot after a very careful reading see a single line which the author should wish to draw a line through. We think any one will rise from a perusal of Dr. Holland's last work with much higher views of human life and renewed obligations within his own heart of living a nobler manhood.

ANNOUNCEMENTS.

HARPER & BROS.—A STRANGER AND PILGRIM.—A novel of much interest.

ELEMENTS OF PHYSICAL MANIPULATION. New York: Hurd & Houghton.

We learn with pleasure that we are soon to have a work by Prof. E. C. Pickering, of the Massachusetts Institute of Technology, for the use of students. This work will open with a preliminary chapter on general methods of investigation, with a series of highly interesting articles upon sound, light, liquid, gasses, solid, &c. This work will be brought out by Hurd & Houghton in the usual tasty style of the Riverside press.

THE WAYS OF WOMEN—In their Physical, Moral, and Intellectual Relations. By a Medical Man. New York: John P. Jewett & Co., No. 5 Dey street.

THE SOUTH.—The kind and generous welcome extended the *FOREST AND STREAM* by our contemporaries is warmly appreciated; but a special acknowledgment is due to the editor of the above journal, for his hearty and repeated commendations of our paper. He possesses the heart of a true sportsman, as well as the pen of a "ready writer." *The South* is devoted to the resources and development of the South, and its pages evince a thorough knowledge of the condition and wants of that section, and a zeal and enterprise which commend it to the hearty support of the Southern people and all interested in Southern progress. Several special issues of the paper have been devoted to different States, the demand for which led to their publication also in the German language. The issue for the Georgia State Fair contained several fine illustrations, and much interesting matter relative to the attractions of that State. Last week's edition was devoted to North Carolina, and was a very attractive number. We commend this journal to all interested in the important section of country to which it is devoted. *The South* office is in the new Herald building, Ann and Nassau streets. Terms \$3. a year.

The beautiful engravings of birds in *Avilude* cost hundreds of dollars, and the fine and instructive descriptions many weeks of labor. Every family ought to have it. For sale by all booksellers and toy dealers, or sent post paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

FOREST AND STREAM.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Co.,
103 FULTON STREET, NEW YORK.

Terms, Five Dollars A Year, Strictly in Advance. A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over one month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. We especially desire to make the FOREST AND STREAM the recognized medium of communication between amateurs and professional sportsmen. All of us have something to impart, which if made available to each other, will in time render us proficient in all those several branches of physical culture which are absolutely essential to our manhood and well-being, both as individual men and as a nation. A practical knowledge of natural history must of necessity underlie all attainments which combine to make a thorough sportsman. It is not sufficient that a man should be able to knock over his birds dexterously right and left, or cast an inimitable fly. He must learn by study and experience the haunts and habits of the game or fish he seeks. If he depend altogether upon his dog's nose, or upon his henchmen, he will some day have to retire from the field in mortification and disgrace. Therefore it is that we shall study to give practical instruction in the most attractive departments of natural history. We shall not forget the technicalities of the craft either, but take pleasure in designating the best localities for hunting and fishing, outfits, implements, remedies, routes, distances, breeds of dogs, &c. Each number will contain a paper descriptive of a particular animal, bird, or fish, with some instruction as to its habits, haunts and mode of capture, and the period when it is in season. We have arranged to receive regular weekly reports of the fishing and shooting in various parts of the country.

Yachting and boating will be encouraged, and yacht news be made an especial feature of the paper. A reasonable space will be given to athletic sports and those out-door games in which ladies can participate. In a word, every description of game that is in vogue among respectable people, and of value as a health-giving agent or recreative amusement, will be considered and its practice encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by that low order of beings who, in their instincts are but a grade higher than the creatures they train to amuse them, will find favor in these columns.

To horse news we shall devote some space, giving a record of leading races and meetings and current events, but we shall not make it a feature of this journal. We leave this department to others, much more competent than ourselves, who are recognized throughout the country as exponents of the turf, and as authority in stock, pedigree and kind. We yield to no one, however, in our love and appreciation of the horse and his estimable qualities. The noblest of all animals, and the companion alike of men of high and low degree, he has never become contaminated by the moral atmosphere by which he is often surrounded, or degraded below the high rank to which his attributes entitle and assign him.

To the forest, lawn and garden we assign full place. For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy—even our supply of drinking water is threatened, from the depletion of our timberlands by fire and axe. It is but proper to state here that the gentleman in charge of this department is the well-known "Olipod Quill," who was connected with the *Agriculturist* newspaper from the start, and a co-laborer with the lamented *Downing* for many years. Much valuable information will be found in this department.

Our military department is intended to comprise merely a weekly summary of news for officers and soldiers upon the frontier—such news as the castaways would enjoy to receive in a "letter from home;" and we trust that many of them will be inclined to send us in return some account of their hairbreadth experiences among the Indians, the buffaloes, the grizzlies and the antelopes. We of the East are not thoroughly familiar with the varied species of game in the far Northwest, and would like to receive full information especially of the numerous *Cervus* family and of the Rocky Mountain sheep. This department is under the charge of a distinguished army officer.

Our dramatic and art column will be prepared by Colonel T. B. Thorpe, and must at once become popular with all our readers who are interested in these matters. We shall occupy an independent position, and throw our efforts in behalf of competent reform. We shall perhaps even *clamor* for it.

Our columns will always contain the cream of the latest foreign sporting news.

In a word, we are prepared to print a *live* paper and a useful one. We shall not be parsimonious in securing the best material for its columns. We are convinced that there is a standard of eminence and usefulness not yet fully attained by any sporting journals in this country. To this we aspire. It will be our ambition to excel; and we have relinquished a life of ease and semi-indolence to take charge of the enterprise. This not of our own free choice, but at the solicitation of many hundreds of friends and strangers. We are ably assisted in our labors by a corps of valuable associates—men of age and experience, all of whom, with single exception, have been identified with leading journals for years.

Mr. SIMEON A. ATKINSON, connected with the Georgia press for over twenty years, has charge of the business affairs of the Company.

WONDERS OF NATURAL HISTORY.

For Forest and Stream.

W I WONDER why the savans call
A mackerel *saltator*,
Because a 'tator doesn't swim,
And salt is not its nature.

I wonder if the great sea-snake
Is but a sailor's yarn, or
Did he really shake his mane,
Foretelling that Maine mariner?

I wonder what the devil fish
Would say about the "pictor,"
If he could read the wondrous tale
Of fascinating Victor.

Is it a lie that nautili
Have sails and oars and tillers?
Do phoenixes exist? And are
Or are there not gorillas?

I wonder if we all came down
From some superior monkey;
Or if the sage philosopher
Is but a Dar(wi)n'd donkey.

Will man develop further yet,
And learn to live on water
Teetotally, and learn to catch his fish
Like any seal or otter?

Will some one tell me all about
The vampire and the emu?
And is there any link between
The cat-fish and the sea-mew?

I wonder much if Reade is right
About that whale of Behring,
Which swam a thousand miles a day,
And wore a harpoon ear-ring.

I wonder if an author grave
Can ever make a blunder;
I know that all I read is true,
And yet, and yet I wonder!

J. J. ROCHE.

The Naturalist in Florida.

IT is a singular fact that for a part of the year at least three-fourths of Florida is under water. After such an introduction my readers will perhaps think that I have chosen a very in attractive subject, for they can scarcely see what there is that can possibly be interesting in *swamps*, even though they are vast, and teeming with an exuberant growth of vegetation, or in sluggish rivers, if they do abound in all classes of animal life.

Had I nothing to write about, however, excepting the submerged sections, I trust I could find something even there which would interest and perhaps instruct my readers. But it must be remembered that the State of which I am speaking contains nearly as much land as is occupied by New England, and that notwithstanding three-fourths of it is under water the number of square miles which are never flooded considerably exceed the area of Massachusetts.

This country has also considerable value, and the United States was aware of this fact, for in 1819 \$15,000,000 were paid to Spain for relinquishing her claims. Although the Government has doubtless committed many errors, this purchase cannot be considered as one of them. For, aside from the question of the protection afforded to our southern borders, this peninsula is certainly a desirable acquisition to the Union.

The water which covers so much of Florida is both detrimental and beneficial to the inhabitants. Much arable land is rendered worthless from this cause, but it is by means of the numerous rivers and bayous that the settlers gain ready access to the interior. The St. Johns is the largest river in the State, and forms the principle thoroughfare to the numerous little towns which are situated on its banks.

As the region through which this river flows contains as many inhabitants as any other portion of the State, I will endeavor to convey some idea of this section by describing what I have seen while making several trips up this stream.

I say up, but as the St. Johns rises nearly two hundred miles south of its outlet, this term will perhaps give an er-

roneous idea, for this is the only river in the United States that flows directly north, and as the peninsula lies north and south, this stream runs parallel with the coast as far as Jacksonville; then turning directly east flows into the Atlantic ocean, within twenty-five miles of the northern boundary of the State, thus traversing in its course nearly two thirds of the entire length of Florida.

Jacksonville is the largest city in the State, and although of recent growth compared with other towns, contains about 10,000 inhabitants, and is the centre of trade. Several lines of small river steamers form the means of communication with the interior.

I found myself on one of these little steamers early one December morning, gliding over the sun-lit waters. The river for about a hundred miles is very wide, being a succession of lakes, on which account the Indians named the stream "Welaka," which in their language signifies the river of lakes. These lakes vary from two to ten miles in width, and as the boat kept in the middle, we could see but little of the shores, excepting when we called at various towns.

The small size of these villages surprised me much, for I had long been familiar with their names on the maps, and although some of them have been settled for about three hundred years, at the time of my first visit, in 1868, they contained but three or four houses.

Of course, in the days when the Spaniards occupied Florida these places were much larger, being important military posts, and formed the homes of many inhabitants. They have deteriorated much since, but are now growing slowly; how slowly may be seen by the fact that after an absence of four years I again visited this section and found that some villages had added only one or two houses to their number, while others remained as I had previously seen them.

I have used the term houses in speaking of the inhabited structures along the upper St. Johns, but shanties would perhaps convey a better idea of their appearance. It will be a source of much wonder why the steamers touched at such places, but it must be understood that they are with a few exceptions representatives of the towns in East Florida, and contained post-offices. We stopped then to leave the mail, and frequently to take on wood, or occasionally found a passenger waiting. And odd passengers they were too, many of them genuine Florida "crackers."

At a wooding up station where there was but one dwelling, a queer looking specimen of humanity came on board in the shape of a long, lank individual, clad in homespun. In one hand he carried an old-fashioned rifle, and with the other led a fine looking horse, upon which was strapped a large saddle, with a saddle bag and an ax handle hanging on either side.

This singular being had a powder horn suspended from his brawny neck, and his matted black hair hung down to his shoulders, while his unkempt beard reached nearly to his waist. A pair of sinister eyes looked out from under the shaggy brows, which were shaded by a slouched hat. He was evidently a hunter by profession.

At one of these stopping places we dropped a little dried up man, whose countenance indicated an uncertain age. He might have been twenty or even fifty, for he was evidently one of the Rip Van Winkle type of men who can lie down and sleep an age or two in the wilderness without trouble. From this sleep they will arise half awake, and again plod through the world, no more or less musty-looking or dried up than before. Such men, even while in infancy, have scarcely enough flesh to cover their bones. As they grow older this little expands, until a certain age, when it hardens; then old Time may shake his glass over their heads without producing the slightest effect, or hack at them with his rusty scythe in vain—they look not an hour older.

Such was the bodily appearance of the man whom we dropped at this place. He was clad in a very dirty suit of homespun cotton cloth, while a satchel of the same material hung at his side. His not very prepossessing face was shaded by an old palmetto hat, from beneath which his long flaxen hair hung in tangled skeins. His stockingless feet, thrus

into a pair of broadsoled shoes, proclaimed him a cracker of the lowest class.

The steamers move slowly against the current, so that in twenty-four hours we had accomplished but 100 miles of our journey, and on the following morning we were crossing Lake George. This is a very large expanse of water, about ten miles in diameter. At the southern extremity the river suddenly narrows, so that it is but a few rods across. Here the scenery changes entirely. The stately live-oaks and pines of the more northern St. Johns give place to the tropical-looking palmetto and the graceful-foliaged sweet bay.

Vegetation is also much more advanced, and as the steamer almost brushed against the luxuriant foliage, we could catch the odors of thousands of flowering shrubs growing in the dense forest which lay on either side. It was indeed a scene of surpassing loveliness, to which I can scarcely do justice. One must stand, as I stood that morning, with every sense rapt in profound admiration of the beautiful panorama that was passing before the eyes, and with the south wind, laden with those delightful odors, blowing gently across the face, to thoroughly appreciate it. For every turn of the now winding river disclosed new beauties for enjoyment.

At first the brain is confused with the multiplicity of objects that are presented to the gaze. Gradually, however, the eye becomes accustomed to the mass of green, and selects objects of greater interest from the whole. From the exuberant growth of creepers and shrubs which line the water's edge, the attention is drawn to the gray, straight trunks of the palmettos, with their stiff, fan-like fronds. The dark green of these is relieved by the paler foliage of the sweet gum, while high over all hang the giant branches of the lofty black walnuts drooped with festoons of Spanish moss. Large bunches of the emblematic mistletoe are brought out in strong relief against the blue sky, with their bright green colors heightened by their more sombre surroundings.

An occasional group of the gloomy cypress might be seen among this sea of living green, raising their dark trunks covered with leafless branches from the swampy ground. As we passed onward our attention was attracted by numerous orange groves, which were growing upon shell mounds, with the golden fruit relieved by the dark green and shining leaves. This scene was rendered intensely interesting by the multitude of birds which swarmed on all sides. Numerous ducks and gallinules swam among the aquatic plants on the river's margin. At one point we saw a group of red and black-headed vultures feeding upon the carcass of some animal. Large numbers of wood ducks started up everywhere, flying but a short distance, then tamely settling down again.

Among all this apparently peaceful life the great law of nature, which ordains that her subjects shall live by preying upon one another, was in full force. At every few rods along the river was perched a hawk. They sat silent and apathetic, but were only waiting for the coots and ducks to finish their morning meal of aquatic life before seizing the plumpest of them for breakfast.

High overhead the osprey was sailing with motionless wings, in huge circles, gazing with eager eyes upon the fishes below. The ever-watchful bald eagle was perched upon the lofty black walnuts or cypresses, intent upon the motions of the fish hawk.

This magnificent scenery, in which is mingled so much of life and animation, must attract the attention and call forth the admiration of the most casual observer. What, then, must be the sensations of the earnest student of nature? Words fail to express the intense ecstasy that he feels as object after object presents itself to his bewildered gaze. The brain is completely overwhelmed, and can simply grasp the mingled mass as it is seen, and in calmer moments arrange each in its proper place.

The sun had now reached a considerable height, and was shining hotly on the water. The captain of the steamer informed us that we might as well be on the look-out for alligators. About a dozen among the passengers produced

rifles or shot guns, and we took our stations on the upper deck. As we stood near the wheel-house an old negro, who was steering, exclaimed, "See, dar's one!" at the same time pointing towards a large object. His words were followed by the sharp crack of half a dozen rifles, and as many voices excitedly shouted, "I have killed him." But the loud laugh from some of the experienced hunters and a broad grin on the black face of the pilot, told these amateurs that they had been sold. Their bullets had merely set free the gases contained in the carcass of a dead alligator.

A short distance beyond this point we saw a flock of about twenty wild turkeys on the river bank. They were beneath some orange trees and were very tame. As we came in sight of them there was a simultaneous discharge of fire-arms; but in the excitement of the moment it was entirely without effect. The turkeys scattered right and left, and were soon lost in the thick underbrush.

Soon after this the alligators became quite numerous, and the deck of the steamer presented an animated scene, resounding with the sharp crack of rifles. The hideous reptiles were in all positions; some were sleeping on the banks, others half in the water, and some were swimming swiftly about with only their ugly snouts and repulsive looking eyes visible.

Sometimes one would roll over in his death agony, after receiving a single shot. Then the attention of the whole party would be turned to one individual, and he would escape beneath the water pierced with a dozen balls.

They would die in all positions; some would turn over upon their backs, but oftener they would lie as they had been shot. The most fatal place for a ball to strike appeared to be in the head. The report that a rifle bullet will glance from the back of an alligator is entirely unfounded. I have seen them shot in every part of the body, and have yet to meet with a single instance of the kind. The ball always penetrates easily if thrown with ordinary force. Many of these reptiles are destroyed by the passengers of every steamboat which passes up and down the river, yet their numbers are scarcely diminished.

The alligator grows to a large size, some measuring seventeen feet in length. The large ones are quite dangerous, but a closely allied species—the caymen, of South America, which is occasionally found in Florida—is particularly noticeable for its fierceness. I have met with it but once.

Three of us were crossing the country which lies between Lake Harney and Indian river, on foot, when we came to a dense swamp. As we were passing through it we discovered a huge reptile, which resembled an alligator, lying in a stream just to the right of our path. He was apparently asleep. We approached cautiously within ten rods of him and fired two rifle shots in quick succession. The balls took effect just before his fore leg, and striking within two inches of each other, passed entirely through his body. As soon as he felt the wounds he struggled violently, twisting and writhing, but finally became quiet. We waded in and approached him, as he lay on a bed of green aquatic plants with his head towards us. It was resting on the mud, and one of the party was about to place his foot upon it, when a lively look in the animal's eyes deterred him. Stooping down, he picked up a floating branch and lightly threw it in the reptile's face. The result was somewhat surprising. The huge jaws opened instantly, and the formidable tail came round sweeping the branch into his mouth, where it was crushed and ground to atoms by the rows of sharp teeth.

His eyes flashed fire and he rapidly glided forward. Never did magician of Arabian tale conjure up a fiercer looking demon by wave of his wand, than had been raised to life by a motion of the branch. For a moment we were too astonished to move. The huge monster seemed bent on revenge, and in another instant would be upon us. We then saw our danger, and quicker than a flash of light, thought and action came. The next moment the gigantic saurian was made to struggle on his back, with a bullet in his brain. It had entered his right eye and had been aimed so nicely as not to cut the lids. To make sure of him this time we severed his jugular vein.

While performing this not very delicate operation, he thrust out two singular-looking glands from slits in his throat. They were round and resembled a sea-urchin, being covered with minute projections. They were about the size of a nutmeg, and gave out a strong musky odor. We then took his dimensions, and found that he was over ten feet in length, while his body was larger round than a flour barrel. The immense jaws were three feet long, and when stretched open, would readily take in the body of a man. They were armed with rows of sharp white teeth. The tusks of the lower one when it was closed projected out through two holes in the upper, which fact proved to us that it was not a common alligator, but a true crocodile. (*Crocodylus acutus*.) This is the second instance on record of the capture of this reptile in the United States.

C. J. MAYNARD.

THE ANGORA GOATS OF GUADALUPE.

U. S. PATENT OFFICE.
WASHINGTON, D. C., Oct. 18th, 1873.

EDITOR FOREST AND STREAM:—

I have read and smiled over your pleasant editorial, in FOREST AND STREAM of October 9th, touching the Guadalupe Island (California) enterprise, notwithstanding your humor is indulged at the expense of a company in which I am interested, whose project I have closely watched from its incipency, and about which I may fairly claim to know something. But as you are manifestly in error regarding the enterprise, and the statements and calculations of its managers, which you have greatly misapprehended in your article, thereby unconsciously doing both much injustice, I make no apology for this effort to set you right, having confidence that your journal will in the end prove as fair and just as it is high-toned and excellent.

Your article says "a company propose purchasing Guadalupe," &c. The fact is, the purchase was consummated nearly one year ago. The Guadalupe Island Company was incorporated under the laws of California, January 25th, 1873, and at once commenced active operations by putting on improvements and shipping to the island a band of fine Angora bucks to be used with the native ewes already there in breeding up future generations to a fleece-bearing standard.

You have entirely omitted to mention the important fact stated in the prospectus to which you refer, that the number of common goats on the island at the time of its purchase was approximately, twenty thousand. (There were some 32,000 slaughtered on the island for their skins and tallow alone during the five years preceding its purchase by its present American owners.) One half of this twenty thousand being males, are to be slaughtered in order to stop the propagation of this non-fleece-breeding race, while the remaining ten thousand, being females, are not to be killed off, but utilized as breeders by crossing them with pure and high-grade Angora bucks. The offspring of the third cross (seven-eighths Angora) is a fleece-bearing animal. So that when you speak of the directors "commencing with one hundred bucks," and counting that in ten years they will have in goats and fleece a capital representing the neat amount of \$2,270,990.40, omitting altogether as you do, to give the number of breeding ewes, you lead your readers entirely astray and justify them in drawing your own too hasty conclusion, viz., that the company's estimates are exaggerated. The fact is, as I have just shown you, that instead of the above aggregate being claimed as the result of ten years' breeding with a few hundred ewes, it is the result of a careful calculation, based upon twenty-five per cent. less than the known ratio of natural increase of the goat in California, showing the yield in numbers, fleece and value of five thousand ewes and a proportionate number of Angora bucks in that length of time. To these five thousand native ewes (being only one-half the entire number now on Guadalupe Island) have already been added more than one thousand pure and high-grade Angora ewes. A large number of Angora bucks have also been sent on since the first shipment last spring.

It will thus be seen that this enterprise is organized upon no narrow or unsafe basis. Commencing on such a broad foundation, having a vast range, comprising more than 166,000 acres of rich grazing grounds, affording ample natural food for at least seventy-five thousand goats, and producing the most prolific, hardy, cheaply-raised and profitable of all fleece-bearing animals, the projectors and managers of the Guadalupe Island Company are not willing to admit that their enterprise is specious in its character, chimerical, visionary, impracticable, or that their estimates are exaggerated.

Finally, the enterprise is no experiment. You say truly "that the Angora Goat can be profitably raised in California, admits of no doubt." There is no room for doubt on this point, when the manager of El Rancho Guadalupe himself, (Mr. Landrum,) has successfully raised them in that State for twelve years past. He being the pioneer Angora breeder on the Pacific Coast, may be presumed to know whereof he affirms in regard to the wonderful prolificness and healthfulness and profitableness of this animal in that latitude and a favoring climate. And of his integrity, good judgment, and fair mindedness there can be no doubt.

I think I have now given you enough facts to show the true state of the case with regard to this great paradise in the Pacific. I doubt not your article was written upon a hasty and insufficient reading of the Company's prospectus, and that you will cheerfully correct the wrong impression you have made.

I am Sir, Yours Respectfully,
HARRISON GRAY OTIS.

PROPAGATION OF SALMON.

DURING the past season the first attempt to obtain the eggs of the sea going *Salmo Salar* within the limits of the United States was made at Orland, on the Penobscot river; and as this was also the first authenticated experiment for confining salmon for breeding purposes during the summer and fall, it deserves some mention. It was necessary to buy the salmon from the fishermen near Bucksport in the early part of the summer, because later in the season they are scattered over the headwaters in the wilderness. It was found that in common brook, river or pond water, of sufficient depth and flow, the salmon would remain in perfect health from June to November. A pond specially prepared for them in a clear, cold brook proved unsuitable, and every salmon there died. The seventeen fish that remained in hand at the beginning of the spawn-

ing season were confined in a pond built of stakes and nets on the margin of a large pond. The area enclosed was some fifteen or twenty square rods, and the depth of water about six feet at the deepest point. Confinement in this limited space does not seem to have hindered in the least the development of the spawn or milt. Ten out of the seventeen proved to be females and nine of them yielded eggs freely. The method of fecundation differed from that commonly employed, in that the eggs and milt were carefully kept from the water till they had come in contact. This method is of Russian origin. It was in this case remarkably successful. About ninety-six per cent. of the eggs were fecundated. They were taken between the 2d and 10th of November, and on December 18th they were packed up to the number of seventy thousand five hundred, and distributed in nearly equal proportions to the three States of Maine, Massachusetts and Connecticut. The conditions under which the seventeen salmon were kept, preclude the idea that they could obtain any considerable amount of food, and there is no good reason for thinking that they ate anything at all after they were brought from the salt water in which they were caught. They slowly fell away in flesh, and at the spawning season were very gaunt compared with their condition in June. More noteworthy was their change in color and shape. In color they were darker, with clusters of red spots on their sides, and a general reddish tinge covered the lower part of the body in nearly all cases. These colors and markings were dull and indistinct in the females but were very bright in most of the males. In shape the females had undergone some change about the head, but it was not remarkable. In the males, however, the alteration was very marked. The sides were flat and broad, the back arched high, the head seemed disproportionately large, the jaws were long and curved. At the extremity of the lower jaw was a large curved process that shut into a cavity in the roof of the mouth. There was, indeed, as great a difference between the two sexes, as between the males and females of our domestic fowls. Yet in June there was so little difference that only a practised eye could distinguish the male from the female salmon. The fishermen who had been handling them all their lives had never observed the difference.

During the process of spawning and after its completion both sexes continue to fall away in flesh, and the colors begin to fade. At the end of a month the process on the lower jaw is found to have decreased in size. Two females and one male taken from the water on the 23d November, thirteen days after the completion of the spawning, were forwarded to the Peabody Academy of Science. To the same institution was sent another specimen, a male, that was put early in July into a pond of one or two hundred acres in Bucksport, and running into a brook in November, was taken thence after ten days. This was the finest specimen seen, a strong, stout-built fish, thirty-four inches long and weighing eleven and a half pounds. His colors were unusually deep, perhaps in consequence of the deep, reddish color of the water, through which nothing could be seen at the depth of three feet.

C. G. A.

EXPERIENCE WITH A YOUNG SETTER.

JACKSON, Miss., October 11, 1873.

EDITOR FOREST AND STREAM:—

It was on a cloudy afternoon during our late commercial panic that, having nothing to do, I took my gun and, accompanied by a pointer dog named Don, belonging to a friend of mine, and Dash, a pointer pup four and a half months old, started out after partridges, (quails). A walk of about half a mile brought Don—a slow but very staunch dog—to a point. An old bird out of the covey for the right, and a miss on a young bird for the left barrel, and the covey has gone to thick cover. During this I kept an eye on the pup as much as possible; he was accustomed to the report of my gun, I having taken him out when testing my breech loader. As soon as I could notice Dash, after the birds got up, I found him coolly sniffing the dead bird. A quarter of a mile further on brings Don down on a covey near a tall Osage orange hedge. There they go, with a whirr as startling as if you'd set a cotton mill going in the streets of Jackson! One barrel only at them, for they go like bullets! A clean miss for me—Dash quite happy, but Don very much excited. The next field brings the old dog to a stand with the birds between him and myself. Dash is trudging along at my heels, and as I approach the covey near enough the thought strikes me to let Dash go in and flush the birds, for Don would not flush if you kicked him. Whoever hunts over him must do that part of the business (the flushing, not the kicking) himself. This is not very satisfactory in heavy cover, especially when you can't reach the bird; but on the whole it makes a safe dog—one that will "freeze" to a bird. This *en passant*.

When I think myself as close to the birds as prudence will allow I stop, and the youngster trots on as unconcernedly as if there was not a bird within miles of him. All at once he stops and slightly crouches with his right forefoot raised; it goes down again, and now for a rush into the covey! No; he raises his left hind foot, which is instantly put down again and the first position resumed, when he settles down to as steady a point as any bird hunter wishes to see. A perfect picture—immovable, but quivering with excitement. Now, Mr. Editor, I acknowledge to a quick pulse and a shorter breath when waiting for a covey to rise; what then must have passed through the brain of the youngster? Oh, some say, it was the instinct of a finely bred dog. Yes, it was the instinct that made the puppy point, but was it instinct alone, or reasoning, with

A rib of a fossil whale has been found in Anne Arundel County, Md., imbedded 200 feet below the average level of the surrounding country. This curiosity has been secured by Dr. John F. King of Baltimore, who gives the following theory of the "why and the wherefore" of it happening there: This skeleton was deposited when the continent was submerged, at a period when the Alleghany Mountains were hidden by the sea, and ages before the Eastern Shore of Maryland became dry land; in fact, when the Atlantic and Pacific Oceans mingled their waters and rolled uninterruptedly across the American Continent. It was deposited there long before any quadrupedal animal or man appeared upon the earth—ages before Adam lived.—*Tribune*.

the former combined, that made him shift his first proper, or, if you will, most beautiful position, only to resume it after a moment's trial of the other? All of this was done without a single "heed" even; it was the young dog's blood that told there, for during the evening he pointed three single birds. I now take him out whenever I go. He has found several dead birds by pointing, for although a good retriever of anything inanimate he will yet only bring a dead bird when thrown from the hand.

I have written the above on the spur of the moment, seeing accounts in your paper of the shooting of elk, moose, grouse, etc., but scarcely a word about our small game, and dogs to hunt it. I hardly think the above is fit for your columns, still, with a sneaking hope that it is, here it goes.

Respectfully yours,

GEORGE C. E.

BLACK BASS FISHING IN THE MAUMEE.

TONTOGANY, Ohio.

EDITOR FOREST AND STREAM:—

Twenty-three miles above Toledo, Ohio, are the rapids of the Maumee, here a river large enough for small steamers to ply in some seasons of the year. While sojourning at the little village of Tontogany, a railroad station on the D. and M. R. R., twenty-two miles above Toledo, I heard that fine sport could be had fishing for black bass in the river, and being a lover of that manly art I was not long in making one of a company of four. I had been reading Prime's "I Go a Fishing," until I was filled with a desire to show off to my friends how much I had learned of the art Piscatorial.

A tramp of two miles brought us to the river, quite a grand looking stream, and the autumn woods were gorgeous with their tints of gold and red leaves, while the wild grape vines hung in festoons and garlands from the over-hanging trees down to the very edge of the water. It was just such a place as would inspire a poet or a painter; but as I was neither I only smoked away at my pipe and enjoyed the soft autumnal air and caught some young frogs for bait, while John and George caught a lot of minnows, and Frank made a bargain with old Sam for a boat.

At first we cast from the shore for rock bass, and soon were busy, as they bit well, and we caught some that weighed two pounds each, but they were not gamey enough, and we rowed out into the river, here about 500 feet wide, and cast our lines. Hardly had my minnow touched the water when a dash, a jerk and a pull, and then a slack line told me only too plainly that I had failed to hook my fish; but my next cast was better, for no sooner had my bait touched water than a snap, a jerk, then a whistling of my line, as the fish flew through the water, made me give it line and let it play, as it darted from side to side, then suddenly stopped to 'possum,' the boys said, when I gently hauled in on the line; but no sooner did he feel himself being drawn in than he made a dash, and again the water fairly foamed with his exertions to escape. I played him for a few minutes when I thought it time to see how he looked, and by gently hauling and slacking I landed a fine specimen of black bass that turned the scales at three and one-quarter pounds. I was elated at my success, but while I was hooking one fish John had killed two equally as large as mine.

The sport was glorious, as bass were plenty and took the bait eagerly, seeming to prefer minnows to young frogs. The day was calm and beautiful, with a soft haze in the atmosphere, while in sheltered places along shore the leaves formed a carpet of bright hues on the water. Sometimes with all our care in handling one would tear loose from the hook, but we caught enough, anyhow, and the few escaping only made the sport more exciting and served to make us more cautious. At times we would all four have a fish on our hooks at once, then there was laughing and bantering as to who would land the largest fish. We fished until we were tired, then rowed to the island and sat in the shade and ate our lunch which we had brought with us. Towards evening we again rowed out into the stream, cast our lines and caught a few, but the best time to fish is in the morning.

I have cast lines in many waters, have brought the speckled trout from among the rocks, and speared sturgeon on the upper lakes; but I never had as good "luck" or as fine sport as this day's work on the Maumee. The way they bit would have delighted even as expert an angler as the editor of FOREST AND STREAM.

A word as to fly fishing. Men who have had experience at fishing here say that in May and June it would do you good to see how black bass snap up a fly; but later in the season they find it almost impossible to get a rise. I have never tried it, but would like to hear through these columns if any one has had success in fly fishing in August or September.

"FREEM."

TWO WEEK'S RANGE AT RANGELY.

OCTOBER, 12, 1873.

EDITOR OF FOREST AND STREAM:—

We wanted to go a fishing where we would find plenty of fish, so we took your advice and went to the Rangely chain of lakes for a two week's trip. Our route was by rail to Farmington, thence by stage to Phillips, and next morning once more to "Kimballs," at the head of the lake. Fortune favored us and we secured the services of Charlie Soule for guide, cook and general head center, and a better guide no one could desire. Off we go by boat the length of the lake, nine miles, to the outlet, where we had the promise of good sport and large fish. Two Sheldrake ducks fell to our lot on the way. At an hour before sunset we were there and soon our tent was pitched. Then

came the news of no luck that day; yet we would not be denied the pleasure of a few casts. Once again fortune favored us, for after ten minutes of patient waiting a fine rise fell to my lot, and in a dozen minutes more a fine trout of two and a half pounds lay panting in the net. Supper for three was he, and none too much at that. No luck next morning, so off we go for the Rock and Cupstuck Lake, for says Charlie Soule, "If the fish 'aint here, we will go and find them, and that before night." Sure enough, we did. Five miles up the Cupstuck we landed at Birch Island in the midst of as fine a rain drizzle as ever you saw. Instead of pitching tent in the rain we took possession of a log camp, and after stowing away our things and taking a bite and a sup, we made preparations for sport. "I guess they have struck in to the mouth of the river by this time," says Charlie; so off we go, and a half mile from camp, close by the mouth of the river and under the edge of the lilly pads, we prepare for glory or disappointment. A good fresh south wind was blowing, and rainy was the weather; just the day to kill trout say we. A half dozen casts—nothing. Half a dozen more and we are at work in earnest. Springing out of the water they came, two at a time, three at a time, dashing over each other in their eagerness to take our flies. We were using "Scarlet Ibis" in the middle, "Montreal" on the bottom and "Brown Hackle" for top fly, and grand service did they do on this and all succeeding days. Ten day's fishing and only using up two Scarlet Ibis flies, is pretty tall work, and by actual count I took 127 trout on my first Ibis before 'twas worn out. Sharp work we had till dusk, and then seventy-five beauties lay before us. Only a few as low as three quarters of a pound, some sixty or so between three-fourths and two and a half pounds, one of three pounds and two of four pounds each.

There was glory enough, and says Charlie, "I told you so." And not one was killed and wasted, for friends were coming the next day and they should have them to take home; and this same Charlie made it his rule never to kill more than he could use. If guides were all of his stamp, there would be plenty of fish for us always. This was our first day's work, and we could have repeated it day after day had we been so disposed. Scarcely twice did we fish in the same spot. We were moving all the time. To "Toothacker Cove" we went the next day, and there we found them; up "Cupstuck river" the next day, and there they were above the falls the next, and so on and on, and always we struck them. Every fish not badly hooked was put back. It seemed very fine to put a two pound trout back in his native element, but when you take a four pounder, and hold him tenderly in your two hands, and gaze at his every spot, and feast your eyes on his beauty, and then place him gently over the side of the boat, and watch him sail away, and say "bless you, old beauty, go, increase and multiply," you will call to mind that it is one of those times that tries men's souls. And when again your very next fish is another four pounder and you go through those very same proceedings, you will experience some very strange feelings around the region of the heart, and you will just lay your pole away, and say you think you won't fish any more, and then wonder if anybody else is just such a great honorable fool as you are. That is what we did: and so we went. Too soon the time came for us to bid good bye to pleasure and go back to work. But a grand time we had, and never should we have had it but for our faith in the columns of the FOREST AND STREAM. Much more could I tell you of the black ducks, sheldrake, pigeons, and partridges that fell to our lot, but I have said enough. Some other day I will tell you more. Truly yours,

WELLSIE.

CALLING MOOSE IN NEW BRUNSWICK.

WILLIAM H. VENNING, Esq., whose experience in salmon fishing has been attested to in a most attractive article printed in one of the earlier numbers of FOREST AND STREAM, writes the following spirited sketch of a moose hunt on the Miramichi:—

"The moose can be 'called' only in the rutting season, which is earlier in New Brunswick than in Nova Scotia and other parts of the Dominion. In the latter places it is seldom that 'calling' is successful earlier than September, but in the former Province the latter part of August is not considered too early. We had commenced our 'outing' on the river in the last week in July—it was now near the end of August—and, though rather early for a good prospect of success, yet Abe, our guide, hoped that it was possible to entice some roaming bull to answer the simulated call of the cow.

"The night was a bright moonlight one, and we soon reached the edge of the barren. Noting in which direction the current of air set, Abe posted Fred in a clump of bushes that gave him a full view of the barren plain before him, impressing upon him that on no account must he speak or move; then going to leeward of him a few rods, he ascended a tree about twelve feet, and, using his 'call,' listened with eager ears for the slightest sound that might break the profound silence of the forest. This 'call' is a trumpet of birch bark about eighteen inches long—the small end an inch in diameter and the large end about four or five. With this simple instrument, long practice enables a good hunter to imitate the lowing of the cow moose so perfectly that the finest ear can scarcely distinguish between the real and simulated sound. For a long time Abe repeated his 'calls' at intervals, imitating the several peculiarities of the female lowing, but no other sound broke the stillness. For more than an hour had Fred impatiently waited, his eye sweeping the barren, and so still that he

was conscious of every pulsation. He began to grow tired of this dull work, and several times was on the point of relinquishing hope and leaving his ambush; but remembering the parting advice of Abe, he determined that his own impatience should not be chargeable with their want of success. This was a wise resolve on Fred's part, for the practiced ear of Abe had detected a sound, and again the 'calls' were repeated with all the skill at his command. At length an answering low, faint from the distance, reached the ear of Fred, and again his heart beat with suppressed excitement. Abe felt certain that his knowledge of the habits of the moose, male and female, would enable him to entice the bull within an easy shot, and, knowing Fred's certainty with the rifle, he had strong hopes of a successful issue to their hunt. He now changed his calls to a soft, low note; they were answered by a deep and resonant bellow from the bull. Presently the sound of dry underbrush, breaking under a heavy tread, was heard to windward of Fred's position, and indicated to him in what direction to look for the appearance of his expected visitor; after a few moments of intense anxiety, a large bull moose burst out of the thick woods that bordered the barren into open view in the bright moonlight. He paused, looked round, and gave a bellow; this was answered by a soft low from the tree beyond Fred, and the bull approached the spot in a direct line, so that he would have passed the bushes that concealed his foe. With rifle ready, Fred waited till the advancing animal was within forty yards of him, when, taking deliberate aim at the breast, he fired. With a snort of fear and anguish, the huge bull tossed his antlered head and fell heavily to the earth. He immediately rose to his feet, and made direct for the woods; this brought his side toward Fred, who instantly stepped from his crouching place, and before the wounded bull had made six paces the second barrel was discharged, and again he fell, this time headlong to the earth. A desperate struggle to regain his feet was made, but when half up he rolled heavily on his side, and a few spasmodic kicks ended the career of a splendid specimen of the largest of the deer tribe.

"Abe had dropped from his roost on the first report, and was now by Fred's side, congratulating him on his success. As all necessity for silence was now over, they were both hilarious over their trophy. Abe took out his sheath knife and cut the throat of the nearly dead animal. Leaving him where he lay till morning, they both returned to camp, quite delighted with their rare luck in 'calling moose' so early in the season.

"A few minutes after reaching camp saw a cheerful fire, the kettle boiling, and our patient hunters prepared to enjoy a good meal after their long and tedious ambush. After talking over the incidents of this victory, and gaining much practical information from Abe's descriptions of former hunts in which he had participated, either as caller or marksman, and sometimes as both, we all betook ourselves to sleep, well pleased.

"In the morning, when we woke, the sun was high; the first things that met our eyes as we stepped from the tent were the antlers of the bull on one side and the skin stretched out to dry on the other. The men had risen with the sun, and leaving us to enjoy our morning nap, had gone to the barren, skinned the moose, removed the splendid antlers and the choice parts of the meat, had brought all to our rendezvous, and prepared breakfast before we had shaken off our drowsiness.

"We breakfasted off moose steak, with a roasted bone, full of delicious marrow, as gravy. The moose is never very fat, and generally the steak, though tender and of fine flavor, is apt, unless carefully broiled, to be rather dry; but the addition of the rich marrow of the shank bones makes a luscious dish, and we all enjoyed it hugely."

EDITOR FOREST AND STREAM:—

Were I alone responsible for the article in last week's issue in regard to dredging, I should willingly let it go as it is, mistakes and all, confident that quite a fair proportion of your readers would not detect the errors, and to those who did it would be a source of self-congratulation that they were able to. But I fear that the Professor who kindly furnished me with a list of Latin names may not feel willing to have them misapplied. Therefore I ask space to correct a few.

First, either your proof reader or I mixed the clams. The "Quohog" and "Calista convexa" are not the same. The *Lopholaima americanus* has two common English names, viz.: the "goosefish," and the "angler," from its habits. I am made to say that "by the angler" it is called by its Latin name. Not by any angler that we met, I fancy.

The pale, straw-colored starfish is the *clenediscus*, not *clene discus*. Other minor mistakes in the spelling of a few Latin words are evidently simply typographical errors.

Yours,

L. A. BEARDSLEE.

SHAMMING POVERTY.—An acquaintance of the writer of these pages, while he lodged in a certain town was alarmed by hearing in a neighboring house a sort of periodical punishment going on daily. Heavy blows were given, and a person was continually crying out "Amaun! amaun! (Mercy, mercy)—I have nothing! Heaven is my witness I have nothing!" Upon inquiry he learned that the sufferer was a merchant reputed to be very rich, who afterwards confessed to him that, having understood the governor of the place was determined to have a share in his wealth, and expecting to be put to the torture, he had resolved to habituate himself to the endurance of pain in order to be able to resist the threatened demands. He had brought himself to bear one thousand strokes of the stick, and, as he was able to counterfeit exhaustion, he hoped to be able to bear as many blows as they would venture to inflict, short of death, without conceding any of his money.—*Fraser's Persia.*

OCTOBER.

THERE comes a month in the weary year—
A month of leisure and healthful rest:
When the ripe leaves fall and the air is clear:
October; the brown, the crisp, the blest.

My life has little enough of bliss;
I drag the days of the odd eleven,
Counting the time that shall lead to this—
The month that opens the hunter's heaven.

And oh! for the morning crisp and white,
With the sweep of the hounds upon the track:
The bark-roofed cabin, the camp fire's light,
The break of the deer and the rifle's crack.

Do you call this trifling? I tell you, friend,
A life in the forest is past all praise,
Give me a dozen such months on end—
You may take my balance of years and days.

For brick and mortar breed filth and crime,
And a pulse of evil that throbs and beats;
And men grow withered before their prime
With the curse paved in on the lanes and streets.

And lungs are choked, and shoulders are bowed
In the smothering reek of mill and mine;
And death stalks in on the struggling crowd,
But he shuns the shadow of oak and pine.

And of all to which the memory clings,
There is naught so sweet as the sunny spots
Where our shanties stood by the crystal springs,
The vanished hounds, and the lucky shots.

—The Aldine for October.

How I was Jilted.

A YACHTING STORY.

IN my youthful days I should certainly have been classified as an amphibious biped. One half of my waking hours during the summer season were spent in the salt water. Moreover, when not sporting in the element which was mine by adoption, I was generally in "hot water." Boys of a certain age usually are, and I was not an exception. I played truant from school with utter indifference regarding future punishment. I thought shoes were made for the purpose of wading through mud puddles; a new hat was just the thing with which to scoop minnows out of the muddy pools left by the receding tide; while spick-span new trousers were devoted to sliding down greased spars and newly tarred rigging. The feelings of my "fond parents," can be better imagined than described. But if I had little regard for my clothes, I had still less for my neck. I went to the mast-head of every vessel that came into the port; ran along yard arms like a squirrel; was frequently capsized in unseaworthy craft; and occasionally fell over the end of a wharf. Surviving all these mishaps I became, as I grew older, an expert swimmer and boat-sailer. My taste for the sea did not desert me when in later years I passed many weeks in "prairie schooners," or dwelt in towns far inland; and when arrived at man's estate, I found myself in the Provincial city of Halifax, fronting a magnificent harbor, with the broad blue ocean beyond, I hungered once more after my old pastimes and longed for a seat in the stern sheets of some swift little craft, that I might grasp the straining tiller, and listen to the ripple made by the sharp prow as it clears its way through the sparkling brine.

I had several offers, more or less tempting, to become part owner of some fleet yacht, but as I wanted to command my own craft, I did not accept them. Finally I made a purchase—such a purchase, too! My friends all declared that if ever I put to sea in the Jilt (significant name) I would certainly have to be fished up from the bottom of the harbor; a coroner's jury would sit upon me, and the verdict would be, "Suicide by Drowning." But here I differed with them, and I was right, as time has proved.

When I bought the Jilt she had been hauled up for a year or two, from the simple fact that when her late owner took a larger craft to fly the Commodore's pennant of the Royal Halifax Yacht Club, there was no one who dared to sail her. The Jilt was a craft of note, too, and had carried off more than one prize in the annual regattas. She was built at Bermuda, of the native cedar, and rigged and modelled after a style peculiar to that place. Her keel was fourteen feet in length, but she had an overhanging stern, and measured perhaps sixteen feet over all. The bow was bluff, but the lines of the stern were very fine, and she drew considerably more water aft than forward. The Bermudians say they model their boats from the duck. The mast was stepped well forward, and raked aft at quite a sharp angle. It was a stick some twenty feet or more in length, small, but of tough springy wood, and well oiled. In a stiff breeze it would bend like a bow, having neither shroud or stay. At right angles with the cut-water a long bowsprit was thrust out, carrying a balloon jib, like an English cutter's. The main-boom extended some four feet over the stern, and just swung clear of the deck. Instead of hoops or rings, the mainsail was laced to the mast with a small hard cord, and when well hoisted it literally "set like a board." I should mention also that both jib and mainsail hoisted to, within a few inches of the mast-head, from which a small red pennant floated in the breeze. The Jilt was decked over with the exception of a small space amidship, oval-shaped, and barely large enough to contain two people, and the greater portion of the hold was taken up by a ballast locker, securely fastened to the timbers, and filled with pig iron. Besides this ballast two bars of lead, weighing some four hundred pounds, were set into the keel. When in sailing trim the deck was barely six inches above the water, and very often the waves splashed over and into

the hold, making it necessary sometimes to lay to and bail out. But on great occasions, such as a sailing match, half the cock-pit was covered by a hatch. A piece of canvas, passed over the steersman's head, and buttoned around the combings, was then fastened securely around his waist, and no water could find ingress. But the risk was great, as a matter of course.

No one who has not seen a boat of this kind would credit their ability to carry sail, their speed and weatherly qualities. Their great point is working to windward. I believe they will lay nearer to the wind than any other craft that floats.

Of course I found my purchase in a somewhat dilapidated condition, and having her towed across the harbor to a marine railway of which I had charge, and hauling her high and dry, I undertook to repair, rig and paint her myself. In the course of two weeks I had her in apple-pie order, and to me she was a very pretty sight indeed as she rode at her mooring. Up to the water line she was painted white, and over the paint was laid a coat or two of varnish, making it as smooth and glossy as the oiled plumage of a duck. From the water-line to the deck the paint was a beautiful Chinese vermilion, through which ran a gilt ribbon. The deck was a light slate color, and the combings were of richly veined cedar, polished and varnished. The mast, well scraped and oiled, was as hard and smooth as ivory, while the sails were of snowy whiteness. Take her all in all the Jilt was a very sightly craft, albeit by the books of the R. H. Y. C., she measured but three-fourths of a ton, and the tall slender spar was somewhat out of proportion to the low hull which supported it. Many a pleasant cruise, however, had I in the Jilt, and I still live to tell the tale of "how I was jilted." To do this I must re-open old heart wounds, but for the sake of the "dear reader" I will try to grin and bear it.

I had not resided in Halifax many months before I was "spoony" on Edith Budd. It is, no doubt, a necessity with some natures to be in a constant state of "spoyness," and I suppose this to be the case with regard to myself. I certainly had all the symptoms of the disease, for so, I suppose, we must term "an affection of the heart." I did not, it is true, lose my appetite, and turn pale, bilious and interesting like some people. I believe I consumed as much underdone roast beef and bitter beer as any one to the manner born. But I haunted Edith persistently; not in a ghostly manner, however, although I used to address the young lady (mentally) in the beautiful words—"Whither thou goest, I will go." And go I did; sometimes to the utter neglect of my duties. But then I had formidable rivals to contend with. Halifax was both a military and a naval station, and I was constantly in trepidation lest some enterprising fellow of the R. N. might prove too many guns for me. I was not then a very timid youth, but so far as brass was concerned the "subs" of either service could have given me long odds. Moreover, I had, or fancied I had—it amounts to the same thing—a rival in Her Majesty's 999th regiment of foot, and another on board H. M. sloop of war "Stingaree." Many a pleasant dinner at mess or in the ward-room was spoiled for me by the presence of one or both of my rivals. The sailor, I thought, had rather the weather gauge of the land lubber, but I hoped I was to windward of them both, though you may be sure I kept a sharp lookout for squalls.

All went on smoothly until one ever memorable day. There was to be a picnic on McNab's island at the harbor's mouth, some four miles away, and Edith and my sailor rival were to be of the party. We were to embark at Pryor's wharf, at the lower end of the town in the schooner yacht Fairy, and you may be sure I determined to be punctual. On coming into town that morning, however, I found it was absolutely necessary for me to go to the railway, on the opposite side of the harbor, and give directions concerning some work to be done by the divers. "Just my luck," I muttered, as I made my way hurriedly to the ferry. When I had completed my business I saw that it wanted but a few minutes of the appointed time for sailing, while it would take at least half an hour to get to Pryor's wharf *via* the ferry. So I was pulled off to the Jilt, which lay dancing at her moorings, got underweigh heartily, and started for the Halifax shore. The wind was blowing directly up the harbor, making it a dead beat to windward to reach my point of destination. Moreover, it was blowing half a gale, and I had need of all my skill to handle the Jilt with her fair weather canvas. But Leander swam the Hellespont, and I would risk my life as willingly, thought I, in the attempt to reach the side of the one I loved. Kneeling down, with one hand holding the main-sheet and the other the tiller, I kept a sharp lookout to windward for the squalls which now and then swept down on me and threatened to bury my little craft under the foam-crested waves. At times she was almost submerged, and once a bigger wave than usual sent several buckets of water over the combings, drenching me from head to foot and carrying my hat away to leeward. I shook myself like a spaniel, brushed back the drenched locks which had blown into my eyes and easing off the main-sheet a trifle to right the boat was soon speeding on my way again. My attention was so much occupied that I had failed to notice whether the yacht had left the wharf, but presently, directly ahead, under jib and main-sail, appeared the Fairy. She was so near that I could distinctly see all on board—could see my rival, comfortably seated beside Edith, and fancied I could see her smiles and hear her merry voice. It was but a moment's glimpse I had, for just then came a squall, and when I had safely weathered it the Fairy was on the farther shore. I was certain they had seen me, and had hoped they would

heave to and take me in tow. It was evident they had no such intention. I immediately resolved to follow on, and to make the island in the Jilt, if possible. It was a mad resolve, for I had had comparatively smooth sailing to what was in store for me. I was then half a mile distant from, and partially sheltered by a small garrisoned and fortified island, lying nearly in mid-harbor. Between the island and the further shore the waves rolled directly in from the ocean, and even in the more sheltered portion of the harbor the waters were in violent commotion. Yet I kept on. By luffing once or twice I managed to get in my jib and double-reef the mainsail, and by the time this was accomplished I was clear of the island and beginning to feel the full force of wind and sea. It was perilous sailing. As my little craft sank into the trough of the waves, their crests of foam rose far above my head, while the wind no longer filled my modest bit of canvas. Then, borne upward by the heaving waters, the sail would fill with a shock that threatened to part the sheet or snap the boom in two. Still the Jilt was kept on her course, though staggering and reeling like a very drunken creature indeed. Every moment, as I got nearer mid-channel, the waves seemed to grow larger and the wind to increase in violence. I was not in any fear of death, though I had not so much as an oar on board to float upon, and the Jilt, with a few more buckets of water in her hold, would have sunk like a plummet. I doubt if I was ever conscious of the fact that for some time I had been in imminent peril. I had a good deal of confidence in my boat, whose weatherly qualities I had before severely tested, and more in my own skill and seamanship. But one thing I soon saw very plainly. That with such a wind and sea I might tack until I was gray (provided the boat floated) and yet never reach my point of destination. But it was almost as dangerous to put back as to go on. With no head-sail, and with such a sea running, it was useless to think of going about. There was nothing to be done but to wear ship. Even that was very risky. In a sea way the Jilt settled down aft, owing to her fine lines, and one good sized wave catching her before she could get underweigh would certainly swamp her. However, I resolved to try it. Watching my opportunity, I put the helm up, and the Jilt wore slowly and sluggishly round. Just as the boom was about to jibe a large wave struck the tiny craft and tossed her skyward on its foaming crest, where for a second or two (minutes they seemed to me) she rode unsteadily, laying at an angle to the force of the wave, as if about to topple over into the trough of the sea. For a moment a dizzy feeling overcame me, and I lost sight of everything. But I soon recovered my lost nerve and my good little craft went wallowing and plunging through the waves, keeping me continually drenched with spray. I made for the island, as affording the nearest shelter; but as I approached it found I should have to haul again on the wind to weather a far reaching point, or bar, now white with row upon row of fierce breakers. I made this disc very rather late, and found to my dismay, when again close hauled, that I was making but little progress. The angry waves proved too formidable for my little craft to contend against. They seemed at times to lift her up bodily and bear her down to leeward. But my only chance was to hold on. I was not more than a yard or two from the outer reef, and thought myself out of all danger, when a wave swept down on my boat and carried her broadside on into the breakers. Soon there was a shock, and a grating, crunching sound, which told me the days of the Jilt were ended. Without a moment's delay I plunged overboard and made my way, not without difficulty, through the surf to the shore. By this time a number of officers and men of the 999th, who were stationed on the island, had collected on the beach, and among the former was a particular friend of mine, (since dead, poor fellow.) He at once took me to his quarters, when I speedily divested myself of my wet clothing, which was taken away to be dried; and arrayed in a suit of "mufti" from my friend's wardrobe, with a stiff glass of brandy and water at my elbow, flanked by a box of fragrant Havanas, I thought it was not so bad being wrecked after all. Of the dissipation which followed the disaster it is not necessary to speak. There were but three or four at the mess-table, but the fun waxed fast and furious, and it was well into the small hours when I donned my own garments, and was rowed across to the town.

The Jilt, as I learned a day or two later, was hauled ashore by an enterprising soldier, and might be repaired; but I made no claim for her, abandoning her willingly to the wrecker. I had another jilt to deal with.

Two or three days after my mishap a ball was given on board the Flagship *Terrible*, and I stepped upon her deck just before the ship-band struck up the opening quadrille. Naturally my first act was to look about me for the fair face and graceful figure of Edith. At last I discovered her, leaning upon the arm of my sailor rival. She averted her head, I thought, as my eyes rested upon her; but I gazed so persistently that I finally received a somewhat cold and distant bow, and a few seconds later I was at her side. Of course she was engaged for the first dance, and it was with evident reluctance that she handed me her ballcard. Perhaps I should have gone away, leaving her wholly to my rival, and devoting myself to some other fair one. But I felt piqued and indignant, especially when I thought of my involuntary bath and the loss of my boat. And she did not ask me why I was absent from the picnic, nor even hint at my mishap, which was known to all the town.

I was standing upon the poop-deck, looking down upon the dancers, for whom the main deck had been cleared, following with eyes that would droop mournfully in spite

of me, every movement of Edith as she glided through the figures of the dance, and noting with anger and bitterness of spirit, every glance she bestowed upon others, when I chanced to hear her name mentioned by some one near me.

Now, during the dancing the poop-deck is occupied exclusively by the chaperons and those unfortunate male creatures who find their heels intractable. In the spanker I recognized a middle-aged matron, the mother of two young ladies dancing merrily below, and distant relative or connection of my flame.

"I suppose you know," she said to her companion, that Edith is engaged to Lieutenant Hardtack. He proposed at the picnic, and she accepted him, of course. Why his father is a Baronet, with an income of £500 a year, and if his six brothers die before him he will succeed to the title and estate. The family are delighted, as they were afraid Edith would throw herself away on a fellow who has been paying her some attention. He's a printer, or an editor, or something of that sort, and he used to send her books and the most lovely wild-flowers, but of course he'll never have anything, and Lieutenant Hardtack has £500 a year beside his pay.

I did not stop to hear more of the conversation, to which I had been an involuntary, but of course a deeply interested listener. Nor did I wait to claim my dance. A sadder and a wiser man I hailed a boatman to row me ashore. Shortly after I left Halifax forever. I did not write to Edith, and

"Send her back her letters and give her back her ring."

I had neither letters or ring to send or give. I did not upbraid her, or have a stormy interview at parting. I never saw her after that night. And that is "How I was jilted."

Had the sea been smoother and the wind been less boisterous, I might have had a different story to tell, but that is pure conjecture, and this is a narrative of facts.

CHARLES A. PILLSBURY.

Woodland, Lawn and Garden.

HEDGES AND THEIR USES.

NO. VIII.—THE PINE TREE. (*Pinus*.)
NAT. ORD. (*Coinferæ*.)

"Beneath the forest's shade I rest,
Whose branching pines rise dark and high,
And hear the breezes of the west
Among the threaded foliage high."

BRYANT.

THE pines comprise one of the most important of the *genus* evergreens, whether made use of as a standard to adorn the lawn, a standard tree, or as a plant in the hedge. The eye can scarcely rest upon a more enchanting sight than the white pine in its native forest. This tree is capable of withstanding the greatest extremes of cold without the slightest injury. Growing even in the greatest luxuriance in regions of ice, it lives and thrives with a perpetual verdure.*

Although a finely developed tree, and, we believe, a good hedge plant, but few of the ten species growing in the United States have thus far been very extensively used for hedges. The pine always presents the same cooling aspect in summer and agreeable greenness in mid-winter. In many of the snow-clad portions of the world, as Switzerland, the high Alps, and even in Norway and other cold latitudes, the pine is called the pet tree of the homestead. In Mexico Humboldt says he "found them higher than any other tree," and Lieutenant Glennie describes them as growing in "thick forests on the mountains of Popocatepetl as high as 12,693 feet, beyond which altitude vegetation ceases entirely."

The pine is a tree so well known to almost every person who lives in the United States that it would seem superfluous to enter upon the minutest details of this interesting tree. Yet there may be some men possessed of considerable information, too, who do not "know pines." To such a few practical ideas may not be given in vain. Certainly not if they would use this tree arboretically, or as a screen hedge of larger dimensions.

The leaves of the pine are very peculiar, being linear, or needle-shaped, and are always arrayed in little parcels of from two to six, this number varying in the different species. The great value of the pine in withstanding our severest winters has made them a deservedly household tree. In the New England towns and villages great pains and care are frequently bestowed in the selection of pine plants to adorn and beautify the green lawns about the homestead. One old farmhouse upon the hillside of one of our New England villages affords an apt illustration of the utility of setting a "green tree now and then." "I love," says a modern writer, "to see the green boughs of the pine tree waving in the breeze; the sound is so homelike. I love to see them as they bend to the slightest breath of air. They look invitingly pleasant to me—they tell me of home."

When quite a lad this gentleman, a great lover of trees, removed from the neighboring pine tree forest a great number of the small white pine plants in the winter, and set them out in a circular belt around the base of a hill near his now delightful home. He made one of the most beautiful and permanent pine tree hedges I ever beheld, which fully proves to my own mind the ease with which the white pine, and other pines also, if judiciously used, can be made into hedges.

The plan pursued by my friend was as follows, and the result warranted all his painstaking. He cut a small trench

*Upon Mount Blanc pines grow within 2,800 feet of the line of eternal snow in full vigor.

all around the small pine plants to be removed, leaving the ball of earth to become frozen by the cold. These he removed in winter to holes previously prepared for them, and he has a beautiful hedge of the white pine ten feet wide and ten feet broad at the base, without a single stem being denuded from this long circular belt.

I have seen several belts of this kind of hedge all in thrifty condition, and very even in their outline, growing freely and evenly from their base to their terminal points. The best manner is to give the plants all the room they want in the row, and not to apply the shears too much, if any. If the plants are selected and planted quite near together in lines (say not over fourteen inches to two feet apart) they will readily compact themselves into a thick bushy row hedge, as they grow more slowly in this manner than when standing alone as trees or in groups. This kind of pine seems naturally adapted to bleak, windy localities, and clings with great tenacity to its new locality when it has acquired from two to three years' growth. It grows well on the most silicious soils. We have seen them thriving heartily upon sand hills that would scarcely afford sustenance for any other tree.

We have heard it said that in several portions of Massachusetts the lands were too poor to bear anything but pines. Well, grow pines then, and you will in this manner be adding to the wealth of the country. A fine white pine forest is not only a beautiful but a very desirable object to behold; there being both beauty and wealth in the investment. And these pine forests are yet to be planted and tilled in great number, and if you have available land lying idle (of which many hundreds of acres may be found in all our States) the best thing you can do is to seed the same down to white pines. It will pay in the course of one generation, and if you do not live yourself to reap the benefit of your plantation of pines, you can leave it as a heritage to your sons. In our plea for the woodlands we shall urge upon all who own lands they do not know what to do with to consider well the claims of the times, the replacement of the ancient forests. But our article is upon the hedge, and not the woods, and we again return to our theme.

If you have an abrupt, rocky side-hill, which you would cover with belts or groups of trees, you cannot choose a better or more thrifty tree than the pine. In some States of our Union the pine tree plants are used as belt lines with good effect, and are really very valuable as orchard protections against the windy currents which frequently blow quite strongly in certain directions. In one favorite locality we recommended the planting of a pine tree barrier for the protection of a fine orchard of thrifty young pear trees of the dwarf kind. Some ten years ago the owner of this pear orchard asked us, professionally, what he should do to preserve this fine orchard of his from the cold wintry winds? Our answer was, plant a good sized barrier hedge, say in three parallel lines, at equal distances in your field, and you are all right. He was satisfied with our written directions as to how to select plants, to make his trenches out, and all the necessary treatment due the same for the term of three years. He grumbled somewhat at paying us for our written advice (*a ten dollar bill*) at that time, but he has since confessed it to have been to him the "very best investment of the whole season." He was wise in following to the letter our directions, and has now one of the best pear orchards to be found in the State. Were I to plant out an orchard of dwarf pear trees upon an exposed situation—flat land particularly—the first thing I would do would be to enclose it with an evergreen hedge barrier.

Our evergreens are too much neglected, and have been for years, but a change, for the better seems to have been gradually coming over many of our States.

Any one inclined to make an experiment with pine hedge making upon a small scale can do so, and will find a pleasure as well as profit in the same. Do not stop to consider your time a failure, and that you will lose twenty per cent. of your first planting. What if you do? Try again. Select one hundred plants, and, after preparing your trench, take up from the woods plants of one or two feet high, dig carefully, and when planted as before instructed, mulch and wait, and you can then tell your exact per centage of loss. Do this, and inform us of your success. Every man should try his hand at making a one hundred tree hedge, if no more.

OLLIPOD QUIL.

FRESH-BLOWN FLOWERS IN WINTER.—The following directions are indorsed by the *Manufacturer and Builder*: "Choose some of the most powerful buds of the flowers you would preserve—such as are latest in blowing and ready to open; cut them off with a pair of scissors, leaving to each, if possible, a piece of the stem three inches long. Cover the stem immediately with sealing wax; and when the buds are a little shrunk and wrinkled, wrap each of them up separately in a piece of paper, perfectly clean and dry, and put them in a dry box or drawer, and they will keep without corrupting. In winter, or any other time, when you would have the flowers bloom, take the buds at night and cut off the end of the stem sealed with wax, and put them into water into which a little nitre or salt has been diffused; and the next day you will have the pleasure of seeing the buds open and expand themselves, and the flowers display their most lovely colors and breathe their agreeable odors."

—Some idea of the rate at which the forests of the Northwest are falling beneath the axe of the lumbermen, may be gathered from the following: The total amount of lumber run out of the Cass river, Michigan, this season, is about 80,000,000 feet; out of the Au Gres 60,000,000; out of the Rifle booms 60,000,000, and out of the Saginaw river 75,000,000.

A PETRIFIED FOREST.

IN Sonoma county, California, about eleven miles north of Santa Rosa, is a region known as "The Petrified Forest," not, as most tourists expect to find it, a growth of standing timber, but broken trunks and fragments of trees scattered everywhere, which a correspondent of the *Alta Californian* thus describes:

The guide first conducts you to what was once a "goodly tree," but which is now a "solid rock," (the most convenient, but not a very scientific name,) lying on the ground and broken into several fragments. The circles of growth, knots, cracks, decayed parts, nodes, and every other characteristic of vegetation are quite distinctly perceptible. This specimen is rather a small one, but a little higher up you find others varying from three to ten feet in diameter near the root. In each of these the signs of structure are remarkably distinct and clear. Here you find a spur of a root, a piece of a branch, a piece of bark, and again you can see a fragment of charcoal petrified, and another not; another made red from the intensity of the heat, and fragments of every degree of petrification. You can find evidences of sulphur in some fragments, but silica seems to be the great agent of petrification.

At the root of one of the largest of the petrified trees I found some of the bark imbedded in the volcanic tufa, which was almost as "natural as life." The tree itself was one of the finest specimens of petrification, being ten feet in diameter, almost as hard as adamant, and exhibiting all the cracks and cranics and other irregularities of an old trunk; yet by its side was this bark, soft and yielding to the touch.

To the north of the tree region stand hills of volcanic tufa, which extends down to and around every tree. This is a kind of sand-stone, is soft, unaffected by fire, but easily dissolved in water. The whole region north and west, forming a kind of semi-circle, is composed of this tufa. The trees, with scarcely a single exception, lie prostrate, almost due north and south, showing that the force which prostrated them acted in the same direction and possibly at the same time. When the trees fell, they broke "right short off," showing that they were petrified before the disturbing force came into operation. I would also hazard the conjecture that the trees were nude, hard and dry before petrification began. This is evidenced by the fact that they bear every sign of old age, being full of cracks, and showing a good quantity of what must have been decayed sap of the last year's growth. The trees belong to the common species of redwood, a few of which are still to be seen growing in the tufa and in a good healthy condition. It is worthy of mention that one fragment shows indications of having been cut with some instrument.

This petrified forest has doubtless been known to the old trappers and mountain men for many years, they having frequently encountered it on their horse stealing raids to the California missions. It is unquestionably referred to in Ruxton's *Life in the far West*, published in 1855, on page 17, where an old hunter narrates his experience in the lingo peculiar to his class:

One day we crossed a "cañon" and over a "divide," and got into a peraira, whar was green grass, and green trees, and green leaves on the trees, and birds singing in the green leaves, and this in February, wagh. Our animals was like to die when they see the green grass, and we all sung out, "hurraw for summer doins."

"Hyar goes for meat," says I, and I jest ups old Ginger at one of them singing birds, and down come the critter elegant; its darned head spinning away from the body, but never stops singing, and when I takes up the meat I finds it stone, wagh. "Hyar's damp powder and no fire to dry it," I says, quite skeared.

"Fire be dogged," says old Rube. "Hyar's a hos as'll make fire come," and with that he takes his ax and let's it drive at a cotton wood. Schru-u-k—goes the ax agin the tree, and out comes a bit of the blade as big as my hand. We looks at the animals, and thar they stood shaking over the grass, which I'm dog-gone if it wasn't stone, too. Young Sublette comes up, and he'd been clerking down to the fort on Platte, so he know'd something. He looks and looks, and scrapes the trees with his butcher knife, and snaps the grass like pipe stems, and breaks the leaves a snappin' like Californy shells.

—Certain facts have been made known that show that lime is a good preserver of timber. Ships and barges used for the transport of lime last longer than others. A small coasting schooner, laden with lime was cast ashore and sunk. She was raised and set afloat once more and remained sound for thirty years. Again, a platform of nine planks was used to mix mortar on during three generations, and then being no longer required, was neglected, and at length hidden by the grass that grew over it. Sixty years afterwards, on clearing the ground, it was discovered sound and well preserved.

FAMOUS TREES.—Individual trees planted by famous men are still to be seen by the pilgrims who visit their homes and haunts. In the last century, there was quite a fashion for planting willows. It is said that the first weeping-willow seen in England was sent to the poet Pope, as a present, from Turkey, by his friend Lady Mary Wortely Montagu, and planted by him in his garden at Twickenham. It is the famous *Salix Babylonica* of the Psalter, upon which, on the banks of Euphrates, the weeping daughters of Jerusalem hung their harps. Garrick planted two willows on his lawn beside his Shakspeare Temple; in the midst of a thunder-storm, which destroyed one of them, the pious and devoted widow of the great actor was seen running up and down excitedly, crying out, "Oh, my Garrick! Oh, my Garrick!" The willow known as Dr. Johnson's willow, at Litchfield, was blown down long ago; it was said in the *Gardener's Magazine* to have been planted by him, but it is more probable that his admiration and talk of it developed the legend of his planting it. At the time of its destruction, it was thirteen feet in girth. Pieces of household furniture and snuff-boxes were made of it; and slips from it were planted by his admirers throughout the neighboring country; an offset of the old tree was planted on the same site. Thomas Moore tells us that, when Byron first went to Newstead Abbey from Aberdeen, at the age of ten, he planted a young oak in some part of the grounds. He had a notion, or thought he had, that, as it flourished, so should he. Six or seven years later, on revisiting the spot, he found his oak choked up with weeds, and almost dead.

Natural History.

THE EIDER DUCK.

THE reputation of this bird is world-wide. And it is not from any peculiarity that it possesses, but because it ministers (unwillingly, to be sure) to the comfort of man. There are four species of this *genus* in the United States, but two of which are found upon the Atlantic coast. The king eider is the rarer of the two, and the most northern. Plain eider duck is the one most common, and the one referred to here. We naturally associate them with icebergs and Icelanders, as they form such prominent features in tales of Arctic adventure. 'Tis true vast numbers have their summer dwelling-place in the Polar regions, but even those who seek a breeding place in Greenland, Iceland or Labrador, seek a less rigorous climate as winter approaches. The range of the eider duck is from the coast of New England to the Arctic regions. It is only in winter, however, that we are favored with their presence, and then they keep well aloof from the shore. By the 1st of May they leave us, and seek a place to make their nest and rear their young along the shores of the Bay of Fundy, Newfoundland, and Labrador, though the first eggs are not laid till the last of that month. It was my good fortune to visit the southernmost place of their breeding last summer, in the Bay of Fundy.

Upon one of the outlying islands of the Grand Manan group, called the "White Horse," from a fancied resemblance to that beast, I found my first "sea duck's" nest. As my guide and I approached the island we could see the female eiders leave the grassy part of it and fly from the rocks to the malls, collected in a body near. This was in July, too late for eggs, had the first laying not been robbed. Landing, I ran eagerly forward, hoping to see the treasures I had so long ago read about.

It required some searching before my friend gave the joyful intelligence that he had found a nest. Before I reached him he had covered it with grass, as when found, and I should have stepped upon it, had he not warned me, so carefully was it hidden. We found half a dozen nests in various parts of the island, all in the tall grass that grew near the rocks. From the rocks many tortuous, narrow paths led to the grassy thickets, and these paths invariably led to a nest, sometimes two, though some had been robbed. Upon the ground they place a few pieces of grass stalks, with other fine material, in a slight depression of which the eggs are laid, from three to five, though formerly, before much hunted, as high as ten. These eggs are about three inches long by two wide, of a beautiful olive green, and very smooth. Sometimes we found these covered with a mat of dry grass, and, in two instances, with the highly prized eider down, so elastic that a whole nest full could be squeezed in the fist and then regain its original bulk. This down was dark slate in color, having been plucked by the female from her breast. The young had not yet made their appearance, but would had the first eggs been allowed to hatch. They are beautiful little creatures, can swim like a fish, and tame easily. My friend said he had caught a whole nest full and sent them to a friend of his in the States.

Towards the last of this month (October) the eiders begin to appear along the Massachusetts coast, forming in large bodies off the rocky capes. Good sport is had by gunners from Cape Ann in the winter months. A good boat, with a man to sail it, can be hired at Rockport or Gloucester, and if the day is pleasant, with wind to westward, and a trifle rough, the sportsman may expect shooting. F. B.

THE MANATEE AT CENTRAL PARK.

EDITOR FOREST AND STREAM:—

One of the most interesting animals lately received at the Central Park Menagerie, is a Manatee, believed to be the first of the species ever kept for any length of time in captivity. These creatures are now retreating before the tide of population, and as animals generally are valued in proportion to their scarcity, a brief description of the manatee may prove interesting to your readers. There are found but three species, *M. latirostris*, inhabiting Florida, the Gulf of Mexico, and the Caribbean sea coast; *M. australis*, from Caribbean sea down the coast of Brazil; and *M. senegalensis*, on the west coast of Africa. The more northern species, strange to say, is more closely allied to the African species, *M. senegalensis*, than to its near neighbor, *M. australis*. Harlan, in his description of the Florida Manatee, when he wrote in 1825, says, "that they were found in considerable numbers, so that an Indian was able to capture ten or twelve with the harpoon in one season."

The manatee is generally to be found at the mouths of large rivers, such as the Orinoco and the Amazon, and they ascend the South American rivers several hundred miles, and even into the inland fresh water lakes. They are usually seen in small troupes, associating for mutual protection and for defense of their young. When the cubs are captured the mother becomes careless of her own preservation, and should the mother be the victim, the young will follow her to the shore. Being found in shallow waters they are easily captured by the natives, who kill them with harpoons, lances and arrows. The manatees grow to the length of ten or twelve feet, and generally inhabit tropical countries, and are represented in the Pacific or Indian oceans by the allied species, the dugong. The manatee has the elongated, fish-like body of the whale, head conical,

without distinct line of separation from the body. The fleshy nose resembles somewhat that of a cow, semi-circular at its upper part where are the nostrils, which are closed with valves when the animal is under water. The upper lips are full and cleft in the middle. Rows of stiff bristles are placed on each side of the cleft. The lower lip is much shorter than the upper one, but the mouth is not very large. In the young animal there are two sharp incisor teeth in the upper jaw which afterwards fall out; canines none; molars thirty-two; eyes very small; anterior limbs flattened into fins, upon which are four rudimentary nails; posterior limbs wanting. The limbs are more free in their motions than those of cetaceans, and can be used for dragging the body about in shallow water. Mammary two, situated on the breast. The tail oval about one quarter the length of the body, ending in a horizontal rounded expansion. The skin is a grayish dark olive color, becoming black on drying, and has a few scattered bristles on the back. The skin is in great demand by the natives of South America for making harness, whips and leathern articles for which great strength is required, and is noted for its great durability. The oil which is extracted from the fat is of excellent quality. The flesh of this aquatic animal is said to be well flavored, being considered a fish by the Roman Catholic church, consequently is eaten on fast days. When properly salted and dried in the sun, the flesh will remain sweet a whole year. Orton in his "Andes and the Amazon," says the flesh resembles fresh pork. Capt. Henderson, in his account of Honduras, speaks thus enthusiastically of the tail as a tit-bit: "The tail, which forms the most valuable part of the manatee, after lying some days in pickle prepared for it, with spices, &c., and eaten cold, is a discovery of which Apicius might have been proud, and which the discriminating palate of Elagabalus would have thought justly entitled to the most distinguished reward."

The manatee now on exhibition in the Central Park was received from Mr. P. T. Barnum in the latter part of May last. The following are its absolute dimensions: length, 6 feet 9½ inches; circumference around body, 4 feet 9 inches; length of flipper, 1 foot; width of same, 4½ inches; width of tail joining body, 1 foot 6½ inches; greatest width of tail, 1 foot 8½ inches; weight, 450 pounds. It has grown two inches since its arrival. After being received it was placed in a tank of fresh water, and remained without tasting food for five days, refusing everything offered to it. A variety of aquatic plants were placed before its mouth, and each in turn rejected. At length some canna, *canna indica*, was procured, which it devoured greedily, and which it continues to use alternately with sea weed, *Fucus vesiculosus*, obtained in the East river. The process of eating takes place under water, which seems strange in view of the fact that it cannot breathe during that time. It manifests at times extreme playfulness, and will answer the call of the keeper by a peculiar noise somewhat resembling the squeak of a mouse. Sometime ago the epidermis on the back peeled off in small pieces, leaving a bright new skin similar to that of a snake just after shedding. It was kept out in the open air until the thermometer fell to 53 deg., when it was removed to a building.

It appears to be very sensitive to the cold, curling up its back if the water is in the least chilly. It has been observed to remain under water five or six minutes at a time without coming to the surface to breathe.

W. A. CONKLIN,
Director C. P. Menagerie.

MORE SNAKES.

JACKSONVILLE, Ill., October 11, 1873.

EDITOR FOREST AND STREAM:—

Notice in your issue of October 2d an article, "Do Snakes Swallow Their Young?" I answer in the affirmative. While living in Wisconsin some years ago, I saw a common garter snake with a quantity of young ones about 2 or 2½ inches long and about as large as a common ground worm. As soon as the snakes saw me the old one opened its mouth and the young ones ran down its throat. I afterwards killed a large copperhead which looked as though it had just swallowed something. I cut it open and found it was a mass of small snakes. How did they get there, unless the old one swallowed them?

I have killed snakes with eggs in them, but never found any snakes in the eggs. This was in the township of Yorkville, Racine county, between the years of 1840 and 1850. Rattle and copperhead snakes were abundant in this township, but I never saw a blow snake until I moved to Eagle township, Waukesha county, about twenty miles distant. Blow snakes were plentiful. It was a common saying in this township that neither rattle nor copperhead snakes had ever been seen in it. Is it common for different species of snakes to inhabit separate districts?

Yours truly,

GEORGE HAYDEN.

EDITOR FOREST AND STREAM:—

What becomes of the young snakes when swallowed by their parents? I should like to make inquiries of those who have seen the young snakes go into the mouths of their mothers, as to whether they were ever seen to come out again. Now I do not mean to say that they do not come out the way they went in, but has any one ever seen them do this? Will those who can give any information on this subject please answer?

C. J. MAYNARD.

GOOD ADVICE TO MISSIONARIES.—Mr. Winwood Reade in his African sketch book, gives the following good advice in regard to missions in Africa, recommending in all cases native clergymen. He says:—

"An ordained negro is a walking sermon, a theological advertisement. The savages regard an Oxford Master of Arts as a being fearfully and wonderfully made, belonging to a different species from himself. His argument invariably is, 'white man's God, he good for white man; black man's God, he good for black man.' But when he beholds a man as black as himself with a shiny hat, a white cravat, glossy garments, and shoes a yard long, wearing a gold watch is his fob, blowing his nose in a cloth, and 'making leaves speak' and when he is informed that these are the results of being baptised, he also aspires to become a white man, and allows himself to be converted."

The Kennel.

SPECIAL RETRIEVERS FOR DUCK SHOOTING.—These dogs—so called on account of their value in recovering or "retrieving" game that has fallen out of the reach of the sportsman, or on which he does not choose to expend the labor of fetching for himself are of various kinds, and in every case are obtained by a crossing of two breeds. There are two principal breeds of retrievers, the one being obtained by the mixture of a Newfoundland dog and a setter, and the other by a cross between the water spaniel and the terrier. The former of these breeds is the most generally known, and the characteristics of each are plainly perceptible in its form. To train a retriever properly is rather a difficult task, requiring great patience and perseverance. It is easy enough to teach a dog to fetch and carry, but to teach him to retrieve in water is quite a different matter. On land the dog can see the object from some distance, but in the water his nose is so nearly on a level with the object for which he is searching that he can only see a very little distance ahead, and must learn to guide his way by the voice and gesture of the shooter. Another obstacle in the tuition is the natural propensity of the dog to bark when he is excited, and generally tries the teacher's patience before he learns to be silent and not disturb the game even by a low whine. The natural instinct of the dog teaches him to eat the bird or animal which he has found, and in order to keep the dog from closing his teeth too firmly on the bird he should be made to lay it down at the shooter's feet, or to loosen his hold as soon as the shooter touches the object which he is carrying. One great point to gain is, to make the dog understand that the birds are killed by the gun and not by himself. Until he fully understands this lesson he is apt to dart off after a bird as soon as he perceives it, or perceives its scent, and to chase it until it is out of sight. The smaller retriever is produced by a cross of the terrier and beagle, and in many points is superior to the large retriever. They are very quiet dogs, and when on their quest do not make so much noise as the large retrievers, so that they are especially useful when the game is wild. Being small dogs, they can be kept in the house, and become very companionable, so that when they go to their regular work they feel more love and respect for their master than would have been the case if they had been kept in a kennel.

—We gave in the FOREST AND STREAM of October 9th several recipes for destroying parasites and fleas in dogs, among them one known as the "Persian Insect Powder," and now we give the very best method to perform the operation without injury to the animal. Dust the dog well with the substance until every portion of him has received a few particles of the powder, and then put him into a strong canvas bag, in which a small handful has been placed, and shake about well, so as to distribute it equally over the interior of the bag. Leave his head protruding from the bag, and put on his head and neck a linen cap, in which are holes for his nose and eyes, and let the interior of the cap be well treated with the powder. Lay him on the ground and let him tumble as much as he chooses, the more the better. In an hour or so let him out of the bag, and scrub his coat well the wrong way with a stiff brush. In a week or so this operation should be repeated, in order to destroy the creatures that have been produced from the unhatched eggs that always resist the powers of the destructive powder.

GREAT FIELD TRIAL OF POINTERS.

Many of our subscribers are continually writing to us, asking about the management and directions for pointer and setter field trials. We subjoin the following account from *Land and Water* of the late field trials at Ipswich, England, which will tend to give our readers an insight as to the marks of accuracy denoted in the different animals:

1. THE SUFFOLK STAKES, for all aged pointers, limited twenty. Entries, £6 6s. First prize, £70, and a cup valued £10, presented by R. J. L. Price, Esq.; second ditto, £30; third ditto, £15.
2. THE ORWELL PARK STAKES, for pointer puppies, pupped since 1st January, 1872, limited to ten. Entries, £5 5s. First prize, £30, and a £5 cup, presented by the manager; second ditto, £15.
3. THE EAST OF ENGLAND STAKES, for all-aged setters, limited to twenty. Entries, £6 6s. First prize, £70, and a cup presented by the Kennel Club, value £10; second ditto, £30; third ditto, £15.
4. THE IPSWICH STAKES, for setter puppies, pupped since January 1st, 1872, limited to ten. Entries, £5 5s. First prize, £30, and a cup value £5, presented by the manager; second ditto, £15.
5. THE TRIMLEY STAKES, for retrievers, limited to twelve. Entries, £5 5s. First prize, £30, and a cup valued £10, presented by the Kennel Club; second ditto, £20; third ditto, £5.
6. THE CONSOLATION STAKES, for beaten pointers or setters. Entries, £2 2s. Two thirds of the entrance money given as first prize, and one third as second prize. The judges to fix the time of trials in this class.

On Wednesday, about nine a. m., a start was made for Trimley Hall, a farm belonging to Col. Tomline, which was the first day's rendezvous, a dusty drive of some eight miles having been accomplished, operations commenced about ten o'clock. Mr. Salter's elegant lemon-and-white pointer-bitch Venus, second at the late Crystal Palace Show, attracting during the brief interval of waiting at the farm, considerable attention.

A fair number of spectators were present on the ground, including Col. Tomline, M. P., Lord Cork, the Master of the Buckhounds, the Duke of Sutherland, and Lord Dwydr. The commencement of the Orwell Park Stakes took place in a good sized turnip field. Mr. Price's Grecian Bend, and Mr. Fairhead's Belle, being the first brace put down, both

commenced by "flushing," a word which would indeed be a sufficient commentary by itself on the performances of all the young pointers, the extreme dryness of the light sandy soil, the badness of the scent, and the wildness of the birds rendering the few steady points that were secured during the day almost as acceptable as angel's visits. Grecian Bend, however, made a grand stand in a rushy bottom, the birds, French, having run up a hill and risen on the edge, Belle then made a good feint in a stubble, her opponent wildly rushing past and flushing. Five birds fell to the next four barrels, put in by Messrs. Shirley and Lort, Grecian being credited with the find, which secured the "flat" from the judges, this brace having been worked almost entirely down wind; at eleven o'clock Bride and Roman Fall tried conclusions over the same field, the best one for lying and scent at our disposal during the whole day, and commenced by springing, then Bride stood on wild birds, her opponent backing prettily, then both pointed, the dog having birds before the bitch behind. Mr. Lort poured in a deadly volley, and Bride showed a decided inclination to rush in to dead, the tenant of the farm, a most jovial old gentleman, at this period directing the beat. As many birds had now been seen in the space of some two hours as had been found in the whole of the two first days at the last spring meeting at Shrewsbury; indeed, any question as to the quantity of winged game may at once be dismissed for good and all with the word "abundance." Both dogs showed good pace and quartering, and were taken up undecided.

The heat between Patch and Macgregor commenced at 11.45, by the last named running clean into a lot, and chasing, making his opponent wild, she soon steadied, however, and dropped capably to a shot at a bird found by the "Crystal Palace" winner, she then worked her ground, a large turnip field, well, and to our mind throughout the trial showed better style than her adversary, her breaker, "Christmas," a new hand at the game, not making perhaps the best that he might of her. She is decidedly a "stay and stand it" sort, and sticks well to her work, though very ugly to look at; Macgregor then stood birds well through a hedge, the bitch being at the time in slips; in the next field she ran up a covey but stood staunch to the "Fool" that remained, Macgregor dropping well to wing, and undecided was again the result. The bitch was decidedly the wildest, but still we fancy a little the best.

Then Mr. Field's Dick, purchased for sixty guineas from Mr. Statter, and as he divided the Puppy Stakes at the grouse trials, the general favorite for the stake, and Mr. Bishop's Brighton tried conclusions, the former soon showing what he could do in this trial, for after lunch he fell off. Dick displayed the best form seen during the day, going off at a rattling pace, which he kept up, and showing at once that he was all right "behind," for Brighton found well over the brow, and Dick backed his adversary, who was a little unsteady, in most commendable style. After a flush from Brighton, who could not pull up quite in time, Dick made a "turn" and "stop" when at racing speed, Bishop's dog rushing past him, and put up the birds, while Dick remained perfectly steady. This virtually decided the judges, who soon after hoisted the red flag in Dick's favor, Brighton not yet being thoroughly broken. Both dogs were handled by members of the numerous family of "Bishops." After passing through a stubble covered with heaps of guano and soil, a sign that Colonel Tomline's tenants put something into their lands, as well as "take it out," and having discussed a comfortable lunch provided at the farm, Dick and Grecian Bend tried conclusions, Dick starting stiffly, and soon running into a fine covey, the bitch dropping, then flush, flush, flush, neither doing good work, and at times rushing in, Mr. Field's celebrated puppy not performing half so well as in the forenoon; but as his opponent, who was suffering from red mange, did nothing in particular, and showed a decided inclination to potter, we, at two p. m., put down Bride and Roman Fall in a large turnip field, in which they did some fair, but not good work, astonishing the natives, who had no idea that any dogs except hounds could run so fast, by their extraordinary pace. At last in a stubble Roman Fall found well, Bride refusing to back, the birds rising wild, and then these same birds having been driven into our original and only fair bit of scenting ground, a rough grass meadow, or what would be in America a salt marsh, Macgregor and Patch again made their appearance, the former soon finding but pushed on and worried up the birds, then he made a couple of false points, the bitch quickly discovering his mistake. Patch then stood false, Macgregor backing, but to signal, then got a pretty point to a single bird, which rose just as the dog arrived upon the scene, and as before backed to word of command. Passing on to a stubble, from a mound in which a splendid bit of coast scenery, with Harwich and the shipping in the foreground, was presented to the eye, Mac made a very creditable long stiff point in a hollow, which we suppose decided the course in his favor, as soon afterwards the telegraph board gave out that the judges had placed Mr. Field's Dick first, Mr. Whitehouse's Macgregor second, and Mr. Bishop's Bride and Mr. Bride and Mr. Price's Roman Fall, equal thirds, Patch being entirely out of it, at which we were rather surprised.

All the puppies worked very independently, but no first-class form was shown, except perhaps for a brief period, by the winner, and we feel sure that a good scenting country well sprinkled with birds, shows dogs off better than when partridges, as here, swarm, but will not lie, which disgusts pointers and setters, and makes them give up trying.

On Thursday, the second day, we commenced at 9.30, the Suffolk Stakes, for alleged pointers, left undecided yesterday for want of time, Mr. Whitehouse's Pax, worked by Bishop, and Mr. Salter's Venus, handled by her owner, commencing operations. A very handsome brace these, and both winners on the bench. Pax at once commenced by flushing a brace off a short-shaven stubble, not dropping until put down by hand, then going at a fine level gallop, and quartering his ground well he made a very meritorious point in good style, the birds, evidently on the run, rising wild. A piece of mangolds showed us a flush up wind by the dog, who took no notice of his error, the bitch following suit, but dropping to wing birds rising around her in all directions. Pax then stood a brace, but, on some casual shooting taking place, to birds walked up, he refused to "down charge," the bitch, whose master was close by, behaving better. Mr. Whitehouse's dog then feathered prettily, and pegged his birds, Venus rushing by and flushing, which decided the heat against her.

At ten o'clock precisely the second brace, Mr. Field's

Mab, purchased at Mr. Clowes' sale for forty-five guineas, and Mr. Bishop's Brighton, the same dog that ran yesterday against Dick in the Puppy Stakes, commenced operations, Mab showing at once steadiness to a wild rise, but a slight inclination to potter. Brighton almost found a brace of pheasants, the pair dropping well to wing. Both a moment afterwards topped dead at the same second to a large covey, Brighton's point being the most meritorious, he being further from the birds than Mab. The brace displayed throughout the trial a hitherto unseen amount of steadiness, the dog being the freest and best goer, while the bitch had more education. In some low ground sown with rape both went down together, Brighton, on the birds rising, showing an inclination to move. This, however, he repressed, and secured the next point, Mab backing in grand form. The birds had run to the left, and were walked up. The field was indifferently beaten, many birds rising after the guns moved on. Mab appeared to be slightly footsore, and not to get her hind legs well under her in the gallop, but she was extremely well broken, and the judges being satisfied of her true form proceeded to test the merits of Pax and Brighton. The former commenced by flushing without recognition a single bird along the hedge, but soon made a couple of meritorious points, Brighton being in this course unsteady behind, and lost his chance by very nearly repeating Venus' final performance. The stake was awarded to Pax, Mab being second, and Brighton third.

Brighton seemed to us to do better work when cown with Mab than Pax showed us in his trial with Venus, and we think he might have been without impropriety placed at least second. Unsteadiness behind was doubtless the only rock on which he split; and after a little discussion over the concluded stake we passed on to Ginx's Baby and Daisy, who, owing to a declaration of Mr. Bishop's that he did not intend to run Brag, were the first put down for the Ipswich Stakes. Thus the two crack setter puppies of the day met in the first round; and from their performances it was very soon guessed that nothing would be seen to beat them. Daisy, at first going in quite her Shrewsbury form, over some nice grass land, almost immediately fixed a fine covey, which rose "close ahead," then she found again, The Forlorn One passing her as the birds rose. Again she spotted a brace, which fell to the gun, and were cleverly retrieved, one out of, and the other some distance across, a wide ditch by the only competitor for the Retriever Stakes—Mr. Price's Sailor.

At this time it looked twenty to one that the Shrewsbury form would be carried out. But the Baby now began to improve, and Daisy, flushing but steady to wing, let him in at a pretty point, his old rival displaying perfect steadiness behind; this Ginx followed up by a point, but hardly a decisive one, by the hedge; and the brace were for the present taken up to make way for Pell and Brag, whose owner had thought better of it, and decided to run his puppy, and in some roots Pell flushed and Brag pottered; the latter then flushed close to the judges, Mr. Shirley securing the bird, which was retrieved from a thick hedge; then both flushed, neither showing first-class form; but in some "kohl rabbi"—that curious cross between a turnip and a cabbage—Pell secured about the first point of the day, in roots. Brag was, however, faster than the Welsh dog, and showed altogether better form, though not in the hunt with the preceding brace, and the decision was very rightly given in his favor. Daisy and Ginx were again exhibited in a potato and turnip field, both ranging and quartering their ground in capital style; the dog flushed down wind in his gallop—an operation repeated by Daisy, who stopped, which he did not; then another spring by the bitch up wind—this time her fault did not seem to impress her. She then curled up beautifully to, alas! a false point; the lemon-and-white, all there, behind. Ginx then found two coveys in succession amongst the potatoes, Daisy retrieving the dead bird, a piece of indulgence from her breaker which spoilt her excellent form, as ever afterwards, as might be expected, she rushed in at every kill, a proceeding not hitherto considered allowable. At this period she appeared to have had enough running, and settled quietly to the heels of her breaker, Ginx continuing his work and finding, with a long draw, some Frenchmen that had scuttled up to the corner of the field. Public opinion decided that the son of Don had avenged his Shrewsbury defeat, and had satisfactorily come to the end of his opponent, but after lunch, a short trial having meanwhile taken place between Pell and Lulu, the latter showing terrific pace, but nothing much else, the judges returned to their old friends and tried the "ante-prandial" opponents in some rushy ground, Ginx again, to all intents and purposes, proving his superiority by a great find, Daisy, as before, rushing in the moment the gun was fired.

ATHLETICS AT DARTMOUTH.

DARTMOUTH COLLEGE,
HANOVER, N. H. Oct. 16th, 1873.

EDITOR FOREST AND STREAM:—

We think it may be justly claimed that old Dartmouth is beginning to take a prominent position among American colleges for the attention paid to athletic sports and games. The principle "*Mens sana in corpore sano*," laid down by Horace, is fully recognized. Through the munificence of George H. Bissell Esq., of New York City, a fine gymnasium was erected in 1867. It is a tasteful and commodious structure, ninety feet in length, forty-seven in breadth and two stories high, built at an expense of \$24,000. The students attend regular exercise under an instructor, to such an extent as to insure to each of them the benefit of the establishment, while the building is open at other times for voluntary practice.

The old English game of foot-ball is played upon the campus almost every evening at this season of the year. The practice of "rushing" has been abandoned, but the Freshmen are usually invited to play a friendly game with the Sophomores, at the opening of the year. At other times, "whiskers" are fitted against "smooth faces" or Seniors and Sophomores, play against Juniors and Freshmen. It is a pleasant and vigorous, yet not dangerous exercise.

Base-ball has not lost its attractions among the students. The various classes have their picked nines and interesting matches are often played. However, boating holds a more prominent place at the present time.

There has always been plenty of material for good oarsmen among the students of Dartmouth, most of whom have been reared to toil among the rugged hills of New Hampshire and Vermont. Skill and experience have been lacking.

The laurels won by sister colleges on the waters, however, raised enthusiasm for boating here to such an extent, that about a year ago, a meeting was held by the students, at which they determined to have a boat club started. With true student zeal the enterprise was commenced. Citizens of the place and friends of the college assisted in the work. Money was raised, boats purchased, a fine and convenient boat house erected, a first class trainer secured, and the Dartmouth boys were for the first time represented at the Inter-collegiate Regatta held at Springfield last July.

The crew was regarded as a set of giants, and their position as fourth to reach the goal, was thought to be a very creditable one, considering all the circumstances.

At the present time the prospect is that another crew will attend the races next year, where still better results are of course hoped for. A Freshman crew will probably be entered also. The crews of the different classes are now in training on the river. Several interesting races will doubtless be rowed between them soon. During the winter "pulling" will be kept up in the gymnasium, where rowing weights are fixed, admirably adapted to the purpose.

The Faculty of the college are all friendly to the boating interest, and give their influence and their money for the promotion of this deservedly popular sport. RUFUS.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, traits, species, governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

GREGORY.—Score you send would be too old for publication. Much obliged.

CREIGHT, Halifax.—Commodore Wm. E. Le Roy; club house, 21 West Twenty-seventh street.

DAVID, Pottsville, Pa.—Apply to Krider. He understands the whole matter, even better than ourselves.

B., Mobile. Your questions are so interesting that we will reply to them editorially in our next number.

F. W. DINSMORE.—See all back numbers of FOREST AND STREAM for full description of Maine hunting and fishing grounds, its game, fish, etc.

W. M. A.—1. You cannot avoid it. Clean your barrels with fine emery powder. 2. It has no effect whatever, beyond keeping the charge uniform, as you say.

FIELD & MANY.—These are the points which were required at the pointer trials. Nose, pace and style of hunting. Breaking. Pointing. Backing. Drawing game.

ANDERSON, San Francisco.—Explosive mixture made of chlorate of potash and sulphate of antimony, equal parts. You can buy explosive balls adapted to any calibre of rifle in New York.

PENN YAN, Yates county, New York.—H. & H. Merrell, 290 Notre Dame street, Montreal, will get you both. Send him the size of your shoe; they cost about \$4, gold.

BON JAKER.—In the neighborhood of Louisville you will find excellent quail and fair ruffed grouse shooting. Mr. J. P. Johnson of the Gal't House will give you every information and put you on the right track.

AMHERST.—You may see two fine specimens of the black wolf at the Central Park. They are very cowardly. We suppose that the *Diabolus ursinus*, Tasmanian Devil, is a type of the most ineradicable ferocity.

GOG AND BILL.—1st. Murcott is the maker of the hammerless breech loader. Address 68 Haymarket street, London. Cannot state cost. You may rely on having a good gun. 2d. Price of Metford rifle from £15 15s. to £31 in England.

WALL EYE, Mobile, Ala.—There are many gentlemen of our acquaintance who wear glasses and are good shots. Expert pigeon shots seldom shoot with both eyes open. However, there are some who do, and are termed "snap shots."

J. N. S., New Orleans.—The claw you send us comes from the *Lupa Forceps* or swimming crab. It is a native of the West Indies. The larger specimen, for which accept our thanks, is the *Thealia acanthophora*, or armed crab. Its home is in Japan.

M. W. P., Newark, N. J.—1st. Four drachms of powder and 1½ oz. shot. 2d. No. 5 shot; it depends on the weight of your gun. 3d. Le-fancheux, the inventor of the breech loading system, has no agent in this country. All breech loaders are but variations of his system.

A. M. GRIFFIN, Plainfield, N. J.—1. A breech loader by all means. 2. There are so many good makers that we cannot express our opinion as to whose is the best. If you will state for what kind of sport in particular you intend to use it, you can have our private opinion on the matter.

APFOMAT & Co.—A four-oared boat, fit for you to practice in, you may buy second hand for from \$75 to \$100. You may get a good "coach" to train you, for from \$7 to \$10 a day. You have time enough yet to make a good performance. Ellis Ward would be your man. Address him at Newburg.

M. A. T., Annapolis.—Having tried powder for the vermin in your dog, try what we see recommended in the *Field*—a strong infusion made of quassia chips, and the application of the fluid with a sponge. Pray inform us about it. It seems simple and plausible. We recommended this same thing for vermin in plants, and our friends informed us that it was quite successful.

J. S. HEADLY, Boston.—The birds of the Mediterranean are numerous. The most noticeable are the balearic cranes, rosy flamingos, purple water-hens, snipe, heron, bittern in quantity, and odorous gull, around Corsica. About Sardinia is found a rare bird, the marble-headed duck. The white and Dalmatian pelicans are found in plenty about the Ionian Islands. Partridges in and around Malta. Noble collections can be made there.

SAM AND BILL, Brooklyn.—Against the English eleven the St. George in the second innings made 44. We think most of the eleven were caught out. Attention to batting averages are not worth much, but bowling averages are. Hard to decide which is the better of the two Messrs. Grace. W. G. Grace plays more frequently than E. M. Grace. Last year W. G. Guillemond made 260 in a match and E. M. Grace 246. Batting is no criterion.

L. S. O., New York.—1. Forty dollars railway fares from New York and return, and three dollars per day while in the woods, including cost of provisions for outfit. 2. Old trappers say that fur is in season in all months that contain the letter R. Winter fur is the darkest, and therefore the most valuable. 3. Take Great Western Railway to Brockville, and the railroad from thence to Annaprior, on the Ottawa river. 4. Moose, deer, wolves, and various kinds of fur-bearing animals. The district of Conlogne is one of the best localities for hunting and trapping on the continent.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, OCT. 23, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Managing Editor.

Calendar of Events for the Current Week.

FRIDAY, October 24.—Maryland Jockey Club....Lexington Trotting Horse Association, Lexington, Ky....Mountain Park, Brookville, Penn....Prospect Park Autumn Meeting.

SATURDAY, October 25.—Boat clubs foot of 133d street, Harlem.....Lexington Trotting Horse Association, Ky....Prospect Park, Autumn Meeting.

MONDAY, October 27.—Macon State Fair, Georgia.

TUESDAY, October 28.—Richmond State Fair, Va....West Eutaw District Fair, Ala....Roanoke and Tar River State Fair, Weldon, N. C....Agricultural and Mechanical Fair, Jackson, West Tenn.

WEDNESDAY, October 29.—Richmond State Fair, Va....West Eutaw District Fair, Ala....Roanoke and Tar River State Fair, Weldon, N. C....Agricultural and Mechanical Fair, Jackson, West Tenn.

THURSDAY, October 30.—Richmond State Fair, Va....West Eutaw District Fair, Ala....Roanoke and Tar River State Fair, Weldon, N. C....Agricultural and Mechanical Fair, Jackson, West Tenn.

REMARKABLE ROWING FEATS.

MR. REGINALD HERBERT, a gentleman well known in racing circles in England, accomplished a great rowing feat on October 16th. He wagered £1,000 that he would row from Maidenhead to Westminster Bridge, on the river Thames, a distance of forty-seven and a half miles, in twelve hours. Mr. Herbert has not rowed for years, and when at school at Eton was considered only a fair sculler. This will show that he had to row four miles an hour. It must be borne in mind that there are eleven "locks;" each lock would take five minutes to pass through before he could start again, having a man stationed there to open and shut them. This would make nearly an hour apparently wasted; but as he could rest the five minutes it would be a literal gain, which is of the utmost importance in a long and tedious pull. Then take into consideration refreshments, etc., which would take up half an hour of the twelve hours allowed him, making altogether one hour and a half to be deducted, he won this extraordinary wager, and rowed the forty-seven and a half miles in nine hours (according to the telegram), leaving three hours to spare. It will be seen that he rowed at the rate of a little over eleven minutes to the mile. If the time lost in passing through the eleven locks and other contingencies are taken into consideration, the actual rowing time would be seven and a half hours, or at the rate of a mile in 9 minutes, 28½ seconds.

An almost similar feat was achieved on the Hudson river some years ago. Mr. J. J. Astor and Mr. Walter Langdon rowed from New York city to Hyde Park dock, on the Hudson river, a distance of eighty-seven miles, in seventeen hours and a half. This is as near the distance and time as our memory serves us.

THE QUESTION OF IRRIGATION IN THE FAR WEST.

AT last it seems as if this vital question of irrigation is no longer to be treated as one merely of scientific research, but to be carried out in its most practical methods. If the theories in regard to the advantages to be derived from the planting of trees, as found in the columns of the FOREST AND STREAM are worth anything, the absolute carrying of them into effect in order to reclaim the arid wastes of land in Nebraska, Colorado, Wyoming, and New Mexico may shortly prove the soundness of our speculations.

At Denver a convention of delegates representing most of the far Western States and Territories, assembled on October 15th to consider the subject of irrigation, and to devise some means "by which the great expanse of rainless country between the Missouri river and the Rocky Mountains, as well as on the Pacific slopes, could be brought under a system of irrigation so as to make them valuable."

This is a question fraught with interest, since it looks to the regeneration of millions of acres of land. In most portions of the country which come under the deliberation of the delegates, water is scarce or if running streams are found is charged with alkaline salts. How far the digging of artesian wells would furnish water in quantity can not be determined. Copious as might be their water flow it is questionable whether in many sections of the country this water would not be more or less alkaline, and not suited either for tree or vegetable life or for human consumption. Then again, such artificial sources, though they might be productive of sweet water, and capable of turning certain spots in these arid wastes into oases, would be expensive of construction and limited as to quantity of wells. We look upon the introduction of certain mountain streams which may be found in quantity throughout this section of country as of much more practical importance. But the plan is so vast in its conception that even should the delegates come to any conclusion, their efforts must be regarded as rather of an experimental character than otherwise, even did they determine to dig wells or to conduct fresh streams by means of aqueducts or California flumes through certain portions of the unfruitful land. One thing certain is that water must be had first, and with it as a positive means of preserving such water, *trees must be planted*.

There is a wonderful cumulative power in tree planting. The trunk starts, the branches spread, and under its shade grow the grasses, all of them capable of retaining the moisture and in turn of giving it off again. As was shown in a late article of ours on "The Influence of Forests on Air and Soil," the evaporation from the ground surface of a wooded country was exceedingly slow, while the soil retained the moisture in a proportion twice as great as when the ground was denuded.

As to the power forests may have of creating or drawing rain to a section of country, the data on this most important question are by no means positive; but theory seems to show that if a rain fall is not caused in their immediate proximity they certainly play an important part in causing rain to fall in other areas of country more or less distant.

The plans of irrigation and tree planting must go hand in hand, for one is the preserver of the other. Have all the water you can bring, without trees to protect it, and the evaporation from sun and wind in these sections of country soon sucks them dry. As to the *humus* formed by the slow decomposition of the leaves, grasses and mosses, consequent to tree planting entering more into the subject of agriculture, we have had little to say, save that tree planting is conducive of this most useful compound. Artificial irrigation is the creative force necessary to convert these sands from unproductive wastes to fruitful pasturages, but the rain fall is the true constant element which we believe can be made to act, not only in circumscribed areas, but through large extents of this country. Of course rapid results are not to be looked for. It may take years before any impression is made on these rainless wastes. At the same time what may be the effect of simultaneous action on them, we are not prepared to state. Let us hope, however, that in this respect the constructive power of man may be found to about balance his destructive energies. To sum up this theory of wood planting, which bears on its face every appearance of being true in practice, one tree planted aids materially in the growth of another tree, and consequently within certain limits, once the first group of trees planted, facility is given to the propagation of a forest.

We sincerely trust that with the many facts before them the delegates will treat this subject of tree planting as of the utmost importance, and that the result of their deliberations will form an era in the practical portion of American arboriculture, as a means of reclaiming arid lands.

NATIVE SALMON FROM THE HUDSON.—We have been invited to inspect some specimens of the true salmon and land-locked salmon which were hatched in the Hudson river, and have been caught and put in alcohol, to be forwarded to the Smithsonian Institute. The fish are in the second year of their growth, and include both parr and smolt. They were produced under the private enterprise of gentlemen who at present wish particulars to be kept in reserve, but we shall in time be able to publish full details. The success thus far obtained is a gratifying promise of something better in future.

—"If George had not blown into the muzzle of his gun," sighed a rural widow, at the funeral of her late husband, last Saturday, "he might have got plenty of squirrels; it was such a good day for them."

RIFLE SHOOTING IN CANADA.

WE have before us the proceedings of the Province of Quebec Rifle Association for 1872, and some short analysis of the same will undoubtedly be of interest. Our own Annual Prize Meeting, printed in detail by us, will give for the first time an opportunity of comparing the shooting.

The number of competitors who entered for matches under the rules of the Quebec Association were 1,503, but would have been much larger had it not been for the elections taking place during the match week. Though the number of competitors is large, we believe that at Creedmoor it was considerably exceeded. One thing to be noticed is that throughout the whole year not a single accident occurred. One feature of the matches in the Dominion is the competition between the smooth bores and the breech loaders, which are called Optional Rifle Matches, the Sniders at 500 yards against the Rigby and Metford at 800 yards. In these matches the Sniders at 500 yards against the small bores at 800 yards succeeded in taking eight out of fifteen prizes. At 500 and 600 yards against 800 and 900 yards for small bores, they were not so fortunate, only four prizes being won by the English Government arm.

The Quebec range is not as good as ours at Creedmoor. From some configuration of the ground, the butts being on a slope, the managers have erected platforms for the 400 yard ranges. Platforms are always objectionable, for no matter how solidly they may be built, they have an effect on the accuracy of the shooting. The Secretary, Lieutenant Col. Fletcher comments with very proper pride on the Canadian teams sent to Wimbledon, and the victories achieved by them there, and also that of the four Provincial teams the Quebec was the best.

At the fourth annual prize meeting held at Quebec, with 191 contestants, at 200 yards, the best score was 23 in seven shots, made by Trumbull of the Grand Trunk Rifles, an average of 3 2-7; arm, Snider Enfield.

At 200, 500, and 600 yards, five rounds at each distance, arm, Snider Enfield, the winning score was 47, made by J. Ferguson, an average of 3 2-15.

In the Battalion match, at 500 and 600 yards, seven shots at each range, team of five, the winner was the team of the Eighth Battalion, who made 176, which is a fair average. The best individual score was 44, at 600 yards, seven shots. Sergeant Baxter made 24; which is a very high average. And in the Association match, at 500 and 600 yards, Mr. Morrison, of the Victoria Rifle club, scored 34 in ten shots, which is very good shooting with a Snider Enfield.

In the Strangers' stakes, Snider's at 500, smooth bore at 800 yards, seven shots, Mr. Stenhouse made 26 with a Metford, which is magnificent shooting; at 500 yards Mr. Wilson made 25, which is also tall shooting. In the Ladies' cup, Captain Cotton of the Ottawa Guards, at 800 and 900 yards, made, with at Metford, 52 in a possible 56, which is a very powerful score, and hard to equal. At 1,000 yards, with a Metford, in 15 shots, Mr. Dester made 49, an average of 3 4-15, which is a shade less than that made by Mr. Adam at our own Sharpshooters' match, who at 1,000 yards made 23 in seven shots, an average of 3 2-7. The Consolation match was quite a good one; distance 200 and 500 yards, five shots at each range, the winner, Mr. Ferguson, making 35, an average of 3½.

It would be useful to the members of our Association to notice carefully the scores published by us of English and Canadian matches, so that they can form an estimate of their own shooting. Undoubtedly our progress will be rapid, but we can only get to thorough excellence by long and arduous work. Now that autumn has fairly set in, and the sun has lost its glare, no better season of the year can be found for rifle practice at Creedmoor, and we have no doubt but that many marksmen will take advantage of it. On the whole, we think from the shooting at Creedmoor, as far as teams taken from the N. G. go, we are quite up to the Canadian militia, though we are decidedly of the opinion that as marksmen at long range there are many Canadians who can beat our best men. It is always better to acknowledge at once where we are at fault, so as to do our best to remedy it. That our men had shot very little at long range arises from the very natural fact that knowing little about shooting at all, the range not having been in existence yet a year, it was wiser for men to creep before they could walk, that is to try to shoot at short range creditably before attempting longer distances. For our military organizations some of the rapid firing as at Wimbledon, in order to test the loading capacity of breech loaders and their accuracy, would be worth the future attention of the Association. Thus at 200 yards five men of an English militia regiment, in three minutes, using the Snider rifle, have fired 265 shots, making 208 hits and 57 misses; of this large number of shots, 7 were bull's eyes, 78 centees, and 123 outers.

In concluding, we trust the National Rifle Association will early in 1874 publish the list of the matches for the year, so that when the important event does occur it may draw together at Creedmoor, not only our own marksmen but that also Canadian and English riflemen may participate in the contest.

OBITUARY.—Notice has just been received of the death, at Rome, Italy, of the venerable Peter MacMartin, of 168 Fifth avenue, one of the finest anglers and students of ichthyology on the catalogue of distinguished names. His age was seventy and upwards. His daughters attended him at the time of his decease.

—What is the difference between a good soldier and a hard drinker? The one knows his colors, the other colors his nose.

X THE MANATEE, OR SEA COW.

GEN. THOMAS JORDAN, whose knowledge of interior Florida is perhaps as comprehensive as any white man's, and possibly as that of the Seminole Indians themselves, has prepared for us the annexed very interesting description of that rare and unique creature, the manatee (*manatus* of Cuvier, who wrongly classed it as a Cetacean), which is the connecting link between Pachydermata and true Cetaceans. Splendid specimens of these are found near the mouth of the Santa Lucia river, in the southern part of Florida. The General says:—"Three of these huge mammals I saw on Indian river in 1849-50, each weighing at least fifteen hundred pounds, and between fifteen and twenty feet in length. They constitute a most interesting feature of the fauna of that magnificent region for other reasons than mere rarity, and their capture affords a most exciting sport, as may be supposed from their great size as well as prodigious strength in the water. With the nose, nostrils, and lips of the ordinary cow, there is no neck, however, or marked separation between the head and body. Their two swimming paws, with greater freedom of motion than those of cetaceans, are likewise used to enable the manatee to crawl upon the low banks of the waters which it inhabits. These paws have five small finger-like claws, and nearly between these paws are two pectoral mammae. These great creatures being herbivorous, browse upon algae, aquatic plants, and the young grass at the mouth of the fresh water streams; and their flesh, delicate and tender as veal, and succulent as the best beef, is excellent. The Florida species (*Latirostris*) are much larger than those found in the Antilles, South America, or Africa, and are of quite a different genus from the sea cow of northern Russia."

In another column will be found a most interesting description from Mr. Conklin of the manatee now in captivity at the Central Park. This creature is well worth a visit.

FOSSILS IN COLORADO.

IN Colorado, in what is called the Bad Lands, Professor Cope in his paleontological researches while attached to the Hazain expedition, has come indeed across the graveyard of long departed creatures. To the labors of Professor Cope we are indebted for the discovery of no less than one hundred species, represented by an infinite variety of individuals. From colossal remains of the mastodon down to the bones of the minute rodent, all have been upturned. Even forms of insectivorous animals, as of the Talpidae, the mole family. The delicacy and minuteness of these smaller fossils, and their wonderful preservation, make them objects of especial interest. Very certainly they were the forefathers of our squirrels, rabbits, rats and mice. Of larger quadrupeds the finds have been quite numerous. Specimens of the early equine races are demonstrated by the teeth and bones. Colorado, too, in primitive times, must have had the rhinoceros in quantity, no less than seven species having been found by Professor Cope. One representative specimen of the rhinoceros is a skull with teeth. Strange individuals of this remarkable family have been brought to light, notably a horned species, approaching to the elephant. They must have been taller than the present animal, having horns. One of the larger species had a large horn over each eye, and one over the nose. What is remarkable about this discovery is—providing future researches prove these particular remains to have belonged to the rhinoceros family—that it will show a divergence from the usual laws, and that we have been too much inclined to lessen the species development of the ruminating animals. Carnivori abound. There are tiger-cats, dogs, and a new species of the *canis* family, resembling the dog, only as large as a bear. Turtle, lizards and snakes make up the reptile discoveries. The scientific world is indebted to Professor Cope for no less than 300 species of vertebrate animals, of which fully 150 are entirely new, all the result of his researches in Wyoming, Colorado, Kansas and Idaho.

OYSTERS AND JOURNALISM.

THOUGH we may think ourselves masters of the heavy puff, the brazen *reclame*, or the startling advertisement, they manage these kinds of things much better in France. A newspaper in the United States, and it might be a good one, seeks additional subscribers by offers of a chromo, or Miss Jones' Poems, (*Idyls of the heart*. Price 37½ cents), or a washing-machine, but did our enterprising publishers ever think of the allurements of a fat turkey about Thanksgiving, or of a barrel of Newtown pippins at Christmas tide?

The French are devoted to oysters. Did not Louis XI feast his learned professors at the Sorbonne once a year on oysters? There was the great soldier Turgot too, who used to bring his failing appetite back with a hundred oysters or so. Voltaire, Rousseau, Diderot, Helvetius, and all the encyclopedists, loved oysters as well as did Thackeray. Even the tigers of France, the Dantons and the Robespierres, devoured oysters, though whether Napoleon cared for them much, is doubtful. Brillat Savarin, the most learned of gastronomes! what brilliant thoughts he has devoted to oysters, and Gastaldi, a martyr to his love of good things, was said to have swallowed forty dozen of oysters at a single sitting, and then to have died gloriously of an indigestion from over feeding on *paté de fore gras*!

With appetites no doubt whetted by their recent privations, the Parisian of to-day hungers much after oysters. Ostend oysters, are worth five sous a piece, while Marenne oysters, with their green bronze color, their coppery flavor

the *bon bouche* of the gourmand, are worth twice as much. Within the last ten years the oyster beds of Rochelle, Marenne and Rochefort, and those of the Isles of Rhe and Oleron, were becoming exhausted. The French Vitellius, was coming near to the utter deprivation of his favorite bivalve, when Coste discovered how these French oyster beds could be renewed, and how oysters could be made as plentiful as in Caesar's time.

Grand oyster companies are then very much in vogue in France to-day, full descriptions of which may be found in Louis Figuier's pleasant work called "The Ocean World," and the profit arising from oyster culture seems to be quite large. There is a famous paper in Paris called the *Figaro*, remarkable not only for the brilliancy of its articles, but because once a week some member of the editorial staff is certain to have an affair of honor on his hands. The President of the *Figaro* newspaper association has started an oyster company called "La Société des Huitières du Morbihan," and each new subscriber to the paper is to have for the price of the journal, besides the *Figaro*, a barrel of oysters sent to him.

This is an idea indeed worth imitating. Not to be too suggestive, perhaps a Sporting paper might offer to the getter-up of a club a trotting horse, a journal of health, a gross of patent medicines, and a political paper, a nomination as a custom house officer.

PUT OUT THE FIRE.

WE are glad to record any advancement in the method of extinguishing fires, for it is a science to a certain extent, and he who adds by his inventive genius only one more instrument of approved appliance in subduing this great destroyer of wealth and property is truly a public benefactor. In all our large cities a vast amount of valuable property is naturally concentrated; all our great manufacturing centres are in our cities. These varied industries seem to demand greater protection than can be found in our present Fire Departments with all their improved appliances. True, they have done much good, they have fought fearlessly and well the *Fire Fiend*. Yet, many useful lives have been sacrificed in subduing the element of fire.

The last two or three great fires in the city of Boston develop one fact: they do not check conflagrations with any degree of certainty, and often much damage is the result of a too lavish use of water. Recent experiments have been made with the union of carbonic acid gas and water. This invention being in its infancy, has done something towards initiating a series of elaborate experiments, which may in the end give to the community an effective agent in the subjugation of fires. Carbonic acid gas is one of the best extinguishers of fires yet known; being composed, one part of carbon to two of oxygen. Years ago the effect of this gas was well known; no life could exist in breathing this atmosphere—containing from ten to fifteen per cent. of this element, death is a sure result.

The great ease with which this gas can be manufactured, would seem to awaken an interest within the minds of scientific and practical chemists, to see if they cannot place this powerful gas before the public in an operative form. It surely "would pay," and he who can harness his horses to a compact effective mine of carbonic gas, and by its timely application subdue a large conflagration, would merit all the honor his philanthropic invention would bestow. To generate this gas hydro-chloric acid diluted with three or four parts of water, with the dust of marble or any other carbonate only is necessary. This gas is also very elastic and can be confined like the bottle-imp in any strong metallic vessel.

We may be somewhat sanguine in our anticipations of the success resulting from a judicious application of this agent; but still we think if a warehouse contained one or two good sized reservoirs of this gas, by closing the doors on the occurrence of a fire, it could be at once distributed about the building and set free with great results. We would like to learn from others upon this subject, for we truly believe that this carbonic gas as an extinguisher of fires, is yet to do wonders in putting out fires. We fully appreciate the value of the "hand extinguishers," as they are called, and which will in many cases at the commencement of fires within ordinary dwelling-houses, be sufficient to completely extinguish the fire. What we suggest is such an application of the carbonic gas in quantities as shall completely and effectually conquer our large fires. This, we believe, will be made so effective in time that these little ten gallon instruments for the direction of a stream of gas upon a fire will be like the toys of children in comparison to what we shall yet witness.

THE LADY ARGONAUTS.

IT was our good fortune to be present at the match between the Argonauts and the Neptune Club. In our columns under the head of Athletic Sports, can be found full details of this interesting boat-race, written in the regularly approved, but somewhat inexpansive style, used in describing such events. At the risk of intruding somewhat beyond our sphere, we must needs notice the kindly influence the wives and sisters of the gentlemen belonging to the Argonauts have had on the Club. The presence of these ladies not only on the occasion of a race, but at all times, has converted the club house almost into a boudoir. Ladies may embroider flags for boat prizes, but such gifts, though excellent in their way, are rather more occasional in character than constant. The interest, the liking these ladies have taken in these sports have added immensely to the good feeling and high toned courtesy which

among the Argonauts. Woman can never be out of her sphere; she must always exert her softening influence, whether she graces the drawing room or the boat house. The club house of the Argonauts, at Bergen Point, with the La Tourette House on the Kill von Kull opposite, is most picturesquely situated, and on the occasion of the race, showed by its pretty decoration how deftly women's hands had helped to adorn it. All praise then to the lady Argonauts, to whose soft influences is due much of the prosperity, high tone and manliness the club now enjoys.

LITERARY POACHING.—Wholesale poaching upon the columns of FOREST AND STREAM has become such a systematic practice of certain sporting papers published outside of this city, that the offence has become too grievous to bear any longer without a protest. Editorial and contributed articles are transferred bodily to their pages every week without credit and apparently without scruple. In one instance the quantity of matter thus appropriated amounted to three columns in a single issue. In another instance an article of especial merit entitled "Elk Hunting in Nebraska," was copied entire into a Canadian paper. But the unkindest cut of all was that of a paper out west which copied one of our editorials on the Penetration of Rifle Balls, and in the parallel column coolly announced that a paper by the name of FOREST AND STREAM was about to be issued. This was after we had printed our fourth number. Now, gentlemen, you who profess to be such nice sticklers for the observance of the game laws, ought to have enough respect for the rights of brother sportsmen, not to poach upon their game preserves. There is little enough of encouragement, in times like these, to stock our FOREST AND STREAM without having the products of our labor continually filched from us. Certainly, if they are worth taking, they are worth acknowledging in the usual way. We print our paper entirely from resources within ourselves, and do not ask to be handicapped in the race for success. We shall gain it eventually on our own merits, and without that little assistance which a courteous recognition of the articles you copy would perhaps afford us. We do not ask now for an *amende honorable*, but trust that you will recognize the justice of our strictures, and govern yourselves accordingly in future.

FISH CULTURE IN CHINA AND JAPAN.

By kindness of George Shepard Page, Esq., President of the American Fish Culturist's Association, we are enabled to publish the following interesting and valuable correspondence relating to the subject of fish culture in China and Japan:—

DEPARTMENT OF STATE, }
WASHINGTON, September 23, 1873. }

George Shepard Page, Esq.:

SIR—Referring to your letter under date of 1st of July, 1872, requesting information relative to the methods in use in China and Japan for the artificial propagation of fish, I have now to enclose for your information a copy of despatch No. 631, dated July 30th, 1873, from the Vice Consul General of the United States at Shanghai, China, which contains all the information which he has been able to obtain bearing upon the subject of your inquiries. I am, sir, your obedient servant,

[Copy. No. 631.]

W. HUNTER, Acting Secretary.

UNITED STATES CONSULATE GENERAL, }
SHANGHAI, July 30, 1873. }

Hon. J. C. B. Davis, Assistant Secretary of State, Washington:

SIR—Reverting to your instruction No. 316 and to despatch No. 576 which I had the honor to address to you in acknowledgement, I now regret to say that any efforts to meet the inquiries made by Mr. George Shepard Page concerning the culture and rearing of fish in China have proved of little success. Had I been able to visit during the spring months the parts of this and adjoining provinces where, report says, the culture of fish is to some extent carried on, I would have been able to make from personal inspection a report more satisfactory than I now can offer.

My numerous applications for information have not succeeded in eliciting anything of value. The fact of making requests of natives for details of fish culture is met at the outset with suspicion by those possessing information and the heresy of those who feign some knowledge thereof is neither accurate or trustworthy. The authors of appropriate Chinese books assert that the art of fish culture obtains, but I am unable to find a single one offer particulars as to time or place, or any details whatever. Some intelligent natives of this port say that fish breeding is carried on to a small extent in this province by the use of earthen jars, in which the spawn is placed and shaded by a peculiar weed, which also furnishes a food for the young fry, but beyond the recital of the fact their ideas are confused. I have not been able to obtain the botanical name of the weed.

Spawn is carried in various ways from the coast waters to the interior. On the Yangtze river near Nanking, there exists in the appropriate season a large natural spawning ground, and about the middle of May the fishermen fence off with bamboos and mats a portion of the shallow part thereof. Passing boats, for a consideration, obtain the water within these bounds, which is impregnated with spawn. By means of earthen jars it is carried into the interior and deposited in artificial lakes, and in canals which are without the influence of live water. In some cases eggs are "blown" and re-filled with spawn. They are then placed under hens with other eggs hatching. When the incubation is perfect the spawn eggs are placed in water heated by the sun and in a short time the fish develop.

I am without information as to the extent of fish culture or its cost. I am not aware that the fish found in China have ever been classified; but a description of the varieties seems to have been given by Dr. John Richardson in 1845, as appeared in the report of the British Association for the advance of science. I have not the paper at hand; the distinction given in Chinese is very inaccurate. Shad of fine quality abound north of the tropical line. Cod and mackerel are caught in large quantities in the Yellow sea and Gulf of Pechili, and trout are said to be found in mountain streams in the interior and Formosa. The apparatus used in any process is of the most primitive sort. The fish wiers in the canals of this province are made of reeds and bamboos, united by strong ligaments and serve only as a means to drive the fish into the nets. I much regret that after so long a delay I am unable to meet more intelligently the request for information made by Mr. Page. I am, sir, your obedient servant,

O. B. BRADFORD, Vice Consul General.

—Here is the epitaph of a hunter:—

Here lies John Mills, who over hills

Pursued the hounds with hollis;

The leap, though high, from earth to sky.

Sporting News from Abroad.

ARE pheasants with their lustrous plumage, absolutely *ferre nature*? English sportsmen must think them so, for just now in default of grouse, or partridge, these handsome birds are being slaughtered indiscriminately in the preserves. We cannot help but think, that this kind of sport partakes of the white kid and *fauteuil* shooting. Imprimis, your single pheasant's egg costs about the price of three dozen chickens eggs; then the young birds are watched carefully from the time they chip the shell; then they are cared for and fed not perhaps exactly as a leading English journal intimates on filtered water, on fried worms and sifted oatmeal, but certainly pretty much as a sweet lady would tend the inmates of her aviary. Whether the pheasants have ribbons around their necks, and are bathed regularly by the game keepers, we are not prepared to affirm. Englishmen in fact are always in doubt as to the exact status of this exotic creature, whether he be a tame or wild bird. All the unfortunate pheasant knows about it is, that pampered until mid-October, cared for *soignée* as would be a canary bird in a boudoir, all of a sudden, he is flushed up in the most rude and unexpected way, and quite uncertain whether it is a handful of buck-wheat or ants eggs, which is to claim his attention, he gets the contents of an Eley cartridge No. 8. from an unerring breech-loader, into his flank, and tumbles over dead, sully his gaudy plumage, representing sport at the cost of certainly a half guinea per bird. "I can't wear these lavender kid gloves any more, Cool. Take them away Cool," says some well bred gentleman on his return from a ball at the Duchess's to his valet. "I have danced once in them, put them aside in my drawer, they will do for pheasant shooting, if they are not too soiled." But give this elegant gentleman his due. Beneath the delicate kid, there may be muscles of steel indured by exercise, and when he does encase his taper fingers in the old party gloves, woe to the birds, whether erratic grouse, swift flying partridge, or more heavy pheasant. Once covered, if in possible distance, down goes the bird, before his unerring breech-loader.

—Does it not look as if the modern careful process of agriculture would in time entirely destroy game in England? It seems to be according to our English contemporary quite a serious question. Take the American mowing machines used in England, where they cut the wheat stalks as close down to the ground as a barber shaves the hairs from a man's chin, and where is your stubble? Birds even if not disturbed, in the few inches of stalk left, must suffer from the want of protection, and in raising their young, must meet with great difficulties. It seems to be a case of McCormick, V. *Perrin et alii*.

—Now is the time for dog shows, and at Nottingham, under the auspices of the National Canine Society, there is assembled a whole universe of dogs, yet all of high degree; in fact, an assemblage of princes. The catalogue includes some sixty-seven classes, divided under the appropriate general heads of sporting and non-sporting dogs. Here you may find the mighty Monarch, a mastiff—height, 33½ inches; girth of body, 44 inches; weight, 176—down to so small a dog that, whether it be a large insect or a toy terrier, to be carried in a lady's portemonnaie, you are quite uncertain.

—People, nationalities, do not anglicise readily. Your Englishman may take to Polo and beat the Thibetians at it, but whether the Thibetians would take to skittles, or hockey, *en revanche*, is questionable. An Englishman has introduced cricket into France, and stumps are pitched, and balls are bowled on a pretty French lawn to-day, and the village authorities take an interest in the game. It is in Brittany that this wonder has been accomplished. We suppose the game might in time take root simply because the Bretton and the Cornish man are of the same race. "I never saw," says an English correspondent to *Land and Water*, "but one Frenchman join a cricket club, and on getting a blow from a ball on the leg he never put in a second appearance." Imagine a true Parisian getting a swift cricket ball—a hot one—in his fingers!

—The fungologists have lately been in their glory; and pray what is a fungologist? It is a human being devoted to the study of mushrooms, both wholesome and poisonous. South Kensington was reveling, at last accounts, with puff-balls, beef-steak fungi, and the *Boletus edulis* and the *Coprinus cornutus*. It is a passion like anything else, and there is nothing better in the world to be well acquainted with in both a scientific and edible sense, than a good dish of well prepared mushrooms.

The report of the Mayor of Vienna shows that of 400 wells used by the Viennese, "not one of all this number contained water which was really fit for drinking." As there are no less than 11,000 houses in the Austrian capital, according to the *N. Y. Times* correspondent, most all of them depending on wells for water, the examination of all of them would have been impossible. It is all very fine for Vienna to have had an Exhibition of the world's wonders, but it would have been even better if the amount spent for the Exposition had been used to bring pure water into the city. The Danube water is of such wretched quality that it cannot be used. The old Romans know this and supplied themselves with water from distant sources by means of aqueducts. It seems strange to us in this newer world, with all the advantages they may have in the older countries, of not only experience but scientific knowledge, that the people there should show such utter indifference to one of the first and greatest necessities of a crowded population, and that is good and palatable water.

Scouring the plain—washing your face.

The first methodical attempt to introduce fresh Australian beef into England is now on the point of being tested. A ship has been loaded at Melbourne with quarters of beef and is now on her way to Liverpool. The meat is placed in a close iron tank and this is covered with a coating of blocks of ice. There is no reason why the Australian beef should not arrive in a perfectly sound condition, even after a ninety day's voyage. Whenever the methods for reducing temperature are rendered possible by simpler chemical and mechanical processes than those now employed, meat will be sent all over the world. The time will come when Galveston, with her Texan cattle all slaughtered and dressed, will send her beef not only to the Eastern States, but all over the world.

The Horse and the Course.

—The American Jockey Club held the fourth day of the Autumn meeting at Jerome Park, near Fordham, on October 15th. The attendance was large, many more people in carriages were noticed, and the weather was sublime. The track was in good condition but very dusty, and the racing afforded amusement and recreation to hundreds of persons who are not accustomed to frequent race-courses, owing to the proper observance of law and order. The first race was for a purse of \$500 for three year olds. Distance one mile and a quarter. Nine horses came to the post, and started very evenly. After running once round the course it became evident that the race lay between Catesby, Carribou and the Wizard; Catesby won after a hard struggle, under whip and spur, in 2-14. The second race was for a purse of \$500 for two year olds. Distance three quarters of a mile. Five colts and fillies came to the post and Mr. Connor started them evenly. Macaroon led round the bluff, followed closely by McDavid's colt; Westcock swerved and bolted. After a desperate race, McDavid's colt shot ahead just at the post and won the race by a short head. Time 1-18½. The third race was the Free Handicap Sweepstakes of \$40 each, with \$800 added by the club. Distance two miles. Seven horses came to the post. Harry Bassett took the lead and maintained it throughout the race, winning easily. Kate Pease second. Time 3-39½. The fourth race was for a purse of \$400. The winner to be sold by auction. Distance one mile and an eighth. Six horses came to the post and again the start was a capital one. Minnie Mc., the favorite, won easily by several lengths in 2-01½ and was bought in by the owner for \$1310. The fifth race was a match for a \$1000 a side, between McDaniel's Cora Linn and Bell's Cross the Sea. Distance one mile and three quarters. Cora Linn took the lead and won very easily. It was a very slow race. The sixth race was a match of \$500 a side, between Mr. Belmont's Gray Planet and Mr. Lorillard's Girl of the Period. Distance half a mile. Gray Planet took the lead and won easily by several lengths. This was a ridiculous distance for four year olds; mile heats would have tested the respective stamina of the horses, and made the match interesting to the outside public. The seventh race was the Handicap Steeple Chase. Purse of \$800. Distance about two miles and a quarter over a heavy hunting course. Five horses started. This was a very exciting race, and the public took especial interest in it, owing partly to the novelty and the chance of an accident. The horses jumped the hurdles in good style, Mary Clark leading, followed by George West and Bibakiba, but on getting to the top of the hill, to the right of the stand, she seemed exhausted, and on going down the steep decline, George West came to the front, the little mare recovering herself, closed on George West, and they both jumped the last hurdle together. George West was too fast for the "little gray" on the flat, and finally won a most exciting race without accident of any kind by a length.

—The American Jockey Club held the last day of the autumn meeting at Jerome Park, Fordham, on October 18th. The weather was cloudy and threatening, which tended to keep many persons from visiting this beautiful course; as it was, the attendance was very fair, the racing was in every respect satisfactory and closed as handsome a fall meeting as was ever witnessed at Jerome Park. The first race was a dash of a mile and one-eighth for maiden three years olds. There were four entries all of which came to the post. They got away with a good start, Carribou in the lead, McDaniel's filly next. This order was soon changed as Periwinkle went to the front, and was never caught, and won by four lengths in 1-17½. The second race was a dash of three quarters of a mile for two year old maidens. There were five entries. After another good start Macaroon and Weathercock were neck and neck on the lead. Macaroon hard held, won by four lengths in 2-03½. The third race was a full handicap of one mile and five furlongs. There were nine entries, Mr. Sandford scratching Mate at the last moment. After several false starts the flag fell to an even send off. Lizzie Lucas went to the front and made the pace very fast; on the lower turn Shylock and Merodac were together, which resulted in a splendid race for home, Shylock lasting the longest, and won by half a length, Merodac second, time 2-56½. The fourth race was for a purse of \$1,000. Distance two miles and three quarters. There were three entries, but Mr. Sandford having withdrawn Preakness, the race was a match between True Blue and Katie Pease; the former giving the latter twenty-one pounds. Katie Pease made the running, but True Blue won the race easily in a hard gallop by eight lengths, time 5-10½. The fifth race, was a handicap sweepstakes for all ages, \$25 each with \$500 added by the club. There were

eight entries all of whom started. Distance one mile and a furlong. The start was one of Mr. Conner's best efforts. Quits, an outsider, made the running and won an exciting race by a length in 2-01. Kadi second. The last race of the meeting was a handicap hurdle race, entries free, about one mile and three quarters over a fair hunting course. The owners of the horses seemed disinclined to start them, owing to the weights being too heavy, but Mr. Wheatly, Secretary of the club, used his influence, and succeeded in getting the owners of Lochiel, Revenge, and Bibakiba to start their horses. At the fall of the flag Lochiel jumped off with the lead followed by Revenge, leaving Bibakiba standing at the post, the starter charging, however, that Murphy wilfully pulled the horse. Lochiel jumped the hurdles clean and well, and won by a dozen lengths. Murphy the jockey of Bibakiba, was expelled the course which includes expulsion from all race tracks in this country and Canada.

—The great race of four-mile heats at the Oakland Trotting Park, San Francisco, October, 18th, attracted fully 5,000 spectators, intense interest being centred on the performance of Joe Daniels as against California bred horses, Thad Stevens being the selected favorite. The race was for a purse of \$5,000, of which the winner received \$3,000, the starters being Joe Daniels, Ballot Box, Thad Stevens, Irene Harding, and Kate Gift. The start for the first heat was good, Joe Daniels winning it easily in 7-42½, each mile being run as follows: 1-58, 1-59, 1-56½, and 1-48½. For the second heat the horses got away well together, Joe Daniels leading for the first mile. In the second mile he was headed by Thad Stevens, who retained the lead, winning it in the extraordinary time of 7-30, Ballot Box second, Joe Daniels third, and Irene Harding fourth. The third and deciding heat was also won by Thad Stevens in 7-43, Joe Daniels second, Ballot Box third, and Irene Harding fourth. Thad Stevens' victory was received with tremendous applause, and there is already talk of sending him East. Careful observers who saw the race think that Joe Daniels will yet turn the tables on the California horses, it being plainly evident that he was short of work, and had not fully recovered from his journey.

The winner, Thad Stevens, was bred in 1865, and is by Langford out of Mary Chilton, she by imported Glencoe out of an American Eclipse mare: granddam Queen Mary, by Bertrand; Langford being by Belmont out of Liz Givens, she by imported Langford out of Charlotte Pace, by Sir Archy.

—The Maryland Jockey Club, have postponed the opening of their meeting until to-day, on account of the late storm, and heavy condition of the track.

Shot Gun and Rifle.

GAME IN SEASON FOR OCTOBER.

Moose, <i>Alces Melchis</i> .)	Caribou, <i>Tarandus Rangifer</i> .)
Elk or Wapiti, <i>Cervus Canadensis</i> .)	Red Deer, <i>Capreolus Virginianus</i> .)
Rabbits, common Brown and Grey.)	Squirrels, Red Black and Gray.)
Wild Turkey, <i>Meleagris gallopavo</i> .)	Quail, <i>Ophrys Virginiana</i> .)
Woodcock, <i>Scolopax rusticola</i> .)	Pinnated Grouse, <i>Tetrao Cupido</i> .)
Ruffed Grouse, <i>Tetrao umbellus</i> .)	Curlew, <i>Numenius Arquala</i> .)
Esquimaux Curlew, <i>Numenius borealis</i> .)	Sandpipers, <i>Tringa</i> .)
	Pigeons, and all kinds of Wild Fowl

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—Wm. C. Prime, author of "I go a Fishing," has been at Paul Smith's, St. Regis Lake, Adirondacks, for two weeks past deer hunting.

—The farmers of Staten Island have warned all sportsmen by posters that they cannot allow shooting on their grounds.

—Mr. Richard Ramft and friend leave for Weldon, N. C., this week for quail and duck shooting. Several gentlemen leave for North Currituck, N. C., on Saturday next.

—We hear of several deer being killed last week on Long Island, in the vicinity of Islip, by members of the South-side Club, and one pair of antlers is credited to Recorder Hackett. We regret that the animals were run to water by dogs. A single trophy ought to be reward sufficient for a whole day's persistent stalking.

—Marriner A. Wilder, Esq., of this city, who is largely engaged in lumber manufacture in Nova Scotia, and is withal a veteran moose hunter, returned last week from a fortnight's sojourn on the Lower Raquette, Adirondacks, where he bagged three deer. We tender our thanks for a sample of the venison.

—The second annual fall gathering of the Blooming Grove Park Association took place on their grounds in Pike county, Pennsylvania, on the 16th inst., and continued three days. There was an attendance of some fifteen members and a goodly number of ruffed grouse were brought to bag. We understand that hounding deer has been prohibited at the Park.

—The season for quail shooting in New York State began October 20th, under the game law, and will continue until the 1st day of January. Quail are reported in considerable quantity in the vicinity of Rochester, and grouse and woodcock in abundance. Snipe have not been plentiful in that section, on account of the dry season, though a few are found near the marshes, exceptionally good bags having been made on the Brackett marshes a week ago. The birds are not distributed at all, and are found only in localities.

Yachting and Boating.

—The New Jersey Yacht Club held their second regatta (the first one being only a drifting race) on October 15th, which unfortunately terminated fatally. The yacht Julia (Commodore Morton), while on her return from the regatta, just opposite the Pavonia Ferry, suddenly shot from behind a tow of canal boats in front of the ferryboat James Fisk, and was run down. On board the yacht there were the Commodore, Edward Morton, Mr. W. Shippen, Jr., W. Schroeder and Mr. Smith, all of whom were thrown into the water. The ferryboat was immediately stopped and life preservers were thrown out. Young Schroeder was struck on the head by the paddle wheel, but was not stunned sufficiently to prevent him from grasping one of them until rescued. Young Shippen was picked up by men in a small boat. Commodore Morton was nowhere to be found. He was undoubtedly struck by the paddle and drowned. The others were saved.

—Commodore Morton's body has been found, and has been taken to Newburg for burial.

—The Regatta Committee of the New York Yacht Squadron submit the following report of the ocean regatta sailed on the 9th ult., for prizes presented by James Gordon Bennett, Esq., Commodore of the club.

The prizes offered were as follows, viz. :—

First—Prize of the value of \$1,000, to be sailed for by schooner yachts belonging to any organized yacht club, from an anchorage off Owl's Head, New York Harbor, to and around the lightship on Five Fathom Bank, off Cape May, N. J., and return to Sandy Hook Lightship.

Second—Three purses; one of the value of \$1,000 and two of the value of \$250 each, to be sailed for over the same course, upon the same day, and open to the following classes of vessels hailing from any port in the United States:

1. Pilot boats.
2. Working schooners of not less than 25 nor more than 300 tons, old measurement.
3. Schooner smacks.

In this race the first vessel arriving at the winning post to take a purse of \$1,000; the first vessel arriving of each of the other two classes to take a purse of \$250.

The entries were as follows, viz. :—

YACHTS.		
Name.	Owner.	Tonnage.
Enchantress.....	J. F. Loubat.....	276.16
Alarm.....	A. C. Kingsland.....	225.17
Clio.....	T. B. Asten.....	59.18
Eva.....	T. C. P. Bradhurst.....	77.50
Atalanta.....	E. Burd Grubb.....	77.50
Dreadnaught.....	William Astor.....	145.41
	A. B. Stockwell.....	240.00
PILOT BOATS.		
Widgeon, No. 10.....	New York Pilots.....	105.09
Hope, No. 1.....	New York Pilots.....	132.04
Edmund Blunt, No. 21.....	New York Pilots.....	85.00
C. H. Marshall, No. 3.....	New York Pilots.....	165.00
James W. Elwell, No. 7.....	New Jersey Pilots.....	—
Thomas S. Negus, No. 1.....	New Jersey Pilots.....	—
Mary E. Fish, No. 4.....	New Jersey Pilots.....	—

WORKING SCHOONERS.

Reindeer.....	B. Captain Howard.....	140.00

SCHOONER SMACKS.		
Wallace Blackford.....	E. H. C. Rodgers & Co.....	80.00

THE RACE.
The preparatory signal was given at 3:02 P. M. The vessels were started at 3:12 P. M.

The person who was sent to Cape May to take the time of rounding the Five Fathom Bank Lightship was unable to board that vessel, because of the strong northeast wind and high sea prevailing, and no official time at that point can be given.

HOME TO THE LIGHTSHIP.

The time of arrival at Sandy Hook Lightship was as follows:

YACHTS.		
	H. M.	
Enchantress, October 11.....	6 49	A. M.
Dreadnaught, October 11.....	8 30	P. M.
Clio, October 12.....	1 22	A. M.
Alarm—not taken.		
Eva—not taken.		

PILOT BOATS.		
	H. M. S.	
Thomas S. Negus, October 11.....	8 49	30 A. M.
Widgeon, October 11.....	12 33	30 P. M.
Mary E. Fish, October 11.....	7 40	00 P. M.
James W. Elwell, October 11.....	8 25	00 P. M.
Edmund Blunt, October 11.....	9 44	00 P. M.

WORKING SCHOONERS.		
W. H. Van Name, October 11.....	10 52	00 P. M.
Reindeer—not taken.		

SMACKS.		
Wallace Blackford, October 11.....	11 44	00 P. M.

THE WINNERS.

The prizes are awarded as follows:—

- The Yacht prize to Enchantress.
- The \$1,000 purse to pilot boat Thomas S. Negus.
- One \$250 purse to schooner William H. Van Name.
- One \$250 purse to smack Wallace Blackford.
- All of which is respectfully submitted.

FLETCHER WESTRAY,
WILLIAM KREBS,
E. E. CHASE,
CHARLES A. MINTON.

Regatta
Committee.

—The new schooner yacht Ibis, of the New York Yacht Club, bound around to Philadelphia last week, when off Bombay Point, Delaware Bay, lost her bowsprit, jib-boom, flying jib-boom, and all head gear, through stress of weather. She was taken in tow by the revenue cutter Hamilton.

—On the 22d of September Mr. Loubat, of the Enchantress, challenged Mr. Stockwell, of the Dreadnaught, to sail for the Cape May Challenge Cup on October 14th. The Dreadnaught did not make her appearance. At 12h. 13m. P. M. the Enchantress sailed over the course and claimed the cup, which was awarded to her by the Regatta Committee.

—The Meta vs. Vision yacht race, as to which is entitled to the prize, has not yet been decided; the judges cannot agree on a referee. Both yachts are laid up for the winter.

—The yachts Agnes, Columbia, Mariquita, Magic, and Undine are still in commission, and are at anchor foot of Court street, Brooklyn.

—The Neptunes, of Greenpoint, New York, and the Argonautas, of Bergen Point, New Jersey, rowing associations, held their fourth annual four oared scull race on Saturday, October 18th, for the championship of the Kill von Kull river. The Neptunes had previously won twice and the Argonautas once. The steamers Pleasant Valley, Josephine, Berbeck, &c., were loaded with guests, friends, and members of the different clubs. The Nassaus, Atalantas, Alcyons, Philadelphias, and other clubs sent several of their members; there were also present others who take a lively interest in this exhilarating pastime. The course was three miles straight away, from the can buoy to the lighthouse. There was some delay in starting, owing to the steering gear of the Argonautas getting out of order, and they had to run ashore to fix it. As the day was very chilly on the water, the Neptunes pulled around to keep themselves warm, and having shipped some water, owing to the swell of a passing steamer, they had also to row ashore. The shells now got into line, and were started very evenly by Commodore Brady, the Argonautas taking the water first and pulling a stroke of forty-one to the minute, the Neptunes pulling thirty-nine. When about three hundred yards had been rowed the Argonautas were two boat lengths ahead; after this both crews pulled pretty evenly for the first mile. It was evident to all that the Neptunes could not stand the pace, nor was there that uniformity of stroke or strength put into it that they had showed on previous occasions. The Argonautas were now five boat lengths ahead, and increasing their lead with every stroke, and on passing their club house, which was thronged with friends and gaily dressed with flags, an enthusiastic cheer was given as they saw they had won the champion flag of the river. The Argonauta's time was 15m. 49½s., the fastest on record, and about eight boat lengths ahead. The Neptune's time was 16m. 12½s. The shell of the Argonautas was built by Roahr. The Neptunes were coached by John Biglir, and rowed in a boat built by Elliott, of Greenpoint. Captain Ray, of the Neptunes, in handing the champion flag to President Warner, of the Argonautas, stated that although one of their men was sick, and the crew had rowed but seldom together, he must confess that the start was an excellent one, and they lost the race by being out-pulled. President Warner, in receiving the flag, made a neat but happy reply. The day's enjoyment ended by a supper given at the beautiful La Tourette House, and a dance at the club rooms. Next year will witness an exciting race, as the clubs stand even, both having won twice.

—The Yale College Navy held their annual autumn regatta on October 15th at Lake Saltonstall, some five miles from New Haven, on the Shore Line Railroad. The fine weather attracted a large number of non-boating students and their friends. The regatta was the best managed that the navy has held for several years. The first race was for shells, and two crews, not belonging to the college, entered as follows:—

Collegiate and Commercial Institute—W. P. Day, bow; W. P. Glover, H. G. Otis, C. C. Ford, T. G. Johnston, L. M. Dole, stroke. Colors, blue and white.

Hopkins Grammar School—W. A. Ransom, bow; H. H. Hostetter, M. Wilcox, J. E. Brainard, J. Wurts, J. A. Porter, stroke. Colors, blue.

The grammar school crew drew the inside, and the crews started a little after three o'clock. The institute crew took the lead at once, and kept it to the end, winning the race in 14m. 16½s. Grammar school crew, 15m. 23½s. The prize was six badges, valued at \$60; course two miles.

The second race was for single sculls. The following entered:—

A. Wilcox, '74; N. Martin, '75; R. J. White, '76; W. C. Hall, scientific school, '75; T. A. Vernon, scientific school, '75. The colors of the first were white; second, blue; third, blue and white; fourth, magenta; and fifth, black.

Hall drew the first place, Martin second, Wilcox third, and Cook outside. The crews all started finely, and kept quite even for half a mile. On the return Wilcox led until nearly in, when Cook made a spurt and passed in ahead in 15m. 29½s.; Wilcox, 15m. 33½s.; Hall, 15m. 55½s.; Martin, 16m. 18½s.; Vernon, 17m. 17½s. Prize, the Southworth cup, valued at \$300. Course two miles.

Wilcox claimed that Cook fouled him at the stake boat. The contest was exciting and warm.

The third race was for barges. The entries were as follows:—

Class of '74—J. L. Scudder, bow; H. H. Chittenden, W. S. Halstead, W. K. Harrison, H. DeForest Weeks; J. N. Brown, stroke; D. C. Holbrook, coxswain. Colors, white. Class of '75—C. L. Noyes, bow; J. W. Brooks, E. H.

Benton, C. W. Cochran, H. J. McBirney; C. F. Cutler, stroke; G. Howard, coxswain. Colors, scarlet.

Class of '77—P. J. Wilson, bow; E. V. Baker, W. M. Barnum, C. H. Shelton, F. J. Stimson; A. W. Cole, stroke; J. M. Townsend, coxswain. Colors, magenta.

Scientific School, '76—A. E. Nichols, bow; W. M. Newhall, M. G. Nixon, C. A. Claffin, C. L. Brace; C. B. Rockwood, stroke; F. Wood, coxswain. Color, blue and white.

In this race the crew of '77 drew the inside, Scientific School next, and '75 outside. A fair start was made, but the contest narrowed down to the crew of '75 and the Scientific. The latter won, closely followed by '75. Time—Scientifics, 13m. 33s.; '75 crew, 13m. 42s.; '74 crew, 14m. 24½s.; '77 crew, 14m. 36½s. This is claimed to be the best barge time at this place. The course was two miles, and the prize six silver goblets.

The fourth and last race was a shell race. The following were the entries:—

Class '74—G. M. Gunn, bow; H. D. Bristol, G. E. Munroe, W. O. Henderson, J. A. R. Dunning; C. D. Waterman, stroke. Color, blue.

Class '76—H. W. DeForest, bow; F. N. Noyes, V. H. Metcalf, S. D. Harrison, D. H. Kellogg; R. J. Cork, stroke. Color, scarlet.

Scientific School—J. C. Webber, bow; W. R. Upham, G. L. Brownell, R. D. A. Parrett, J. Kennedy; F. Wood, stroke. Color, white.

The scientific crew withdrew on account of lack of practice. The '76 crew took the inside place, and the shells started about five o'clock. Both crews steered widely, '76 especially so. The '74 crew led two-thirds of the distance, but the '76 crew used the English stroke and won the race. Their time was 19m. 23½s.; '74 crew, 19m. 43½s. The distance was three miles, and the prize six gold badges.

—Joseph C. Cloud, the oarsman who started from Philadelphia some months since to row to New Orleans by canals and rivers, was found in his boat on the 16th inst., five miles above Plaquemine, La., in an exhausted condition, and died next day. His diary shows that he had been suffering with what he termed the "heavy shakes" for some days before his death. The only marvel is that he could have endured the malaria of the river bottoms so long without fatal results. Why didn't some humane person caution him about the river fever? We doubt whether whiskey had anything to do with determining his fate.

—The Palisades and Vesper crews, of Yonkers, will row an eight-oared barge race to-day. The steamer Virginia Seymour will leave Gas House Dock at 2:45 P. M.

—The Atalantas and Nassaus row a four-oared race this afternoon (Thursday) on the Harlem river. The Nassau crew comprises Messrs. Montgomery, Johnson, Brown, and Walker. The Atalanta crew—Dr. Withers, Speir, Blake, and Van Raden.

—In Portland Harbor, Me., last week, C. M. Henry, the present champion, rowed a race for a silver cup and the championship, against John Kennedy; distance two miles. Henry won in 16 minutes and 40 seconds.

BUFFALO, N. Y., October 16, 1873.

EDITOR OF FOREST AND STREAM:—

The great rowing match between the Hibernian and Black Rock rowing clubs is lost and won.

The morning of the 11th, the day set down for the race, dawned clear and bright, but as the day wore on, it became more and more threatening, and at the hour appointed for the race a drizzling rain had set in. Nevertheless it attracted some five or six thousand spectators who lined the banks from the starting point to the stakeboats.

Both the crews bore the reputation of being first-class oarsmen, consequently the friends of each were sanguine their favorites would win.

The Black Rock crew won the choice of positions, and about fifteen minutes past three bore down the harbor and took their place opposite the judges' stand, shortly followed by the Hibernians.

The men in the contesting boats were as follows: Hibernians, Banshee crew; James Noonan, bow; Patrick Hurley, No. 2; William Jones, No. 3; Cornelius Donovan, stroke; boat, Wm. Weston.

Black Rock crew: Joseph Raymond, bow; Edward Powe, No. 2; Benj. Pfeiffer, No. 3; George Raymond, stroke; boat, P. P. Pratt.

At twenty minutes past three the word "go" was given, and the race began. The Black Rock crew took the water with a powerful stroke, before the word was fairly given, thereby having the advantage of a stroke or more. The "Banshees" started off nicely with a quick, powerful stroke of forty to the minute. At this time the greatest excitement prevailed among the spectators, and odds were freely offered on the Banshees, who seemed to gain steadily inch by inch upon their formidable antagonists. Now they are neck and neck, each fighting bravely for the advance, the friends of each cheering loudly as either gained the slightest advantage. At length the Banshees draw away slowly, and upon reaching the two mile stake-boat were fully twelve feet ahead. In making the turn they had the misfortune to get afoul the stake-boat, which gave the Pratts the advantage on the home stretch of five or six boat lengths. Nevertheless they did all they could to lessen the distance between them, and made a splendid pull over the balance of the course, gaining rapidly on the Pratts, who reached the judges' stand two boat lengths in advance.

The average weight of the Pratt crew was 169 pounds, and the time made by them was 26 min. 36½ sec. The Banshees' average weight was 148 pounds, and their time 36 min. and 44 sec.

The time made by both crews was remarkably good, and has seldom been beaten, as the course was two hundred feet over the required four miles.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

COAST FISH.	LAKES.
Bluefish, Skipjack, Horse Mackerel, Spanish Mackerel, (Cero maculatum.) Weakfish, Squetang (Trout) Otolli-	Black Bass, (Micropterus nig) and archigan.) (two species.) Pickerel, (Esox reticulatus.) Pike perch, (Lucioperca Americana.)
BAYS AND ESTUARIES.	
Striped Bass, Rockfish. (Labrax lineatus.)	

—There is positively no striped bass fishing or any other fishing down the Bay, and all the boats come in "clean." On Saturday, Messrs. Clerk and Abbey took seven small bass after a most persistent trial of the Jersey flats and lower bay; but "what are these few among so many." At Hell Gate and the Little Gate business has fallen off, and squids glitter in the surging tide in vain. At Pelham bridge Henry Harbeck has beaten the game, we think, having made a very fair score the past week.

—Thomas S. Steele, an expert angler of Hartford, Ct. to whom we owe many favors, sends us the "paper patterns" of seven of the monster trout of Maine which were caught last summer and the year before in Mooselucmagantic Lake and the Rangely river. Their captors were R. G. Allerton, Dr. G. A. Mills, L. B. Reed, and Mr. Steele, and their weights in avoirdupoise were respectively as follows: 5 pounds, 2 ounces; 6, 7, 7½, 8½, and 10 pounds. As we shall have little more to report respecting trout fishing until the advent of spring, we can bring the subject to a no more graceful conclusion, especially as regards the wonderful waters of Maine, than by printing the following letter from C. Pennock, a guide well known to anglers on Rangely waters, and whose veracity is undoubted:

RANGELY, October 14th.

EDITOR FOREST AND STREAM:—

On Lake Mooselucmagantic there has been dull fishing the last of this season. Kennebago Lake and the outlet at the foot of Rangely Lake have beaten everything for numbers and size. This fall I went up the stream Kennebago October 3d, with a gentleman from Boston and he caught thirty trout in two hours' time. They weighed 59 pounds. We met a party on the stream who caught twenty trout, one of them weighed 9½ pounds. October 6th I went up again with another party and caught a fine string, two of four pounds among them. Joseph Lamb, another guide, went up the next day with a stranger, and the two of them caught 75 pounds in just one hour; one of them weighed eight pounds. On the 10th I went up with a party and we caught twenty trout which would average two pounds each. The water was the highest that it has been this season. At the outlet and dam they have caught a great many trout and most of them large. They have caught twenty a day on an average, that would weigh four pounds each, for the past few days. Sammy Clark, another guide, caught in one day what fish he sold for \$10, and he sold them very low at that. Fishermen are plenty and will be until the season closes. Respectfully yours,

C. PENNOCK.

—From the South we have received a pleasant letter. Our correspondent goes fishing from Savannah to Thunderbolt, and through Ossabaw Sound, and plies the line through many of the estuaries and water courses which interlace Southern Georgia below Savannah. Fish he gets in plenty, the sheeps-head, the whiting and the croaker, and not only did the fish bite, but also did the mosquitoes, represented as singing of nights like "a full brass band." Turtle too, did our correspondent find, a lordly aldermanic fellow of 175 pounds having been captured. No such exciting sport can be found as that the turtle affords. You spy him from afar off floating in the undulating surface of the water sometimes miles from the shore. Slowly, cautiously your boatman rows the skiff to the turtle; the least clumsy splash of an oar would disturb his siesta. At last you get behind him, and inch by inch you approach him. Then you stoop well over the bow, and turn your turtle. Ahem! Turn him? It seems easy enough to say "turn him," but how do you do it? You bend down, leaning far over the bow of the boat, make both hands meet under his belly in the water and you lift Mr. Turtle clean out of the sea and tumble him backwards into your boat. It is surprising how light a turtle is in the water and what a dead weight he is when out of his element. No matter if he does struggle a little and dash his flippers at you, the only thing really to be afraid of is the barnacles which almost always grow on his sides and cut like knives into the arms and wrists when you hold him in your embrace. Of famous turtle catchers in the approved method, one who can turn a monster of any size and land him with such a clatter in the boat that you would think the frail bottom would come out, we give the palm to Captain Buckley of the steamer "Virgo." People fish in and around Savannah all the year round, and there is a certain bank, off Tybee Light, near the Light Ship, where bass are captured in quantity. There may be found in Savannah not only good fish but excellent company.

—Professor Uhler, chairman of the committee appointed to investigate the causes of the disappearance of fish from Maryland waters, reports that all the rivers in the State are gradually filling with mud and sediment, carried into them from the cultivated soil by the rain and freshets. Rivers and mouths of rivers which less than fifteen years ago were navigable by large ships, can now barely accommodate small boats. The only remedy, according to Professor Uhler, is to require the farmers whose lands border on the rivers to plant grass and vines alongside the shore to prevent the freshets from washing away the soil.

The following extract of a letter from Dr. Wm. F. Clerk, the artist, will be read with especial interest by the numerous friends of himself and his genial brother, Andrew Clerk, of Maiden Lane. It is written from the river Esk, in England, September 29th:

"I am still at Metal Bridge. While the river was in condition I was tolerably successful in salmon fishing, having landed ten salmon, two of which weighed twenty pounds each; this for a short time on an English river is considered great fishing. The Esk, however, is a small stream, frequently out of condition either in flood or when low, as it is now. In

the latter condition the pools are full of salmon. In many of them they are lying as numerous as they ever were in the Grand pool at Grand river in Canada, and not confined to one pool, but everywhere they abound. I have seen over two hundred salmon leap in one pool during part of an afternoon. Mr. Parton, the artist, is now with me, but he is getting tired of this quiet place, and I suppose will leave for London. I think I shall wait a little for the fishing, which is said to be best during October. This house is exceedingly comfortable. I have an excellent bedroom and parlor, well furnished, and the table is everything I could wish for; the people are very attentive and get whatever I wish for, and the expense is very moderate indeed—less than I have paid anywhere during my wanderings in Scotland. Mr. Parton and I visited Gretna Green yesterday. There is nothing remarkable about the locality; the small brook or river Sark there divides Scotland from England. There is no village—only a farm house, which was formerly in stage coach days an inn, and a toll-gate. The weather here is at present very fine, and exactly like the Indian summer in America. There is the same hazy atmosphere and the same spider webs floating in the air. The popular sports here are otter hunting and coursing hares.

Athletic Pastimes.

The cricket field, foot of North street, Hoboken, last week was rendered lively by a couple of interesting contests, in which the players from our metropolitan clubs took part. On Thursday, October 16th, a one inning game was played between an eleven of the Manhattan Cricket Club and a mixed fifteen representing the Knickerbocker Base Ball Club, and on Saturday the 18th a one inning match was played for the benefit of Smith and Brewster, the two professionals of the St. George and Staten Island Clubs, in which an eleven of the St. George Club were opposed to an eleven including players of the Manhattan, Staten Island, Prospect Park, and Jersey City Clubs, those of the latter organization having nearly all joined the Manhattan Club.

The game on Thursday was quite an enjoyable affair and to the surprise of the cricketers it resulted in favor of the base ball players' side, the Manhattan eleven evidently taking things too easy, not a safe thing to do in a cricket match. It was the intention to play eighteen of the ball players, including Mr. Chadwick, who has always played in the cricket games of the Knickerbocker Club, against an eleven of the Manhattans, but as the ball players did not muster in force the Manhattans allowed them to have the assistance of Brewster, Hayward and Talbot to the bat. These three only added ten runs to the save, and as they did not arrest in the field the credit of the victory as really chiefly due to the ball players. The latter went to the bat first at 2:30 p. m., and they availed themselves of the rather loose fielding and easy bowling of the Manhattans to the extent of serving fifty-three for ten wickets. Afterwards the three cricketers went in to assist them and when the 14th wicket fell seventy-seven runs had been scored, of which Heyward made seven and Brewster three only. Of the ball players Ben Kirkland battled well for twelve marked by a four hit, and Goodspeed ran up eleven in short order. Van Nest and Fryatt contributed eight each, Hecksher getting an average seven and Chubb six. Of the bowling Tucker took the majority of wickets, several catches being missed off Ronaldson's bowling. Rutty took four wickets and then was taken off, the ball players beginning to take liberties with him. At 4, p. m., the Manhattans went in to run off that seventy-seven, a task they regarded as quite easy; and the way they began to hit the bowling of Fryatt and Bucklin looked as if they would lead their opponents score with the loss of about four or five wickets. After Marsh had got eleven and the score had been run up to twenty-eight Fryatt got in on his stumps, and just at this time Chadwick took Bucklin's place in the bowling, and he and Fryatt got in together so well in the bowling that the wickets began to fall in a very rapid manner. In fact after Ronaldson's retirement for twenty-six—he having had two lives given him by dropped fly balls—not a man could get even an average score, the final result being the fall of the tenth wicket for fifty run, three less than the ten ball players of the other side had scored, Fryatt taking four wickets and Chadwick six. The victory was fully enjoyed by the Knickerbockers, and they propose duplicating it on Saturday next, provided the weather is favorable. The full score below gives the details:

KNICKERBOCKER.	MANHATTAN.
Van Nest, b. Henry.....	8 Ronaldson, c. Chubb, b. Fryatt..

Fryatt.....	56	23	1	4
Chadwick.....	35	10	2	6

Good catches were made by the brothers Kirkland, Rodgers, and Chubb, and by Rutty and Tucker.

On Saturday, the day of the benefit match, the weather

proved very inauspicious, heavy clouds threatening rain every hour. In consequence the attendance of spectators on the occasion was very small, and the pecuniary results unsatisfactory. The game began shortly after noon, the St. George eleven going to the bat, Smith and Bance being their first representatives, the latter having but recently returned from a trip to Europe. Before these two were parted the score had been run up to twenty-one, of which Smith put on ten marked by a three and a two, Harcombe being his successor. Ronaldson and Hosford opened the bowling and they were both well on the wickets at first, but when Harcombe got in the bowling had to be changed, Brewster and Greig going on. Before Bance left he had run up a good eighteen, in which two threes and three twos were prominent, his wicket falling for forty. Moeran joined Harcombe, and together they ran the score up to sixty-four, Harcombe contributed twenty-five in handsome style, marked by two beauties for four each, and a three and a two. Moeran added sixteen, in which a three and three twos were noteworthy, and afterwards Grainger added ten, a three and a two being a good share of it. The fifth wicket fell for seventy-eight, but as the others did not add average scores the last wicket went down for eighty-six, eight additional runs only for the last five wickets. The bowling score of the innings showed the appended result:

	Balls.	Runs.	Maidens.	Wickets.
Hosford.....	24	5	2	3
Ronaldson.....	73	19	2	2
Greig.....	66	22	3	1
Brewster.....	142	38	7	4

The Field team went to the bat at 2, p. m., Hosford and Lewis going in to the bowling of Smith and Jones. Eight runs were scored before the first wicket fell, but afterwards wicket after wicket fell for small additions to the score, Kersley being the only player who made an average score, his eleven being the score of the innings. This gave the game to the St. George eleven. As there was no time to play the game out the St. George went in again but did not complete half their second innings, the play under such circumstances being of no account. The bowling score of the innings was as follows:

	Balls.	Runs.	Maidens.	Wickets.
Smith.....	74	11	4	4
Jones.....	66	15	4	4
Moeran.....	12	4	0	1

A fine catch was made by Talbot off Outerbridge's bat, and good catches were made in the same by Greig, Marsh, Outerbridge, Smith, Grainger, and Jones. The score of the innings, which decided the game was as follows:

ST. GEORGE.	FIELD ELEVEN.
Smith, b. Ronaldson.....	10 Hosford, c. Grainger, b. Jones...
Bance, c. Greig, b. Ronaldson.....	18 Lewis, b. Smith.....
Harcombe, b. Brewster.....	25 Ronaldson, b. Jones.....
Moeran, c. Outerbridge, b. Brewster.....	2 Dexter, c. Smith, b. Jones.....
Jones, b. Greig.....	16 Kersley, b. Jones.....
Grainger, b. Hosford.....	1 Greig, b. Smith.....

Umpires—Messrs. McKean and Heyward.
Time of game—3:10.

The base ball championship for 1873 may be said to have been settled, as it is almost a certainty now that the Boston Club will win. They have but to win two more games to render it impossible that the Philadelphia Club can win, and as in the five games named to be played this week, two more with the Washington and one with the Baltimores, their ultimate success is assured. The second, up to Oct. 20th, is as follows:

Clubs.	Games Played.	Won.	Lost.	Yet to Play.
Boston.....	49	36	13	5
Philadelphia.....	48	33	16	6

In order that the Philadelphians may win they will have to win all the games they yet have to play and the Bostons to lose all but one of all they have to play. The struggle for the third position is between the Baltimore, Mutual and Athletic Clubs, the record up to Oct. 21st, standing as follows:

Clubs.	Games Played.	Won.	Lost.	Yet to Play.
Baltimore.....	48	27	21	6
Mutual.....	48	24	24	6
Athletic.....	45	23	22	9

The Baltimores have a winning lead for the third position, but as the Athletics have the most games to play, they may pull up; at present it looks as if the Mutuals would be fifth.

In the amateur arena the Chelseas won the Island championship last week, they having defeated the Nassaus, Nameless, Amity Union, &c., of Brooklyn, in two games out of three.

The Silver Stars are the amateur champions of New York City.

Art and Drama.

THE ruin that has overwhelmed Wall street these last weeks is gradually affecting every department of business. Generally, financial depressions are met with increased theatrical patronage, "but this time" forms an exception to the rule. From all quarters the "revolving stars" that rotate in their professional tours back to our metropolis, speak gloomily of the difficulty of getting together paying houses in our country towns. That is, well regulated and established routines are making fair remuneration, but the "side shows," however deserving of patronage, are almost totally neglected. There must be something deeper than appears on the surface for this strange phenomenon. People discouraged and desperate, rush to places of amusement for momentary excitement. In the panic of '37 the playhouses in New York were constantly crowded. In '57 the same thing was the case. In revolutionary times, in its darkest days, dramatic representations seem to relieve the people of sad thoughts, and divert them at least for the hour. But under our present anomalous monetary derangement, it is not severe to the extent of making the masses hopeless; enough is left to encourage the "most ruined" that with economy fortune may

be regained, and the mimic stage is for the nonce dismissed. It is a good sign socially, though bad for the players.

In New York, however, the stagnation and loss that is settling down on a majority of our theaters may be heightened by commercial pressure, but this catastrophe has been merited by the imprudence of managers and carelessness of capitalists. In all this great city, a refined and highly cultivated family, a family sensibly fond of dramatic representations, can only with difficulty find a place of amusement where its members will not be offended by bad taste and scenic display.

In this "flurry," our metropolitan "show-houses," for that is the proper name, must suffer. Some of them will probably go down altogether in the gale, and they should. The real history of the Lyceum theatre is a chapter of disappointments. No one can say it was wanted. It filled no place, supplied no demand. Its management never had any plan, and the only resource left, scenic representations, had so cloyed upon the public eye that the building was not filled even on the night of its opening. The Grand Opera House is another great mistake, a magnificent dramatic temple built in a wilderness, and as unapproachable to the mass of our citizens as if surrounded by a swamp. Then its size gives the different extremest parts of the interior a gloomy, ghostly, unsociable look that chills and depresses. The players on the stage from remoteness and from want of ability never get nearer the audience than groups of moving men, seen on shore by the passengers of a passing steamer. Here again are no resources but sensation and scenery.

Wallack's little theatre, corner of Broadway, small from necessity and not from design, was always crowded. "How is the Winter Garden to-night?" would be a current inquiry, and although that great barn was well filled, yet acres of empty seats only impressed the beholder that it was "poorly attended." "How is Wallack's?" "Crowded, crowded." Just so, Wallack's is the place. The "little handbox" had almost as much to do with its good reputation as did its excellent actors. It is in the wind that all of our "large buildings" are suffering, and that all along the line of a group, under the charge of one manager, discontent and a black future threatens.

The commercial history of theatres shows that not half the established theatres are profitable, and that a manager who undertakes to run more than one invariably fails. What is to become of one who dares to hold four, among them that elephant, the Grand Opera House? The fragments must soon be seen flying in the air. The pressure in Wall street will not be the author of this explosion; it follows on the footsteps of all vain men, who achieving a great success in a legitimate way, conceive that they can defy all precedents and work miracles. Let all attempted monopolies go under. It is better for the general public. In this connection the statement that Clara Morris has left the "Daly Troupe," will have a marked effect in more directions than at first supposed. Mr. Daly loses a popular actress who has been made by his undoubted tact in putting his "society plays" on the boards. This excellent management was the setting that brought to Miss Morris her wealth of popularity. Can she succeed well, then, upon her own resources, and relieved of the glamour and enticing glare of the Fifth Avenue stage, a stage in which upholstery, fine dresses, and fashion did so much to delude the dazed audience into the idea they were really witnessing high, genteel comedy, when it was little else than Clara's tears, and a fashionable opening of the fall fashions? We shall watch the result carefully and add a new confirmation to our old experiences.

We want a playhouse, genteel, patronized by refined and intelligent people, where we can hear popular music, where we can go and be amused for an hour or so, where we are not, as at the Grand Opera, "hung by the gills" to the prima donna and the tenor, and if inattentive or without gloves, are expected to feel that we are considered out of place, and told by looks and grimaces that we don't appreciate music, and all that sort of *dilettanti* nonsense. We want our popular music all the season through; we suppose fashion will sustain the grand opera through the subscription nights. Seats must be taken because they have been paid for, but music for the masses, if a success will be a necessity, a permanent institution. The fact that so many persons this last summer went up town, and suffered so many inconveniences to listen to Thomas' concerts, is argument enough to convince the most sceptical that we want a popular music establishment in the centre of our densest population. Whoever has faith and capital to start one, will be favored with great success and consequently great fortune.

The "Geneva Cross," judging from the crowded audiences that assembled at the Saturday's matinee, is increasing in popularity. To the Germans it is evidently a source of delight, while all nationalities, save the French, are charmed with the manner it is put upon the stage. Miss Etyng is the centre of attraction. We regret that she has not a better opportunity to display herself in the softer and joyous scenes of dramatic life. The cares and sacrifices growing out of a loved country suffering under the foot of a conqueror; the scanty food and neglected dress of a military prison, are not the true field for her many graces; but difficult and unrewarding as her part is, she never forgets its dramatic claims, and maintains it with most consistent action to the end.

The announcement that on Monday, 27th inst., Mr. Lester Wallack will appear at his own theatre, causes a flutter among the old patrons of that house. It will be a relief indeed to witness an old English comedy, and look over the intelligent and fashionable audiences that will assemble to

greet a manager who has throughout his managerial career made good acting the feature of his establishment.

The irrepressible Barnum has found a vacant square on Madison avenue, which he has covered entirely over with a series of tents, and opened one of the largest shows that ever found place in this city, or anywhere else, that we know of. In spite of the prevailing storm, the seats were crowded with a highly respectable audience. The menagerie, which is very fine, is of more than usual interest, from the fact that as far as possible, on exhibition, it is arranged in scientific order. The street show on Broadway, Tuesday, created both interest and amusement from its queer mixture of the absurd and grotesque, with redeeming points of decided interest. The automaton gymnasts were greeted with hearty applause, and as they resembled so nearly the presumed to be human beings dressed in tinsel and paint, many honest people will never know the "other from which."

Mr. Daly has opened the Grand Opera House with prices reduced to a specie paying basis. The very excellent play of the kind, "Under the Gaslight," with reasonable charges for admission, promises success.

The Maretzek troupe has closed its season at the Grand Opera House. At the Academy the Strakosch company continue their presentations. Salvini maintains his popularity, and every time he appears in a theatre he is more thoroughly understood and appreciated. His appearance in "Sullivan" would never be translated to mean "David Garrick" but so it is. We presume if "David" could come to life and witness the performances of Southern and Salvini as his "double," he would pray to fate to put him back in his "little bed."

BOSTON, October 21st.

Our theatres are well patronized despite the money panic. We have Booth at the Boston, our single star, but one of the first magnitude. We miss the elegant and cheerful Globe, which was burned last spring, and there is some talk of its being rebuilt. The Museum has an excellent stock company, and plays the standard dramas with good appointments and superior talents. The Howard is a variety show just now the home of the sock and buskin, with Studley's thrilling drama of "Buffalo Bill," a wonderfully realistic and almost pre-Raphaelite picture of Western life. The natural and unstudied blank verse of the frontier speech, the attire and ornaments of the forest maiden, even to the minutest earring and oxidized bracelet, are reproduced with the fidelity of a Buntline or an Emerson Bennett. It only needs the presence of a horse car or a balloon to make the entranced spectator fancy himself transported to the boundless prairies of the Far West. J. J. R.

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

THE WAYS OF WOMEN.—In their physical, moral, and intellectual relations. By a medical man. New York: John P. Jewett & Co., No. 5 Dey street.

The name of this old publishing house, so long a household word in the book trade of New York and Boston, will be remembered with pleasure. J. P. Jewett has many friends who will welcome his re-appearance as one of the publishers of good books. The "Ways of Women" appears in a most fitting garb, with which the most fastidious can find no fault. The inside letter-press is every way worthy of the rich binding in which it is enclosed. As its title implies, it is devoted to the gentler sex, and will be read with special interest and advantage.

THE CHRONOTYPE. New York American College of Heraldry and Genealogical Registry: No. 7 University Place.

This elegant monthly journal, issued by the American College of Heraldry of New York, affords facilities for those families having a history to perpetuate such memorials as they may possess of value to themselves and of interest to the refined and cultivated, and embracing such history of places, persons and events as may be connected with their lineage. Such matters, carefully selected, will be found from month to month in the columns of *The Chronotype*. In typography there is no magazine of the day that surpasses it. In a literary point of view it is superb, and we heartily commend this journal to our readers. Our old friend, Dr. J. V. C. Smith, is just the man to preside over such a work. In his hands its character will be fully sustained.

ROMANCE OF OLD COURT LIFE IN FRANCE. By Francis Elliot. New York: D. Appleton & Co.

This is a lively, true picture of the "old gay days" of court life. The times of Louis XIII pass in review again in this charmingly told story. These were indeed the historical days of Henry Quatre, Gabriella d'Estrees, of Louis de Lafayette, and the varied and romantic life of Mademoiselle de Montpensier; a true life picture of the olden times, with all its fitting memories graphically illustrated with drawings. The reader has in these pages the sayings and doings, the lives, intrigues and amusements of those remarkable personages who composed the ancient regime of La Belle France in a voluptuous and exciting age.

In picturing these personages the author has done himself much credit, we think, in confining himself to the historical language of the personages themselves, using their own language as far as possible to express the ideas of the times. Many of the characters are so well placed before the reader that, like the personages in an old finely painted picture, they seem about to step forth from their frames, so true to the life are they drawn. This is just the book for a present for the coming holidays.

THE WOOLING—LEISURE HOUR SERIES.

Forest and Stream.

OPINIONS OF THE PRESS.

The first number is a model of typographical neatness, and its contents are sufficiently varied and interesting to secure for the paper a cordial reception from that class of the public to whose taste it caters.—[New York Times.]

It is a handsome sheet of sixteen large pages, and is filled with a variety of very interesting reading.—[New York Sun.]

There is need for a new advocate to make the American people more in love with outdoor life, and FOREST AND STREAM promises to do the work admirably. The various departments are edited with knowledge and skill.—[New York Journal of Commerce.]

The publication of a new sporting journal, FOREST AND STREAM, is another evidence of the increasing love of our people for the sports of the field and athletic exercise. There is every evidence that good fortune awaits the new-comer. That this should be so is a source of congratulation.—[New York Express.]

The first number promises well, and its prepossessing appearance is no slight confirmation of its claim to a high and manly tone in its conduct.—[Home Journal.]

It is tastefully arranged and handsomely printed, and seems to be well adapted to persons of cultivated tastes.—[New York Tribune.]

Mr. Hallock is an enthusiastic sportsman, a good writer, and competent to make a "sporting paper" fit for household reading.—[New York Commercial Advertiser.]

We commend with special earnestness the claims of FOREST AND STREAM to favorable attention.—[The South.]

We may safely predict its success.—[New Orleans Home Journal.]

It is neat as to typography and varied and interesting as to contents.—[Hartford Times.]

The matter of the sample number is both appropriate and interesting.—[Brooklyn (E.D.) Times.]

It is a necessary publication, and we welcome its birth with open arms. It occupies its own position, intruding upon no pre-occupied ground, but it is an elevated position. To sportsmen of the gun and fishing-rod it will be invaluable.—[Brooklyn Review.]

Got up in a handsome manner, both as to presswork and arrangement of contents.—[Philadelphia Ledger.]

It is decidedly the most *recherche* thing of the kind ever issued in this country, and so far as we know is the peer of anything similar in England. All its departments show a practical and intellectual filling up which challenges general favor.—[Germantown Telegraph.]

Judging by the number before us we can unhesitatingly recommend the FOREST AND STREAM to all who take an interest in out-door recreation and physical culture. It will no doubt merit the patronage of our sporting gentlemen.—[Every Evening, (Wilmington, Delaware).]

The terms are very reasonable for such a large and necessarily expensive paper. We commend it to our sportsmen friends most heartily. We like the ring of its editorials, evidently written by the true lover of nature in its multiplied and beautiful forms.—[Niagara Falls Gazette.]

There is a standard of excellence and usefulness not yet attained by any sporting paper in the country, and FOREST AND STREAM will find its success at the top of the ladder.—[New York Graphic.]

It covers ground not occupied by any other journal.—[Waterloo (New York) Observer.]

Sincerely hope it will live long and prosper. It certainly deserves success.—[Springfield (Mass.) Union.]

Health, longevity, and happiness largely depend upon such open air pursuits, and a journal like this is the best means to effect the object.—[Portland (Me.) Argus.]

WHAT THE PEOPLE SAY.

I hope you will meet with entire success in your project. My days of active life in the field and forest have gone by, but I recall my experience with pleasure, and I feel that I owe my health in a good degree to early habits of free exercise in the open air in forests and along our streams.—[Horatio Seymour.]

There is a demand for just such a paper as this. It will give me very great pleasure, indeed, to do all I can to help your journal.—[Professor S. F. Baird, Smithsonian Institute.]

I have no doubt that FOREST AND STREAM will have a large circulation. Consider me a subscriber.—[George A. Boardman, Naturalist.]

Such a journal, conducted upon the principles and with the spirit which you announce, will certainly find warm support.—[Rev. J. Clement French.]

I have no doubt you will make it a marked success.—[Hon. J. D. Catton.]

I wish you the best sort of success in your effort to make a journal of out-door sports such as a gentleman can read and write in.—[Charles D. Warner.]

I doubt not it will be a great success. It is wanted, and must be called for.—[Major John H. King, U.S.A.]

I have long wished just such a journal to receive into my family, that my boys may learn from a better teacher than myself the best way in which to follow the sports that in years past have given me so much pleasure.—[Henry W. Abbott, Boston.]

Under your management it ought to be a success.—[W. H. Venning, Inspector Marine and Fisheries, Canada.]

You shall have all the aid and comfort I can give you in your enterprise.—[Com. L. A. Beardslee, Washington Navy Yard.]

I must congratulate you on the very attractive appearance of your paper. Keep it up to the standard you have marked out for it, and it will become an assured success.—[Rev. Charles F. Deems.]

Nothing but the exigencies of my roving life have prevented me from starting, or trying to start, just such a journal as yours. You shall have my hearty co-operation.—[Professor Elliott Coues, Smithsonian Institute.]

Your paper is just what we have long wanted, and will take well in the Southern States.—[Dr. R. P. Myers, Savannah, Ga.]

The editorial matter, the contributions, and the make-up and general appearance of the paper are just such as Fishrod and Nimrod admire.—[Genio C. Scott.]

I am glad to hear of your literary enterprise. It will give me pleasure to put you, or any one else representing the FOREST AND STREAM, in the way of getting information for your paper.—[Andrew H. Green, Comptroller, and Central Park Com'r.]

"I take the heartiest interest in FOREST AND STREAM. I have always thought that an American 'Land and Water' was needed, and that many valuable observations are yearly lost, through the want of some such medium of communication between field-naturalists."—Prof. G. Browne Goode, Middletown University.

I wish the FOREST AND STREAM every success, and will be most happy to lend any assistance in my power to make it so.—Hon. Robert B. Roosevelt.

The beautiful engravings of birds in Avilude cost hundreds of dollars and the fine and instructive descriptions many weeks of labor. Every family ought to have it. For sale by all booksellers and toy dealers, or sent post paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

"An excellent addition to our home amusements."—*Christian Union*

FOREST AND STREAM.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Co.

403 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance. A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over one month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. We especially desire to make the FOREST AND STREAM the recognised medium of communication between amateurs and professional sportsmen. All of us have something to impart, which if made available to each other, will in time render us proficient in all those several branches of physical culture which are absolutely essential to our manhood and well-being, both as individual men and as a nation. A practical knowledge of natural history must of necessity underlie all attainments which combine to make a thorough sportsman. It is not sufficient that a man should be able to knock over his birds dexterously right and left, or cast an inimitable fly. He must learn by study and experience the haunts and habits of the game or fish he seeks. If he depend altogether upon his dog's nose, or upon his henchmen, he will some day have to retire from the field in mortification and disgrace. Therefore it is that we shall study to give practical instruction in the most attractive departments of natural history. We shall not forget the technicalities of the craft either, but take pleasure in designating the best localities for hunting and fishing, outfitting, implements, remedies, routes, distances, breeds of dogs, &c. Each number will contain a paper descriptive of a particular animal, bird, or fish, with some instruction as to its habits, haunts and mode of capture, and the period when it is in season. We have arranged to receive regular weekly reports of the fishing and shooting in various parts of the country.

Yachting and boating will be encouraged, and yacht news be made an especial feature of the paper. A reasonable space will be given to athletic sports and those out-door games in which ladies can participate. In a word, every description of game that is in vogue among respectable people, and of value as a health-giving agent or recreative amusement, will be considered and its practice encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by that low order of beings who, in their instincts are but a grade higher than the creatures they train to amuse them, will find favor in these columns.

To horse news we shall devote some space, giving a record of leading races and meetings and current events, but we shall not make it a feature of this journal. We leave this department to others, much more competent than ourselves, who are recognised throughout the country as exponents of the turf, and as authority in stock, pedigree and kind. We yield to no one, however, in our love and appreciation of the horse and his estimable qualities. The noblest of all animals, and the companion alike of men of high and low degree, he has never become contaminated by the moral atmosphere by which he is often surrounded, or degraded below the high rank to which his attributes entitle and assign him.

To the forest, lawn and garden we assign full place. For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy—even our supply of drinking water is threatened, from the depletion of our timberlands by fire and axe. It is but proper to state here that the gentleman in charge of this department is the well-known "Olipod Quill," who was connected with the *Agriculturist* newspaper from the start, and a co-laborer with the lamented Downing for many years. Much valuable information will be found in this department.

Our military department is intended to comprise merely a weekly summary of news for officers and soldiers upon the frontier—such news as the castaways would enjoy to receive in a "letter from home," and we trust that many of them will be inclined to send us in return some account of their hairbreadth experiences among the Indians, the buffaloes, the grizzlies and the antelopes. We of the East are not thoroughly familiar with the varied species of game in the far Northwest, and would like to receive full information especially of the numerous *Cervus* family and of the Rocky Mountain sheep. This department is under the charge of a distinguished army officer.

Our dramatic and art column will be prepared by Colonel T. B. Thorpe, and must at once become popular with all our readers who are interested in these matters. We shall occupy an independent position, and throw our efforts in behalf of competent reform. We shall perhaps even clamor for it.

Our columns will always contain the cream of the latest foreign sporting news.

In a word, we are prepared to print a live paper and a useful one. We shall not be parsimonious in securing the best material for its columns. We are convinced that there is a standard of eminence and usefulness not yet fully attained by any sporting journals in this country. To this we aspire. It will be our ambition to excel; and we have relinquished a life of ease and semi-indolence to take charge of the enterprise. This not of our own free choice, but at the solicitation of many hundreds of friends and strangers. We are ably assisted in our labors by a corps of valuable associates—men of age and experience, all of whom, with single exception, have been identified with leading journals for years.

Mr. SIMON A. ATKINSON, connected with the Georgia press for over twenty years, has charge of the business affairs of the Company.

LEGEND OF "KILL DEVIL HOLE."

THERE is a little conical camp,
Contrived of a framework of spruce,
With splits newly riven of hemlock,
Exuding an odorous juice.
A lawn from the door gently sloping,
To lave in the river's bright gleam:
A pathway by feet daily trodden
Quite smooth to the edge of the stream.

In front of the wigwam an eddy,
Beyond a precipitous shore,
Where the foam dashes down with madness,
And whirls with monotonous roar:
And bubbles, formed in the seething,
Are tossed by the waves to the shore—
Then, floating awhile in the eddy,
Come up and break at the door.

At eve, through the dusk of the gloaming,
Leonta, with love's yearning soul,
Awaiteth her husband's returning
From his nets at "Kill Devil Hole."
And often and often she looketh,
Where sunset reddens the west,
For glimpse of his bark boat careering
Far up on the stream's foaming crest.

(For danger lurks there in the chasm;
Elf-goblins make it their home;
The phantoms that flit there and flutter
Are winding sheets wrought of the foam.)

In vain! and with tearful misgivings,
Till darkness settles at last!
Eyes strained and swelled with long weeping
A messenger cometh at last—
A waif drifting slow in the eddy,
A form through the dusk dimly seen—
Drifting slow, with a chuckle and ripple,
Like cadences soft of Undine.

With motion so strange and uncertain,
It seems both to come and retreat;
Till finally, fears all confirming,
A corpse floateth up to her feet.
Heaven rest the agonized watcher!
Forfeid her from pain evermore!
Poor heart! now stilled by its breaking,
Like the bubbles that broke by her door.

The wind sweepeth by with a flurry,
And swiftly the wild waters roll;
But neither winds or waves shall efface
The legend of "Kill Devil Hole."

—Hallock's Fishing Tourist.

The Matches at Creedmoor.

—The third competition for the *Turf, Field and Farm* Challenge Badge, presented by the Messrs. Bruce, took place at Creedmoor on Saturday last, under the same conditions as heretofore—that is, the competitors were required to fire five rounds at 200 yards, off hand, using rifles weighing less than ten pounds, with a trigger pull of not under three pounds, the hits on the bull's eye (eight inches square) counting four, on the centre (two feet square) counting three, and on any other part of the target (six feet by four) counting two, the highest possible score, therefore, being twenty. The badge has to be won three times before becoming the property of the winner, and has been won before by Capt. J. Bodine with a score of 17; Capt. Geo. W. Wingate, score 18; J. T. B. Collins, score 16. In this instance Mr. L. C. Ballard, of Yonkers, was the winner, his score being 16. Capt. Wingate came very near getting it for the second time, scoring 14 in four shots, tying the winner on every shot but one, when a defective cartridge which dropped the bullet within fifty feet, scored him a round 0 and destroyed his chances.

As has been before remarked, the military rifles were found to shoot with full as much accuracy as the fine sporting weapons, the second and third highest scores being made with them. It was noticeable also how fatal to extreme accuracy is the possession of honors, or even the strong probability of winning them. Mr. Collins, the former holder of the badge, although recognized as one of the steadiest shots on the range, seldom or never averaging less than 15, only scored 14. Gen. Meserole, who had made five consecutive bull's eyes just before the match, only made 15. McMillan, who had recently scored 17 and 18 several times, only made 16. Baker, who won the Adjutant General's prize in the recent State competition, made but 14.

The total entries were forty-three, including most of the "champions." We were pleased to observe several non-commissioned officers and privates of the Regular Army, belonging to the Engineer Corps at Willet's Point, participating in the competition, and think that the effect of the army taking an interest in rifle practice cannot but be beneficial to all concerned. If all the Regular officers took the same interest in the subject as has been shown by General Abbot, Gen. Ord, Capt. King, and a few others, such occurrences as the Modoc war would seldom be heard of, and the desertions from the ranks would be greatly diminished.

The following is the score:

Name.	Arm.	Score.
L. M. Ballard.	Remington sporting.	3 3 4 2 4—16
B. Burton.	Ward Burton.	2 4 4 3 3—16

Lieut. J. G. Story, 23d N. G.	Remington military.	3 0 0 0 2—5

*The sixteen made by Mr. Burton with the Ward Burton gun shows it to be an arm of great merit.

In a Sweepstake match which followed the *Turf, Field and Farm* Badge, Messrs. A. Pyle, Seventy-ninth; Thomas Floyd, T. B. Collins, and C. L. Fincke, Twenty-third, won prizes.

A number of projects are on foot at Creedmoor. The Seventh are at work getting up a competition for the famous "stove-pipe battery," which created such a furore at their Saratoga encampment. This is intended to be open to all the companies, without limit as to the number of competitors, the company having the five best shots to be the winners. This renowned piece of ordnance is one of the heir-looms of the Seventh, and the struggle for its possession will cause as much excitement in their ranks as if it was worth \$2,000, instead of \$200.

Messrs. Remington & Co. are also getting up an additional prize in the shape of a "Diamond Badge," to be shot for at long range—that is, 800, 900 and 1,000 yards. This is a project which speaks highly for the interest taken by this firm in the progress of the Rifle Association, for it is just what is needed to induce their members to take up long range practice.

The idea of these badges, such as the *Turf, Field and Farm*, the Amateur Club, and that of Remington & Co. is very happy. They keep up a constant interest in the range, and not only make it popular but constantly develop good shots. A project is under discussion to build a club house at Creedmoor. The need of some accommodations is greatly felt, and Mr. H. C. Popperhusen has expressed an intention of erecting some structure on his property adjoining. Whether this will be in the shape of a large building or detached cottages is now under discussion; but the former plan is the more popular. At a conversation after the match, representatives from the Seventh, Ninth, Twenty-second and Twenty-third Regiments, the Amateur Club, together with Mr. Bethel Burton, have expressed their willingness to hire rooms, if such a building should be erected.

The idea of having a match of the officers of the First and Second Divisions of the National Guard on Thanksgiving Day has been given up, the season being too late, and the calls upon the time of the officers of the Association during the recent match having been too engrossing to permit them to go into another this fall.

General Sialer is indefatigable in pushing the work on the range, and in a short time all the raised butts will be replaced by timber ones.

A number of the members are agitating the subject of putting up a "running man" by private subscription, the Association not being in funds at present to warrant the expenditure. This is a subject that directly concerns our gentlemen sportsmen, and they should take a hand in the matter. No mark can be prepared better calculated to train the eye and hand than to practice at the figure of a man moving at the rate of ten miles an hour, and we trust in the interest of good shooting, that the matter will not be allowed to rest until Creedmoor is provided with the necessary appliances for such practice.

Next Saturday, November 1st, the badge of the American Rifle Club will be shot for. This badge has been won twice by Captain John Bodine and once by Mr. J. P. M. Richards.

At the request of the various regiments we publish the score in detail of the winning teams at the late Grand Match held at Creedmoor on the 8th of this month.

A WILD GOOSE CHASE.

EDITOR FOREST AND STREAM:—

What a pleasant and suggestive name your paper bears. "FOREST AND STREAM"—it is positively refreshing on a sultry day, and is always indicative of benefit to the physical, mental, and moral man. It is not my intention, however, to moralize, but to write the simple history of a short journey W. and I made last spring in quest of recreation and geese. It was about the 1st of April that we took the cars at Hunter's Point, and started for West Hampton on the south shore of Long Island, distant seventy-five miles from New York.

At a depot called "the Manor," we took the Sag Harbor branch of the road, and after traveling some twelve miles reached our destination. Darkness had set in when we left the train, and the deserted look of everything around was calculated to remove all enthusiasm.

But we found "Wes" waiting for us, and one look into his genial face, and one sound of his cheery voice, entirely banished loneliness.

The ride of a mile was soon made, as old Grey was kept in a lively trot by sundry whacks of the whip, and in a few minutes we reached the modest but hospitable dwelling of Mr. Nathan Raynor. It is marvelous how soon a crackling fire, pleasant faces, and a well filled table will remove embarrassment and give one a perfectly home feeling. It wrought this change in us. At once we felt at home. And we did full justice to Mrs. Raynor's fare.

After supper our traps were got in readiness for the next day's sport; in the meanwhile, however, we listened to stories of duck and goose shooting by our Captain, who was to be Clark Raynor, and ascertained, too, that twice a year—spring and fall—fine shooting could be had.

At a late hour we were shown to our rooms, with the words, "we will call you at four for breakfast," and we went to bed to dream of ducks and geese. It seemed as if we had just fallen asleep, when a knock upon the door and the words, "time to get up," aroused us. We hastily dressed, partook of a hearty breakfast, put on our rubber suits, stepped into our boats (the house is by the water) sailed three-quarters of a mile across the bay, and landed at Picket Point. Alas! the first day was foggy and we returned with only one bird. On the second was a north-easter that soon drove us to a warm shelter. But the third dawned beautifully with a stiff north-west wind, just what we wanted, and during that day and two hours of the following morning, we killed eighteen geese and ten ducks.

The only thing to which I objected, was being obliged to lie flat on my back in such coffin-looking boxes, and when geese were around to hear the softly whispered caution of the Captain "hush, don't move." I protest, Mr. Editor, that it is hardly fair to stow away 175 pounds of flesh and bone in so narrow a place, and then not have the privilege of moving, when you feel the more inclined to do so because you know you must not.

The recollection of that day's sport is a pleasant memory. It was genuine pleasure. When the geese were circling round us, and each moment coming nearer, every faculty "seemed supernaturally active." Every nerve tingled with excitement, and the blood coursed swiftly through every vein.

Often since, when tired with writing, have my thoughts gone back to that day, and I have laid aside my pen to shoot every goose over again.

To all in quest of a few days of delightful and healthy recreation, I commend our hospitable hostess, and her worthy sons, our accommodating Captain and the genial, whole-souled "Wes." Yours,

J. C. DUTCHER.

Bound Brook, N. Y., Oct. 1873.

X HOW WOLVES HUNT DEER.

EDITOR FOREST AND STREAM:—

Ralph—"Roaring Ralph from the rising Sun," he called himself—a tough old trapper standing six feet four in his moccasins, and well proportioned otherwise, who though prodigiously self-conceited and boastful as to his strength and miraculous exploits, yet possessed many of those elements of character that made him a welcome partner among those sinewy pioneers of the woods; for with a rollicking devil-may-care way coupled with a genuine eagerness to do favors to others, he really had the strength of a young giant and the courage of a lion.

Ralph I say, was *mad*; he came by our camp that morning in a towering rage, swearing he would have the *reptile's* pelt, if he had "ter send clar ter York State for a dozen of ther steel traps," and he had reason for his billious outburst. A fisher for the second time had taken almost the entire length of his line of dead falls and tore them all to pieces, thus wiping out the labor of many days. An old fisher is often a great pest to the trappers, for he is too cunning to go into a deadfall as he ought, like other animals, (and steel traps in those days were costly and hard to get), but would surely sneak around behind, tear down the back part of the trap, seize the bait or martin or sable, if any happened to be therein, and then on to the next, repeating the trick throughout the whole line. Four fingers of Scootawaboo, with a smoke, put Ralph in a better humor; and when I told him that if he would wait until I put a patch on the sole of one of my moccasins, I would go with him over his line, the last wrinkle of displeasure passed from his face.

The line led along the bottom a mile or so, then up a ravine or gulch and over the mountain some four or five miles to another water course beyond.

We had rebuilt, baited and set eight or ten of the falls, and were toiling up the mountain side dragging our trail (a deer's head) behind us, when my attention was attracted by the howling of wolves farther up the mountain, this not being a very common thing in the day time, I said: "Ralph, what's up? There is something to pay among those varmints." Ralph stopped and listened a moment, then turning to me with an eager twinkle in his eye, said: "George, do you want to see some fun? If we hurry I reckon we can get there in time—those devils are driving a deer around the mountain, and this crust will cut his legs so that they will get him, sure. Now up on top of the mountain is a lake, (they call them all lakes, even if they don't contain an acre of water), the deer when hard pressed will make for that lake, not thinking, the fool, about its being froze over, and if we can get there in time you'll see how quick a pack o' wolves will make mince-meat of the critter." Up we went as fast as we could and do it silently. We crossed the runway where the deer and pack had passed several times around the brow of the mountain and arrived in view of the opening containing the lake. Approaching cautiously we peered through, and there, sure enough, was a magnificent deer being driven around on the ice by a couple of wolves, within a circle of a score or more of the scoundrels, sitting on their haunches and licking their chops in eager anticipation of the morsel they knew would soon be within their reach, the poor victim, with labored breath and eyes almost starting from their sockets, passing and repassing on the inner circle. His strength was failing fast, while the places of his pursuers were taken by fresh racers every second or third round.

The lake, nearly of a circular form, probably one-eighth of a mile in diameter, was bordered (on our side at least) with a narrow fringe of dwarf evergreens, giving us a fine opportunity to crawl up within a couple of rods of the backs of the nearest wolves. I was impatient to pour a broadside into the said backs, but Ralph checked me, saying "hold on until he falls, and then we'll give it to them." Ralph carried a heavy double rifle; my gun was a double barrel, rifle and shot (and I have it yet, a remembrance of old times, for it furnished me my only food for many a day), the rifle carrying a peaked ball of forty to the pound, the other loaded with buckshot.

We watched with strained eyes and bated breath the cold-blooded race. Once the deer fell to his knees, and there was a start around the whole circle; but gathering himself he kept on his course another round. His pursuers would nip him in the flank and then jump back, their razor-like teeth of course drawing blood every time, until the snow of the track was reddened its entire length.

The noble deer, finally weakened by the loss of so much blood and the unequal contest, gave up, and with a despairing groan, almost human in its accents, fell a little quivering from us and about twelve or fourteen rods distant, and almost in the twinkling of an eye was covered by

a mass of yelping, snarling devils. "Now, now!" whispered Ralph, and raising up we let them have it. Bang, bang—four barrels (two simultaneously) into that writhing heap, then we drew our knives and rushed toward them. Well, you may well believe there was a scattering among the cowardly things. We killed only two outright (I have often wondered why we didn't kill more), but wounded I don't know how many, three of which we afterward got by shooting over again. I had calculated on a pound or two of the meat for a broil, but as sure as that I never told a lie, though it took less time than I would in telling this were I talking instead of writing. When we reached the spot all we found was a heap of bloody bones, neither hide, meat, nor insides; not an ounce of flesh was left on that crimson rack; picked clean in apparently not certainly more than one hundred seconds. A poor chance a human being would stand in such company.

Another time I may tell how Ralph bagged his *reptile*. JACOBSTAFF.

UNSEASONABLE TROUT.

BANGOR, Maine, October 26th, 1873.

EDITOR FOREST AND STREAM:—

Will you allow me to call out through your journal the opinion of the angling fraternity, sporting men generally, and pisciculturists, as to the correct close time for trout, always holding in view the keeping up of the stock of a fishery rather than the quality of the food, in a sanitary point of view. As a healthful article of food we do not regard the trout as fit to be eaten after the 1st of September, as they then begin to become slimy, white, and soft; the general health of the fish deteriorating rapidly preparatory to spawning, although they do not yet crowd into the streams as later in the season, when they are looking for their spawning grounds. Therefore, the pleasure of killing may still be indulged in by those who either have no taste or palate to mark the difference between a fish in or out of season, or those who like to indulge the mere animal pleasure of killing. We think it would be well that the rod should be laid aside for the gun the 1st of September. The laws of our State prescribe the 1st of October as the commencement of the close season for trout, togue, and land-locked salmon. We think this too late, not entirely from the cause that the fish are then crowded into all the streams, deserting the lakes and ponds, but thus affording unlimited slaughter to the merest tyro, for we believe that the mischief then done by the rod is but a mere tithe of the evil. It is that the limit legalizes the sale of trout in our markets, and it is at this time when they are crowded into the streams that the villainous pot-hunter and poacher sweep the net and ply the murderous spear and grapple, and glut the markets not only here, but of New York and other States with their spoils. Your trout were then in perfect season, and the bare fact of the habits of the fish rendering them such an easy prey at this period to the poacher should be a sufficient argument to every true angler for limiting rather than extending the close time.

Unfortunately, this last winter a special law in favor of a popular place of resort for anglers was engineered through our legislature at Augusta. It allows trout fishing on a certain lake until the 15th of October. Our markets have been overstocked with trout, most of them bearing unmistakable marks of the seine. The wardens of the State were powerless, for they could not discriminate between a trout caught in the privileged waters or those caught five miles distant in some lake where the law does not apply. Hotel keepers living near good trout waters could see no reason why they and their interests should be ignored in favor of those who could better afford the loss of guests, and the people at large were disgusted at what seemed to them partiality and injustice. In fact, the whole State was and is demoralized so far as enforcement of the internal fishery laws is concerned.

We wish it were possible for the Dominion Government and our Northern States to unite with us in passing co-operative laws forbidding the sale of any fish in any of the States severally when the species of fish offered for sale was forbidden to be caught or sold in another State. We should thus strike a deadly blow at the poacher and pot-hunter, and do more for the protection of the products of forest and stream than has been brought to pass for many years. During our close months here our trout are run into the neighboring States and sold, and large numbers are brought into our markets from New Brunswick.

I may as well here refer to a most destructive abuse, which every true angler should interest himself in breaking down. I allude to the custom of counting by number rather than the weight of fish caught. It should be a rule at every sporting resort to fine every man who brings home in his k reel a fish of less weight than a half pound. I have known men calling themselves anglers boasting in our local papers of a count of one hundred and fifty trout, most of which had the bars still on, and not one fish of a pound weight in the lot. S.

DOES SAW DUST KILL FISH?

HONEY FALLS, N. Y., October 15, 1873.

EDITOR FOREST AND STREAM:—

In reply to the letter of Fred. E. Ranger, Glen's Falls, N. Y., which you referred to me, I would say: The saw dust and refuse from the tanneries on the upper Hudson will undoubtedly prove a serious obstacle to stocking the river with salmon as suggested by "Piscator." I do not know how far the theory is true that saw dust kills trout by clogging their gills; in fact I have always had a doubt of it—but that it will speedily depopulate a stream by ruining the spawning beds and killing all ova there-de-

posited, is sure. The salmon, like the trout, usually choose a spawning place below an eddy; here there is generally a fine bed of gravel which has been gathered from different parts of the stream and deposited clean and fit for the reception of the fish's eggs. Here also, the smothering saw dust gathers, and either kills the embryo (if it has been allowed to develop so far), or to use a Hibernicism, nips it in the bud. Or if we suppose that through some combination of currents a certain spawning bed has escaped the suffocation to which the rest have been doomed, then instead of being stifled, the ova is killed by fungus generated by the minute particles of dust which soon decay.

There is but one remedy for this; the saw mills and tanneries should be compelled to dispose of their rubbish in some other manner, and this river should not be allowed to become a mere sewer. To give an idea of the amount of saw dust that comes down the Hudson every year, I will give a description of the deposit at one spot: Between the two freight houses of the Albany and Boston railroad at Greenbush, there is a ditch or canal eight hundred feet long and six feet deep at ordinary low tide; this canal is filled at its eastern end every spring during the freshet, and the company are obliged to remove it every summer, and their scows carry off thousands of yards of almost pure saw dust from this place. This canal is cut through an island on the eastern shore of the river, and this dust is only the small portion that comes down the shore and strikes in behind the island at Bath and is deposited at the eastern end of the canal.

Not having examined the river to its sources, I cannot say how far this evil extends, nor if there may not be some small tributary that is free from it; if there is, then in my opinion all that will be required to try the experiment is a few fish ways and some stock.

Albany is going to take water from the river for drinking and other purposes, and would very likely prefer to have Troy and other cities above refrain from polluting it as much as possible, but allows its own sewers to pour in dye stuffs and other poisons.

A few years ago there were analine works there which discharged their refuse into the river and struck the fish that came in contact with it with instant death; these have been removed, but I have noticed other dye stuffs in the discharge of the sewers which are probably more or less poisonous.

Some think that the steamboats will scare salmon from ascending the river, but it seems hardly possible, for a gravid fish is not so easily scared and will often face dangers at spawning time that it would not at any other.

"Piscator" says that the Croton is a good spawning ground, and that he knows that "the upper waters of the Hudson are splendidly adapted for salmon, to say nothing of many large brooks running into the river above Lansingburgh."

The experiment is certainly worth trying, for in that way only can it be determined, no matter how much we may write about it. Yours truly, FRED. MATHER.

FORESTS AND ANIMALS.

EUROPEAN travellers in this country frequently allude to the American forest as remarkable for its solitude and deficiency of animal life. The scarcity of animals, I would remark, is not peculiar to the American wilderness. The same fact has been observed in extensive forests both in Europe and Asia; and in proportion as the traveler penetrates into their interior, he finds a smaller number of animals of every species. Birds, insects, and quadrupeds will multiply, like human beings, in a certain ratio with the progress of agriculture, so long as there remains a sufficiency of wild wood to afford them a refuge and a home. They use the forests chiefly for shelter, and the open grounds for forage: the woods are their house and the meadows their farm.

I had an opportunity for observing these facts very early in life, when making a pedestrian tour through several of the States. I commenced my journey in autumn, and, being alone, I was led to take notes of many things, which, had any one accompanied me, would have escaped my observation. After passing a few weeks of the winter in Nashville, I directed my course through Tennessee and Virginia, and was often led through extensive ranges of forest. I never saw birds in any part of the United States so numerous as in the woods adjoining the city of Nashville, which was surrounded with immense corn fields and cotton plantations; but, while walking through the country I could not help observing the scarcity of birds and small quadrupeds in the woods, whenever I was at a long distance from any village or habitation. Sometimes night would draw near before I reached a hamlet or farm-house where I might take lodging. On such occasions, the silence of the woods increased my anxiety, which was immediately relieved on hearing the cardinal or the mocking-bird, whose cheerful notes always indicated my approach to cultivated fields and farms.

That this scarcity of animal life is not peculiar to American forests, we have the testimony of St. Pierre, who says of the singing birds: "It is very remarkable that, all over the globe, they discover an instinct which attracts them to the habitation of man. If there be but a single hut in the forest, all the singing birds in the vicinity come and settle around it. Nay, they are not to be found, except in places which are inhabited. I have traveled more than six hundred leagues through the forests of Russia, but never met with small birds except in the neighborhood of villages. On making the tour of fortified places in Russian Finland, with the general officers of the corps of engineers with which I served, we traveled sometimes at the rate of twenty leagues a day without seeing on the road either village or bird; but when we perceived the sparrows flitting about we concluded we must be near some inhabited place. In this indication we were never once deceived."

It may be remarked, however, that birds and quadrupeds do not seek the company of man when they congregated near his habitations. They are attracted by the in-

creased amount of their means of subsistence that follows the cultivation of the land. The granivorous birds, no less than the insect eaters, are benefited by the extension of agriculture. Even if no cereal grains are raised, the cultivated fields would supply them, in the product of weeds alone, more sustenance than a hundred times the same area in the forest. Before there were any settlements of white men in this country, birds and small quadrupeds must have congregated chiefly about the wooded borders of prairies, on the banks of rivers, in fens and cranberry meadows, and around the villages of red men.

America was colonized and occupied by civilized people, and the forests were swept away with a rapidity unprecedented in the history of man. Every pioneer was a hunter, provided with guns and ammunition; every male member of his family over seven years of age was a gunner and a trapper.

The sparse inhabitants of the forest, which, if unmolested—as in the early period of European civilization—would have multiplied in proportion to their increased means of subsistence, have been, on the contrary, shot by the gunner, ensnared by the trapper, and wantonly destroyed by boys for amusement, until some species have been nearly exterminated. Instead of increasing in a ratio with the supplies of their natural food, many tribes of them are now more scarce than they were in the primitive forest. The small birds alone whose prolific habits and diminutive size were their protection have greatly multiplied.

There are many species of birds which we associate with the wild-wood, because they breed and find shelter there; but if we watched their habits, we would learn that even these solitary birds make the cultivated grounds their principal feeding-places. Such are the quail, partridge, and very many of our game birds. The quail and the partridge are omnivorous, but, like our common poultry are more eager to seize a grub or an insect than a grain of corn. A potato field is hardly less valuable to a flock of quails than a field of corn, and affords more sustenance to the snipe and the woodcock, than any other grounds. But these birds, as well as others, have diminished as those natural advantages have increased that should promote their multiplication.

Even our sylvias and thrushes, the most timid of all the winged tribe, birds hardly ever seen, except in lonely wood multiply with the clearings of the country, and the increased abundance of their insect food. The vesper thrushes, that shun the presence of man, and will become silent in their musical evening chants if the rustling of the bushes indicates the approach of the human footstep, are more numerous in the woods of Cambridge, than in any other part of the country. These are chiefly of maple filled with underbrush, and afford the birds a harbor and a shelter, while the adjoining fields, in a state of the highest tillage, supply them plentifully with their natural food, consisting of worms and the larvæ of insects. The timid habits of these solitary birds are their chief protection. They will not expose themselves to observation; and, on the approach of a human being, they flee to the woods where they are concealed from the youths who destroy all sorts of small game. Birds of this species continue to grow more numerous, while the red thrush and cat bird are constantly diminishing in numbers, because they breed outside of the wood, where they are easily discovered.—*Woods and By-Ways of New England.*

INSECT AND ANIMAL MEDICINE.

INSECTS once formed a class of medicines, considered very effective in certain cases, and time was when the doctor would order a dose of three gnats or three drops of lady-bird milk, just as he might order three grains of calomel in our day. Wood-lice, ants, and beetles used to be prescribed for the toothache. The sacred beetle is eaten by the women of Egypt and regarded as an emblem of fertility. The oil-beetle exudes a deep yellow oil from the joints of the legs, which was esteemed diuretic and used in rheumatic complaints. In some cases the effects attributed to these curious remedies may possibly be produced by them, as for instance when Turkish women eat, cooked with butter, the *blaps sulcata* (a sort of beetle) with a view to the development of fat; but when the same remedy is represented as an antidote against earache and the sting of the scorpion, we are less inclined to believe in its efficacy.

In Atwood's "History of Dominica" we are told that the fat of snakes is esteemed an excellent remedy for rheumatism and sprains; and by the vulgar in Persia a hard green substance about the size of a bean, found in the body of a certain species of serpent, is reckoned an infallible cure for the bites of venomous reptiles. Among the ancients serpents' flesh was in high repute as a medicament, and was also used for food, like the flesh of the turtle. On the continent of Europe vipers have still a place in the popular pharmacopœia, and Mr. Simmonds asserts that the Italians to this day "occasionally regale themselves with a jelly made of stewed vipers." In Guatemala lizards eaten alive are supposed to cure cancer.

As late as 1618 lion's fat belonged to the materia medica of the British pharmacopœia. Among the ancients, Galen prescribed it as an antidote for poisons. The smell of it was said to drive away serpents. The Roman physicians had great faith in remedies derived from this animal. Pliny enumerates the following: First, as a cosmetic, the fat mixed with oil of roses gives delicacy to the complexion; and secondly, as an unguent, it cures affections of the joints. The gall mixed with water cured weak eyes; mixed with the fat, and taken internally, it was a remedy for epilepsy. Quartan fever was cured by giving to the patient the heart roasted, but quotidian fevers were treated with the fat and oil of roses. The natives of the Malay peninsula eat tiger flesh, believing it to be a specific for all diseases, besides imparting to the one who partakes of it the animal's courage and sagacity.

Discarded from the service of the physician, a few mollusks have found a resting place in the popular materia medica. Slugs and snails were anciently and in some parts are to this day a popular remedy in consumptive complaints. They are sometimes made into a mucilaginous broth; sometimes swallowed raw. Snails are to this day kept on sale in London markets for this purpose.

THE ART OF FRYING FISH.

SEVERAL kinds of fish are fried when small: such as small trouts or troutlets, carps, tench, sun-fish, pike, pickerel, flounders, white-fish, black and blue-fish, perch, porgy, mullet, weak-fish, herring, bass, and the like, and smelts, which never grow above the frying size.

When fish or anything else is cooked in a frying-pan

with just fat enough to prevent it from burning, it is not fried but *sautéd*, there being two very distinct ways of frying. To fry, means to cook fish or something else immersed in boiling fat. To *sauté*, means to cook fish or something else with just enough fat to merely cover the bottom of the pan; for instance, small fishes are fried, but omelets are *sautéd*; potatoes are fried, but parsnips are *sautéd*.

Many inexperienced cooks make mistakes on that account; they read in some cook books that such article of food is good fried, and set to frying it when it should be *sautéd* and *vice versa*.

The fat skimmed from the surface of broth, which is beef suet, the trimmings of steaks or roasting pieces of beef melted as directed below, are better for frying purposes than lard, not flying all over as lard does.

The fat skimmed from trimmings or from around the kidneys of beef, is cut in small pieces, put in an iron pot, and set on a rather slow fire. As soon as it begins to melt, ladle off the melted part and turn it into a stone or crockery jar, which you cover when cold. Put it away in a cool, dry and dark place. A careful cook never needs lard for frying purposes, but has always more fat than is necessary, out of boiling or roasting pieces, and that skimmed on the top of broth, sauces and gravies. Some cooks will not take the trouble to melt it when the mistress allows as much lard and butter as is asked for.

It is an error to believe that by using much fat to fry, the articles fried will taste greasy; if there is not fat enough in the pan to completely immerse the objects fried, they will certainly taste greasy. It will be the same if the fat is not heated enough. It is heated enough when jets of smoke ooze out of it, or, when on throwing drops of water in it, it makes a crackling noise.

When the fat is hot enough, the article that is to be fried is dropped into it, and stirred gently now and then with a skimmer. When done, it is taken off the pan with the skimmer and turned into a colander, which should rest on a dish or bowl to receive the fat that may drop from it.

If the article to be fried is not completely immersed in the fat, the part not immersed will absorb fat, and, as stated above, will taste greasy; but if there is fat enough to cover it entirely, the intensity of the heat closes the pores, carbonizing the exterior of the article, as it were, and preventing it from absorbing any fat.

If the articles to be fried be tender and somewhat brittle, they are put in a wire basket or perforated double bottom made for that purpose, and the basket is plunged into the fat. The basket is raised when the articles are fried, and held over the pan to let the fat drop; they are then taken carefully out of it, placed on a dish, sprinkled with salt, and served hot.

When the frying is done, the pan is put away for a few minutes to allow the particles of solid matter that may be in it to fall to the bottom of the frying-pan; then it is turned into the jar, gently and slowly, so as to retain those particles in the bottom, and it is put away for another time.—*Prof. Pierre Blot in To-day.*

OUR ATHLETICS.

TO have been an honorary secretary of an athletic club meeting, and to have "pulled off" not one but many of those meetings successfully, argues an amount of zeal and activity and a genius for administration in a man which ought to render him an object of admiration. But if an honorary secretary of a great athletic celebration is required to display an unwonted capacity for business and organization, what shall we say of, and what praise bestow upon, a functionary of that kind who combines with the duties of his office those other and far more arduous ones of honorary treasurer also?

For be it known that though our club was only that of a large school or college—if you like that title better, as did not a few of the parents of the *alumni*—our sports, from the uniform success that had invariably attended former celebrations, had assumed such colossal proportions as regarded the number of "events" to be competed for, and were held in such high repute by the inhabitants of the town, that the better part of two days was taken up before we could bring them to a conclusion. So interested, indeed, were the principal tradesmen of the town in the success of our sports that many of the more enthusiastic among them actually closed their shops during the celebration; and, what was of far more consequence to us, sent us such a plentiful supply of articles from their stock as prizes for the "youthful athletes," that the treasurer found himself encumbered with an absolute *embarras de richesses*, and was sorely puzzled in the matter of the distribution of these costly presents.

Of course, the treasurer never refused anything gratuitously presented by an enterprising tradesman, but the misfortune was that the presents were all too frequently of a kind utterly unfitted for presentation to a youthful and successful athlete. One man would send a cornopœan and case, but though the instrument was the undoubted manufacture of the most eminent makers, though a better could not be had for love or money, this particular kind of prize was never valued at its true worth, and its lucky recipient was almost always one whose savage breast music had no charms to soothe. Another tradesman would contribute a writing desk, a photographic album, or perhaps that now happily obsolete abomination, a postage stamp album. These articles, it is hardly necessary to remark, found no favor among the stalwart competitors at our athletic sports, reminding them, as they did, too strongly of those higher and more intellectual pursuits from which they were enjoying a temporary release.

No difficulty was ever experienced with the jeweller and the saddler; everything those gentlemen supplied, even down to shirt studs and spurs and leathers, always found a conspicuous position on the prize list; and, as it soon oozed out, in spite of every precaution against such surreptitiously acquired knowledge, to what particular competitions prizes of such inestimable value would be awarded, the number of competitors for those events was considerably greater than for most of the others. For the grand steeplechase—a race, by the way, which for a long time, in deference to the wish of constituted authorities, we were reluctantly and foolishly compelled to describe as "a race with leaps"—in addition to the gold-mounted cutting-whip and spurs and leathers, there was also adjudged a silver medal emblazoned with the school arms, and for this race there was always a large entry; but it is singular what little value was set upon the medal. It was quite impossible, however, to smuggle any other kind of prize into this race, the *pièce de résistance*, so to speak, of the entire meeting.—*Gentlemen's Magazine.*

MY LAKE.

MY little lake doth in a valley lie,
 Bowered deep in green of drowsy solitudes;
 No din or dust of highway cometh nigh,
 No reek of towns can pass these winnowing woods,
 'Tis fabled that its grassy borders keep
 Trace of a shape to human outline true;
 That here some Queen of Naiads, fallen asleep,
 Hides her white beauty 'neath the dimpling blue.
 And see—at yonder cove's remotest edge,
 A gleam of white against the stirring sedge,
 As if the gracious sleeper lightly slept,
 And from beneath her robe's unravelled hem,
 One fair white instep in a dream had crept,
 Lighting up all the dim place like a gem.

—HELEN BARRON BOSTWICK, in *Galaxy*.

Indian River, of Florida.

BEGINNING some thirty or thirty-five miles to the southward of St. Augustine, and extending along the coast of Florida, about one hundred and seventy-five or eighty miles, are two salt water lagoons, separated from the ocean by a mere narrow fringe of sand. The larger and more southward of these is known as Indian river, and the other as Mosquito lagoon. They are separated by a low belt of sand, resting upon a bed of shell conglomerate scarcely two miles broad.

It is, however, with Indian river that I have present concern, as it is possessed of peculiar, extraordinary, and little known attractions and resources, which, if properly developed, would make it an unequalled sanitarium for pulmonary subjects.

With its northern extremity near Cape Canaveral, this sheet of water stretches southward for about one hundred and fifty miles, with but one narrow communication with the ocean—Indian river inlet, latitude 27 deg. 30 min. north. The long, narrow strip of sand on either side of the inlet, which, as I have said, separates the lagoon from the ocean, is no where broader than one mile. Here and there the winds and waves have heaped up the sand into clusters of low dunes, but next to the waters of the lagoon there is a dense growth of the mangrove (*Rhizophoraceae*), wood of small diameter, but of a beautiful red color, and takes a very fine polish, and the whole zone is thickly dotted with the graceful, picturesque, and useful cabbage palmetto tree, which is valuable as a timber for many purposes, and its leaves also, while its unexpanded young foliage is a delicious vegetable. Other and even more valuable trees of the same (palm) species might be largely introduced, as, for example, the cocoanut, which has been shown to flourish there. It is in part this low-lying skirt of luxuriantly wooded, dry sandy soil, breaking the force of tempestuous winter winds, met at times on the southern Atlantic coast, which makes the western shore of Indian river so highly favorable as a winter residence for invalids.

Near Indian river inlet, upon the main land, a military post (Fort Capron) was established in November, 1849, and careful meteorological observations were taken, for a series of years which show rare climatological characteristics peculiarly favorable for pulmonary patients, that is to say, a singularly equable temperature with comparative dryness. For example, during a period of five years ending with 1854 the mean temperature of the winter months was 63 deg. 20 min., with a relatively small rainfall during the late autumn, winter, and early spring months, or 217 fair weather days for the year.

The lagoon has a coralline bed, and is free from marshes. Communicating with the sea by Indian river inlet, as I have stated, it likewise receives a good deal of fresh water through Santa Lucia river, which is an outlet of the Everglades. It seems to an almost incredible degree with fish of the finest and most palatable varieties, including that most delicate and toothsome of all American fish, the "pompano." Never, indeed, on either the Atlantic, Gulf, or Pacific coast have I seen fish so fat and well flavored. The ordinary mullet, here very fine, is found in extraordinary shoals at certain seasons, and no where else is the sheepshead so fine and dainty a fish as in Indian river. As for the oyster, it is worth a visit to Indian river to eat those found there, especially those which have been transplanted; their flavor is the finest in the United States.

Some four miles southward of the inlet the western shore rises some thirty feet above the level of the sea into a bluff of compact, broken, or decomposed shell for some distance. Here there are fine situations for building, with the necessary space for small plantations of tropical fruits and plants, which thrive so well in all that region. There are already orange orchards which have been planted for a quarter of a century. The pineapple, found in most of its numerous varieties, and other inter-tropical fruits, do as well here as in the Antilles. Northward the shore is skirted in large part by narrow reaches of dry hammock land, covered with the live oak. This soil is shallow, but underlaid by a marl, which keeps fresh its virgin fertility, and is found particularly well adapted to the growth of sugar cane, which comes to flower or tassel on Indian river as in Cuba, but not habitually in Louisiana. Therefore, the cane of Indian river is richer in saccharine matter to the pound than that of Louisiana.

Immediately back of these arable tracts, the very timber of which is so valuable in ship-building, there runs a sand ridge, which here and there abuts directly upon the water of the lagoon, and is everywhere covered with noble pines,

affording an exhaustless supply of accessible building timber. Rearward of this ridge the country, somewhat lower than the ridge, stretches out into great spaces of pine barrens, which afford, however, a fine range and pasturage for cattle, and abound in game, such as deer and wild turkey, while in winter the lagoon is alive with wild duck. On the slope of this ridge, toward the lagoon, by digging wells of ten or fifteen feet an abundance of pure, delicious water is developed, being simply the rainwater of the great pools in its rear, filtered through the sand ridge.

A glance at the map discloses the fact that for more than thirty miles of its upper course, the St. John's river flowing northward, is parallel with Indian river lagoon, at an average distance of not more than ten miles. At several points, indeed, the distance is reduced to eight miles, so that a canal of that length through ground peculiarly favorable for cheap and easy construction, would give water communication by steam with Jacksonville, and in fact with Charleston. At the same time, during the late fall, winter, and early spring tides the inlet affords passage to steamers drawing from eight to ten feet of water, with a completely sheltered harbor immediately within the bar. Beside fish to so marvellous a degree in variety, numbers, and excellence for food, Indian river is likewise the resort for turtle.

The vegetation and flora, by no means so luxuriant as that of inter-tropical regions, are, however, largely of the same description. The trees are covered with beautiful air plants and other parasitic plants, which open a broad field of interesting investigation. The tree yielding gum, Caoutchouc by exudation, for example, is there, although not in quantities for commercial purposes, and is an interesting feature of the landscape from its peculiar growth or habit of climbing and staying itself by the trunk of another tree, which it finally envelopes, crushes, and destroys. Several species of very closely grained, heavy, high-colored woods, susceptible of fine polish, and adapted to the uses of the cabinet maker, are there in abundance. Undoubtedly the Campeachy or logwood would thrive if introduced upon the beach or seaward shore of the lagoon, or would soon so multiply (as in Santo Domingo, where it was first planted for hedges) as to become a valuable product.

And so I might go on enumerating what nature has planted or supplied in forest and stream, and what man might easily do to make at least a charming health resort of Indian river, but I will only add that I have myself seen some remarkable evidences of the benefits which persons of both sexes, having diseased lungs, have received there—benefits that proved lasting—with some yet more remarkable instances of persons so diseased that elsewhere they were in constant pain, who yet were able to lead a prolonged and comfortable life in that singularly equable temperature.

I likewise passed one summer upon the lagoon, and never found the heat oppressive, as it was habitually tempered by a soft, gentle breeze. The only discomfort was the mosquito, against which, however, it was not difficult to guard by proper precautions.

It is a misfortune that the real climatic and general sanitary advantages of Indian river are not widely known to the thousands who suffer from weak lungs and bronchial affections in the New England and Middle States. T. J.

MOUNTAIN CLAMS.—In the Adirondacks, up in Bay River, where it leaves Mud Lake, one of the most distant, gloomy, and forbidding sheets of water in the whole wilderness, are immense beds of clams shaped precisely like our salt water clams. They would be mistaken for them anywhere. Now why, when other waters abound with the ordinary mussel, should this peculiarly shaped clam, looking for all the world as if it had once been imbedded in the sea, and only changed in taste by being removed to fresh water, be found alone in this lonely, remote place, nearly 2,000 feet above the sea level, and more than a hundred miles from the St. Lawrence, is a problem I should like to see solved. I wish the clam found there could be transplanted to the tide water, to see if it would turn to a regular salt water clam. The experiment would be well worth trying. If after a few floodings of salt water, it should become an ordinary salt water clam, it would seem to indicate that it was one at some former time. But why it should be confined to this peculiar locality is another difficulty not easily overcome. To mystify the matter still more, these beds would seem to be of recent origin. Fourteen years ago when I was first there and almost the first except hunters that ever visited it, there were but two beds, about six miles apart. This year they are found extended so greatly that if they continue at the same ratio of progress for 40 years to come, they will fill the whole six miles of river and probably the whole bed of the lake. A scientific man once denied the fact of the existence of such a clam till he was shown the shell, and then, though convinced, did not pretend to explain it. They furnish an immense quantity of food to the minks. —*Tribune*.

—On one occasion Hon. Jeremiah Mason went into Chas. Sumner's office and found him writing an address to be delivered before a peace society. After a little good-natured defense of his views by Mr. Sumner, the former, rising to take his leave, said: "Well, Sumner, you may be right, but I should just as soon think of joining a society for the suppression of thunder and lightning as a society for the suppression of war."

—Once a careless man went to the cellar and stuck the candle in what he thought was a keg of black sand. He sat near it drinking wine until the candle burned low. Nearer and nearer it got to the black sand; nearer and nearer, until the blaze reached the black sand, and as it was sand, nothing happened.

—While a compositor on the *Montreal Witness* was setting up an advertisement for a lost canary, the bird flew in at the office window. "which shows the value of advertising."

Woodland, Lawn and Garden.

TULIPS.—FALL SETTING.

(NAT. ORD. *Tulipaceae*.)

"Her eyes possess a language and a spell,
 A form like Aphrodites in her shell;
 With all her loves around her on the deep;
 Voluptuous as the first approach of sleep,
 Yet full of life; for through her tropic cheek
 The blush will make its way and all but speak,
 Like coral reddening through its darkened waves,
 Which draw the diver to its crimson caves."

THE seedling tulip does not, so far as we have learned, ever produce any but plain unmarked or veined flowers. You will notice, if you plant seedlings—and every lover of tulips should plant either what are termed seedlings, or what may be called nearly the same thing—the first year plain bulbs; and try their success in producing some rare and beautiful striped tulip. This would afford them a fine opportunity of studying the laws that govern the floral kingdom, and in the production of a rare and beautiful addition to their floral treasures.

In the history of this ancient flower many quaint anecdotes and romantic stories are told. The Holland tulip has indeed a romantic history all its own, and when we know that to the cultivation of this bulb alone hundreds of acres are devoted, we cease to wonder at its great value as an article of merchandise alone. Meinheer Vanderpoel was a little squat figure of a Dutchman, who was always accompanied by his little dog and his pipe. "I smokes, I does, and I sells the best bulbs in Haarlem, I shust does, and of all prices, too. I have him for ze fife penny apiece, and I have him for ze fifty dollar apiece, I have. Yah, I have." Such was the literal truth in Holland, and even to-day, in sober 1873, there are tulips valued at about their weight in gold.

The plain tulip, after one, two, three, and four years, is not the same tulip started with. This rusty jack, in his former gray coat of one color only, has thrown away the old gray, and in exchange he wears a coat of many colors, a real "Joseph's coat" of many stripes, and is very beautiful. These tulips are called breeders, and from these breeders come, with care and perseverance, many of our most valuable garden tulips, for every tulip thus produced is to be called by some name, which the propagator or originator has the sole right to append. Another very curious fact is, there may be, and often is, twenty different sorts in the same bed of tulips, yet it is exceedingly rare to find two flowers alike. This proneness to sport in the tulip gives rise to much variety as well as amusement to all lovers of this beautiful flower.

In making a good tulip bed only care is necessary. The bed, which should lie, when possible, north and south, for the benefit of sunny exposure, should be excavated in the same manner as the bed made for the hyacinth, described in a former paper. It may be four feet or more wide, and two feet six inches in depth; the soil filled in being a few, say three, inches above the path, and the centre three inches above the sides. The tulip bed must be most thoroughly drained, or no tulips will grow. After you have made your bed of soil, taken from the under side of good old pasture sod, which has laid in a heap until well rotted and "friable," you are ready to begin the planting of your tulips in the bed.

On a bed like the one thus described I would plant say five, seven or nine rows, according to size of bed. These rows are to run across the bed, and the bulbs to be placed six inches apart in the rows. Press them gently into their places in the soil, which should be three inches over the top or crown of the bulbs when your bed is finished. Your bulbs are to be planted with the tallest ones in the centre or middle row of the bed. These will be from fifteen to eighteen inches in height, and, if good strong growers are chosen, they will afford you a world of delight. "They are God's messengers of beauty to man," said an ardent admirer of nature to me one day, as he was looking upon a rare and beautiful bed of wonderful diversity of color. "This is one of his wise lessons," said he, "and who is he that could look upon this magnificent tulip and say it came by chance?" Having set your bed thus, if you please, the tallest bulbs in the centre, the lowest at the sides, or any way to please your own taste (for we suppose you possessed of some, or you never would plant tulips), you will secure them from frosts and severe cold by coverings of matting, litter, straw, &c. When they begin to break the ground, and the first green leaf appears peeping up, then remove carefully all lumps of earth, if there should be any, and lighten the soil with some appropriate instrument, and you will soon feel yourself richly rewarded by what follows. I have found my account in adding as a dressing one half to an inch in thickness all over the bed a compost made of finely pulverized charcoal, one part to two parts of coarse sand. This gives the bed a very nice, clean look, and the sun adds heat by absorption of sunlight, which the tulip loves at this period to revel in. If you would enjoy the sight of a fine bed of this fairy of the flowers, you can do so by shading the opening blossoms from a too hot sun and high winds, both of which are exceedingly injurious to the plant. Your own taste and ingenuity will suggest just the kind of shelter you need, care being taken to shield the bed on the side next the sun from its too hot rays.

After flowering, the tulip, when its leaves are withered, may be lifted and dried and carefully marked and packed away in drawers for another year's planting.

The time of planting tulips is from October 1st to November 15th, and of this fine floral appendage to every perfect garden we might say much more; but as our intentions in landscape, lawn and garden, woodland and moor conversations is not only to make a readable article, but one of real practical value to all our readers, we close this paper without giving a long list of the rare and beautifully named varieties, as a list of one thousand and one may be had of our floral friends, Vanderbilt Brothers, Fulton street, who will let you into many other of the mysteries of Holland.

OLLIPOD QUILL.

The Horse and the Course.

—The second day of the Prospect Park extra fall meeting took place on October 23d. The attendance was fair and the trotting very spirited. The first race was a match for \$250 mile heats, best three in five to wagon. T. H. Phillip's bay team Prince and Mack, and M. Schenck's bay and black geldings Adonis and Listener. Schenck's won in three straight heats. The second race was the Prospect Park Colt Stakes for three year olds, \$50 each. Value of the stakes, \$1,500. Distance—one mile and repeat. Shepard Knapp's Reform won in 2:25½—2:40. The next two trots were walk overs, only one horse in each race putting in an appearance. The last race of the day was for a purse of \$600 for horses that had never beaten 2:30 mile heats, best three in five in harness. There were four heats trotted when darkness put an end to the day's sport. The last day, October 24, began with the finishing heat of the postponed trot of the day before. Lady Emma won very easily. The second event was the three minute trot. Seven horses started. Sterling, the favorite, won very easily in three straight heats. The most interesting race of the meeting was the free to all race. Purse \$3,500. The celebrated trotting horses Gazelle, Camors, Judge Fullerton, and American Girl, started. American Girl was the favorite and won in three straight heats. Time—2:20—2:22—2:22½.

—The second day of the Kingston (N. Y.) Park races came off on October 23d. The first race for a purse of \$300, for 2:45 horses, was won by Colonel Roberts in three straight heats. Time—2:50½, 2:52½ and 2:51½. The second race for a purse of \$350, for 2:37 horses, was a very exciting one. Five heats were trotted and was finished on October 24th, Major King winning easily in 2:36½. Mag Tammany won the race for 2:50 horses. The second and last race for a purse of \$300, free for all, was won by Joe Brown in three straight heats.

—The Maryland Jockey Club held the first day of the annual autumn meeting on the Pimlico course, Baltimore, on October 23rd. The weather was delightful and the attendance of the elite and beauty of Baltimore was immense. The first race was for a purse of \$500 for all ages. There were eight horses started. Preakness was the favorite and won easily by six lengths. Time—1:54. The second was a hurdle race. Distance—two miles, over eight hurdles, for all ages, with welter weights. Three horses started, the jumping of the horses was poor, as none except the favorite Lochiel jumped clean, the others knocking down the hurdles. Lochiel won very easily. Time—4:31½. The third race was for the Dixie stakes, three year olds. Distance—two miles. Four horses only came to the post. Tom Bowling came home the winner by twelve lengths in 3:58. The fourth race was two mile heats for all ages. Six horses started. This was a closely contested race between Harry Bassett, Sylock and Warlike. Harry Bassett finally won a spirited struggle by a head time—3:56. The second heat was won by Bassett, the same horses as in the first heat were second and third, the others distanced. Time—3:57½.

—The second day of the Maryland Jockey Club meeting on October 24th was well attended, but the track was slow. The first race was for the Central Stakes for two-year old horses; one mile; \$50 subscription, play or pay; club to add \$500. Three horses started. Weathercock won the race, beating Saxon, second, and Visgoth, third. Time, 1:56. The second was the selling race for horses of all ages; two miles; purse \$500, \$400 to first and \$100 to second. Eight horses started. Cora Linn won the race, beating Artist, second; Wheatley, third; and Village Blacksmith, fourth. Time, 3:52. The third race was for the Gentlemen's Post Stakes; one and a quarter miles; for horses of all ages; welter weights; \$25 subscription, play or pay; club to add \$500; \$100 to second. Four horses started. Stockwood won the race, beating Coronet, second; Tabitha, third; and Lochiel, fourth. Time, 2:29½. The fourth race was mile heats, best three in five, for horses of all ages; purse \$700, \$600 to first and \$100 to second. Two horses started. Mate won the race in three straight heats, beating Bessie Lee. Time—1:56, 1:56, 1:58.

—The third day of the Maryland Jockey Club took place October 25th. The number of persons present was unusually large. The first race was the Handicap Stakes, one and a half miles, open to all ages; \$20 each if not declared out. Lizzie Lucas won easily; Shylock, second; Cariboo third. Preakness, the favorite, was the eighth horse. Time, 2:48. The second race was mile heats, for three-year-olds; purse \$600, \$100 to second horse. The first heat was won by Katie Pease; time, 1:56; the second by Artist, time 1:56, and the third by Katie Pease, time 1:50½. The third race, four mile heats, for all ages; purse \$1,700,

\$1,200 to the first horse, \$400 to the second, and \$100 to the third. True Blue and Harry Bassett were the only starters, True Blue being the favorite at 2 to 1. Harry Bassett was distanced in the first heat by nearly two hundred yards. Time, 7:49.

—The Trotting Horse Breeders' Association of Lexington, Kentucky, held the third day of the meeting on October 23d. The track was very heavy and time made by the horses was quite slow. The first race was a purse of \$250 for three year olds, which had never beaten 2:50—one mile and repeat in harness. There were eight horses started. The first heat was won by Ike Marvel, the second was a dead heat between Marvel and Alley, when the third and fourth heats were won by Alley. Turpin was distanced in the first heat. Time—2:59—2:59—2:56½—3:06½. The second race was a purse of \$300 for four year olds and under, mile heats, best three in five in harness. The contest was between Lady Turpin and Hylas. The former scored the first, second and fifth heats, winning the race. The third event was a purse of \$800 for horses that had never beaten 2:34—mile heats, best three in five in harness. Jamison won the race in three straight heats, Lady Alice taking second money and Josie the third premium. The fourth day of the meeting was well attended, but the track was still heavy. The first race was for four year olds. Ella Clay walked over. The second race was the Woodford County Stakes for three year olds. This race resulted in a match between Albrina and J. W. Combs; the former won. The last race closed with a purse of \$500 for three minutes horses. Eleven started, and it was won by Bill Spencer.

—The fifth and last day of the Kentucky Horse Breeder's Association took place October 25th. The weather was fine, but the track was not in good order for fast time. The first race was a walk-over, by Tracy, in 2:53. The second race was won by Doble. Time—2:47, 2:51, 2:46½, 2:49½. The third race was won by Dick Jamison, beating Red Cloud, Ira H, and Billy Haskins in five heats. Best time, 2:34½. The driver of Ira H was suspended for sixty days and the horse distanced, for foul driving.

—There was some interesting driving and trotting at Dexter Park, Chicago, on October 25th. In the free-for-all race, \$3,500, Bashaw, Jr. Mila C., Lady Mac, Ella Wright, H. Collie, Morris, and Bro. Jonathan started; the latter took the first heat in 2:27½, Bashaw, Jr., the second in 2:26½, and Mila C. the third in 2:26½. The race was then postponed until Monday on account of the darkness. The judges put Budd Doble up to drive Mila C. in the third heat, as her former driver was evidently pulling her. Lady Mac was distanced in the third heat. During the afternoon Goldsmith Maid was run round the track, doing her mile in 2:18 each time. The running race was won by Lady Fairfield in two straight heats. Time—1:50, 1:51. James Stinson, of Chicago, then drove his four-in-hand around the track in 2:50, which is said to be the fastest time on record for a four-in-hand.

—HOW TO TREAT RUN DOWN HORSES.—When horses become worn out and run down by hard work, sometimes liberal feeding alone will not bring them up again to their proper state of health. A writer in the *Agriculturist* says his animals were in that condition of lassitude and weakness, and he sawed a barrel in two and placed the ends upon the platform of the pump, to be used in watering the horses. Into one of them he put a pailful of corn meal and mixed it with the water. The horses at first did not like it, and would only drink a little when very thirsty. After they had drank what they would, they were allowed pure water. In a few days, however, they drank this corn meal soup with a relish, and in less than a week there was a decided change for the better in the appearance of all the horses. He did not let them eat the meal, but merely let them drink the milky water. There is no doubt but it is as good for them as a plate of good soup is for a tired and hungry man before dinner. It seems to stimulate the appetite and aid digestion.

A HUNTING INCIDENT.—Henry IV, when hunting, became separated from his company, having lost his way. In the forest he met a peasant.

"Did'st see the hunt passing this way?" asked the king.

"No, but I heard them riding down yonder slope," said the man.

"A gold piece, if thou wilt take me the way they went," said the king.

"I will do it for nothing if thou wilt show me the king," said the peasant.

"Willingly," replied the merry monarch. "And do thou jump up behind me and tell me which way they went. I will certainly show thee the king."

The peasant nothing loth mounted behind Henry, and presently they approached the hunt.

"How shall I know, good sir," asked the peasant, "who is the king? They are all so smartly dressed."

"Thou canst easily distinguish him," said Henry. "People always take off hats to the king." Very soon they were in the midst of the hunt, and hats were doffed.

"See here," said the peasant, "I do not exactly understand this; for very surely if you are not king, I must be king of France and Navarre. So, if thou art king, I will get down; but shouldst thou owe me allegiance, dismount."

The best beloved of French kings hesitated a moment what to do, when the peasant, having enjoyed the joke, deftly slipped off the horse.

"Give this man a cup of wine," cried the king, "and a hundred crowns, for of all contestants to my crown of France he has been the most easily deposed."

—What is the difference between a manatee and a man at sea for the first time? One is a sea cow, and the other a sick coward.

—Worse than a tempest in the tea-pot—a war in Ashantee; (a)shanty.

Natural History.

MORE ABOUT THE MANATEE.

SINCE the publication of Mr. Conklin's most interesting article on the Manatee, we have been in receipt of a number of letters in regard to this strange creature, and some of the questions asked us we can reply to. The manatee *australis*, of the Amazon, an engraving of which can be found in Wood's Natural History, if taken as a model or outline of the *M. Latirostris*, of Florida, differs materially from Gus, the unique specimen of the Central Park. Our Gus, who comes to you in his shallow bath when you call him, has no bottle nose like the one in the picture. His snout tapers down gradually, when he opens his mouth to get his food, his nose wrinkles up a little, but never in the coarse way as shown in Wood's picture. Whether his position on the bank, as in the picture, would incline him to be high shouldered, we cannot state, but there is no marked prominence in the fore part of the Floridian manatee. The fore flippers are not placed so far forward, and the tail is much broader than in the Wood picture. Altogether there is a puffly appearance to the illustration which does not belong to Gus, who is rather flat-backed. One beautiful thing about Gus is the construction of the valves in his nose, the working of which can be distinctly seen. As soon as his cleft snout gets above water, open goes the valves, the instant he is submerged he shuts them. They are about as big as a waistcoat button, and are neatly hinged. They have a perfect mechanical movement, and their motion is due to some involuntary action. The tail itself resembles very much the single flange of a propeller placed parallel with the water. It has an undulatory motion, and can, we think, be made convex or concave at pleasure. The rudimentary nails on the flippers are whitish, and not very marked. As to the question the power the manatee would have when in its natural element to inflict injury, we are somewhat doubtful about. Certainly the muscular power of our manatee's tail would be immense, as it is joined closely to the main body, but we think his want of activity would render the use of his only means of inflicting injury useless at times, though Mr. Conklin informed us that his manatee would strike a stranger with its tail, and inflict quite a powerful blow.

In feeding on the leaf of the *canna*, the manatee generally takes the leaf lengthways across his mouth, and bites it off bit by bit, the hold being always retained something like a boy without good table manners eating a slice of bread and butter, and commencing at one end of the slice and munching it from end to end. Mr. Conklin told us, when we examined Gus, that he would consume from twelve to fourteen pounds of canna leaf and sea weed together per diem, and that although he browsed a little from time to time, his feeding hours were late at night and early in the morning.

This most intelligent director of the Central Park collection of animals deserves great credit for the care he has taken of this strange creature. Specimens of the manatee from Florida have been sent north before, but have never lived any time. Some five years ago, some showman had a fair specimen of the Manatee in Savannah, but it lived for only a short time. Gus is quite tame, and will come to the surface and approach his keeper when called. To our eyes he presented somewhat the appearance of a monstrous gorged leech with a tail and flippers, and seemed in disposition to be particularly harmless and peaceful.

THE PEREGRINE FALCON.

(*Falco anatum*.)

You remember, Mr. Editor, the huge mass of red sandstone, shot up six hundred feet above the Connecticut river at South Deerfield, called Mt. "Sugar Loaf."

You probably can recall the lovely view of the little valley spread out before you from the summit.

I doubt not you have sat in "King Philip's seat," scooped out of the cliff, where 'tis said he planned the massacre of Bloody Brook, when Capt. Lathrop and his Beverly Volunteers were slain so many years ago.

One day in April I climbed the steep path on the southern side, and wearied and heated, threw myself upon the grass at the summit to gaze upon the scene below.

The spires and towers of Amherst glistened in the sun, thrown out in bright relief against the dark green of the Holyoke Mountains.

Hadley and Northampton presented pictures worth remembering, and the Connecticut reflected the last rays of the sun as it sank behind the Hoosac hills.

I was awakened from a reverie by a sharp, chattering cry, unlike any I had ever heard, and looking in the direction whence it came, saw coming towards the eastern cliff a sharp-winged hawk. It swooped beneath the shelving rock and disappeared. Climbing out upon a projecting tree-trunk I threw a stone over the cliff and took a quick shot as the hawk appeared; owing to the insecurity of my seat I missed. Examining the brow of the precipice I found that I could descend some twenty feet, and by carefully steadying myself by the small stunted cedars could reach a point opposite a projecting stick, where from the whitened appearance of the rocks, I conjectured the hawk had his eyrie. But by this time the sun had set, and so descending the mountain and craving a supper and bed, I deferred my attempt upon the life of the bird. Before it was fairly light next morning, I had ensconced myself behind the lowest cedar on the cliff, just where the rock began to shelve in. Though so early, the hawk was seeking his

breakfast. Patiently I waited, and the sun climbed high up in the heavens, and I thought feelingly of the breakfast I was losing, when suddenly there appeared over the river a swiftly approaching bird. Nearer and nearer he drew, till I could hear the whistle of his wings. Sweeping now above, now beneath me, he finally seemed convinced that the coast was clear, and close beneath the cliff and up, with a sudden rush, alighted upon the dry branch. Scarcely had his wings folded when his sharp eye espied me; but 'twas too late! As he launched into the air I fired; and the report was followed by a cloud of feathers, my only sign that I had struck, so sharp was the incline of the precipice. Any naturalist can imagine my feelings as I descended the mountain and climbed again to the base of the cliff and found my bird.

Three hundred feet had he fallen and nearly every bone was injured; but there he lay, a duck hawk—a true falcon. I stuffed him and he is in my cabinet to-day. A few years afterwards I procured an egg from Mr. W. S. Street, the kind-hearted keeper of the Eyrie House at Mt. Tom. Allen of the Museum, Comparative Zoology, gives the best description of the eggs and bird, extant. Its range is from Greenland to the West Indies. It is closely allied to, if not identical with the European falcon of the same name. It preys upon ducks and smaller game of all kinds. The old residents near the mountain call it the "Black Hawk," and relate many stories of its prowess. One old man said they had bred there for forty years; if one was killed another took its place. I know that the widow of my bird had another mate in less than two weeks. Once a bird of this species met with a horrible death: swooping down upon a small bird perched upon the sharp point of a stake, it was securely impaled, the stake passing through the body.

FRED. BEVERLY.

OVERWORKED BRAINS.—The nearest thing to an indication that the brain has been working rather more than is good for it, is the persistence in the mind, during the period of rest, of the thoughts which have engaged it during its condition of activity. After a good spell of hard work, the brain-worker is often tormented by finding it difficult, all at once, to turn off the steam. His work-day thoughts will intrude themselves, in spite of every effort to keep them out. Each worker has usually a way of his own of endeavoring to get quit of these unwelcome guests. Thackeray generally succeeded in exorcising the creatures whom he had been calling into existence by the simple expedient of turning over the leaves of a dictionary. A great lawyer was in the habit, in similar circumstances, of plunging into a cold bath, and averred that a person never takes out of cold water the same ideas that he took into it. Perhaps the best mental corrective of this condition is to employ the mind for a short time in a direction most contrasted to that in which it has been overworked. In this way a mathematician might find advantage in unbending his mind on a page or two of a novel while the novelist could chase away the phantoms which haunt him by dipping into a discussion on the "Quantification of the predicate." The cure, in fact, must be sought for on a principle the very opposite to that of the famous homeopathic doctrine of "similars."—*Chambers' Journal*.

EUROPEAN ANTELOPES.—Europe can, at the utmost, reckon but two antelopes among her ruminants, the chamois (*Antelope rupicapra*), and the saiga (*Antelope colus*). The name *rupicapra* (rock goat), applied to the former, suggests the difficulty which naturalists have felt in classing this creature of the Alpine peaks. We will, however, admit it among the antelopes, and this will give one species of the family to western Europe, leaving the saiga to the regions of the Lower Danube, and the hills of Caucasus. Neither species can be deemed a good example of the antelope form and beauty, the rough coat of the chamois, and the heavy sheep-like body of the saiga, exhibiting little of elegance or grace. But either animal may be taken as a good specimen of the wonderful activity and amazing watchfulness which distinguish the whole family. The skill of the keenest rifleman is often baffled when tracking the chamois along the edge of the avalanche or up the ice covered peaks. Far off the daring animal stands, on some projection of a rock where no hunter's foot can tread, or bounds from crag to crag as if endowed with supernatural energies. No finer specimen of brute skill and courage can be witnessed in Europe. The muscular power by which the brave creature balances itself on the narrow ledge of rock, and then springs from this across a fathomless gulf to a mere shelf of the opposite precipice, may well excite the envy of the most daring and best trained hunter. The contest between human power and animal energy is here seen in its highest forms. The saigas, or antelopes of eastern Europe, are often seen in flocks many thousand in number when making their autumnal migration from the barren plains of the north to the sheltered valleys of the south. Man keeps a sharp look out for their approach, and destroys vast multitudes, not for the sake of the venison, but to enrich himself by the sales of their horns and skins. The belles of Europe and Asia wear ornamented combs made from the transparent substance of the saiga's horn, while the skins may appear as elegant gloves in shops of London and Paris. Thus far this antelope may claim to be a promoter of civilization, and to share with the tortoise the honor of adorning beauty's head.—*Cassell's Popular Educator*.

—The following prices were given for various animals and birds, many of them bred in the Antwerp zoological garden. Female giraffe, £360, hyena, £18, elands, £80, dama antelope, £30, pair of llamas, £60, red kangaroo, £40, black faced kangaroo, £29, two lion cubs, £60. Pheasants brought high figures, one couple of Amherst pheasants (*Thaumalea Amherstiae*) £160, and a single male brought £50. A couple of Siamese pheasants (*Euplocomas prelati*) sold for £98. Some pheasants notably Reeve's pheasants (*Phasianus Reevei*) having bred fully from the exceedingly tall prices, they brought £100 a pair. It seems as if the breeding of animals and birds in Europe, may be made to be remunerative. But of course any such ideas of profit to be made by zoological societies, is entirely a secondary consideration.

The Kennel.

THE BOAR HOUND.—This strain of hound will be found useful in hunting wild pigs in Louisiana, and is derived from a mingling of the mastiff with the greyhound, crossed afterwards with the largest sized English terrier. Our friends who own and breed dogs will at once see the necessity of using these three animals, in order to get at the best strain to hunt the Wild Boar or the less ferocious Wild Pig. The greyhound element is required in order to give the dog sufficient speed for overtaking the boar, which is much swifter animal than is generally supposed, from his unwieldy piggy form. The mastiff is needed to give it the requisite muscular power and dimensions of body, and the terrier is introduced for the sake of obtaining a sensitive nose and a quick spirited action. To train this dog properly is a matter of some difficulty, because a mistake is generally fatal, and puts an end to further instruction by the death of the pup. It is comparatively easy to train a pointer or setter, because if he fails through eagerness or slowness, the worst consequence is that the shooter loses his next shot or two, and the dog is easily corrected. But if a Boar-hound rushes too eagerly at the bristly quarry, he will in all probability be laid bleeding on the ground by a rapid stroke from the boar's tusks, and if he should hang back he would be just as likely to be struck by the infuriated beast. The only good breed of boar hounds known to us is a strain owned by Dr. Slack, of New Jersey, which has turned out remarkably well. The limbs are long and exceedingly powerful, and the head possesses the square muzzle of the mastiff, together with the sharp and somewhat pert air of the terrier. It is a very large animal, measuring thirty inches to the shoulder. Wild boar hunting, next to lion and tiger shooting, is a dangerous sport, and the most destructive to hounds that the travelled sportsman will encounter. The boar is a most fierce and savage animal, and when irritated or disturbed by hounds will rush at any man or animal and attack them with his tusks. In fact, a boar has been known to turn with such terrible effect upon a pack containing fifty dogs that only ten escaped scatheless, and six or seven were ripped up and killed on the spot. The speed of this beast is no less remarkable, as when fully aroused he puts the mettle of the swiftest and staunchest horse fairly to the test, even on ground where the horse would have the advantage he frequently gets away from the sportsman to regain his haunt, which is usually in a cane-brake. The spear is generally employed in Algeria in boar hunting or pig sticking, as the sport is familiarly termed, and is either thrown from the horse's back, or is held like a lance and directed so as to receive the animal's charge. When driven to bay the African boar is as savage an animal as can be imagined (to which some few gentlemen residing in the city can testify), as with flashing eyes and foaming mouth he dashes at one and then another of the horsemen, sometimes fairly driving them from the spot, the boar often remaining master of the field. Another cross or breed of the Boar-hound which would suit our Southern friends (as thoroughbred mastiffs and terriers are a rarity), may be derived from the mingling of the Southern hound and grey-hound, which would answer every purpose for wild pig shooting in Texas and Louisiana.

—If we have strictly no wild boar hunting here as in the Ardennes, or pig sticking as in Africa and India, we have the peccary in Texas, a sport by no means to be despised, and to which we would call the attention of our northern sportsmen. In the cane-brakes of southern Texas, in the dense thickets, the peccary is found, and he requires for his capture exactly the kind of dog we have described. The planters do not like the peccary. He destroys the crops, mutilates stock at times, and sometimes makes the sportsman take to the trees. Along the Brazos Bottoms, the peccary is found in quantity. He is at times a most pugnacious little rascal, and will charge at a man, as straight as an arrow, and his sharp curved tusks cut like knives. To meet him is no easy task, as the cane brakes are close and a path has sometimes to be cut through them. One would think from the size of the peccary, for he is rarely more than eighteen inches high, by two and a half feet in length, that he would be hardly a match for a dog, but such is his quickness, his strength, and valor, as to make him a most dangerous foe to the staunchest hound ever bred. As quick as lightning, all the strength lying in his head, neck and shoulders, with his lance-like tusks, he will disembowel a dog in a trice. Being gregarious, peccaries have a shocking bad habit of all doing exactly the same thing, at the same time, and they frequently charge *en masse*, and scatter the dogs.

Webster in his wild scenes of hunting life, thus describes the peccary. A bear has been wounded and the dog are fighting him, when a troop of peccaries enter and charge headlong on bear, men, dogs and all. "Such yells, and screams, and roars of pain, and such a medley helter-skelter rout as now occurred, would be difficult to describe. The wounded dogs, with tails between their legs, came sulkily towards us. The bear, frantic with pain, rolled his great carcass to and fro, and gaped his read mouth, as he struck blindly about him here and there. The grunting and rushing patter of an addition to the herd coming in behind us, waked us from the sort of stupor this unexpected scene had thrown us in for the instant. "Run, run!" shouted my friend, with a voice half choked with mingled rage and laughter, and such a scurrying on all sides, for the other hunters had just come in, and the cry of "Peccaries! Peccaries! run! run!" and the popping of our guns all round

at them, as we urged our horses to escape through the cane, closed this eventful scene, of my first introduction to the peccaries!"

DOG LAW.—Difficult cases of dog ownership often crop up in the police courts, the magistrates generally allowing doggy to decide the quarrel. One lady we remember recovered her pet by making him die at her command. A very satisfactory instance of sending a case to the dogs for settlement was reported in a Jersey newspaper in 1857: "A few days since a son of the Rev. Mr. Bellis was passing along the street, holding in his arms a pup-dog, of which he had been made a present; when a French dealer came up to him, took the animal from him, declaring it to be her own. Mr. Bellis complained to M. Centenier du Jardin, whom he assured that the pup had been given to his son by Mr. Cornish, the owner of the animal's mother. The Frenchwoman insisted that the pup was hers, and said she had given its mother to an innkeeper in Hillgrove Lane. M. Centenier caused the two mothers to be brought together at the innkeeper's, and the pup to be placed equidistant between them. The pup immediately ran to its mother, owned by Mr. Cornish, and was instantly covered by her with caresses. Of course it was forthwith ordered to be given up to its rightful owner." A less successful result attended the experiment tried by Judge Cush in the belief that a wise dog must know its own master. Finding himself getting bothered altogether by the conflict of evidence adduced by the rival claimants for the possession of the animal, the judge cried, "Stop! we'll settle this very quickly. You, Mr. Plaintiff, go into the far corner of the room out there. You, Mr. Defendant, come into this corner up here. Now both of you whistle; and Mr. Clerk, let loose the dog." His orders were obeyed; plaintiff and defendant whistled their loudest, the dog made a bolt of it and 'scorted' out of court. "Very extraordinary!" said the judge. "I can't understand that. Mr. Clerk, as the plaintiff could not prove his case when I gave him the chance, you may enter judgment for the defendant." It would have been in stricter accordance with the evidence to have declared the dog a free dog, belonging to neither.—*Chambers' Journal*.

A New York *Times* correspondent tells this story: "In one of Landseer's early visits to Scotland he stopped at a village, and took a great deal of notice of the dogs, jotting down rapid sketches of them on a bit of paper. Next day, resuming his journey, he was horrified to find dogs suspended in all directions from the trees, or drowning in the rivers, with stones round their necks. He stopped a weeping urchin who was hurrying off with a pet pup in his arms, and learned, to his dismay, that he was supposed to be an excise officer who was taking notes of all the dogs he saw in order to prosecute the owners for unpaid taxes; so the people were all anxious to get rid of their dogs."

HYDROPHOBIA.—Dr. Luke in his work entitled "Influence of the Mind upon the Body," supports the hypothesis that hydrophobic symptoms are often developed without previous inoculation. In illustration, he relates a notable instance of a physician of Lyons, who, having assisted in the dissection of several victims of the disorder, imagined that he himself had become inoculated. On attempting to drink, he was seized with spasm of the pharynx, and in this condition roamed about the streets for three days. At length his friends succeeded in convincing him of the groundlessness of his apprehensions, and he at once recovered. Dr. Marx, a German physician, writing to *The Clinic*, regards hydrophobia as a morbid affection of the imagination induced by fear, and, in support of his opinion, cites some interesting cases in which persons unaware of the superstition have escaped the spasms.—*Tribune*.

—The following appears in *Land and Water* in regard to cross-bred grey-hounds:—

I was surprised to see stated, that you were of opinion that a cross-bred greyhound would catch the fastest antelope living. I do not exactly know what is meant by a cross-bred greyhound, but as I think your information is likely to mislead your correspondent, I take advantage of a leisure hour to give a little of my own experience in regard to the antelope tribe. In the first place, I must inform you that I resided in the Bombay Presidency in the East Indies for about twenty-three years, and was employed in Candish, the Deccan and Province of Guzerat. There are two kinds of antelopes which are common enough there, viz., the black buck species, which are nearly, if not, quite as large as a fallow-deer, and a much smaller kind, known by the name of chinkarra, goat antelope, or hill deer. The former are seldom to be seen anywhere except in the plains, but the latter are met with in the open country pretty frequently, especially in Guzerat. Now, I kept greyhounds myself many years ago, some of the pure English, bred some Persian, and I think I can assure your correspondent, that to the best of my belief, Master McGrath himself would not have much more chance of catching a healthy full-grown buck or doe of either of the species mentioned, under ordinary circumstances, than he would of catching a wild goose. My dogs were as good as any I ever saw in India, and used to catch foxes and hares in very good style, but neither I nor any other person who knew anything about the matter, would have thought of slipping them at a full-grown animal or even at a well-grown fawn. They used sometimes to break away in pursuit of one by itself or after a herd, but I never thought of riding after them; they ran till they were tired or the antelope disappeared, and came back again. I have seen my dogs have a good long course before they could catch one after I had broken a hind leg with a rifle-ball; and on one occasion a strong Persian greyhound had such a severe run after a large black buck, when I had put a ball in its body, and which he caught at last, that I fancied that the dog was never himself again afterwards. There are other small antelopes in the Bombay Presidency, but I never met with them except in jungle or hills, and there may be some in the plains in Bengal or elsewhere that a greyhound may have a chance with for anything I know to the contrary. I am only giving my own experience. I never heard whether a greyhound can catch a roe-deer.

—The aborigines of Utah feared a Manitou. The present inhabitants are not afraid of a woman or two.

—When is a twenty-four pound trout not a twenty-four pound trout? Ans.—When it is weighed.

The Magazines.

THE MOORISH COFFEE HOUSE.

PICKING our way through the little crowd outside, we enter a long room, and are struck by the contrast between it and the French café, but not so much on account of the simplicity of the interior as from the kind of life within. As one passes through the doorway no jingle of dominoes, no sound of billiard balls striking together, no clinking of glasses, no hubbub of voices, no triumphal cries of the man with a good hand at *piquet* greet the air. There are no waiters in clean white aprons and short black jackets, moving with extraordinary nimbleness and rapidity among small marble tables, no *dame de comptoir* seated sedately behind a rosewood tribune; but in lieu of these quietness and peacefulness reign over everything. At the end of the room the *Kahouadj* or master, who is generally a Moor or a Kouloglis, is standing before his stove, where water is always on the bubble and coffee continually simmering. As the water boils he places five or six tea spoonsful of coffee into a tin pot containing about two tumblers of water, and carefully removes the scum as it rises to the top; after allowing it to simmer for a few seconds he pours the coffee several times from one pot to another, reminding one of an American preparing a brandy-cocktail, and finally empties it into small cups—sometimes fitting into metal stands resembling egg-cups, but more frequently being ordinary European coffee cups—which the *thefel* or waiter hands round to the customers. In some cafés the coffee is roasted daily and pounded on the premises, as it is generally considered that it gradually loses its flavor when once cooked, but there are also shops where the process of crushing is carried on as a trade. In these establishments you see bent over a long stone trough, resembling a manger, three or four half naked men, who stand there from morn till sundown, with a rest of about a couple of hours in the middle of the day, crushing the coffee with a huge iron pestle. The Arabs never mix milk with their coffee; they take it lukewarm, and sip it, stopping from time to time to draw a whiff of smoke from their pipes, or to make an observation to a neighbor.—*Gentleman's Magazine*.

WAVE ACTION OF THE PACIFIC.

NOTHING can be more tumultuous or less pacific than the waters of the Pacific Ocean along the Mendocino coast. Where there is a sandy beach, which is not often, it is pleasant to watch the incoming waves, and to compare them with those of the Atlantic. We at once perceive that there is a great difference. In the Atlantic the surf is seldom more than six feet high, and the serried line of waters that comes dashing onward is rarely more than two hundred yards long. In fact, gazing at the sea that breaks upon the Long Branch shore, or upon the sands of Cape May, or upon the western side of Martha's Vineyard, or upon the petrified beach of Santo Domingo, one can see without difficulty ten or a dozen waves breaking on the shore or advancing in line, all within the field of vision afforded by one glance. It is not so here. The waves, in the first place, are not so frequent. Accustomed to the Atlantic quick pulsation, the traveler waits with impatience, even with a degree of pain, for the roar of the breakers on the Pacific coast, and has about concluded that the sea has given the thing up as a bad job, when the tremendous boom bursts suddenly and unexpectedly upon his ear. Then the waves are twelve feet high and a mile in length, and advance with a solemnity of motion which words cannot describe. The curves described by the crests of such waves are infinitely finer than anything which the Atlantic presents; and the boiling fury with which they crash upon the beach and churn the sands is at first sight appalling. Around isolated rocks they rage and raven, like the dogs which the poets fabled around Scylla. All along the Mendocino coast they have worn the cliffs into strange and wondrous forms, beating out caverns where the lower part is conglomerate rock, and series of arched cellars, into which tons of seaweed and debris are thrown. The basalt, which is the leading character of the crust, is not uniform in texture, some parts being very much softer than others. Wherever this occurs in the proximity of the waters, they have invariably scooped out the soft rock, making all kinds of mystic arches, siren rings, and gateways of Poseidon. This is not infrequent, and occasionally happens in spots accessible to the human foot, sometimes even in close neighborhood to the stage road. The surface is covered with a rank, coarse grass, which even mules disdain, and which the wandering goat will not even look at. Sometimes a cactus will bloom along the cliffs, and there is a species of thistle with very handsome bluish-green leaves and a large yellow flower.—*Appleton's Journal*.

A PLEA FOR SHEEP.—Lately, visiting some of the sheep farms of Lincolnshire, I noticed that while the Midland farmer talked to his horse, and even petted his oxen, he treated his sheep as an animal peculiarly devoid of intelligence. Now, I noticed among my agricultural friends this general sentiment in practice, a sort of general disregard for the intelligence or feelings of sheep, though to me there is as much sad pitiful intelligence in the eye of a sheep as there is in the "patient melancholy" face of a cow. While the farmer has brought sheep to the perfection of size and shape and profit, that sort of mutual regard which animated sheep, shepherds, and shepherdesses in the olden days seems to have died out. St. John says, "To him the porter openeth; and the sheep hear his voice; and he calleth his own sheep by name, and leadeth them out. And when he putteth forth his own sheep, he goeth before them, and the sheep follow him, for they know his voice." On these words Dr. Hammond observes that the shepherds of Judea knew every sheep separately, and that "shepherds of that country had a distinct name for every sheep, which each sheep knew and answered by obediential coming or following to that call." Moreover, they trained up the ram to collect the flock, a far better device than that of the sheep-dog. Homer endorses this in his simile of Ulysses drawing up his men to a ram ordering the flock. On the authority of Philo Judeus, a philosophic Jew, born and bred in Egypt, in his first chapter concerning the Creation says: "Woolly rams laden with thick fleeces in spring season, being ordered by their shepherd, stand without moving, and, silently stooping a little, put themselves into his hand to have their wool shorn; being accustomed, as cities are, to pay their yearly tribute to man, their king by nature."—*Gentlemen's Magazine*.

—PRESERVATION OF HUMAN REMAINS.—In the Italian section of the Vienna Exhibition, Dr. Marini exhibits, among an assortment of human feet, hands, legs, arms, and busts of shrivelled proportions and deep-brown color, a large, round plateau, evidently of hard and polished material, which has been likened to stale gelatine or potted boar's head. It is a conglomerate of specimens, illustrative of an art invented by him—the petrification and mummification of human corpses. It was this Dr. Marini who petrified Mazzini, and executed the work so well that the admirers of the arch-conspirator proposed to set up the corpse in the Capitol and save economical Italy the expense of a statue. The doctor's preparations are weather-proof, and will not only stand wear, but take on a high degree of polish. His mummified specimens, by a process known to him alone, can be restored to their original size and elasticity; while the petrified ones are as hard, and possibly as durable, as granite. The top slab of the table is composed of muscles, fat, sinews, and glandular substance—all petrified together in a block, the surface of which has been planed and polished till its face resembles marble. Certificates from Nélaton and others are attached to the specimen limbs, setting forth that the limbs in question had, for the satisfaction of the certifiers, been restored to their pristine softness and pliability by Dr. Marini.—*The Lancet*.

—THE COMMON FROG.—What is a frog? At first, almost all will think, on meeting with this question, that they can answer it readily and easily. Second thoughts, however, will show to most that such is by no means the case. Indeed many a man of education and culture will find himself entirely at a loss, if suddenly called upon for a reply to what is in fact a problem by no means easy of solution. "The frog is a small saltatory reptile" will probably be the reply of the majority. But is it a reptile? At any rate it begins life (in its Tadpole stage) like a fish! By the great Cuvier, however, as by very many naturalists since, it has been regarded as a reptile and classed with lizards, crocodiles and serpents; and yet it may be a question whether the marine affinity conunually assigned to it in the nursery tale, be not the lesser error of the two. If the frog was only known by certain fossil remains it would be considered one of the most anomalous of animals. Many persons are accustomed to make much of the distinctive peculiarities of the human frame. In fact, however, man's bodily structure is far less exceptional in the animal series, is far less peculiar and isolated than that which is common to frogs and toads.

The frog is the never-failing resource for the physiological experimenter. It would be long indeed to tell the sufferings of much-enduring frogs in the cause of science! What frogs can do without their heads? What their legs can do without their bodies? What their arms can do without either head or trunk? What is the effect of the removal of their brains? How they can manage without their eyes and without their ears? What effects result from all kinds of local irritations, from chockings, from poisonings, from mutilations the most varied? These are the questions again and again addressed to the little animal which perhaps more than any other deserves the title of "the Martyr of Science."—*Nature*.

× THE BEAVER.—Beaver have their young about the first of June, and breed but once a year; these number from one to eight; very old beaver having but one or two at a time. They are pretty little things, about the size of a rat, and are easily tamed, but, on account of their mischievous propensities, are not favorite pets. One pair of young ones that I know of being put in a tub of water, and thinking doubtless that their "lake" should have a creek, proceeded to gnaw the sides till they had made a hole in one of the staves, when they gathered together all kinds of rubbish, consisting of boots, slippers, &c. with which they attempted to make a dam. As it did not answer, they were very much cast down, crying and rolling themselves about like children in a pet.

There are various ways of trapping these sagacious animals adopted by professional hunters and trappers. In the fall and spring, the chief method is, to make a small opening in the dam, and set the trap in such a manner that they will get caught when repairing the mischief. The traps should be fastened by several feet of chain to a dry pole, driven firmly at full length of the chain into the mud at the bottom of the lake; no marks must be left. Should the chain be slack, the beaver is almost sure to leave a toe or paw in the trap. Since he has a chance of resting on the dam, and by twisting and using his teeth, will set himself free, it is then a labor of much ingenuity to catch him. The presence of beaver and their size are judged by the freshness of the sticks and the size of the teeth-marks on them, as well as the general appearance of the works.—*Chambers' Magazine*.

ANECDOTE OF LORD PALMERSTON.—Gordon, the Scottish painter, used to tell this story: "I had exhibited for several years, but without success. One year, however—the year before I painted 'the Corsicans'—Lord Palmerston took a sudden fancy to my picture, called 'Summer in the Lowlands,' and bought it. His lordship made inquiries after the artist, and invited me to call upon him. I waited upon his lordship accordingly. He complimented me upon the picture, but there was one thing about it he could not understand. 'What is that, my Lord?' I asked. 'That there should be such long grass in a field where there are so many sheep,' said his lordship promptly, and with a merry twinkle in his eye. It was a decided hit, this; and having bought the picture and paid for it he was entitled to his joke. 'How do you account for it?' he went on. 'Those sheep, my lord,' I replied, 'were only turned into that field the night before I finished the picture.' His lordship laughed heartily, and said 'Bravo' at my reply, and gave me a commission for two more pictures; I have cashed since then some very notable checks of his—dear old boy!"

ORIENTAL EASE.—*Kief* means, firstly, to do nothing more fatiguing than to lie down upon cushions smoking a hookah or a chibouck filled with the finest tobacco, which a young Arab lights with a piece of perfumed tinder; then to sip coffee drop by drop, or violet, orange, or rose sherbets, and to listen to that peculiar music which, although dull and monotonous to us Europeans, is delicious to an Oriental ear. Add to this a beautiful site, which is indispensable, a warm atmosphere, inspiring people with an inclination for repose, shady trees, and, above all, water—if only a corner of the Bosphorus in the distance—and you will have the principal elements of *kief*.—*Gentlemen's Magazine*.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fish ing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, traits, species, governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

JAMES HOBSON.—Alarm; 1 min., 42½ sec.

OLD POP.—Write to Thad. Norris, West Logan Square, Philadelphia.

DE B., Wheeling, Va.—Your deer hound is a fair dog. About thirty-two inches at the shoulder is a handsome dog.

D. S. AND L.—We believe the decision to be absurd, though final. Change the rules next year.

J. Q. A. Jr., South Orange.—The female is much smaller than the male, both in the tame and wild species. In some fancy breeds it is marked by the plumage, also by the strut.

OUR CLUB.—Six hundred yards a minute and twenty-five seconds is very creditable. An amateur has lately made this distance in seventy-five seconds.

M. S.—Leg byes must be called aloud by the scorers and by the umpire to decide. "Arm before wicket" is a proper decision, and puts a man out. Glad to have your scores.

RICHMOND, Va.—A pair of beagles will cost in this city from \$50 to \$75. If you wish to give us the order, we will import for you one pair of pure red rabbit beagles, the cost not exceeding \$35 in currency.

B., Whitehall, N. J.—Will take the subject up shortly and treat it in full. We send you to-day last report of the National Rifle Association. Address in the meantime the secretary.

PISCATOR.—Will our correspondent "Piscator," whose article is noticed by Mr. Mather in this day's issue of our paper, be kind enough to send us his address?

CHAS. HUNGERFORD, Kansas City.—For ordinary shooting, ¾ ounces of powder. Don't ram your shot. Take it to a practical gunsmith; it may be loaded.

ABRAHAM D., Charleston, S. C.—A little Colman's mustard sprinkled in the box kills insects for the purposes of the naturalist, very quickly, and is always to be found.

H. L. N., Boston.—Would be exceedingly obliged for photograph. We think there is no doubt about the King Charles spaniel being derived from Japan.

GRAVES.—To ask if contributions to this paper would be acceptable to its editors is superfluous. We are always anxious for favors of this sort. Send them in.

H. L. O., Hoboken.—1. Use any clear dry varnish or copal varnish for your fish specimens. Much better to preserve the whole fish than the half. 3. Use arsenical soap. 4. For your reptiles, suspend by means of string through the cork.

G. D.—The dog puzzle-peg is out of use. We never knew it to be used in the United States, and though spoken of in English books, we think it worthless. Only slow or low bred dogs are given to the faults you speak of.

NAMBY, Hartford.—Brown paper test the only one to ascertain penetration of shot; the tin canister method unsatisfactory. To send shot, No. 5 or 6, through 28 sheets of thick paper is creditable, though 30 thicknesses have been penetrated at 40 yards. Of course the centre shots show the best penetration.

J. The best plan would be for three or four of you to club together and buy a small skin, which would cost \$5; any country shoemaker will make them for you, according to our instructions. Mr. Kaiser, furrier, Granville street, Halifax, N. S., will supply the skin.

H. U.—1. Barrels were first rifled about 1498. The spiral turn belongs to the eighteenth century. 2. Express rifle said to have a point blank range, with four drams of powder, at 130 yards. Weight 8 and 9 pounds. We think heavier guns are being made. Your third question we will reply to shortly *in extenso*.

PRACTICAL, Savannah.—Box-wood for wood engravers comes principally from Odessa and Smyrna, and from Soukoun Kall, Russia. To try whether wood grown with you is fit for engraving purposes, send us a piece and we will have it tested. There is no substitute for boxwood. It is not the hardness which makes it excellent for wood engravers, but the evenness of the structure.

EXPERIMENT, Concord.—Your idea is a very pretty one, the only pity is that it has been anticipated. The Chinese have for centuries attached such little whistles as you describe to their pigeons. They put them to their tails and not to their legs as you propose. The Chinese, like the Japanese, are full of tricks.

MISS H. AND GIRLS, Rochester.—Of course sun-fish must have something to eat; give them a few crumbs of bread, and occasional grains of soft-boiled rice, a fly or so occasionally. But do not let the food taint the water. Do not use rain water in your little aquarium, and wait patiently until your plants exercise their power of purifying the water.

JALLABAD.—You are right in your dispute as to the size of the elephant. People are prone to exaggerate his size. See in former number an answer to this question. Ordinary height of Asiatic elephant is 8 feet. In the East India commissariat, 7 feet is the minimum height required. When an elephant in India is 12 feet tall he is a curiosity.

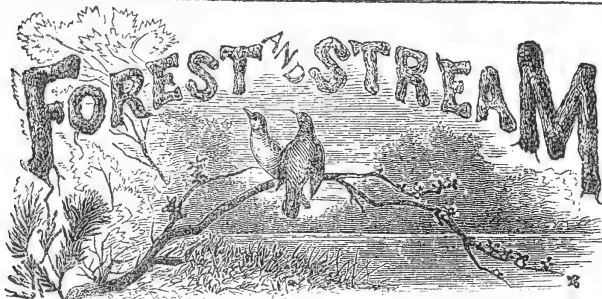

A. S. N.—Nature seems to have been quite prolific in her varieties of the kangaroo or macropidae. There is the macropus major, the macropus laniger, the wallabee (*Ualnuturus walatralus*), the rock kangaroo (*Petrogale pericillata*), and the smaller kinds, as the brush-tailed betong, the kangaroo rat and the kangaroo hare.

CAMPISTS.—For comfort and convenience the Adirondacks are preferable to any other hunting ground in the country, and there is no pleasure more enjoyable than a fortnight spent there in camping out. Some of the guides are very intelligent and obliging, and will take good care of young novices and amateurs who are without experience in out door life. Go to Paul Smith's, Bartlett's or Martins.

DEMAR.—To dress your cat skin, take, after well cleaning and scraping, and steep in sumac decoction, letting it stay in ten days. Then wash thoroughly in cold water. Dry then pretty well, and nail skin on a board, hair down, and while moist rub in oil and tallow mixed. Then let it dry. A good rubbing with a flat stone helps to make it soft in finishing. Have seen skins of even such small animals as rats moles and squirrels made very pretty and serviceable this way.

H. B. P., Boston, Mass.—For ordinary shoe packs and moccasins Messrs. H. and H. Merrill, 290 Notre Dame street, Montreal. The best plan, however, would be to buy a small caribou skin, and get any good shoemaker to make them according to instructions, page 89, FOREST AND STREAM. Any of your friends would be glad to have a pair, if the skin should be too large. Address for skin, J. Kaiser, Furrier, Granville st., Halifax.

G. L. EDDY, Racine, Wis.—The only work on birds and their eggs which has appeared lately is Dr. Ed. A. Samuel's "Ornithology and Oology of New England," published by Nichols and Noyes, Boston, 1867, in octavo; 583 pages, with some colored plates, many cuts and full notices of each bird and its habits. This work will be found to contain most all the birds of the northern Atlantic States. The publishing price was \$15. The best way to procure it is to address a letter to the *American Naturalist*, Salem, Mass., who will also furnish any other books on natural history at short notice, and also lists of naturalists and dealers, with their addresses, and their special branch of study or business. This magazine will be found very interesting to all who cultivate these studies. The Smithsonian Institution has published two editions of Dr. Thomas N. Brewer's North American Oology, in quarto, 1857 and 1869, with colored plates. We believe that this work only includes the Raptores and Fissirostres. It can be had by direct application to Prof. S. F. Baird, assistant secretary of the Institute. The price the 1857 edition was five dollars, with colored plates.

A WEEKLY JOURNAL,
DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY
Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCT. 30, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Managing Editor.

Calendar of Events for the Current Week.

FRIDAY, October 31st.—Trotting, White Plains, Westchester, N. Y.... Macon Fair, Georgia.... Richmond Fair, Virginia.... Eutaw Fair, West Alabama.... Roanoke and Tar Rivers, Weldon, N. C.

SATURDAY, November 1st.—Boat Clubs, foot 133d street.... Foot ball, Princeton vs. Yale, New Haven.... Trotting, White Plains, Westchester county, N. Y.

TUESDAY, November 4th.... Columbia Fair, S. C.... Aurora Fair, South Eastern Indiana.

WEDNESDAY, November 5th.—Foot ball, Princeton vs. Rutgers, New Brunswick, New Jersey.

ROMANCE AND SCIENCE.

PERHAPS modern romance writing is more indebted to Oliver Wendell Holmes than to any other author, for the introduction of scientific matter in its midst. Balzac, the greatest novelist the world has ever produced, whose comprehensive brain held all subjects, rather generalized science than otherwise in his romances, a notable instance of which may be found in his "Pean de Chagrin." Dr. Holmes, however, draws his similes from chemistry, natural philosophy and physiology with such delicacy and neatness as to add immensely to the interest of his books. It may be said of this admirable author that illustrations taken by him from science, are something like Thackeray's French quotations—they are never out of place. The advance sheets of the admirable romance, fraught with scenes of startling horror, when the primeval Alfred Augustus fights with the Megalosaur, and from his gaping jaws rescues the primitive Angelica, are, we suppose, to-day in the hands of the publishers.

French romance writers are exerting their skill this way, and nature's secrets are getting dressed up for exhibition like actors, with no end of rouge, frippery, artificial flowers and spangles.

Perhaps the time may yet come when the dime novel, with its atrocities, may be rendered yet more horrible by paleontological effects, and servant girls when they buy the "Penny Dreadfuls," may shed tears over the struggles for life of some hero and heroine of the lacustrine era.

How far true scientists like this rather promiscuous handling of their sacred subjects is quite a question. "Popularize science" is the cry. All the world is shouting it. But perhaps, though wise men may "hark on," they may be fearful that the dogs are on a false scent, leading to very little.

Nature, in a poem called "Molecular Evolution," (quite a touching production, by the way) has these lines, which seem pertinent as to what the present romantico-scientific period may lead us to:—

"Yield, then, ye rules of rigid reason!
Dissolve, thou too, too solid sense!
Melt into nonsense for a season,
Then in some higher form condense."

HAIR TRIGGERS AND RESTS.

WE have received from numerous correspondents a series of questions in regard to rifle shooting at Creedmoor, and various is the character of the information asked of us. As a sample of such inquiries, we have taken a letter received from a prominent gentleman in Mobile, as embodying some of the principal queries. Our correspondent writes:

"I see in your accounts of target practice that three and six pounds pull on the trigger is still insisted on at Creedmoor. Is not this unnecessary, since the introduction of the breech loading target and army rifles? I know from experience that in the army a 'hard' trigger had to be used for safety with the muzzle loading musket, when it was frequently necessary to carry the arms loaded day and night, but now that an army gun need not be loaded until the enemy is in sight, or until the marksman takes his place at the shooting stand, a one pound or even half pound pull on the trigger seems to me to be ample. Should the New York State militia take the lead in this the army will follow in a few years. As it is now, a soldier has a poor show opposed to an adversary armed with a hair trigger rifle."

The same correspondent, in a later letter, says:

"In Mobile and New Orleans rifle clubs hair triggers are always used. A man must not cap a muzzle loader, or load a breech loader until taking his place at the stand."

Our correspondent's letter is not wanting in acumen, and is worthy of a full explanation. In regard to the pull of three and six pounds required on the trigger at rifle ranges, questions of this character, though appertaining rather to the ordnance department, enter somewhat within our province. The primary object in the formation of any rifle range, whether at Wimbledon, Hythe or Creedmoor, is to engender more fully proper military spirit; to relieve, as it were, the dull monotony of the drill; to make the citizen-soldier have something to think about, and by affording him a thorough acquaintance with his rifle, to give him greater reliance. We do not think it at all derogatory to the noble fraternity of sportsmen to which we belong, to state that the interests of the huntsman are certainly secondary to that of the soldier, at Creedmoor or any other national ranges. A proficient marksman as a soldier, would be of course an excellent shot when using his rifle for game.

War experience has shown that any rifle or musket, no matter whether it be muzzle or breech loader, when carried by an army would be terribly unsafe, unless there was a certain definite limit, and that rather leaning on the side of hardness of pull on the trigger. The general pull of an army gun, as for instance the old Springfield and Enfield, was from fifteen to twenty pounds. The decision arrived at, of a minimum pull of six pounds, is one that has not been hastily determined, but is the result of long experience. A very simple test of the safety of a gun, is to take one of an average weight, say of ten pounds, either a military or a sporting arm, to load it, and to drop the but on the ground. If the sear spring is made of less restraining power than three pounds, the arm will go off by the shock, the spring being unclosed. Three pounds trigger pull, though it might do for a sporting rifle, would be impossible for a military gun, liable as it is at all times to accidental concussions. Of course all our military and sporting readers know this, as does our able correspondent.

As to the comparative safety in using muzzle and breech loaders, the advantage on the part of the breech loaders is immense, as they need not be loaded until wanted; after that period, however, when charged, both the breech and muzzle loading guns are about the same as to liability to premature discharges. It is impossible to prevent men from loading guns out of season, no matter how constructed, and though the facility with which a breech loader can have the cartridge removed is one of the strongest points in its favor, it is a question having to do entirely with the man and not with the gun.

Accuracy of fire with the rifle is undoubtedly gained by means of hair triggers, and also by permanent rests, some of our inquiries being particularly directed toward this latter subject. When both hair triggers and rests can be combined, no doubt extraordinary shooting is the result. But practically, for actual service, it is not of avail. There cannot be an army of sharpshooters, with hair triggers, each one having a fixed rest. The fixed rest was part and parcel of the old *musqueton*, when a match was used, the rest being called the fork, and hair triggers are of the middle of the last century, and they have not been found of service but in exceptional cases. The time requisite to set first the main trigger and then the hair spring catch occupies a certain period, and a convenient rest is not often available. Army officers used fixed permanent rests every day in order to test the accuracy of any special arm, and a properly made arm thus secured ought to send a succession of balls all to the same spot. The use of hair spring guns will not we think show on an average much better shooting than that of practical simple trigger shooting. Then again, a man who could shoot well with a gun having a three or a six pound pull could undoubtedly use a hair trigger with great effect, while *per contra*, the hair spring rifleman would shoot quite wild with an ordinary rifle.

We do not mean to cast the least imputation of diletantism on the advocates of hair springs. We have frequently used them ourselves, and have seen amazing strings made, but it is neither practical, military, nor sportsman's shooting; not because ordnance officers do not endorse them for soldiers' use, but because ninety-nine times in a hundred, either on the battle-field, or in the forest, hair springs would be out of order, or circumstances would not allow of their being used. When the term "any position" is used for rifle shooting at Creedmoor for distances over 200 yards, it means that a rest can be used, but such rest does not allow

of any other than the natural one, such as of the elbow on the ground, or of the rifle laid across the thigh of the shooter.

There is quite a common error conveyed to some in regard to a three or six pound pull, which gives the idea that the pull on a trigger is something like the pull on a horse's mouth. The trigger pull is a most gradual one, requiring little effort, and the knack and skill is to make the pull cumulative, to commence with the slightest pressure on the trigger and to bring it up to its maximum, when the target and sights are together. The acme of art then is to know exactly when your gun is going off. As was remarked by the best Canadian shot at Creedmoor: "If I only knew precisely when my gun was going off, I would win every match in the world." Now the advocates of the hair trigger may assert that this is exactly the excellence they claim for this delicate gun mechanism. We are inclined to assert that a hair trigger piece goes off much more frequently when you do not expect it, than an ordinary coarser trigger piece. As to the question of certain sights being barred at Wimbledon, we believe there is to be greater license allowed at Creedmoor for certain matches. In fact, we can see no reason if a sight be invented, no matter how complicated it may be, if it will give greater accuracy of aim, allowing us better facility of sighting, why we should not have it. The objection raised to hair triggers or fixed rests is of a different character. It seems to us that sights, no matter of what kind, can by no means interfere with that steadiness of aim or the command over the nerves which a rifle range teaches. Of course for a military gun, complicated sights would be impossible from their delicacy of construction. That there are improvements to be made in sights is quite probable, and many ingenious men are to-day devoting their attention to this subject.

Questions of cartridges have also been frequently put to us. It is getting to be to-day, many suppose, not so much a question of guns, sights, or grooves in a rifle, as that of properly made ammunition. The best arm in the world may be worthless when charged with a carelessly prepared cartridge. Even a match may be lost by the best of shots because the cartridges used by him are not fresh, but have been manufactured for a year or more. It is certain that the packing of powder in a cartridge case, and the powder remaining in this condition for a certain period, not exactly determined, has a tendency to cake the powder and to diminish its explosive power. The fact of balls falling short at long ranges is frequently attributed to inferior powder, when the fault lies in the cartridge, which when first made was excellent, but has deteriorated in time from some molecular or chemical change in the powder. We are by no means prepared to assert that this is always the case; but for careful shooting, when a single point is to be gained in a score, the prudent marksman should be perfectly acquainted with the character of the cartridge he uses. The subject of hardened balls of rifle grooving have all been put to us, which in time we will answer fully in our columns.

Questions relating to Creedmoor, coming from all sections of the Union, show the interest taken in rifle shooting, and in our correspondence we find many sensible suggestions, which are not only worthy of the attention of our rifle makers, but of consideration by the National Rifle Association.

Perhaps the name of the association will convey to many the best idea of its aim and purpose, and that is that it must be thoroughly national. Though hair-trigger shooting may be national in Switzerland it is not the case in the United States, and between a rifle club, where perhaps a few hundred gentlemen may practice at their leisure, and Creedmoor, where thousands of the National Guards, and rifle-men from all parts of the world will use the range, there is a vast difference.

At Creedmoor and other ranges changes are taking place every day. Like everything else, where theory and practice go hand in hand, increased skill in rifle shooting has been the result, due not only to improved arms, but to individual proficiency. In England they are talking of decreasing the sizes of the targets, so as to increase the difficulties and to make even more skillful marksmen, and very certainly it must result in bringing forward better guns and better men.

CENTRAL PARK MENAGERIE.

MR. CONKLIN'S REPORT.

MR. Conklin's report of the Central Park Menagerie shows that the collection of animals, birds, reptiles, &c., confided to the director's care, is in excellent condition. If the Zoological collection is secondary to the Park itself, it having been we think but a later idea to add the show of animals to New York's pleasure garden, nevertheless with the means at the disposal of the Park Commissioners the results attained have been entirely satisfactory.

Though the collection is as yet somewhat limited, and it might be desirable and by no means impossible to have represented at the Central Park Menagerie, if not all, at least the major part of our native animals and birds, what there is at the Park to-day, may be considered as an excellent nucleus, around which doubtless other specimens will be shortly added.

Personal inspection has convinced us of the care and judgment Mr. Conklin has exercised; the best proof of which is shown by the healthy condition of the animals and the number of births which have taken place in the Park collection. That wild animals can be acclimatized and propagated to a certain extent in well organized Zoo-

logical Institutions, is evident from the fact, that with London, Paris and Antwerp, every year quite a notable amount of money is received from the sales of animals raised. Of course such ideas of profit are foreign to the main object of a museum, as animals used for breeding purposes must necessarily be withdrawn at least for a time from public curiosity.

There has been a noticeable increase in the number of animals exhibited as well as in the variety of species, the total number of specimens this year being 806, an increase of over 200, when compared with the previous year. There have been no deaths among any valuable animals of the permanent collection this year. The births have been as follows:

Two Lions, *Felis leo*; one Leopard, *Felis leopardus*; two Pumas, *Felis concolor*; one Camel, *Camelus dromedarius*; one Hyæna, *Hyæna crocuta*, which is believed to be the first Hyæna born in America; one Cape Buffalo, *Bubalus caffer*, (South Africa); two Fat-tailed Sheep, *Ovis aries*, (Syria); six Red Deer, *Cervus virginianus*.

Among the most valuable gifts may be mentioned the following:

One Sooty Monkey, *Cercopithecus fuliginosus*, presented by General Bomford, U. S. A. One Sambar Deer, *Rusa aris-toteli*, presented by Consul Heyse, of Swindimundi, Prussia. Two large-eared Browsers, *Coassus auritus*, one presented by Hon. Henry S. Sanford, the other by Mr. Thomas P. Ramsdell. One Paisano, *Geococcyx californianus*, presented by Mr. Ben. Honnet, of Texas.

The Menagerie has been largely indebted to Mr. P. T. Barnum, Mr. George F. Bailey, Mr. Louis Ruhe, Messrs. Van Amburgh & Co., and Messrs. Charles Reiche & Bro., for a number of specimens placed by them on exhibition. Among these specimens of greatest importance are the three Giraffes, *Giraffa camelopardalis*; two Sea Lions, *Eumetopias stelleri*; one Manatee, *Manatus americanus*; one Malayan Tapir, *Tapirus malayanus*, all exhibited by Mr. P. T. Barnum.

The Manatee fully described by Mr. Conklin in the last number of FOREST AND STREAM, is a notable instance of the painstaking care of the director, and as was accurately stated by this gentleman, is the first instance known of the preservation of the Manatee, away from its native resorts.

The following table shows the most satisfactory increase of the permanent collection:

	1871.	1872.	1873.
Quadrupeds.....	89	103	199
Birds.....	143	208	347
Reptiles.....	14	11	35

The bird collection has received the most notable additions and the Falconidae family have many fine representatives, and perhaps is the best known collection of American birds of this peculiar class.

We trust to be able from time to time to give our readers further particulars in regard to the habits of the animals and birds in the Park collection.

Animals, &c., donated to Central Park for the month of October, 1873:

One Gray Squirrel, Miss Annie Olevenger.
One Chati, Lieut. J. W. Miller, U. S. N.
One Small Alligator, Sanford W. Steele.
One Red Vented Corkatoo, Charles P. Daly, Esq.
One White Heron, Master Charles Earle.
One Young African Lion, Thomas C. Durant.
One Black Bear, Mr. H. Alberger.

THE POLARIS.

AS one by one all the mischievous stories circulated in regard to the death of Captain Hall, of the Polaris expedition, have been traced to their sources, it has been found that they were the merest hearsays, and rested on no possible foundation of truth. Secretary Robeson, having personally investigated the matter, comes to the most evident conclusion that Captain Hall died a natural death. Hall, from our own personal acquaintance with him, from build and temperament would seem exactly a subject liable to apoplexy. The Secretary states, after explaining Hall's habits, that "in the seven days of the severest trial and suffering, when he reached the highest point attained by man, he was much of the time without the necessities of life. During this time of trial he was living and taking exercise at a temperature some thirty degrees below zero, and on his return to the ship the air of the cabin was fetid and unhealthy. On Captain Hall's coming to his room he was in an exhausted condition. Lying down in his heavy furs, indulging perhaps in too large a quantity of food, a combination of vertigo, congestion, and apoplexy set in which terminated fatally."

The death of Hall, the rival of Kane, was as heroic as it was tragic. Such investigations in regard to the manner of his death as were necessarily within the province of the Navy Department were of the most judicious character, and we have never for a moment supposed that Captain Hall's death could have arisen from any other than natural causes.

The alacrity with which the Government sent out a relieving party was in the highest degree commendable. On the whole we may congratulate ourselves on the termination of this last chapter of Arctic exploration.

It is unfortunate for human nature that too often the best of motives are ignored, and that official personages, in the accomplishment of their duties, are made the butts of contumacious critics.

—The voice of war—the gun-stock; (gun's talk).

WILL BLACK BASS TAKE A FLY.

—The *German town Telegraph* of this week says:—"Several parties have gone down to the Potomac to try their hand at taking black bass with the fly, and we will report results as soon as they are ascertained. Our private opinion is, though it is in opposition to far more experienced people in the matter, that it will prove a tedious diversion. In the Susquehanna, in the vicinity of Harrisburg, where the bass are taken in great numbers, in no one instance reported, have they yet been known to break the water. The fancy professionals will have to resort to young frogs, crawfish or minnows to fill their creels, or refrain from fishing altogether. We shall be sorry for them, should this turn out to be true, for this, one of the gamiest fish swimming, ought to take the fly."

Strange persistence some anglers have in the doubt that black bass will not take a fly. It may be that by some natural whim, or peculiarity of variety or locality, these fish will take the fly in some sections and not in others, or it may be that the anglers have not full opportunity to study and learn "their tricks and their manners." We have taken black bass repeatedly in the "Narrows" at Lake George, but only by trolling, while at the deep water at the north end of Fourteen Mile Island, we have repeatedly taken them with a fly. One day we remember that C. L. Brace, who used to spend his summers at this quiet resort, had tried in vain to tempt the fish, and other anglers from Bolton took their hand at it, when observing that the bass were exceedingly coy, darting furiously at the fly at first, and then stopping dead-short when they detected the deception, the water being very clear, we agreed to hook the rascals if the gentlemen would allow the place a half hour's rest. Then taking a small scarlet ibis fly, we whipped the body with a fine thread of sheet lead to give it weight, and after a lapse of time, waiting until the shadow of the ledge darkened the surface of the water, we approached as cautiously as if educated trout were there, and tossed in. Instantly three black bass responded, when suddenly checking the motion of the rod to let the fly sink ever so little, and as quickly drawing it forward again, we succeeded in fixing the hook in one of the fellow's lips. Afterwards, we took thirteen more. Again, last August, at Lake Giles, Blooming Grove Park, Pa., where the bass are by no means abundant, we took two with a fly on a split bamboo rod, likewise with red ibis fly. We observed that we raised them at only one particular spot. This time we were in a skiff, and lying well out from shore, threw in toward a pad of scattered lily leaves whose thread-like stems found root between the interstices of the stones and boulders that lay on the bottom. There was a shelf just on the line of growth with six feet of water on it, and just outside a depth of twenty-eight feet. In all kinds of fishing, we have found it best where practicable to throw *in toward* a shore rather than *out from* the shore. The reasons are obvious. The angler is not so easily seen through the greater depth of water and the ripple that usually ruffles its surface, while the fish find their small fry and other food along the edge of the channel more than in its centre. We have also taken black bass in Minnesota lakes and in the lakes of Canada, but never in any water later than the 13th of August or earlier than the first day of July, though one of our correspondents speaks of bass taking the fly with avidity in the Maumee in May and June. There is nothing remarkable in the fact that they will not rise to a fly at all times, for this peculiarity belongs to other fish as well, and notably to the lake trout (which by the way, is a northern fish that some anglers affirm will never take a fly, although we have taken them in this way repeatedly). In Florida, during December, we have also taken the black bass with fly opposite Palatka, on the St. Johns. See letter from Ohio in our Fishing Columns.

JOHN C. HEENAN.—There died last week at Great River, Utah, John C. Heenan, the well known pugilist. The leading event of his life was his fight with Sayers in Devonshire, England, some thirteen years ago. If it be possible to lift the Prize Ring from the low brutality which always characterizes and attends it, Heenan certainly used his influence to do so. He was said by those who knew him to have been more straightforward and correct than most of his class, and in the latter days of his life to have held the fraternity in contempt, never allowing any allusions to be made in regard to his former career. His death, at thirty-nine years of age, was induced by pneumonia.

—Some weeks ago, when we introduced the story of a "Manatee Hunt in Mexico" as coming from the pen of Mr. Charles Lanman, we committed an error. In a note transmitting the essay to us he stated that he had received it in a letter from a friend. Mr. Lanman, it would appear, has been everywhere, but not in Mexico.

—If all the streets of London were joined end to end, they would reach in a straight line from England to Ceylon. London's population some 4,025,659 souls, lives in 528,749 houses.

—George Francis Train has the asthma, and his once clarion voice now resembles the sound of a hammer striking a green pumpkin. —*Danbury News*.

—A tract of land containing 107 acres, located within the limits of the military reservation of Fort McPherson, is to be laid out as a National Cemetery. This is another way for preparing for war in time of peace; yet it is one of the saddest. Just think of over a hundred acres of land, away out on the dreary plains, being especially devoted to graves! Let some calculating member of the Engineer Corps estimate the number of little mounds it will take to fill one hundred and seven acres.

OUT-DOOR COSTUMES.

THERE are fashions of forest and stream and of the field and course, as well as of the carriage, promenade and ball room, and it becomes the mission of this journal, in its own peculiar province, to instruct its lady readers and their devoted husbands and admirers in the selection of costumes for out-door recreation which the fashion leader of the woods has decreed are suitable for the purpose and becoming to the wearer.

In this department even more than in house dressing, sound practical taste is required, as well as judgment in selecting the material, which must be healthful, serviceable and graceful; and in attempting to give some hints of instruction we fear that our rough hand, used to rifle and rod, may make a mess of all this delicate female drapery. Yet possibly we can suggest to our lady friends how to make the skirts of their riding habits flow more gracefully, or to give a cut of sleeve that shall be better adapted to display the charms of the rounded arm which launches the arrow from the twanging bow.

In an old-fashioned chateau on the Belgian frontier is the portrait of that noble huntress, Charlotte de Laurenton, the Baronne de Dracek, who died at the age of eighty years, about the beginning of the present century. She kept eight horses all for her own riding, and hunted all the year round. The lady is mounted on her favorite gray horse, prepared for a hunting expedition. She wears a green coat with a gold belt round her waist, hat with a high crown, having a small gold band round it; her hair is powdered and appearing behind in small curls. By her side hangs a *couteau de chasse*, and all the buttons of her coat have wolves' heads stamped on them. As to her prowess, she was known to have killed six hundred and seventy wolves in her time, besides hundreds of deer and other game; her boudoir, too, showed her hunting taste, for there in a row stood her saddles, seven in number, also the brackets for her eight guns, and instead of flacons with *eau de luce*, her toilet stand was garnished with powder flasks and shot pouches. To be truthful as to the portrait of this lady, we must add that the chronicler relates that she was fond of cock fighting, though he affirms, rather apologetically, that "no cock fighting was allowed in the chateau, but in an out-house, and only when the weather was too bad to allow of field sports."

RIDING HABITS.

The simplest of all female costumes, and yet the most elegant and perfect, is the riding dress. Yet we seldom see one that, in spite of extravagant outlay and the handsome form which it envelopes, is exactly satisfactory. A handsome woman and a fine horse are the crowning works of nature. To the casual observer the attire of an equestrienne appears the same, yet through the reform as well as the fickleness of fashion, it has been very much improved. A dark-brown or blue-black cloth habit is very stylish. The skirt is now worn much shorter than formerly, the going of the breadths taking away that superfluous fullness around the waist, gives a graceful flow to it, which cannot otherwise be obtained, and entirely does away with shot to keep it down. The pantaloons, made of flannel or some loosely woven material of the same color as the habit, faced with chambray, ought to be long and strapped to the feet. This masculine appendage ignores underskirts and unburdens the rider with any unnecessary clothing. The art of the habit maker lies in the jacket. This should set as though it grew on a well-rounded form, giving the effect of broad shoulders and hips and a tapering waist. It is cut high at the throat, the buttons down the front are small, and it is destitute of any kind of trimming. Piccadilly collar with small gray or white bow, and cuffs, easy fitting gloves of three or four buttons, laced boots, English riding hat and cane equip a lady for a *promenade à cheval*.

Ornaments of all kinds ought to be left at home, if we except a tiny pair of ear-rings, those that screw into the ears having the preference. Superfluous hair can keep the jewelry company, otherwise it may be lost on the road, and that which has a legitimate right there fixed close to the head. The "jockey is *en règle* for a morning run, the "Die Vernon" gives piquancy to certain faces; but the English hat, with the veil tied carelessly around it, is suitable to ladies of all ages, and is incorporate with horse-back riding.

In riding, the throat often becomes dry; a cup made of Russia leather, so that it folds up and can be placed in the lining of the hat, is very convenient. It is not advisable to go on horse-back after a hearty meal; the jolting of the animal is apt to cause nausea, especially as the aristocratic trot has entirely superseded the easy canter.

FOR CROQUET.

A croquet dress admits of length that is of the demi-train order. As the fair contestant walks over the boundary line from wicket to wicket, the graceful flow of the skirt sweeping over the grass has a very pleasing effect. Of course no one in this nineteenth century conversant with the laws of health, would attempt to play croquet unless the earth be dry. A muslin dress of white ground and delicate figure, neatly made, with a sash to match, a white jockey hat trimmed with black velvet and a few wild flowers, and the neatest kind of a kid boot complete a toilet for this favorite out-door game. Be very particular about the feet, for as every one knows how often it is required to croquet the antagonist's ball, remember that *bien chaussée* is one-third of your attire. Though gloves protect the hands from being tanned and blistered, yet they are not to be recommended, because they encumber one, and not having free control of the mallet, in nine cases out of ten the ball aimed at is missed.

THE YACHTING HABIT.

Whether on shore or afloat nothing adds more to the agreeableness of a pleasure party than lovely woman—sprightly, jolly, stylish, and wherever she goes a dress suitable to the occasion should always be worn, as it is the greatest compliment to the gentlemen. A blue cashmere jacket *à la Garibaldi*, with sailor collar trimmed with white braid and an anchor embroidered on each corner. A scarf tied under the collar in a careless knot, skirt of same material as the jacket, and trimmed with two or three flounces about a quarter of a yard in depth, and white silk braid. Woollen fabrics keep off any dampness and are recommended on that account. The hat *à la marine*, the rim of which is always flat and stiff.

The dress of the sailor is as positive in its characteristics as any point in law; the ladies' dress must approach this peculiarity of the sea, because any direct departure from it is a defect in the style.

FISHING.

What pleasanter pastime than to join in piscatorial sports with the sterner sex, especially as the ladies depend on the gentlemen to bait the hook and draw up the line, should they chance to get a bite. If you really enjoy seeing a poor little fish "wriggle" on a hook, go prepared with a dress from which a few spots of mud can be erased with soap and water. Nothing is better than a brown linen fresh from the laundry, colored collar and cuffs, a large sun-down that old Sol's rays will not make you look like a broiled lobster, stout shoes and a woollen shawl. Lisle thread gloves are recommended, or if they put your teeth on edge and make you feel like a bundle of nerves, wear an old pair of kids—and, by the way, it is a good plan to save last winter's for summer excursions.

SHOOTING COSTUMES.

Though not yet introduced into this country, "gunning" is becoming quite a fashionable sport with the ladies of the French nobility. The young Dianās go to the forest with their escorts in a most charming toilet, and though the game has a very good chance to escape when the tiny hand points the gun at the bird, yet willingly do their beaux give them the lion's share, so delightful is it to have their sweet-heart's company.

A pretty velvet blouse fastened at the waist with a Russia leather belt, which is secured by an oxidized buckle, zouave pantaloons of velvet, buttoned at the knee, a brigand hat, falling shirt collar, and jack boots.

Is this merely a pastime, or has it risen, phoenix-like, out of the late war? and are the French women preparing to fight the Prussians at no distant day, redeeming their country by their own blood?

MINING.

"To do a mine" is now *à la mode*. The great copper regions of Lake Superior during the last few seasons have been visited by parties of ladies, each year increasing in numbers. In descending a mine the suit of a miner is substituted. This consists of pantaloons made like overalls, loose jacket, and hat with a flat brim, all made of canvas. In the hat is a hole large enough to insert a candle, in which one is put and lighted, both in descending and ascending the mine. Heavy boots should be worn. The reason why a male attire is adopted is because going down in a kind of scoop there is not room for many flounces. As canvas material is impervious to water, which is constantly dripping down in the mine, it is therefore used.

ARCHERY.

Archery was revived by Mr. Ashton of London, in 1776, as an out-door amusement. From that time it has been popular in England, being one of the few games of the kind in which ladies can indulge.

It is best to wear a dress similar to a gymnasium suit, loose about the shoulders and waist, so that free scope can be given to the arms.

PEDESTRIANISM.

To roam through the woods or climb up a mountain there is no more suitable material for the pedestrian than the American water-proof cloak. It is not so heavy as the English, consequently less burdensome. A neat suit trimmed with bands of the same edged with braid, fancy linen collar and cuffs, chamois gloves, a pair of broad-soled, flat-heeled boots, a long stout stick, and a rough and ready straw hat, fit one for any amount of walking, provided the weather be favorable. Let the waist of the dress be loose, otherwise it prevents circulation, and the lady gets fatigued before the first half-mile is gained.

BATHING DRESS.

A Venus de Medici in an ordinary bathing dress resembles a "Meg Merrilles." Modistes have racked the brain from the time bathing came in vogue up to the present day to make Helen appear attractive in the eyes of Paris, and sad to say, their efforts have not been crowned with laurels. We have searched through the city of New York, in every fashionable establishment in vain.

While sitting on the piazza of one of the fashionable hotels at Long Branch last summer, a young lady came tripping up the lawn, just out of old ocean's arms, in a pale green flannel jacket and pants; these were trimmed with white cloth. Her blonde hair was waving with the wind and her little feet were bare. She created a great deal of excitement, but disappeared before any one could discern her features.

The blue flannel blouse, made with a yoke and belted in at the waist, Turkish pantaloons opened a little at the calf of the leg that the water may have an outlet, a pretty pair of moccasins, an oil-silk cap to keep the hair dry, and a large straw hat, cannot be improved upon for bathing purposes.

Many different materials have been tried, but a soft

woollen fabric has the supremacy, as when wet it clings less to the form than any other kind of goods.

SKATING COSTUME.

When the ground is covered with snow, and river and rill are congealed into one icy mass, what brightens the eye or gives color to the cheek quicker than the healthful, graceful exercise of skating? With its whirls and curves and curls it is the very poetry of motion.

A black velvet skirt reaching to the ankle, an over-dress of the same material trimmed with seal skin fur, a seal skin jacket, tippet, muff, and gloves, heavy laced boots and club skates. With these a young lady is ready to face old Boreas and enjoy this most delightful of out-door winter sports.

SYBILLINE LEAVES.—II.

HINTS TO SPORTSMEN.

NO party should attempt to camp out unless one at least of their number is thoroughly conversant with woodcraft, and able to devise and direct so as to secure the general comfort under all changes of circumstances and vicissitudes of weather. One great essential to thorough enjoyment is an equitable division of labor and a faithful observance of the duties assigned to each member. This is especially important where no servants are employed. Four persons constitute a large enough party. One should be a fair cook; another should be able to keep the camp supplied with wood and make a fire, which is a task by no means easy; a third should be a fair shot and a good pot-fisherman, for a variety of food adds much to the charm of camp life; and the fourth should be apt at building a shelter and pitching a tent, and a good boatman withal. Thus organized, a party is ready to start for the woods.

In the first article of this series we designated suitable outfits for special occasions, and the importance of traveling as lightly as possible. We cannot too earnestly urge the advantage of taking the various kinds of condensed food which modern ingenuity has devised, for they not only greatly reduce a load, but add much to the ease and comfort of all, and materially lighten the labors of the cook. Borden's condensed milk, coffee and beef are a great acquisition. A single can of coffee will serve a man for thirty days, and really needs neither milk nor sugar. Put a part of a teaspoonful in hot water, stir it, and your beverage is ready for use. The beef will make a variety of soups, if used according to directions, and the milk is useful in compounding various dishes. The self-leavening flour prepared by Jewell Brothers is another indispensable. It has only to be mixed with cold water or milk, requires no salt, and with slight change in preparation will produce bread, biscuit, cakes, &c., in a very few minutes. We have already recommended the portable camp-kit, and there is a small and compact cooking apparatus which we could recommend if disposed.

To carry the camp stuff most easily, back-loads should be so made up that the softest parts should rest upon the shoulders and neck, and when adjusted and supported by a strap that passes across the forehead, boxes and cumbersome articles may be packed on top; by this method fifty pounds may be carried with comparative ease. Fishing rods, paddles, axes, &c., should be tied together in bundles in two places at least, and when shouldered, boots, kettles, and the like, may be slung over their upper ends. Where a canoe or boat is to be carried, lash the paddles lengthwise one foot apart across the bars or thwarts amidships, turn the canoe upside-down, rest one end upon a convenient projecting branch of a tree at such a height that you can easily pass under, and then thrusting in your head so that the paddles will rest upon the shoulders, raise and balance it and proceed on the journey. If the canoe is too heavy for one person, it should be shouldered by two men, one at each end, and carried right side up. There is a knack in walking, too, which should be acquired, namely: always run your eye along the trail at least a rod in advance, so that you may not only see soft places, rocks, roots, and other obstructions, but calculate to a nicety just where your steps are to be made. This practice will prevent stumbling; it also enables one to discern a blind trail easily, and teaches him to observe any strange signs which might otherwise pass unnoticed. If you are thirsty by the way-side, and have no cup handy, bend up a portion of the brim of your felt hat so as to form a cup, and drink out of that. It is better than lying flat on the stomach to drink from a pool or spring.

Of course every one knows that camp sites should be selected for access to wood and water—wood first; but there are many other considerations to take into account, such as shelter, immunity from insects, or proximity to game. A high open knoll away from water is preferable, in fly time, to a location on a river bottom. Sandy beaches or gravelly points are liable to swarm with midges or punkies, and the thicker woods with mosquitoes. Points where a breeze draws up or down a stream are the most desirable. Black flies do not molest between sunset and sunrise. The camp site being chosen, the first duties are to fix the shelter, cut wood, and get the kettle boiling. A letter A tent is the greatest luxury in camping, but in fair weather a tilt or half tent of canvas or blankets, or a "rough slant" of bark or boughs laid on poles supported by crotches, are comfortable enough when a good fire is kept up. Or, for the matter of a night, a screen of spruce boughs to windward, or the canoe turned over to protect the chest and shoulders, is a good make-shift. The lee of a protecting ledge, with a brush screen is a dry and comfortable camp. A permanent shanty is made with sides four logs high and a peaked roof

of poles covered with bark or split shingles four feet long, with a hole at the top for smoke. In this way also a conical wigwam can be constructed, Indian fashion. Make the bed of evergreen boughs—balsam and hemlock are the softest—place them in layers with the butts all one way, and shingle the butts of the first row with the tops of the second, and so on successively. Fires are made in various ways. For a good cooking fire, a back should be made three logs high, supported against upright stakes driven into the ground; two logs at right angles, or two stones placed in front to lay fuel on, will raise the latter from the ground sufficiently for a good draft. Another mode is to lay two eight-inch logs on skids, say two feet apart and parallel, filling in the space with small fuel. The Indian fashion is to lay the sticks in a circle, with the butts in the centre, resting on one another, making a conical pile. A tree should be felled, the trunks cut into logs, and the branches chopped up for fuel. In almost all woods are logs, some time cut and seasoned that furnish dry fuel and kindlings. To peel bark, girdle the tree at intervals of two or more feet and split the sections with an axe longitudinally. In fly time, when the air is still, make the camp fire so that the smoke will not blow into the tent or shanty, but at all times, and especially at night, guard against changes of wind and flying sparks. Clean greasy plates with moss and scour them with sand. To clean knives and forks, simply thrust them two or three times into the ground. At night, tuck your trousers into your woollen socks, and tie them at the ankles. Never sleep with boots on. Use moccasins if you have them. Keep your feet to the fire, but don't let them burn. See that there is a sufficient supply of fuel for the night, and learn to wake at proper intervals to replenish the fire. Early mornings are always cold at any season of the year. A compound of tar and sweet oil applied to the face and hands is the best protection against gnats and flies. Buckskin gloves may be worn without discomfort at night. When an A tent is used, a cord drawn through the apex with its ends stretched to convenient trees, supports it better than two crotches and a ridge-pole, and will prevent its being blown down by a gust of wind. The sides should be drawn down tight and fastened to the ground. Never sit up after nine o'clock at night, and rise at daylight in the morning. Never omit a good wash, at least of the face and hands.

In our next paper we shall speak particularly of woodcraft, giving instruction how to travel understandingly by forest and stream.

Sporting News from Abroad.

Coursing and cub-hunting are what our English sportsmen have been engaged in to their heart's content for the last fortnight. If the latter amusement were possible in the United States, the former we can not encompass from the very good reason that we have no hares in this country. The antiquity of coursing is immense, and if we are to believe Arrian, it dates back to the earliest period of English history. Queen Bess was fond of it, when mails of honor galloped away all day, after hare and hound, and were wont to recuperate their failing strength by lurching on sirloins of beef and brimming tankards of ale. Rules and regulations in regard to coursing may be as little changed as the British constitution, and the Magna Charta, which lays down the law of how to kill a hare, comes back with hardly a change from the sixteenth century. Coursing is not to be regarded as an effort to hunt the hares *per se*, as a trial of speed and endurance of dogs. Two dogs are run together, and the winner, or he who catches the hare, is then again pitted against another winning dog, until it is narrowed down to a contest between two dogs, who have beaten all comers in the stakes. For instance the South Lancashire Derby meet for dog puppies commenced with thirty-two dogs, then sixteen of the winners ran against each other, which reduced the number to eight, and so on until two dogs, Kingstone and King Ben by name, were left. The endurance of the winner must be immense, as he has to run in no less than five courses. The hare has very often a fair chance to escape, not, however, from her speed, as a well bred gray hound can invariably catch her on the flat, but where the hare has the advantage is in his turns and doubles. It is not unusual to see a gray hound launched at full speed get thwarted by a clever dodge of puss, and take a complete summersault, in his endeavors to turn rapidly.

"Never," says a leading journal, "in any previous season have deer been more numerous, nor in better condition." If grouse or partridges are scarce, at least in lieu of feather, fur is in plenty. We read of fifty, sixty and seventy stags, as the result of a season shooting. We happen to have just concluded reading the most charming of all books, St. John's trip to Sutherland, and the delights of stag-hunting in the Highlands is one of the most interesting chapters in the book. Long range guns have of course rendered the sport more destructive, but still a good deer stalker must be a thorough sportsman, not only a good shot, but capable of enduring no small amount of fatigue. Except under extraordinary circumstances the stag or red deer is a most wary animal, and requires all the skill of the hunter to follow and kill.

—They still race on velocipedes in primitive England, and matches and handicaps are in vogue. We notice a mile made in four minutes and twenty-two seconds, and four miles made in fourteen minutes and twenty seconds, which is quite rapid bicycling.

—It is perhaps too early for us yet to have Piscatorial societies in our midst as they have in England; that is societies where awards are given for the finest and largest

fish raised in fish-ponds. Such a society with us would undoubtedly be the means of creating a rivalry between our fish raising friends, and would give greater publicity to their enterprise. The time will come, however, when displays of this character will be made, and when a prize trout will give as much distinction to the fish-breeder, as a prize calf does now to the agriculturalist.

—Sir Samuel and Lady Baker are in London to-day. The brave man and the plucky woman are once more safe and sound. We all await with the utmost curiosity, an account of their adventures, and how they fought their way back from Massondi to Unyoro through mud and water, disputing their ground step by step. Of course the geographical researches will be secondary to the detailed account of their adventures. Native information however in combination with European discovery seems to point to the fact that the Lakes Tanganyika and Albert Nianza, are one and the same body of water. Cars to Khartoum will be next in order, and at last a permanent foothold will be had into the interior of Africa. The Khedive of Egypt, is a great man, and so are his lieutenants Sir Samuel and Lady Baker.

Their gracious Majesties the Emperor of Brazil and the King of Sweden, having intimated their august intention of showering down a rain of orders, decorations, ribbons, &c., for the gratification of the Englishman of science, the learned Britton of to-day is quite generally exercised, whether he can take the much coveted honors at all. The English foreign office has some stringent regulations respecting foreign orders, which interfere sadly with the decorative hopes of those gentlemen, who would have liked to have sported knots of variegated ribbons on their dress coats at scientific dinners or have upholstered their manly bosoms with dangling crosses on the occasion of a paleontological *conversazione*.

"Nature" is quite sad over hopes dashed, and pathetically observes: "It seems so unjust, so cruel, that men of science to whose labors it is mainly owing, that our country and the world generally are mounting rapidly higher and higher in the scale of civilization, should be practically debarred the few honors that come in their way."

This partakes somewhat of the character of a plaint, which we do not think emanates from the true man of learning, and we feel certain does not represent true English feeling. Would the order of the Boot Jack in diamonds have given great Michael Faraday any more distinction? Would Mr. Tyndall be any more impressive with a brass Sun—an enameled Lion or a pinchbeck Eagle plastered on his person?

Recognition of merit comes from sources mightier than monarchs possess. Great illustrations of science shed luster on the age they live in, and it is they who give distinction to Kings and Emperors.

Yachting and Boating.

HIGH WATER, FOR THE WEEK.

DATE.	BOSTON.	NEW YORK.	CHARLESTON.
	h. m.	h. m.	h. m.
Oct. 30.....	6 27	3 13	2 27
Oct. 31.....	7 34	4 19	3 34

Nov. 5.....	11 50	8 33	7 50

—There seems to be no doubt but that James Gordon Bennett, Esq. is making preparation for fitting out an expedition to the North Pole. What we believe to be very certain is, that should Mr. Bennett organize such a voyage of exploration, every detail will be perfect. We must needs admire not only the liberal spirit of Mr. Bennett, but the pluck of the men, who are willing to undertake this perilous voyage. May it be successful.

—The New York Yacht Club held their regular monthly meeting at the club rooms, on Twenty-seventh street, Vice Commodore Wm. P. Douglass in the chair. The following gentlemen were elected members: John A. Burnham Jr., George W. M. Sturgis and Arthur Lumley.

Mr. Arkwright, of Savannah, Ga., has offered to give the club a tract of land for the purpose of making it a winter rendezvous. The gift was accepted. The following letter was then read:

C. A. NEWTON, Esq.:

DEAR SIR: I beg, through you, to tender my resignation of the office of Vice Commodore of the N. Y. Y. C. While naturally reluctant to resign so honorable a position, I feel it my duty to do so inasmuch as I am persuaded that the flag officers of the club should always be active members. For two years back the Sappho has not been in these waters, and it is very uncertain whether I shall put her in commission next summer. While placing my resignation in your hands, I desire to thank the yacht owners for the honor which they have conferred on me in selecting me as their Vice Commodore, and to assure them that although relieved from office, my interest in the welfare of the club shall never flag.

October 23, 1873.

W. P. DOUGLASS.

The members of the club asked the Vice Commodore to reconsider his determination to withdraw as an officer of the club, which at length he concluded to do, and afterwards tendered to the club the die for the new medal, which was struck some time since in commemoration of the victory of the America in winning the Queen's cup.

—We are pleased to aid in extending the publicity of a most signal act of benevolence, as well as of graceful courtesy, which has grown out of the Cape May Yacht race. It seems that Mr. A. B. Stockwell, of the Dreadnaught, sent his check for \$1,000 to the Regatta Committee of the N. Y. Yacht Club, in payment of the bet won by Mr. J. F. Loubat, of the Enchantress, which the latter gentleman, instead of accepting, immediately endorsed over to the order of the Committee with the following note:

UNION CLUB, NEW YORK, October 25, 1873.

Fletcher Westray, Esq., Chairman N. Y. Y. C. Regatta Committee:—

SIR: I beg to acknowledge receipt of your official communication of the 22d inst., with check of Mr. A. B. Stockwell for \$1,000, our bet upon the race you decided won by the Enchantress.

Inclosed please find that check indorsed by me to the order of the New York Yacht Club, as well as my own for the same amount.

I beg the Regatta Committee to hand one to the Treasurer of the Sandy Hook Pilots' Charity Fund (care of J. W. Avery, No. 309 Water street), and the other to the Treasurer of the New York and New Jersey Pilots' Benevolent Society, (corner South and Fulton streets). I remain, sir very respectfully, your obedient servant,

(Signed),

J. F. LOUBAT,

Captain Yacht Enchantress, N.Y.Y.C.

—The Atalanta and Nassau Clubs held their four oared shell race October 23, on the Harlem river. A large number of the friends, invited guests and members of the Atalantas, Nassaus, Argonautas New York Rowing Clubs, were on board the steamers Catlin and Winants to witness this exciting contest. The water was as smooth and placid as a mountain lake in July, and the arrangements were carried out with decision and fairness. The course was three miles straight away, from the Powder Schooner anchored in the stream, to Morris's dock. The Nassau's shell was built by Jewett of England, and the crew consisted of the following: F. G. Brown, bow, 144 lbs.; John Walker No. 2, 157 lbs.; A. W. Montgomery, No. 3, 168 lbs.; O. T. Johnston, stroke, 157 lbs. The Atalantas' shell was built by Biffen of London. The following were the crew: Edward Blake, bow, 130 lbs.; William Spear, No. 2, 145 lbs.; Theodore Van Raden, No. 3, 150 lbs.; Russell Withers, stroke, 55 lbs. They had never rowed in a match before, and had only been in training ten days. They started at a quarter to eleven, both crews getting away evenly. The Atalantas pulling a long stroke of about thirty-nine to the minute, the Nassaus nearly the same, but not as long a reach. It was a very handsome race for the first mile. The Nassaus steered badly, losing at least two lengths, while the Atalantas course was so true that it could not have been steered better by a coxswain. The Atalantas on approaching McComb's Dam Bridge spurted and were a boat's length ahead, the Nassaus still keeping too much in shore, but rowing well. On coming up to High Bridge it was apparent that the Atalantas must win, bar accident, as they rowed with almost mechanical precision from end to end and finally won passing the dock about three lengths ahead in 16m., 20sec. This time is not very fast, but it must be borne in mind that the water was very dead, and the course fully three miles. A foul was claimed by the Nassaus, but afterwards very properly withdrawn. The referee was Mr. Charles Roosevelt. The judges for the Atalantas crew were George B. Springstein and George Rooker; and the judges for the Nassau crew were J. C. Babcock and J. H. Willis.

—The great race is over, and it is safe to say that every man on the Nassau steamer was willing to acknowledge that his crew was fairly outrowed. Individually, the men were physically superior, but the style of stroke, the hold on the water, and that regular uniformity which has always marked the rowing of the Atalanta four put them in the eyes of rowing men much farther ahead than they showed at the finish.

The Nassaus now paddled back to their boat house, and the steamboat with the members of the club and their lady friends on board turned and went down the river to get ready for the next event, the single scull race from the powder sloop to McComb's dam; distance, one mile; for a prize. During the passage lunch was served, and the band exerted its powers to dispel the shadow of disappointment which had become visible on the faces of some of the members.

For the single scull race the following members entered: John H. Walker, Lindsay Watson, John H. Abeel, Jr., Grinnell Willis, and E. S. Gilley. The men were soon got in line, and all started off fairly at the word, Willis slightly leading. He was, however, soon overtaken by Abeel, and as he was evidently pulling stronger with his left arm, twice ran across Abeel's bow, finally compelling him to stop dead and get on the other side, thus practically spoiling his (Abeel's) chance of winning. In the meantime Walker and Watson were having a close race on the other side of the river, and at the half mile it was hard to tell which was ahead. Abeel now having a clear course was trying hard to make up for lost time, and Willis and Gilley had disappeared in the grass which lines the river's bank. After a hard struggle Walker came in first, half a length ahead of Watson. Time, 5:55.

The third and last race was between the six-oared barge and six-oared gig of the Nassau Club; distance, one mile; for prizes. Of the twelve men selected to row, the committee placed the six heaviest men in the barge, as it was the heaviest boat, and arranged the crews as follows:—

Barge—Bow, Frank Brown; 2. George Scott; 3. Lindsay Watson; 4. Montgomery; 5. Frank Bacon; stroke, Grinnell Willis; coxswain, Foster.

Gig—Bow, M. D. Parker; 2. Giffin; 3. George Floyd Jones; 4. Chris. C. Gunther; 5. John H. Babcock; stroke, J. H. Miller; coxswain, E. S. Gilley.

This race was rowed from McComb's dam to the powder boat, and resulted in an easy victory for the barge, the superior weight and experience of the crew more than compensating for the difference in the boats. In fact, it was no race at all, as the gig never once showed to the front. Time not taken.

The men were now taken on board, and the Fletcher steamed back to the city. The deck was cleared, and dancing was indulged in, much to the delight of the ladies.

This closes the season on the Harlem river, and while

the Nassau club have no reason to be ashamed of their defeat, the Atalantas certainly have reason to be proud of a victory so hardly won.

—The Palisade and Vesper boat clubs of Yonkers, on the Hudson river, rowed an eight-oared barge race on October 23d. The steamer Virginia Seymour left the Gas House Dock at three o'clock with a large number of friends of both clubs on board. The course was three miles straight away. The Palisades were pretty confident up to within a week of the race that they stood a fair chance of winning, but on learning that the Vespers had put sliding seats in their boat the race lost much of its interest. The stroke of the Palisades was, however, by no means as telling as the Vesper's long steady pull, the Vespers finally winning in about eighteen minutes.

CORNELL UNIVERSITY, October 18th, 1873.

EDITOR FOREST AND STREAM:—

The Fall Regatta of the Cornell Navy took place, as per announcement, at the corner of the lake, Saturday, October 11th, A. M. The weather was all that could be desired, with the exception of a slight south-wind, which roughened the water somewhat. Every exertion had been made by the Regatta Committee to have the regatta a success, and they were ably seconded by all interested. But an unforeseen accident occurred a day or two before the races, by which one of the six-oared shells was rendered useless, for the time being, and two crews were in consequence not able to row:

The two single-scull races were merged into one, on account of Courteney's shell having been disabled. So that, instead of four there were only three races.

The first race was for the "Tom Hughes Challenge Cup," open to crews belonging to the "Tom Hughes B. Club." Classes 75 and 76 entered crews. The race was well contested throughout, both boats keeping near together over the entire course, which is two miles straight away along the shore of the lake. But 76 proved a trifle too much for 75, and won the race in seventeen minutes, having rowed considerably over two miles. The starting Signal Officer starting them from a position too far down the lake, mistaking the two-mile post. The following is the crew:—F. O. Young, bow, G. M. Jarvis, 2d, N. R. Roy, 3rd, T. A. Murray, 4th, G. P. Sturgis, 5th, A. M. Ensign, stroke.

The second race was for single sculls for a prize of a silver goblet, three entries. R. H. Robinson, U. S. R. C. W. J. Thompson, 74, C. F. Tweet, 74, won by R. H. Robinson, of Union Spring, in 17½ minutes. Thompson second. The third and last race was for the championship of the University, and the Cluck Champion Silver Cup.

Great preparations had been made for this race, since it was the occasion of the first race for the challenge cup, which had only been finished lately. But on account of the before mentioned accident, only 74 and 76 entered crews. They started well together, and for a time rowed bow to bow, but soon the better and longer training of the 74 men told, and they drove their boat into the lead, which they maintained throughout, winning the race in 14 minutes 50 seconds; 76 about 30 seconds behind.

The following are the champions:—R. B. Foster, bow, L. F. Henderson, 2d, F. B. Alexander, 3rd, D. G. Derin, 4th, G. B. Upham, 5th, J. H. Southard, stroke.

Notwithstanding the accident, the large crowd in attendance considered the regatta a success, and enjoyed themselves much. They pronounced the cars provided by the committee to follow up each race along the shore, a decidedly useful novelty, and a means for viewing the races, which it is to be hoped will be continued at all future regattas.

J.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

COAST FISH.	LAKES.
Bluefish, Skipjack, Horse Mackerel, Black Bass, (Mycopterus nig (Temnodon saltator.) and archigan.) (two species.	Weakfish, Squetang (Trout) Otoli. Pickerel, (Esox reticulatus.)
thus.)	
BAYS AND ESTUARIES.	
Striped Bass, Rockfish. (Labrax lineatus.)	

—Anglers who propose to continue their favorite pastime after the first of November, should go to the Potomac and regions more southerly.

—Rods to be laid aside for the winter should be carefully examined now, and all defects and damages repaired, the ferules and bands thoroughly cleaned, new plugs fitted to the joints, and rings supplied where missing. Where a joint has been fractured or broken entirely, the parts should not be patched or spliced, but a new one obtained. Negligence in this matter will be found a poor winter's investment when the rod comes to be used again in the spring. Take the rod apart, wipe the joints dry and lay them away in their case in some apartment where the temperature will be uniformly as near 45° as possible. By no means let the rod stand near a chimney or furnace flue; and the other extreme of cold in a garret or outbuilding should be avoided. Changes of temperature destroy the pliancy and stiffness of the rod. Where the rod has no leather-case, but is kept in a bag, never tie the parts together tightly, as it subjects some portion to an extra strain, thereby impairing the equal distribution of strength throughout its entire length. For the same reason a rod should be laid flat on a floor if possible, instead of being stood on end in a corner, and under no circumstances, either when in use or in ordinary, should it be left jointed and hung on pegs. Really, the best way to keep rods perfect is to put them in

a shallow box, wide enough to hold them when laid side by side, and two or three inches longer than the longest. There is always some spare room in the house where this case could be laid along the surbase and not be in the way or seem unsightly. As regards tackle, all lines should be reeled off and stretched from one end of the garden to another on some bright and sunny morning, and left an hour in the air to dry. They should then be over-run lightly with a bit of woollen cloth or chamois to remove any taint of mildew, sand, sea salt, or other extraneous matter, and then be wound upon the reel not too tightly and put away with the reel nicely cleaned. If frayed portions are discovered they should be condemned, and the good parts kept for miscellaneous uses, which will be found frequent enough. With respect to leaders, flies, ground tackle, &c., it is admissible to defer immediate attention until some fine evening when a cheerful blaze and indoor comforts are heightened by the blustering weather without, and then with his stock spread out upon the sitting room table, one can summon the aid of the little folks to assort the several varieties. What a wealth of curiosities will be opened to their wondering eyes! How many interested questions they will ask, and how much impracticable knowledge of entomology they will acquire, keeping themselves awake till long past regulation hours for "little folks to go to bed!" As in the case of lines, all worn and imperfect flies, all frayed leaders, and half broken gut lengths, should be rejected as past service, for the great desideratum with a careful angler is to keep his gear in as perfect condition as possible, that at no time he may be aggravated through negligence by an untoward loss. Bait boxes and creels should be thoroughly cleansed with warm soda water, and when dried it is well to sprinkle them with a little carbolic acid, or a wash of carbolic soap can be used. Never keep your fishing and shooting gear in the same drawer or chest. Have a place for every thing and keep every thing in its place, and when the spring time comes you will be happy and prepared for work.

—We learn of a string of 18 speckled trout being taken in the Nepigon a week ago Tuesday, which weighed 57 pounds, over three pounds average! They were captured for scientific purposes, and were on exhibition two days ago at Andrew Clerk's, Maiden Lane. The largest weighed 5½ pounds. This string, for average, rather takes the rag off the Rangely samples, away down east in Maine.

—Some lively specimens of California salmon, *Salmo gairdneri*, are on exhibition at Andrew Clerk's fish pond, Maiden Lane. They were hatched by Dr. Slack from eggs obtained by the Government. There is also at the same place a capital painting of trout by that clever artist, Wm. Holberton, which best critics say possesses unusual merit.

—One of our friends wishes us to state that a ten pound salmon was caught in a shad net last summer at the State dam, near Troy.

—We don't intend to meddle with *every-body's* business, but wish merely to remark that Mr. M. T. Avery, of Chicago, burned or buried *four hundred pounds* of speckled trout that he caught and couldn't use, while on a visit to the Nepigon river, Lake Superior, last August! We have this from authority which, unfortunately for Mr. A., is reliable.

—A Maine correspondent writes from Piscataquis county:

The railroad now building to Moosehead lake will bring that sheet of water, forty miles in length by five to twenty in width, within an hour's ride of Piscataquis, a pleasant summer resort.

The Commissioners of Fisheries for Maine, aided by the Commissioners of Massachusetts and Prof. Baird of the United States Commission, selected a beautiful lake within four miles of us for the artificial ponds and hatching houses which have been already completed near the mouth of some of the beautiful mountain streams that come tumbling along to form this lake, which is twelve miles in length by one to seven in width. Some thousands of dollars are being invested here that the beautiful land-locked salmon may be largely increased in New England. These beauties are now caught in this sheet of water in large numbers, weighing from one to three pounds. There are also some of the finest pickerel of the American continent, while a couple of miles only north, a small pond contains lake trout.

The speckled brook trout are truly at home in northern Maine, one half to two pounds in weight. Many "strings" of ten to twenty in number were brought to the hotels at Greenville, Moosehead Lake, from Wilson's pond, last summer.

NEW LISBON, OHIO, October 20, 1873.

EDITOR FOREST AND STREAM:—

Noticing an article in your paper of October 9th in relation to fly fishing for black bass, signed "Kirby," induced me to give my opinion in the matter. My experience is similar to that of "Kirby's," and I have concluded that black bass will not rise for a fly, no matter how carefully thrown or what fly is used. I have thrown into a school without disturbing them, and immediately gave them a minnow when the whole school would rush for it. In a conversation with a friend of mine who is an old hand with the rod, he says he has tried the fly and never saw a black bass rise to a fly. The bass fishing is good with us at present, although two pounds is the average weight. I succeeded in fooling thirty-eight the last two times I was out. Quail shooting was never as good in this section as now, thanks to the game law, and the example of the better class of our hunters. While out on a business trip a day or two since with my friend Bob S., we took a couple of hours with the "rod and gun," and returned with squirrels, quails, pheasants, plover, black bass and perch. If we had devoted the day to sport, no doubt we would have had something to write about. We have not commenced our "sport" yet, but expect to bag a few before Christmas. THE FOREST AND STREAM 'as many admirers in this section, and we hope for continued prosperity in your undertaking. Yours, H. W. B.

—The *Tribune* correspondent, who accompanied the Hayden Expedition, writes thus glowingly of the first trout found in Colorado: "In the Eagle river we find at last the trout, long promised and long sought in vain—great, splendid fellows, with red lines on gill and fins, averaging a pound apiece or near it, and rising to two pounds. We are ill-provisioned with tackle that will pull out those still larger, all ready, too, to snap at the enticing bait. The day we turned to go up the mountain flank, four of the party stayed behind a few hours to fish, and came into

camp at evening with a hundred pounds (deduct, if you choose, a quarter for the usual over-estimate of fishermen). The biggest of those caught the day before had been an interesting entomological collector, a considerable variety of insects being found in his maw; but his predilection was grasshoppers, of which he contained nearly thirty undigested, beside apparently twice as many no longer distinguishable as individuals. The value of trout as repressors of the plague of grasshoppers has perhaps not been properly appreciated, we shall have them by and by protected by act of the Territorial Legislature. This afternoon we have about 50 pounds more.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, <i>Alces Melchis.</i>)	Caribou, <i>Tarandus Rangifer.</i>)
Elk or Wapiti, <i>Cervus Canadensis.</i>)	Red Deer, <i>Caracus Virginianus.</i>)
Rabbits, common Brown and Grey.)	Squirrels, Red Black and Gray.)
Wild Turkey, <i>Meleagris gallopavo.</i>)	Quail, <i>Ophrys Virginiana.</i>)
Woodcock, <i>Scolopax rusticola.</i>)	Pinnated Grouse, <i>Tetrao Cupido.</i>)
Ruffed Grouse, <i>Tetrao umbellus.</i>)	Pigeons, and all kinds of Wild Fowl

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—We have made most thorough inquiry, through circulars sent all over the country, for vital statistics concerning the common red deer, and gather the gratifying information that the country at large shows a decided increase in their number over the previous year. This is especially true of the Cumberland Range and of the Lower Raquette river, Adirondacks. In the vicinity of Winchester, Va., deer seem to be unusually numerous. If we could find figures upon which to base a comparative estimate of the relative loss and gain in other years, the statement would be valuable. As it is deer actually seem to be increasing, no doubt due to an observance of the close season and a general disposition to be sportsmanlike in the mode of capturing the animals. Justin Roe, of Patchogue, Long Island, informs us that *fifteen* deer were killed near Islip in one week. Old settlers did not suppose there were so many deer on the whole Island. From all indications the number is very considerable, and the "sign" abundant. But isn't it deplorable to slaughter these creatures by the wholesale? If it were possible to forbid the killing of more than one deer at a time, whether to a single gun or to a party of half a dozen, it would be very proper to do so. To be able to claim a single Long Island trophy is something to be proud of, while it is most important to maintain a shooting presence so accessible to New York as this is. It is a most short-sighted folly to glut one's self with venison for the mere sake of counting coups. We respectfully commend this matter to the attention of some gentlemen of the South Side Club, and give no offence in doing so, we hope.

—As to general habits of sportsmen in quest of game of any kind, they make the mistake of *hunting too much*. Moving about through the woods has the effect to scare the game away, and in consequence a man may often cover a large tract of good ground and see absolutely nothing. The less "hunting" the more game usually. A dozen squirrels can be shot from the same stand oftentimes, if one will only be content to remain quiet. In deer stalking, too, it is not necessary for a hunter to run the animal to earth as he would a fox. Let him but stand still as soon as he discovers the deer and perceives that he is discovered in turn, and the deer, if not much frightened, will not run far. After she breaks cover she will make a few wild leaps and then stop and turn to ascertain the cause and character of the alarm. She will not run far if not followed, and will remain in the vicinity until her curiosity is satisfied. There is a natural inquisitiveness about animals. They don't become frightened as much through the sense of sight as through the senses of smell or hearing—particularly the first. The antelope of the plains is notoriously attracted by anything red, and the moose is especially distinguished for his curiosity. The moose is much more easily killed than the deer. If he has your wind you may follow him till doomsday and save your powder. But if you remain quiet—perhaps it may be for hours—nevertheless the moose will not rest until he has made his detour and come around to satisfy his curiosity. We have known an old hunter on one occasion to follow a moose *three times over his own trail*, having stalked him so cautiously as merely to interrupt his occasional attempts to browse. His route was almost a circle.

Naturalists are the most successful hunters, for in their search for information it becomes necessary to lie perdu for hours, in order to pursue their investigations of the habits of the animals and birds they study. That which is to be most guarded against is giving the animals your scent. It is all important to hunt up wind.

The first light snow of the season gives the hunter a great advantage over the game, and in the case of caribou one has only to dress in white clothes to approach to close range and ensure his success; and the same is true of grouse and rabbits, both of which are readily tracked.

—Although the woodchuck can scarce be called game, yet the sportsman who is fond of rifle shooting can do the farmer a good service by knocking over these pests as they sit at the entrances of their burrows. They are very fat at his season, for they are about to retire to the depths of their holes, where they remain all winter; they are there-

fore not bad eating, but the peculiar glands which lie under the fore legs must be carefully removed before cooking, else they impart a disagreeable, rank flavor to the flesh, which otherwise is as delicate as that of the rabbit. The woodchuck is one among a few of our mammals which hibernate. The long-tailed jumping mouse (*Jaculus Hudsonus*) is the smallest species that passes the winter in this way. C. J. Maynard, the naturalist, writes: "I have taken this little animal during the cold season from a nest which was buried in the ground to the depth of five or six feet. I found it perfectly dormant. Circulation was apparently suspended and the mouse did not seem to breathe, but when placed near a fire it recovered, becoming quite lively; then, when removed to a cold spot, it almost immediately returned to its previous condition. If again brought to the warmth the effect was as before, but the little creature was uneasy and invariably sought some cold spot, where it crept beneath some article of clothing and returned to its state of lethargy."

The common striped squirrel also remains beneath the surface of the earth all winter, but I do not think they become dormant, or at least do not remain so for all that time, for they lay by a large supply of food in autumn, in anticipation of the coming cold season. Bears are the largest animals which hibernate."

—The *Germantown Telegraph* says:—

"We have the most remarkable rail-shooting to report that has ever occurred. It happened at Port-Penn on the Delaware, two weeks or so ago. A party of sportsmen from this city, with ten guns, bagged in two tides three thousand six hundred birds! The marsh was literally alive with them. They rose in flocks and were slaughtered by wholesale. One gentleman, not of this party, on the same day shot nine without moving his boat, running on the broken down reeds, and they could be seen on all sides as thick as blackberries."

—Robert Sixbury died on the 22d inst., at the house of his son, Isaac Sixbury, in the town of Le Roy, Jefferson county, N. Y., at the age of 110 years and 7 months. Mr. Sixbury had acquired great reputation as a hunter on John Brown's Tract in Northern New York, where he had slain over 2,200 deer.

—Mr. Louis A. Leland, of St. Joseph's county, Michigan, has just sent 150 wood ducks to Europe. These beautiful fowls are very abundant in that section, Mr. Leland having netted as many as 800 in a single season.

—The *Baltimore American*, speaking of a collection of guns in a store in that city, says:—"Two of these are unique affairs, brought home recently by our worthy citizen, Mr. T. H. Oliver, who spent twelve years traveling in all parts of Europe, Asia, and Africa. They are of great length, and of the most antique construction. One of them has a barrel five feet long, made of the finest steel, curiously carved and inlaid with gold and platina. The inlaying is elaborately and beautifully done. The stock of this gun is of ebony, inlaid with silver, pearl, and ivory. The flint lock, of antique pattern, with springs and works all outside the plate, is finely inlaid with platina. The barrel and stock are bound with six silver bands, and all the mountings are silver or gold. The stock is affixed to a but plate of ivory, very handsomely inlaid. The bore of the gun is five-eighths of an inch. On its side is an elegantly written Arabic inscription that nobody has yet been able to decipher. The gun was made in Morocco, where there are twenty-five gun-makers, who, with the crudest implements, turn out guns that have great reputation in all Northern Africa. Such a gun as this one brought home by Mr. Oliver as a curiosity could not be had in this country for less than \$1,000. The other of the two guns that he brought home was made in Algiers, has a similarly immensely long barrel, flint-lock inlaid with platina, an ivory and steel but-plate, and a stock inlaid with silver and coral. This gun is not so fine as the other, but is very curious."

—That popular and brilliant Canadian author J. M. Le Moine, tells us in his "Maple Leaves" of shooting in Canada, writing thus pleasantly:

"What clouds of sand pipers, curlew and plover, September brings forth from their breeding places, in the barren wilds of Labrador, the secluded lakes and solitary islands of the north, up to the frozen ocean! Look at that dense vapor hovering over that long sand bar, *La Bathure aux Alouettes*, a breast of Tadousac. From afar, you might take it for a cloud of hail or rain; but wait a minute, until the sun's rays light up the picture. Now, see the snowy breast of myriads of chubby little northern strangers, the ring plovers; look out for them as they settle by thousands, on the sand; now is your time. Enfilade their serried ranks, fire low; bang! One shot suffices, you have one hundred victims; to fire again would only cause unnecessary carnage. Father Point, lower down than Rimouski, during strong easterly winds, affords capital sport. Canada geese, Brent geese and ducks are perpetually hovering over the extreme end of the point: the fowler carefully concealed, pours a deadly volley into the flock, and his faithful Newfoundland dog springs into the surf and fetches out the dead and wounded birds. You can either continue to beat the shore or cross over with us to Seal Rocks, opposite the Traverse, a delightful small game preserve, so bountifully stocked with ducks, teal and plover, that a club of *chasseurs* of St. Jean Port Joly have leased it from government. A rare thing in Canada for natives to pay for the privilege to shoot game; it is so plentiful everywhere. We are now at Crane Island. *Quadruplément ab illa!* Night shooting has effectually scared the ducks from their resting places. Of swans, Lord Dalhousie seems to have had the last. As to cranes, two only have been seen of late years. This wary stilted stranger, *Gruem adenam*, can only be an accidental visitor, as its range is considerably more to the west. How often have we seen its solitary figure looming up at low tide, far beyond the range of a gun? Where is

the time when a Crane Island *chasseur* thought he had had a poor season if he had bagged less than one hundred *outardes* (Canada geese), together with a few dozen snow-geese? Wary in the extreme are those noisy swamp-feeders, who during the summer months, wing every alternate day their wedgelike flight from the St. Joachim beaches, to the Crane Island flats, where they congregate at low water mark, some 3,000, feeding beyond a rifle's range. We know of a hunting ground not one hundred miles from Quebec, in which the protection of game is strikingly exemplified. None but the proprietors have access to this preserve, in which *outardes*, wild geese, and ducks assemble in astonishing multitudes. Recently two men shot fifty wild geese there in two days. The place is a source of revenue to its owners, and those birds, which are not sent to market, are salted and preserved for the farm servants' daily use.

Athletic Pastimes.

—The month of October closed the cricket season of 1873, and locally, it has been one of the most successful for many years past. The season of 1873 has seen the St. George and Manhattan Clubs of this city, the Prospect Park of Brooklyn, and the Staten Island Cricket Association, in successful operation, the two former as regular cricket clubs; the Park Club as an organization of journalists for afternoon recreation, and the latter as a club combining cricket and base ball. These clubs have the advantage of having excellent grounds, the Park Club especially, the latter playing upon the finest cricket ground in America.

—The St. George Club closed their regular season on Oct. 18th, on the occasion of the match, which was fully reported in the last issue of this journal. Their record for the year is as follows:

May 30.—St. George vs. Staten Island; at Quarantine; won by 22 runs.
June 4.—St. George vs. Manhattan; at Hoboken. Won by 51 runs.
June 11.—St. George vs. Staten Island; at Quarantine. Won by 53 runs.
July 3.—St. George vs. Germantown; at Philadelphia; drawn game.
July 4.—St. George vs. Merion; at Philadelphia; won by 52 runs.
July 17.—St. George vs. Waltham; at Hoboken; lost by 7 runs.
July 30.—St. George vs. Manhattan; at Hoboken; lost by 9 runs.
August 6.—St. George vs. Manhattan; at Hoboken; won by 24.
August 12.—St. George vs. Staten Island; at Quarantine; won, 1 inning, by 34 runs.
August 16.—St. George vs. Staten Island; at Quarantine; won by 53 runs.
August 29.—St. George vs. Boston; at Boston; won, 1 inning, by 57 runs.
August 30.—St. George vs. Waltham; at Boston; won, 1 inning, by 24 runs.
September 9.—St. George vs. St. Louis; at Hoboken; lost by 36 runs.
October 4.—St. George vs. Germantown; at Hoboken; won by 71 runs.
October 18.—St. George vs. Field Eleven; at Hoboken; won by 53 runs.

It will be seen by the above record that out of ten first eleven contests, with strong teams, the St. George Club were victorious in six, and in all the games played they won eleven out of fifteen.

The following are the averages for those who have played in five games and over:

Names.	Matches.	Innings.	Runs.	Most in Innings.	Most in Matches.	Times not Out.	Average.
W. R. Bowman.....	9	14	167	34	34	5	18.5
J. B. Cashman.....	9	14	223	81	81	1	17.3
Smith.....	13	19	256	54	61	1	14.4
W. Lemon.....	11	15	150	42	58	0	10.0
Basset Jones.....	13	19	184	27	33	0	9.13
E. H. Moeran.....	10	17	147	35	36	0	8.11
J. B. Sleigh.....	10	18	114	27	31	0	6.6
J. Harcombes.....	9	12	77	25	25	1	7.0
F. Satterthwaite.....	5	7	30	15	15	2	61.0
Talbot.....	13	20	72	9	11	2	4.0

BOWLING AVERAGES.

Names.	Runs.	Wickets.	Average.	Names.	Runs.	Wickets.	Average.
Jones.....	213	56	4.18	Moeran.....	173	26	6.17
Smith.....	305	69	4.25	Cashman.....	82	11	7.5

Messrs. Bruce, Souther, and Gibbs played one match each, scoring double figures.

—The Base Ball championship question is practically settled, and the well-trained and honest players of the Boston Club win, as they deserve to do, the championship honors. The Professional Championship season closes Oct. 31st and up to Oct. 28th—the day of our going to press the record of the five leading clubs stood as follows:

Clubs.	Games played.	Won.	Lost.	Won by forfeit.	Yet to play.	Total won.
Boston.....	54	39	15	0	0	39
Philadelphia.....	43	32	16	4	2	36
Baltimore.....	49	27	22	3	1	30
Athletic.....	48	25	23	3	3	26
Mutual.....	49	25	24	4	1	28

—The Washingtons by retiring from the arena before the close of the season lose the remaining games they yet had to play. It will be seen that the Bostons have a winning lead even if the Philadelphians win their remaining games.

—The record of games played in the professional arena since our last issue, is as follows:

Tuesday, Boston vs. Baltimore.....	18—13
Tuesday, Mutual vs. Athletic.....	15—3
Wednesday, Boston vs. Washington.....	11—8
Wednesday, Atlantic vs. Athletic.....	4—4
Thursday, Boston vs. Washington.....	9—8
Friday, Athletic vs. Boston.....	5—4
Saturday, Athletic vs. Boston.....	10—6
Saturday, Atlantic vs. Mutual.....	14—4

—On Monday a rain storm prevailed, the effects of which will probably leave but two days wherewith to finish the season's games.

—Election day will be observed as a ball-players' holiday, and both amateur and professional players will be on the field. The Knickerbockers will make a day of it at Hoboken on that day.

—The game of Foot Ball is truly pleasing, not only for the spirit and amusement which it affords to the mind, but the good results which the constitution derives from such active exercise. There is no game, not even base ball, which combines so much bustle, so much "hurrying to and fro," or healthful pastime for the young men of our Universities and Colleges, as foot ball. In fact, it is one of the prettiest of all athletic pastimes, and quite exciting to see forty of the flower and youth of our country combating on a bright November morning in this manly and much to be respected game.

—The Foot Ball season opened on October 18th. The following Colleges sent delegates to the convention which was held in this city, namely—Rutgers, Yale and Princeton. Harvard College having adopted rules of their own, it was useless for them to send any members to the convention. Columbia College was not represented. The first match of the season was played on October 25th at Hamilton Park between Rutgers and Yale. The following are the names of the players, being twenty on each side:

Rutgers—Lydecker, Captain; Allen, Martine, Davis, P. Fuller, Staats, Hendrickson, Vreeland, Watson, Nevins, Hauxhurst, Van Aken, H. Fuller, Pumyea, Anderson, Kemlo; Walser, Cutler, Ross, Fischer.

Yale—Halsted, Captain; Deming, Bowers, Bushnell, Henderson, Porter, Scudder, Stokes, Avery, Hotchkiss, Peters, Bristol, Dunning, Melick, Robbins, Sherman, Osborne, Grinnell, McBirney, Ferry.

The first game was won by Yale, the second game was won by Rutgers, the third and fourth games by Yale. Time occupied in playing games—two hours and forty-five minutes. Referees—Messrs. Searing and Babcock. Judges—Yale, Mr. W. Kelly; Rutgers, Mr. Johnson.

—Princeton vs. Yale play on Saturday, Nov. 1st, at New Haven.

—Rutgers vs. Princeton play at New Brunswick, New Jersey, Nov. 5th.

—The following laws are those which bear the impress of the Football Association, and are not only very extensively employed in London, but most universally in the northern counties. The object of this code is to encourage "dribbling," or working the ball with the feet to the exclusion of all usage of the hands, and simplicity has also been carefully studied by the abolition of all clauses and technicalities calculated to prevent an easy comprehension of the rules:

FOOTBALL ASSOCIATION.

1. The maximum length of the ground shall be 200 yards, the maximum breadth shall be 100 yards, the length and breadth shall be marked off with flags; and the goals shall be upright posts eight yards apart, with a tape across them eight feet from the ground.
2. The winners of the toss shall have the choice of goals. The game shall commence by a place kick from the centre of the ground by the side losing the toss; the other side shall not approach within ten yards of the ball until it is kicked off.
3. After a goal is won, the losing side shall kick off, and the goals shall be changed. In the event however of no goal having fallen to either party at the lapse of half the allotted time, sides shall then be changed.
4. A goal shall be won when the ball passes between the goal-posts under the tape, not being thrown, knocked on or carried.
5. When the ball is in touch, the first player who touches it shall throw it from the point on the boundary line where it left the ground, in a direction at right angles with the boundary line; and it shall not be in play until it shall have touched the ground, and the player throwing it in shall not play it until it has been played by another player.
6. When a player has kicked the ball, any one of the same side who is nearer to the opponent's goal line is out of play, and may not touch the ball himself nor in any way whatever prevent any other player from doing so until the ball has been played, unless there are at least three of his opponents between him and their own goal; but no player is out of play when the ball is kicked from behind the goal line.
7. When the ball is kicked behind the goal line it must be kicked off by the side behind whose goal it went within six yards from the limit of their goal. The side who thus kick the ball are entitled to a fair kick-off in what way they please without any obstruction, the opposite side not being able to approach within six yards of the ball.
8. No player shall carry or knock on a ball.
9. Neither tripping nor hacking shall be allowed, and no player shall use his hands to hold or push his adversary, nor charge him from behind.
10. A player shall not throw the ball nor pass it to another, nor shall any player handle the ball under any pretence whatever.
11. No player shall take the ball from the ground with his hands while it is in play, under any pretence whatever.
12. No player shall wear projecting nails, iron plates or gutta percha on the soles or heels of his boots.

DEFINITION OF TERMS.

- A place-kick is a kick at the ball while on the ground, in any position in which the kicker may choose to place it.
Hacking is kicking an adversary intentionally.
Tripping, is throwing an adversary by the use of the legs.
Knocking-on is when a player strikes or propels the ball with his hands or arms.
Holding on includes the obstruction of a player by the hand or any part of the arm below the elbow.
Touch is that part of the field on either side of the ground, which is beyond the line of flags.

WILLIAMS COLLEGE, October 20th.

EDITOR FOREST AND STREAM:—

Notwithstanding the disastrous defeat which "Williams" sustained at the Springfield regatta, there seems to be an unusual interest felt here in athletic sports. The term was opened by a very spirited game of football between the Sophomore and Freshman classes, which resulted in a victory for the former in four straight innings. Last week occurred the grand College tournament on the grounds of Hoosac Valley Agricultural Association. The contest embraced those in running, jumping putting the weight, &c.

The first thing on the programme was the vaulting with a pole; but two entered for this prize, a silver cup: Gunster, 74; and Rankin 76. The vaulting of both was good, but Rankin succeeded in clearing 18 feet, and thus taking the prize. The next feature of the entertainment was a jumping-with-weight match, which was won by Barnhart, 74, who cleared 10 feet 8 inches.

Gunster was successful in putting the weight some 33 feet out of his way in a manner quite calculated to discourage his unsuccessful rivals. In the half mile race eleven started, but only one came in first, Ballard, who won the cup in the remarkable time of 2 minutes 7 seconds. Smith then threw the base ball 276 feet, taking another cup. This was followed by the scrub races, Siamese twins, three-leggeds, &c., which of course caused much sport. The event of the day, however, was the mile race for the junior cup. The entries for this race were Wood, 74; Gould, 75; Whitcomb, 76; Hallock and Wilder, 77. Hallock and Gould were the favorites before the race, but both spurted too soon. It was an exciting contest throughout, and was finally won by Wilder in 5 min. 21 sec., very excellent time considering the small amount of practice had by the contestants.

—Louther Loomis, a young man residing in Somerville, N. J., walked a mile on Saturday last in seven minutes and thirteen seconds, for a purse of \$50. Loomis is six feet four inches high, and as slim as a rail, weighing only ninety-four pounds.

—The National Amateur and Gymnastic Tournament will take place at the Academy of Music on Saturday evening, November 8th.

—Secretaries of Athletic Pastimes in Universities and Colleges will please mail their reports not later than Monday of each week.

Art and Drama.

A NUMBER of the most prominent Italian gentlemen of the city on last Friday evening gave to Signor Salvini a dinner, as a mark of respect for him personally, and in admiration of his genius as an actor. The introduction of the best material of the French and Italian schools of dramatic performers within the last few years has done much to enlighten our theatre-goers regarding foreign standards of excellence. The Bateman Troupe, that performed so satisfactorily in opera bouffe, created the most marked admiration for the finish of their performances. The attention paid to the minutest details was in singular contrast to much of "our management," where the actors may be slovenly and inattentive to their heart's content, provided the scenery is gorgeous, and its mechanical movements unexceptionable. The effect was good, at least for a time, and more study and elaboration was perceptible in many of our popular actors, which result proved to be a great comfort to the audience and a decided advantage to the gentlemen who were willing to learn.

The Italian troupe which, under the guiding star of Salvini, has just closed its advertised engagements, has shown to the careful observer that the Italian stage has the grandest characteristics, and that its spirit is broad, comprehensive and worthy to be ranked as a lineal representative of the days of Roscius, being entirely different from the French school; in fact, closely resembling the best American standard. This is after all quite natural, and to be expected, for the Italians have at the bottom a grave and subdued nature, with traditions of greatness that chastens the minds of the living, making the wonderful past and the struggling present harmonious and most thoroughly characteristic.

What we most particularly wish to notice at this present moment is the fact that Signor Salvini made his best impression in *Othello*. The English version was so closely followed that all persons familiar with the original could understand the action of the play, though the words were in a foreign tongue. The "new readings" struck most of the critics with surprise, confounding them at first, and then compelling admiration. The result was that the popular sentiment encouraged Salvini to play nothing else but *Othello*, and he could with perfect ease, and with better receipts possibly, have fulfilled all the nights of his engagement with a specialty.

But this was not in accordance with his ideas. "The continental" audiences have not yet become reconciled to a season occupied by one play, however excellent that play may be, and he went through the entire selection of his best pieces, at first much to the regret of some of his friends, but to be crowned at last with a greater triumph.

We have spoken of his *Othello* as in many respects unsurpassed; we may heartily record that his comedy is equal to his tragedy, and that he may be justly ranked with Garrick, whom Reynolds properly painted, Garrick standing undecided between tragedy and comedy, hesitating to give preference to either. It is a great misfortune to the mass of our play-goers who have been compelled to see Mr. Sothorn's *David Garrick* for weeks at a time, that Salvini could not give his version in the English language. Salvini, in his rendition, is throughout a most delicate and refined gentleman; the absolute pain he shows on his face at the part he is playing before the poor girl "to disgust her love" is the very perfection of the highest sentiment, and at no time, intoxicated as he is presumed to be, does he leave the impression on the audience that he is doing else than a most offensive act from the keenest sense of duty.

Mr. Sothorn, on the contrary, over-does the scene; the young lady is disgusted thoroughly at sight, and all of his subsequent maudlin, rolling about in the old women's laps, upsetting the table furniture, and suggesting at times that he is in the preliminaries of a first-class sea sickness, absolutely produces on the ladies at his presentation the same impression that he diametrically desires to effect on the infatuated young heiress.

On Monday evening Mr. Lester Wallack returned to his theatre, and commenced the event by the popular comedy of "She Stoops to Conquer." The "mounting" is most perfect, and what makes the scenery particularly genial is that its vernal effects are so naturally imitated that our "stay at home in the summer denizens" can view English landscape and enjoy a trip into the country and get acquainted with the internal arrangements of Mr. Hardcastle's stately home at the same time. Mr. Wallack's young Marlow and Mr. Gilbert as Mr. Hardcastle are a conjunction that cannot be equalled on any other stage than Wallack's. The play throughout was thoroughly satisfactory, and the patrons are turning out in the best attire and most delighted faces.

Mr. Daly has set the example of putting down the price of admission to the theatres. It was a necessity at the Grand Opera House, for the venture may hereafter fill the house, and thus redeem it from its heretofore constant interior expression of empty seats. "Popular prices," however, carry

with them a certain kind of imperative patrons, who want, in addition to popular prices, popular plays. Twenty years ago anyone could have marked out this now "equivocal line." The time was when something patriotic was absolutely necessary; when the American flag was a regular star and had to be unfurled, not only over a man of war, but over a country wedding. This feature has passed away. Now what is to be a popular play? If "Round the Clock" is a success, then we are going from bad to worse. With the "New Magdalen" served up to the exclusives at the Fifth Avenue, and portrayals of the lowest city life on Eighth avenue to the populace, certainly our theaters, at least many of them, are not setting moral lessons before either the refined or the commonplace of our population. Our idea is that dramatic exhibitions have, as a rule, become so entirely without any real standard, so thoroughly addressed to the eye and to the sensational emotions, that a new generation must be trained and brought back to admire what is admirable in the mimic life on the stage.

Again on the subject of theatres, with low prices, have we among us a community or population that agrees in sentiment sufficient to afford steady patronage to a theatre that addresses itself to popular taste? We know of none. New York with its 800,000 inhabitants, has thousands of different communities, still distinct, and will remain so, for two or three generations at least. The influence of naturalized citizens has brought all the peculiarities of European civilization, and though this polyglot people are within one corporation, it is a unit in nothing save in being robbed by high taxes, and oppressed by an extravagant and heartless municipal government. In dramatic taste certainly there is no contiguity.

We have no good natured working classes composed of prosperous young mechanics and jolly apprentices. Thirty years ago the "fire boys" and their companions ruled, but they did not possess any characteristics of cruelty and ruffianism that now distinguishes our impecunious young men. In their way they were chivalrous, and respected helplessness, and had a code of fair play in their dealings with each other. From among them came many of our best citizens, some grew rich and all had the chivalrous idea of loving the old city. In this useful class of this population, Mitchell found his warmest patrons of the Olympic, and before his day, they supported the old Bowery, when it was really a school of good acting—giving the elder Booth his most glorious benefits—and worshipped Forest, not only because he was their favorite actor, but also because he was one of the "bhoys."

We can see no material to steadily patronize a popular play-house with popular prices. The very suggestion will drive away hundreds of good people who can afford to pay a little more and have a select audience. We shall therefore look upon the experiment with interest. If it ends in keeping such monstrous productions as "Round the Clock" before the footlights, then it were better to have our great dramatic buildings turned into concert saloons, giving the visitors good music, and let them from conversation and their own resources furnish intellectual excitement.

London has poured upon us almost its entire force of novelists, readers, lecturers, and "bohemians;" in fact, this sort of material comes to our hospitable shores in quantities only less in volume than the flood of immigrants that daily land at Castle Garden. The result is, that the modern Babylon is now enjoying a sort of healthy literary reaction—that comes to an overtaxed stomach when relieved of its surplus and pernicious food. Taking the men who have come among us in this strange exodus as a body, or in single specimens, we do not think them, with one or two exceptions, remarkable for any extraordinary talents, their chief availability for drawing audiences being in the popular taste for novelties. Not one of them now holding forth from the rostrum or lecture hall could maintain himself for two consecutive years if a permanent resident. We therefore suggest to our American lecturers, thrown out of work by these importations, that they immediately commence a general removal of themselves to Great Britain to fill up the aching void which is really felt to be a relief in London, yet not wholly appreciated, because the literary appetite is vitiated and requires a constant supply of stimulants of some kind—good, if possible, bad, if nothing else is at hand.

Dickens was a success, his novels made him a real lion. To see the author was worth the "price of admission," for in his person centered the recollection of so many simple and kind-hearted characters, the recalling of which sheds a bright light over benighted human nature. But Dickens was as an actor only second to his great genius as an author, and hence we had a combination of the most rare qualities that ever centered in one person.

Wilkie Collins, on the contrary, brings us a literary repast, that is only peculiar for the intricacy of its plots; no remarkable literary ability, no humanity, cold, rude, but ever fascinating, as polished steel machinery is fascinating. His manners are consistent with the developments of his mind. He is stiff, has no faculty for story telling, and no dramatic power as an elocutionist. So stand by contrast these extremes of modern English writers of fiction. London has yet to furnish us with a truly great lecturer—we have men by the dozens who are his superiors in this line—he is a fine example of what can be done by judicious advertising—a voice that is of the canting order, and mental training, that enables him at every desired moment to assume the "ministerial tones" which make Gough so invincible before suburban audiences. In viewing the field, we have reason to congratulate ourselves, nationally and intellectually on our home talent. It "scatters" terribly,

but our magazines are evidently full of ammunition. Up to date, this exodus of foreign literary laborers, Dickens excepted, has not by comparison belittled our own achievements, or by contrast, in the slightest degree caused the suspicion in the public mind, that the people of this country are not very wonderful, especially in paying out their money for second-hand foreign wares.

"Mrs. Burnham," a correspondent of a western paper has heard Mr. Beecher "hold forth" at Plymouth Church. She seems to be very much struck with his "worldly success" and his talents as an actor. Among other things she says: "On Friday night I saw an audience of sixty-three in the Broadway Theatre. Saturday night twenty-three persons occupied the lower part of the Grand Opera House, but Sunday night 3,000 people waited the rise of the curtain at Plymouth Academy." She then goes on and repeats the story of the Prodigal Son as told by Mr. Beecher as follows: "I'd rather of the two boys have been the prodigal. The other son was a miserable creature. There was a good deal to admire in the prodigal. He went off to have a good time, and he had it and got through with it. He reached the ground and made a rebound. He did not say when in his trouble, 'I'll go to my father and state the circumstances.' He called his performances sins, and he went and confessed 'em and was joyfully forgiven."

Referring to the other brother, he described him as hearing the singing and dancing and refusing to go inside, being "too stingy to get drunk; too cautious, too cold, too unsympathetic to sin lasciviously. He was mean, stiff, and proper, and was going to Heaven as a mummy," and Mr. Beecher made himself as much like a mummy and walked as stiff as a ramrod across the stage on his road to Heaven, in the style of the prodigal's brother. The assembled three thousand roared.

For drawing an audience, detailing a story with most thrilling action, Mr. Beecher has no superior on the dramatic stage.

TAHITIAN HOSPITALITY.—Half-way to Kuloa we stopped at a native hut. The men were absent and were working in the fields. A woman of fully forty, immensely stout, as are all native women at that age, welcomed us. She made us sit down while our servant unloaded our tired horses. After the customary questions of whence we came from and whither we were going, she asked if we were not hungry. On our replying that we were almost famished, she called for her husband, who was in sight. He came very quickly. He was a magnificent specimen of humanity and elegantly proportioned. In a little out-house attached to the hut was a canoe made of palm wood. He picked it up as if it was a feather, and carried it to his fish pond, which was within a stone's throw. The canoe was launched, a stroke or two of the paddle carried him into the middle of his pond, and throwing in his net he caught a dozen mullets. He selected two, the largest weighing three pounds fully, and threw back into the water the smaller fry. His wife then took the fish, wrapped them up nicely in the leaves of the Ti (*Dracana terminatis*) placed them in a hole in the ground lined with grass and herbs, and then baked them over red hot stones. A quarter of an hour afterwards the most delicious aroma exhaled from her extemporized oven. We did not fancy poi, but eat the boiled taro, and with the fish made a delicious meal. We wanted to pay the good woman, but she refused to take our money. After saying good-by, we went on our journey, delighted with the kind hospitality we had received from these good people.—*M. C. de Varigny, Tour du Monde.*

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

ILLUSTRATED LIBRARY OF FAVORITE SONGS: Edited by Dr. Holland. Boston: George M. Smith & Co.

As this rare book can only be had of agents, our friends should send their orders at once. These songs are of such a character as to recommend them to all readers, old as well as young. In this work may be found songs of home, of the heart, of life, of nature, by the wayside. These are no longer waifs on an uncertain sea, and liable to be lost or lost sight of, but are presented for future preservation and reference, in a form more worthy of their real merit. Many of our first American poets speak through these pages, and their effusions are finely illustrated by our best American artists. Published by Scribner, Armstrong & Co., N. Y.

ROMAIN KALBRIS. Phila: Porter & Coates.

This is an interesting story of rather a nautical style, often suggestive of Captain Marryatt, whom the author could have copied in a still closer manner with good effect. It is rather a free translation. Intended for the special perusal of our American readers, and Mrs. Wright has made it quite a readable work. The adventures of Romain upon the coast of France, by sea and land, make the subject of this pleasing story. There is simplicity and naturalness about the narrative that much enhance its claims to our kind consideration. Porter & Coates deserve much credit for the beautiful style in which it is printed, the fine illustrations making it doubly attractive.

ANNOUNCEMENTS.

ILLUSTRATED LIBRARY OF FAVORITE SONG. Boston: G. M. Smith & Co. To be sold by subscription. A splendid book and will find a ready sale.

WORK. By L. M. Alcott.

We have received from the New England News Company this interesting work. Also, several others which will hereafter receive attention.

LADY GREEN SATIN, and her Maid Rosette. From the French of the Baroness E. Martineau des Chesney. Porter & Coates.

The beautiful engravings of birds in Avilude cost hundreds of dollars and the fine and instructive descriptions many weeks of labor. Every family ought to have it. For sale by all booksellers and toy dealers, or sent post paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

"An excellent addition to our home amusements."—*Christian Union*

Forest and Stream.

OPINIONS OF THE PRESS.

The first number is a model of typographical neatness, and its contents are sufficiently varied and interesting to secure for the paper a cordial reception from that class of the public to whose taste it caters.—[New York Times.]

It is a handsome sheet of sixteen large pages, and is filled with a variety of very interesting reading.—[New York Sun.]

There is need for a new advocate to make the American people more in love with outdoor life, and **FOREST AND STREAM** promises to do the work admirably. The various departments are edited with knowledge and skill.—[New York Journal of Commerce.]

The publication of a new sporting journal, **FOREST AND STREAM**, is another evidence of the increasing love of our people for the sports of the field and athletic exercise. There is every evidence that good fortune awaits the new-comer. That this should be so is a source of congratulation.—[New York Express.]

The first number promises well, and its prepossessing appearance is no slight confirmation of its claim to a high and manly tone in its conduct.—[Home Journal.]

It is neat as to typography and handsomely printed, and seems to be well adapted to persons of cultivated tastes.—[New York Tribune.]

Mr. Hallock is an enthusiastic sportsman, a good writer, and competent to make a "sporting paper" fit for household reading.—[New York Commercial Advertiser.]

We commend with special earnestness the claims of **FOREST AND STREAM** to favorable attention.—[The South.]

We may safely predict its success.—[New Orleans Home Journal.]

It is neat as to typography and varied and interesting as to contents.—[Hartford Times.]

The matter of the sample number is both appropriate and interesting.—[Brooklyn (E.D.) Times.]

It is a necessary publication, and we welcome its birth with open arms. It occupies its own position, intruding upon no pre-occupied ground, but it is an elevated position. To sportsmen of the gun and fishing-rod it will be invaluable.—[Brooklyn Review.]

Got up in a handsome manner, both as to presswork and arrangement of contents.—[Philadelphia Ledger.]

It is decidedly the most *recherche* thing of the kind ever issued in this country, and so far as we know is the peer of anything similar in England. All its departments show a practical and intellectual filling up which challenges general favor.—[Germantown Telegraph.]

Judging by the number before us we can unhesitatingly recommend the **FOREST AND STREAM** to all who take an interest in out-door recreation and physical culture. It will no doubt merit the patronage of our sporting gentlemen.—[Every Evening, (Wilmington, Delaware).]

The terms are very reasonable for such a large and necessarily expensive paper. We commend it to our sportsmen friends most heartily. We like the ring of its editorials, evidently written by the true lover of nature in its multiplied and beautiful forms.—[Niagara Falls Gazette.]

There is a standard of excellence and usefulness not yet attained by any sporting paper in the country, and **FOREST AND STREAM** will find its success at the top of the ladder.—[New York Graphic.]

It covers ground not occupied by any other journal.—[Waterloo (New York) Observer.]

Sincerely hope it will live long and prosper. It certainly deserves success.—[Springfield (Mass.) Union.]

Health, longevity, and happiness largely depend upon such open air pursuits, and a journal like this is the best means to effect the object.—[Portland (Me.) Argus.]

WHAT THE PEOPLE SAY.

I hope you will meet with entire success in your project. My days of active life in the field and forest have gone by, but I recall my experience with pleasure, and I feel that I owe my health in a good degree to early habits of free exercise in the open air in forests and along our streams.—[Horatio Seymour.]

There is a demand for just such a paper as this. It will give me very great pleasure, indeed, to do all I can to help your journal.—[Professor S. F. Baird, Smithsonian Institute.]

I have no doubt that **FOREST AND STREAM** will have a large circulation. Consider me a subscriber.—[George A. Boardman, Naturalist.]

Such a journal, conducted upon the principles and with the spirit which you announce, will certainly find warm support.—[Rev. J. Clement French.]

I have no doubt you will make it a marked success.—[Hon. J. D. Catton.]

I wish you the best sort of success in your effort to make a journal of out-door sports such as a gentleman can read and write in.—[Charles D. Warner.]

I doubt not it will be a great success. It is wanted, and must be called for.—[Major John H. King, U.S.A.]

I have long wished just such a journal to receive into my family, that my boys may learn from a better teacher than myself the best way in which to follow the sports that in years past have given me so much pleasure.—[Henry W. Abbott, Boston.]

Under your management it ought to be a success.—[W. H. Venning, Inspector Marine and Fisheries, Canada.]

You shall have all the aid and comfort I can give you in your enterprise.—[Com. L. A. Beardslee, Washington Navy Yard.]

I must congratulate you on the very attractive appearance of your paper. Keep it up to the standard you have marked out for it, and it will become an assured success.—[Rev. Charles F. Deems.]

Nothing but the exigencies of my roving life have prevented me from starting, or trying to start, just such a journal as yours. You shall have my hearty co-operation.—[Professor Elliott Coues, Smithsonian Institute.]

Your paper is just what we have long wanted, and will take well in the Southern States.—[Dr. R. P. Myers, Savannah, Ga.]

The editorial matter, the contributions, and the make-up and general appearance of the paper are just such as Fishrod and Nimrod admire.—[Genio C. Scott.]

I am glad to hear of your literary enterprise. It will give me pleasure to put you, or any one else representing the **FOREST AND STREAM**, in the way of getting information for your paper.—[Andrew H. Green, Comptroller, and Central Park Com'r.]

"I take the heartiest interest in **FOREST AND STREAM**. I have always thought that an American "Land and Water" was needed, and that many valuable observations are yearly lost, through the want of some such medium of communication between field-naturalists."—Prof. G. Browne Goode, Middletown University.

I wish the **FOREST AND STREAM** every success, and will be most happy to lend any assistance in my power to make it so.—[Hon. Robert B. Roosevelt.]

Don't let your children spend their money for trash, but let them get a game of Avilude. If the pictures and descriptions comprising this game were in book form they would cost many times the price of the game. Sent post paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

"Must have a large sale, and deserves it, too."—*Harper's Weekly.*

FOREST AND STREAM,

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Co.

103 FULTON STREET, NEW YORK.

Terms, Five Dollars A Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over one month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. We especially desire to make the FOREST AND STREAM the recognised medium of communication between amateurs and professional sportsmen. All of us have something to impart, which if made available to each other, will in time render us proficient in all those several branches of physical culture which are absolutely essential to our manhood and well-being, both as individual men and as a nation. A practical knowledge of natural history must of necessity underlie all attainments which combine to make a thorough sportsman. It is not sufficient that a man should be able to knock over his birds dexterously right and left, or cast an inimitable fly. He must learn by study and experience the haunts and habits of the game or fish he seeks. If he depend altogether upon his dog's nose, or upon his henchmen, he will some day have to retire from the field in mortification and disgrace. Therefore it is that we shall study to give practical instruction in the most attractive departments of natural history. We shall not forget the technicalities of the craft either, but take pleasure in designating the best localities for hunting and fishing, outfits, implements, remedies, routes, distances, breeds of dogs, &c. Each number will contain a paper descriptive of a particular animal, bird, or fish, with some instruction as to its habits, haunts and mode of capture, and the period when it is in season. We have arranged to receive regular weekly reports of the fishing and shooting in various parts of the country.

Yachting and boating will be encouraged, and yacht news be made an especial feature of the paper. A reasonable space will be given to athletic sports and those out-door games in which ladies can participate. In a word, every description of game that is in vogue among respectable people, and of value as a health-giving agent or recreative amusement, will be considered and its practice encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by that low order of beings who, in their instincts are but a grade higher than the creatures they train to amuse them, will find favor in these columns.

To horse news we shall devote some space, giving a record of leading races and meetings and current events, but we shall not make it a feature of this journal. We leave this department to others, much more competent than ourselves, who are recognised throughout the country as exponents of the turf, and as authority in stock, pedigree and kind. We yield to no one, however, in our love and appreciation of the horse and his estimable qualities. The noblest of all animals, and the companion alike of men of high and low degree, he has never become contaminated by the moral atmosphere by which he is often surrounded, or degraded below the high rank to which his attributes entitle and assign him.

To the forest, lawn and garden we assign full place. For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy—even our supply of drinking water is threatened, from the depletion of our timberlands by fire and axe. It is but proper to state here that the gentleman in charge of this department is the well-known "Olipod Quill," who was connected with the *Agriculturist* newspaper from the start, and a co-laborer with the lamented Downing for many years. Much valuable information will be found in this department.

Our military department is intended to comprise merely a weekly summary of news for officers and soldiers upon the frontier—such news as the castaways would enjoy to receive in a "letter from home," and we trust that many of them will be inclined to send us in return some account of their hairbreadth experiences among the Indians, the buffaloes, the grizzlies and the antelopes. We of the East are not thoroughly familiar with the varied species of game in the far Northwest, and would like to receive full information especially of the numerous *Cervus* family and of the Rocky Mountain sheep. This department is under the charge of a distinguished army officer.

Our dramatic and art column will be prepared by Colonel T. B. Thorpe, and must at once become popular with all our readers who are interested in these matters. We shall occupy an independent position, and throw our efforts in behalf of competent reform. We shall perhaps even clamor for it.

Our columns will always contain the cream of the latest foreign sporting news.

In a word, we are prepared to print a live paper and a useful one. We shall not be parsimonious in securing the best material for its columns. We are convinced that there is a standard of eminence and usefulness not yet fully attained by any sporting journals in this country. To this we aspire. It will be our ambition to excel; and we have relinquished a life of ease and semi-indolence to take charge of the enterprise. This not of our own free choice, but at the solicitation of many hundreds of friends and strangers. We are ably assisted in our labors by a corps of valuable associates—men of age and experience, all of whom, with single exception, have been identified with leading journals for years.

Mr. SIMEON A. ATKINSON, connected with the Georgia press for over twenty years, has charge of the business affairs of the Company.

THE ANGLER'S FAREWELL TO LABRADOR.

For Forest and Stream.

SOFT the balmy south wind blows,
Swift the brimming river flows;
Now a ruffling ripple sweeps
O'er the shallows and dusk deeps;
'Tis a glorious time to try
With the salmon rod and fly.

Now a shade obscures the stream,
Now a sun-flash casts its gleam,
Now the dark tides darker flow,
Now the bright waves brighter glow;
O'er the checkered river's face
Shade and sunshine run their race.

See, by yonder sandy bar,
Where a rock juts black and far,
See, in yon undimpled pool,
Deep, unfathomable, cool,
See, where wheeling eddies gleam
In the centre of the stream,
Flashing fin and flukes display
Where the spangled salmon lay.

Sweep with careful rod the flood,
Cast the light fly many a rood;
Ha! the salmon from the deeps
Like the nimble lightning leaps;
Now he feels the barbed steel,
Singing, humming goes the reel;
Soon the captive comes to land,
Gasping on the yellow sand.

Swelling floods of Labrador,
Pouring rivers, torrents hoar,
There's a sorrow at the heart,
As we linger ere we part.
Far away, on winter nights,
We will dream of your delights,
Longing to return again,
To your desolate domain.

I. McLELLAN.

Wild Life in Florida.

CAMPING AMONG THE SEMINOLES.

NUMBER ONE.

THE EVERGLADES—LAKE OKEECHOBEE—TIGER TAIL—
BLACK CYPRESS SWAMP—ALLIGATORS—DOG MEAT
RAGOUTS—INDIAN BELLES—QUEER EXPERIENCES.

BY the treaty of 1842, the few Seminoles remaining in Florida after the war were confined to the southern portion of the peninsula. There they still remain, between two and three hundred in number, leading a peaceful life, cultivating their fields, and hunting. They are governed by two chiefs; those around the southern shore of Lake Okeechobee by "Tustenuggee," and those east of that great lake by "Tiger Tail." Their intercourse with white men is limited to occasional trading visits to Indian River and the Keys. Though they have existed as a nation for one hundred years, very little is known regarding their language, customs, and social life.

It was with the avowed object of studying the Indian in his native wilds that I left Indian River one beautiful spring morning in '72. I had provided myself with an ox-cart, oxen, of course, and a guide—though just what he was a guide of, and to where, I've not satisfactorily determined to this day—and the usual amount of hunters' traps. There was also a colored individual, who had charge of the frying-pan and coffee pot. Well, we progressed favorably enough, till the second night out found us fifteen miles from my camp on Indian River, thirty miles from Okeechobee, and further travel apparently stopped by a long line of cypress swamp. So we camped on the "Alpattiokee." Alpattiokee is Seminole for Alligator Creek. Game was abundant; deer in herds on the savannas; turkeys in flocks in the "hammocks;" the half-dry creek-bed swarmed with ibis and heron of every hue, and alligators were in abundance. They crawled upon the banks of the creek, reposed upon its sand bars, and swam its waters.

They made night hideous with their bellowings, and kept our mastiff in perpetual dread of being devoured by assailing him while he reposed by our camp-fire. Every inducement for the stay of hunter or naturalist was offered, and every tramp and hunt would bring new additions of rare plants and birds to my collection.

While hunting along the various creeks I discovered signs of Indians—in the sand of the dry creek-bed the impressions of moccasined feet; on its banks a "cabbage palm" with its terminal bud torn out and the leaves scattered. An old Indian camp, strewn with bones of deer, turkey, and tortoise showed that the place was a favorite hunting ground. There were fresh tracks of three Indian hunters, beside fainter ones of a woman and child. One day Jim came in with the pickinny's playthings—an alligator tooth, two or three grotesquely-shaped pieces of briar root, and a walnut. While we were examining them we heard a faint tinkling in the distance, and a preliminary reconnaissance revealed three Indians approaching the ford in the creek near our camp. Affecting to be employed with our duties, we only looked up as they appeared, and they, taking no notice of us, marched on with heads erect till brought to a halt by Jim, who ran forward with extended hand and a hearty "Howdy." Then their swarthy faces displayed grins which grew broad and loud as we summoned unhappy Tom to prepare a repast for the weary aborigines. Removing from their pony a huge pack, upon which was a tin kettle, which had made the tin-tinabulation we had heard, they hobbled his feet and sat down. While they were demolishing the huge piles of flapjacks which Jim set before them, I had an opportunity for studying their dress and features.

"Tiger," the oldest, was about seventy years old, and had fought in the Seminole war. He was rather above the medium height, broad shouldered, massive arms, and legs like mahogany pillars, worn smooth and polished by many a brush with thicket and briar. His nose and lips indicated a trace of negro blood. His iron gray hair straggled over a greasy bandana bound about his temples. His broad shoulders were artistically draped in two ragged shirts of "hickory," or striped homespun, the inner one about a foot longer than the outer, and reaching nearly to his knees. A breech cloth and moccasins completed his attire. "Charley Osceola" was a young man of twenty, claiming to be a descendant of the famous chief Osceola. Over six feet high, with broad shoulders and finely-shaped limbs, erect and straight, he was my *beau idéal* of an Indian brave. His eyes were small, black, and keen, his voice was musical, and he spoke in a firm, gentle manner that won my heart at once. His hair was thick, coarse, and black, with the changeable purple of the raven's wing. It was shaved close at the sides, leaving a ridge on the crown, spreading toward the neck, and hanging in braids over the shoulders. His dress was similar to Tiger's. The pickinny was hardly worth a description. Each carried a rifle, a reserve supply of bows and arrows, and a pouch for ammunition, etc.

They obstinately refused to talk "Yankaistahadka," or Yankee talk, but used their own language. It was a long time before I could be made to understand that "shatoka-nowa humkin" meant one dollar, the price of a set of bows and arrows, but after much labor I mastered their system of numeration up to a thousand, though I will now admit that I was much exercised at "chopkakolehokolin," and gave it up.

While Osceola was making me some talipikahs, or moccasins, Jim was endeavoring to extract from Tiger the proper route to Lake Okeechobee, and whether we could reach it with our ox-cart. Jim had mingled with the Indians in his youth, and prided himself upon his accomplishments in the manner of dealing with them, and speaking their language. Tiger sat upon his haunches beneath the spreading branches of a live oak, looking like some ragged Turk.

Jim (in a loud voice)—"Okeechobee; you savez?"
Tiger—"Eucah," (yes).

Jim—"Okeechobee; me go; walkah (oxen) go; Yankaistahadka go; hey?"

Tiger—"Eucah; walkah, me eatum; good!"

Jim—"No, you old fool, (emphasized); you know more'n you pertend; walkah no slumpy, slumpy, no sticky, icky in the mud; that's what I mean."

Tiger—"Haigh!"

Jim—"Oh, you old black leg; you consarned old manatee! Can't you talk Istachatta (Indian), or do yer mean to go back on yer native tongue? Come, now, talk Yankee talk; none of your dog-goned nonsense and hog Latin. Okeechobee, me go; walkah go; cartah go; Istalusta (mulatto) go; no get stuckah, no have to come backah; hey?"

[This in fearful tones, for Jim held, with many others, that you could make any foreigner understand, provided you spoke loud enough].

Tiger—"Istalusta; shookah, me give um; pahlen!" and he looked wistfully at Tom.

Jim—"Ten hogs for that nigger! There, I'll give up; the—something—heathenish old chattymico don't know Injun no more'n a cracker!"

A peculiar twinkle of Tiger's eyes convinced me that he "knew more'n he pertended," but what his reasons were for baffling Jim's curiosity I didn't know till later.

That night we left our camp on the Alpattioke, and made our fire at the foot of the "forked cabbage," on a branch of the Alpattie. The Indians accompanied us, though unasked. It seems that Tiger had divined Jim's meaning, and had determined to prevent us from reaching our destination. He had concocted a fearful scheme to prevent our departure—it was to eat us out. I didn't know it at the time, or I shouldn't have aided them as I did.

The shades of night and the time for our evening repast drew near. In honor of our guests, Tom had cooked just four times the usual quantity of flapjacks, besides our last steak of venison. I had devoured but one flapjack, and was about securing another, when, lo! they were not. Tiger sat dignified and sad; Charley dignified and serious; "Fistilokeen" dignified and dirty. The corners of their mouths ran hog juice, their faces and hands were unctuous with it, yet there they sat, patiently waiting, sad and serious; grieved, even, judging from their countenances.

Tom refused to cook any more.

"Is-ta-lus-ta lazy; ho-la-wan-gus!" said Tiger.

Thus taunted, Tom broke open our last package of flour, and busied himself, cursing the Indian the while, till they all united in a satisfied "me full!" These untutored "sons of the forest" soon left us with their customary "me hipus j" (me go), and we were not very sorry that, to use their own expression, they were "sui-cus j" (gone). From Tom's quarters that night I heard a muttered blessing upon the "Is-ta-chat-tas." In the morning they brought a peace offering of venison, and that night we had an alligator hunt by moonlight.

I shall never forget the weird aspect of the scene spread out before us, as we assembled silently upon the banks of the creek. The creek-bed could be traced through the vast plain by the occasional clumps of palms till lost in the swamp far beyond. The bright plumaged herons, that told of its meanderings as they hovered over it by day, were now gone, and silence, as of the grave, reigned over us. The creek-bed was dry and exposed, except at intervals there were great holes full of alligators—rightly called "alligator holes." Here, crowded together, they were patiently awaiting the setting in of the rainy season, which would set them free from their narrow prisons.

The "gaitors" seemed to have had notice of our coming, as, when we gathered upon the steep bank, not a head was visible. "Ump, ump, ump!" said Fistilokeen, imitating the grunting of a young alligator. Soon a dozen knotty heads showed themselves, peering anxiously above the water. At the slightest motion they would disappear.

"Ump, ump, ump, ump, ump!"

The evil-looking eyes again appeared, and the round noses gave utterance to similar though louder sounds. Up they came, silently, cautiously, till I counted twenty-seven above water of the little pond.

Jim launched the harpoon at the side of the largest. True—as his aim always was—the sharp head pierced the reptile's side in its most vulnerable part, just behind the fore leg. A rush, a roar, as though all the bulls of the prairie had united in one grand outburst, and this king of Alpatiokee sped from one end to the other of his small kingdom, making the water boil, and leaving a bloody wake behind him. I have seen the dolphin and porpoise cross and recross the bow of a steamer at full speed, I have seen the shark and bluefish in their most desperate rushes, but it did seem to me, standing by that solitary creek in the soft moonlight, as I slackened and tightened the line as the alligator alternately sulked and darted, that the remarkable speed of those fishes was paralleled in the lightning-like rapidity with which that huge serrated tail clove the water and forced its owner onward. After a little while he got to be somewhat exhausted, and I passed the line to the rest of the party and seized the axe, to be ready for him as he was drawn ashore. It was hard work even then to land him on the soft sand, and he would throw that huge tail around till it nearly touched his nose, and snap his jaws till the night air resounded again. But, watching my chance, I sunk the axe deep in his skull, and his struggles ceased as the quivering paws clawed the sand convulsively and then relaxed. We finished eight more before midnight. A ghastly spectacle they formed, lying upon their backs, their white bellies and mailed sides glistening in the moonlight.

"Umph! alpatiah fight heap!" was the only exclamation our red brothers made.

A few days later we parted from our friends, and, after sending Jim into the river, I hired another guide and set out for the Indian settlement. The man I now hired was an old "cow herder," having charge of several hundred cattle which roamed in a half wild state through the woods and over the vast prairies. His house was the only one between Indian River and Lake Okeechobee, a distance of nearly fifty miles. We left the cabin, mounted upon two stallions trained for cattle hunting and following narrow trails. Each horse carried a pair of saddle-bags, bag of corn, pair of blankets, and a man. Each man had a gun, pint cup, and big knife. Leaving the cabin early one day, we reached the Indian settlement late the next. Our only guide was a narrow trail across the vast flats, following dry creek-beds, through cypress swamps and saw-grass jungles, beneath gigantic pines and through thick palmetto scrub. We followed this trail, made by the Indians, in a southwesterly direction till we struck the saw-grass bordering the "Big Cypress," a belt of cypress swamp nearly forty miles in length. Through this swamp there was but one narrow, blind trail, carefully concealed, lest the white man should find it. But my guide was an old "tracker" during the Seminole war, and struck it just where it entered the swamp. Dismounting, we attempted to lead our horses through. Bleeding and torn we emerged from the saw-grass to enter the blackest looking swamp it was ever my lot to behold. The tall cypress grew high above our heads, shutting out every ray of light; long vines and hooked briars hung from the limbs above and festooned every tree. The mud beneath was of the blackest and softest; stagnant pools of water, covered with green slime, gave hiding places to numberless alligators and moccasin snakes, numbers of which unwound themselves from the gnarled cypress trees and wriggled silently away after darting at us their forked tongues. While carefully avoiding these noxious places a long vine would come athwart my horse's back, sweeping blankets, saddle-bags and all into the mud. To describe the rage of my guide at such a juncture would be impossible. I was mad, but he was even more so, and swore and stormed in a way that was perfectly frightful, causing the innocent snakes and alligators to flee in terror still farther into the black fastnesses of the swamp. My rage died away as his increased, for I was convinced that, black as was the picture, he was doing it justice. At every leap our poor beasts sank above their knees, and it required much dodging to lead them through the narrow apertures and escape being struck by their fore feet. Never was daylight hailed more joyfully than when we emerged from the tangled thicket and at last reached solid ground. The Big Cypress was passed, and we were in the Indian country.

A few miles over a level prairie and we saw the first habitation. A little further, and we caught sight of a squaw running rapidly to apprise the men at work in the swamps of our arrival. They couldn't have chosen a locality more favorable to their mode of living than this. A swamp bounded it on the north and east, and a forest of pines south and west. The scene presented was one of peaceful rest and happiness. What wonder that the Seminole fought for his chosen land as he did! The meadow lark trilled his clear notes from the grass, where, also, we heard the mellow whistle of the quail. Woodpeckers and paroquets flew screaming by, and the wood ibis winged his silent way overhead.

Soon the entire population came forth to meet us, with the exception of the women, and we were welcomed to the village. There were sixteen shanties grouped together, with that of the chiefs a little ways off. Four posts supported a pitched roof, thatched with palmetto leaves. The shanty was open at the sides and ends; a raised platform of logs the whole length and breadth was used to sleep upon by night, and as a table and chairs, etc., by day. We were much annoyed by the dogs, who would come about us examining everything we had. They were nasty little curs, most of them, who would creep carefully up to us, with noses extended and tails between their legs, and who would scurry away at the least motion. I am prepared to

vouch for the statement of the old sailor, Romans, who, in 1770, says: "They (the Creeks) are very fond of dogs, inasmuch as never to kill one out of a litter; and it is not uncommon in the nation to see a dog very lean, and so sensible of his misfortune as to seek a wall or post for his support before venturing to bark." (Another "old joke.") I mention things in their natural order of affection in the Indian estimation—dog, hog, squaw, and pickaninny. The hogs were black, as all Florida hogs are, and numerous. The children were brown, and numerous. The girls and young squaws were much superior to their degraded sisters of the west in point of beauty and cleanliness. Of medium height, with small hands and feet and well-shaped limbs. Their heads were small and well-shaped; eyes black and lustrous; nose small and straight; mouth small and full-lipped. Their hair was long, black and abundant. The older women were less prepossessing, as older women usually are. All, however, had the same low, musical voice, excepting the old hags and habitual tobacco chewers. The women wore a short cape over the shoulders, and a petticoat. These two articles, with a profusion of beads, completed their attire, with, of course, moccasins. The only exception to this style was a young widow, who, being in mourning, was allowed to wear but a single apron, and was forbidden by their law to leave camp for two years. The squaws are very careful of their master's health. Pickaninnyes under twelve, or thereabouts, were in a "state of nature;" boys over twelve, and under sixteen, wore a shirt, and girls a petticoat; women, as described. Upon great occasions both sexes ornament themselves with beads, ribbons, and silver.

At first the maidens were coy and bashful, but they soon overcame their natural diffidence, and sweetly insinuated that "ichee" (tobacco), or "on-mee" (whiskey), would not be unacceptable.

After a short stay at the village we all went over to Indian Parker's cornfield, a mile away in the swamp. Parker, his wife and children were all at work when we arrived, but soon washed themselves, and set before us great milky ears of corn, roasted in the ashes. He had corn over six feet high, pumpkins, beans, etc., all growing finely—this in April. Next, we visited Tiger at his plantation. I met with a warm reception, and was introduced to his squaw. In the course of our conversation he said: "You hum-bux-j?" I told him I thought not; I never had to my present knowledge. He then repeated more earnestly, "You humbuxj!" This time I got vexed, and told him I wasn't. A third "humbuxj," accompanied by a gesture, directed my attention to a small palmetto shanty, beneath which were three iron pots, around which were three hungry Indians, and from which (the pots; not the shanty) they were "humbuxing" after the most approved style. As I was extremely hungry I *humbuxed*. Here was an opportunity! Tiger had eaten me out at Alligator Creek; I would now pay him back in kind. I looked for my guide; he had disappeared. I unbuckled my belt, laid aside my revolver, and joined the band of revelers. "How romantic, thought I; to be sure, things aren't just as I'd like to have them, but then, when you're in Rome, etc." The pot nearest me contained a dirty looking liquid, which, as near I could remember, not having seen any for six months, looked exactly like dish-water, boiled over twice, with the dish-rag left in. It was corn and water boiled. A huge wooden spoon was employed to convey this delectable nourishment to its proper receptacle—the mouth. The bowl of the aforesaid spoon was as big as a baby's head, and while I was wondering how 'twas used a shock-headed urchin inserted it, drew it forth full, elevated it till the handle pointed toward the zenith, when presto! the dish-water disappeared, the spoon was returned to the pot with a swoop of satisfaction, and Injun number two proceeded to do likewise. Number three did even so, and I was expected to ditto. I was hungry; I knew it; I'd eaten nothing but the roast corn since sunrise, and had ridden near thirty miles that day. But, strangely, my appetite was gone. I forgave Tiger for eating all my flapjacks; I promised myself to forget it. After all, he hadn't done so very badly. But the eyes of all were upon me. I must eat, or lose my influence. Gently I grasped the spoon, coyly I fished for a few kernels of corn, and very little of the dish-water. I shut my eyes, opened my mouth, shuddered, gulped—lo, 'twas done! The second pot contained pieces of boiled meat about an inch square, which proved very good eating. So, inserting my fingers, *à la* Indian, I drew forth a piece and ate it. The third vessel contained about thirty feet of sausage, looking so natural and life-like that I instinctively recoiled. One of my brother revelers would seize one end of the membranous rope, and, after storing away as much as his mouth would contain, would sever by a dexterous cut the adipose tissue and pass it to the next. When my turn came I begged to be excused, and I've never hankered for sausage since.

I stuck to pot No. 2; my appetite returned. I yet cherished revengeful feelings towards Tiger, and did my best. The meat was tender and juicy; moreover, it had a delicious flavor that I never had found pork possessed of. Of course it was pork; it wasn't venison, nor bear, nor coon; and I vowed I would get the receipt, and that the next stray pig should be offered up. To be sure that it was a pig, I said to "Charley," imitating the Indian manner, "Um; good; too much; 'Shokocalika?'" A negative shake of the head, and a single word, "Efab," (dog) terminated the repast. In my sleep that night came visions of fearful Indian curs, chopped into small pieces, yet having the power to bark and bite.

As a special honor, I was assigned the chief's shanty to

sleep in that night, he being away. It differed in no way from the rest, and probably the round logs which made my bed were just as hard as the others.

The next day we visited the corn fields, and a rain coming up accompanied Parker and Tiger to their shanties. My guide having offered his horse to Parker's squaw I could do no less than offer mine to the old squaw, which Tiger accepted in behalf of himself. I hoped he would break his neck. It was an unique procession that wound through the shady cypress swamp and over the prairie. First, there were Parker's two daughters—young ladies of sixteen and seventeen respectively—who had captured one of papa's colts, and, mounted upon its back man fashion, led the cavalcade. They seemed to be enjoying themselves, and their musical laughter would come floating back at every leap and kick of their half-broken steed. Next came Parker's wife, astride my guide's pony with a solemn-looking pappoose on her back, holding up her scanty skirts with one hand, while with the other she guided the beast. Next came Tiger, with my rubber blanket over his head, a tin kettle on one arm, an iron pot on the other, and a lap full of corn. He didn't see the comical figure he cut, but treated the whole matter as a thing of serious moment. Parker, a host of pickaninnyes, eleven dogs, a young colt, and a hog or two came next. My guide and I came last. The procession started; the girls had stripped, and were clinging to the pony and each other for dear life. We had gone but a few rods before the pony suddenly elevated his heels, landing the girls—a confused vision of arms and legs—rods away in the mud. With another flourish of his heels, and a snort of defiance, he then scoured away over the plain. That started the rest; my guide's pony vainly strove to throw his burden. Tiger had his hands particularly full as the bay stallion sped away with the blanket flapping and pail rattling. I shall never forget the desperate expression of Tiger's face as he went off, clinging to the horse and shouting broken fragments of Seminole, such as "Che-la-koa (horse) ho-la-wan-gus (bad); cha-high-wagh (squaw), ho-la-wan-gus—dam!" The colt now went for the scene, upsetting a whole line of dogs, and extorting profane exclamations from the patient Parker. After we had reached the shanties they came in, one after another, and, removing their wet garments (such as had any), we squatted around the cheerful blaze of pine knots, placed Indian fashion, with the ends toward the centre of the flame.

According to promise, Charley was to pilot me to Lake Okeechobee, but as several days elapsed, and no offer was made, I became impatient, and anxiously sought for information regarding it. The only satisfactory replies I received were as to its size:—

"Okeechobee, achiska pahleorstein, heap long; achiska pahlehokolin."

This intelligence was very gratifying, as it settled many misgivings I had indulged in. FRED BEVERLY.

(To be Continued.)

—THE SIERRA NEVADA OBSERVATORY.—Mr. Lick, after a long, laborious, economical and successful business life, has the laudable ambition of doing something to advance the cause of science and thus benefit mankind; and the agent which he has selected to render the chief service, if the rumors which have reached us be correct, is to be an observatory, placed in a better situation than that occupied by any similar institution, provided with instruments superior to any now in existence, founded on principles that will secure the greatest scientific ability and fidelity. The details of the plan are not yet worked out, but the announcement is made by authority that there shall be such an observatory. The summit of the Sierra has been selected after careful consideration. It is well known that the lower strata of the atmosphere are constantly filled, even in what we call clear weather, with particles of dust; and all the most noted observatories are in countries where the air abounds with a moisture which greatly obstructs astronomical discovery. When we reach an elevation of 3,800 feet on the summit of Monte Diablo, on an ordinary summer day, we are astonished to perceive that, while the valleys within ten or twenty miles may be rendered indistinct by the haze, we can distinctly see Mount Lassen and Mount Whitney, several hundred miles distant, but above the level of the floating dust. Travelers who go to Yosemite are generally astonished at the intense blueness of the sky, and as we ascend it increases, indicating the lack of moisture and dust. Scientists on the Sierra and on the Rocky Mountains have, by instrumental observation, found that the telescope and spectroscope would give them much information not obtainable on the sea-shore. The announcement, therefore, that an observatory, to be built on the most approved plan, supplied with the best instruments, and placed in charge of the most competent men, will be received with interest and gratification by men of learning and intelligence in every land where civilization has established her blissful sway."

From the San Francisco *Bulletin*, we have additional information about this observatory, which has been announced by President Davidson of the California Academy of Science. In a most impressive speech, from which we make the following extracts, Mr. Davidson said:—

"With a telescope of the largest size and most consummate workmanship that American skill can devise, properly located ten thousand feet above the sea in the clear skies of the Sierra Nevada; with every variety of apparatus commensurate therewith; with masters of observation and ingenuity in research; with ample funds reserved to devise instruments and methods which those instruments and the highest genius must suggest, we hope at no distant day to see solved the mighty problems of creation that are yet beyond our grasp."

"A thousand years hence, the James Lick Observatory, endowed with perpetual youth, will continue to unfold the mysteries of the cosmos, and to search for new worlds to conquer."

WILL BLACK BASS TAKE A FLY.

EDITOR OF FOREST AND STREAM:—

I observe some discussion on this point in FOREST AND STREAM. Over thirty years ago I was in the habit of taking the black bass in this way in western waters. I found, however, that it was only in rapid water that they could be taken by casting. In lakes and still rivers I trolled with three gaudy flies of a large size. In the Rock and the Fox rivers in northern Illinois and in a small stream in Waukesha County, in Wisconsin, called Back river, I have taken both the black bass and the rock bass by casting with bright colored flies. In the Calumet, a river twelve miles south of Chicago, which winds through extensive marshes of wild rice, I used to have great sport, trolling for bass and pickerel along the edge of the weeds. That was before the introduction of the spoon, and my favorite bait was a strip from the white belly of the dog-fish, (*amia calva*), which being as tough as leather, would resist the teeth of the pickerel.

In July, 1841, two of us killed in that river in one day's fishing, 110 bass and pickerel, weighing 250 lbs. My largest bass weighed six and three quarter pounds, and being taken on a fly rod, gave me great sport for ten or fifteen minutes. My largest pickerel was about eight pounds, though I have encountered them in that river of much larger size, and have repeatedly had twisted brass wire bitten off by them. Although this river has Lake Michigan for a reservoir, it has been depopulated by thirty years' fishing and netting, and three years ago I fished it carefully for two half days, and only got half a dozen small pickerel and bass and two or three dog-fish.

In 1840 I used to anchor a skiff a short distance up the north branch of the Chicago river, and catch a mess of black and rock bass there in a very short time. One day while fishing along side of a sunken wreck in that river with small frogs for bait, one of them escaped and swam to the wreck, and climbed upon a part of it which was above water. He had not sat there long when a black bass rose from under the wreck and lifting his head from the water picked off the frog and descended with him to the depths below. At the present time not even a dog-fish could live in those fetid waters.

There is a fine sheet of water in McHenry County, Illinois, which is known as the Crystal Lake. About 1840 I visited it; there was then only one house near it, and there being no boat upon it I could not fish it. The next winter I sent out a skiff upon the sled of the nearest inhabitant, and in July, 1841, my friend and I drove to the lake and had a day's fishing. We trolled all round the lake, which is perhaps three miles long, and we killed fifty black bass, averaging three pounds each, two fine specimens of the northern pickerel of about five pounds each, and a half bushel of rock bass and perch—about 200 lbs. of fish. Now there is a village of 2,000 inhabitants on the banks of the lake, and a row of tall icehouses, from which the Chicago people cool their summer drink by the aid of a branch railroad to that fair city.

My greatest catch of bass in numbers, was made in April, 1842, in the Fox river, near Ottawa. In company with Delano, mine host of the Fox River House, the greatest sportsman of that region, I went to a part of the river about four miles from the village. We brought home that evening over a hundred black bass, all of one size, about a pound weight, taken with a minnow. The next day we set out again, followed by half a dozen fishermen, who were anxious to learn where we caught the bass—but Delano drove out of town in an opposite direction and baffled his pursuers. We got rather more that day than the preceding, but of the same size. When we returned that night with a wagon box full for the second time, half the men and boys of the village were waiting to see our fish, and the third morning they followed us so sharply that although we outdove them and got to work on our old ground before they arrived, yet, they found us out, and a cavalcade of fishermen appeared, headed by the County Judge, who, if I mistake not, adjourned court to find out where "old Delano" caught his bass. Of course our fun was over, and we packed up our tackle and departed. Our score for the three days was nearly 400 bass, all of one size, and all taken with live minnows—and they would touch nothing else.

I agree with your correspondents who believe that it would be a dangerous experiment to introduce the black bass into trout streams. I think it is as rapacious a fish as the pickerel, but more particular in its food. I have often found the bass would only take a live bait, paying no attention to a dead one; while I never observed that it made any difference to the pickerel; they would run at a piece of fish or pork as readily as at a live minnow. So, appreciating the difference between a young trout and a shiner or chub, Mr. Bass would probably take the more delicate fish. The bass can hold their own against the pickerel. Before the waters in the West were much fished, we used to find the two species in about equal numbers; but of late years the bass being the more choice fish, are more pursued, and are soonest exhausted. In game quality, and long resistance to capture, I think the black bass is equal to any other fresh water fish—pound for pound. I think he is a harder fighter than the trout or salmon.

The naturalists have so much the habit of re-naming our birds and fishes every few years that it is hard to keep up with their nomenclature, even if one knew which Professor was right. We used to know the black bass as *Centrarchus fasciatus*, following Cuvier and DeKay. Then Agassiz, I

think, named it *Grystes nigricans*; and now Professor Gill calls it *Micropterus achigan*; and presently some other ichthyologist will hunt his Greek Lexicon for a still harder name. How are we simple anglers to decide when Doctors disagree? *

[This question promises to become as interesting as the one respecting snakes swallowing their young. We presume that after a little more testimony in the affirmative, doubters will surrender. Ed.]

71 BROADWAY, N. Y., Oct. 31.

EDITOR FOREST AND STREAM:—

I see by your paper that some of your readers seem to doubt that "black bass" will take the fly. I have been in the habit of catching them many seasons in Canandaigua lake and outlet, and never took one in any other way than with a light trout rod and fly. They run from, say half a pound up to five and even six pounds, and as you can imagine, afford most exciting sport.

The large ones are taken in the lake from a boat, and it is very exciting to play a three or four pound bass with light tackle. In casting it is necessary to allow the fly to sink about two feet under water and draw it gradually toward the boat. The season is from June 1st, until August 1st. In the outlet, we wade and fish the same as for trout, using brighter flies. The season there lasts until October 1st. After August 1st they retire to very deep water which is the reason they will not take the fly in the lake.

Yours truly,

WAKEMAN HOLBERTON.

AUTUMN IN NOVA SCOTIA.

AS the season progresses, the waters surrounding this almost insular Province, lose their arctic chill, and the cool airs of early fall do not become charged with the dense fogs that so often at other seasons hide earth and sky from the eye of the tourist. Visited at this time of the year, when almost every variety of game is in full fur and feather, and many fish are still excellent, there is about the hunting camp, as tempting a section for rod or gun, and as satisfactory results for the cuisine as are to be found in any district that is as easily and rapidly reached. The Intercolonial Railway now bears the sportsman and his impedimenta, by the head of the Bay of Fundy, under the shadows of the Cobequid Mountains, by many a charming vista of woodland, ponds, and streams suggestive of salmon, to Halifax, or by its branches to Pictou and Shediac, from which points steamers of safe size and reliable management convey tourists to many points in New Brunswick, where a coast swarming with waterfowl, rivers with fish, and forests abounding in game, offer at each season some peculiar temptation to the sporting tourist.

From Halifax the all-rail route to Annapolis, reaches many points from which access to "The Forest Primeval" is easy and immediate; in the phraseology of the country, the stations are handy to the woods, while a good road renders a drive down the sea coast a most tempting excursion. This route alone passing between the spruce clothed highlands, with mountain scenery on one hand, and every variety of sea coast and estuary on the other, would require a separate letter to describe, with mention of the salmon rivers, the trout ponds, the seal ledges, and the broad surf-swept beaches of glistening sand, that are reached in pleasing variety.

Delightful recollections come before us of days passed along this road, but let them remain, a valued companionship of agreeable associations, to be shared perchance with some of your readers who have lingered among the same attractions, while our wandering pen abandons its divergent ways, for a few bits of informal gossip about the trout lakes among the mountains.

Landed in early September at Thompson's Station, on the Intercolonial, with rod case, gun case, camp pails, and the paraphernalia that would not fit one for Saratoga or Cape May, we were delighted to have a fine, hearty man pointed out in response to the query, "How will we get to Purdy's?" and to find our host himself, to our good luck, at the station. We surrendered ourselves to him, and care was at an end. His strong horse and wagon would carry us, but not our traps; and could we leave our things, our carefully-chosen odds and ends; selected from half the sporting stores of New York and Boston? rods from Clerk, Conroy, and Bradford & Anthony; guns from Read & Son; lines and flies from every shop from Marquette to Enterprise; and little inconveniences that had been made or bought with heart and mind full of the charming anticipations that gather about one's preparations for the woodland camp? Could we leave them until the next day? Not a bit of it; we must sleep with them under our pillows, like children with new toys. So said we to Purdy, while he replied, "All right," believing there was not a charterable horse nearer than River Philip, but smiling with the confidence of one who reaches port with wind fair or foul. Just at this moment of uncertainty the rattle of a wagon was heard, and a conveyance halted at Purdy's hail with a promptitude that endangered its surrounding framework, rope lines and general structure, and after a cherry salutation our host said, "Now, Cusped, turn around lively and take this luggage home for me." "Can't do it, Mr. Purdy; sorry, sir, but must sell my blackberries and a leg of mutton." "Just what I want," replied Purdy, "berry pies and mutton, just what I need. I will buy them, so turn around." "But, Mr. Purdy, I just want to do a bit of trading," replied our half-willing recruit, as he fumbled in the straw that carpeted his wagon and finally developed a black bottle with a broken neck, "I just

want this filled." "Chuck it in the bushes," responded Purdy with unfailing promptitude, "my cellar is full of better bottles, and you need not take home an empty one." Cusped fondled the black bottle; evidently it was associated with some genial hours, but slowly his eye twinkled, and not wishing to be the only man who could resist Purdy's rapid resource and winning tones, he carefully deposited the broken bottle in a bush, and soon our traps were loaded, hung and tied on his groaning conveyance, which said in many tones that another straw would break its venerable back, as Cusped seized his whip and strode by his horse, while we spun away behind as good a roadster as one often finds.

Before us to the southward were the forest clad Cobequid Mountains, with a round, high dome crowning the pile, known as the "Sugar Loaf," the highest land in the province, and a landmark for many a mile of wilderness, guiding weary hunters from Moose Barrens to Caribou Plains even as far east as Cobequid Bay, whence the eyes of the settlers of Grand Pie gazed upon it in the days of Evangeline. Our road, like the roads of almost all the province, was good, and all about were the characteristic features of the country that has so long furnished haunt and home for the noblest game of the continent.

From a bridge just west of Thompson's Station we looked down upon River Philip, a famous salmon and trout river; a superb stream, that is being ruined by the usual effectual means of badly-guarded mills, netting, spearing and fall fishing. Here and there on our way we passed streams that are still full of fair brook trout, and as we gained elevation our way was by the half mossy plains, with a low growth of dwarf shrubs, where moose and caribou are still seen, and these dreary expanses of grey, sullen looking land were bounded and broken by hardwood forests and full of fur-bearing game, and still sheltering many animals of value for their game nature, and fur-bearing character. As still greater elevation was reached the black spruce and balsam became frequent, giving with their sombre color and pointed form a new aspect to the same, while as we approached the summits more and more extended rivers opened to the northward. Prince Edward Island was visible, and the water about it like a ring of silver. The cool twilight found us still upon this upward road, but as the chill was forcing its way despite our wraps, and our eyes were becoming weary of tracing the strange outlines in the deepening gloom, we drove up to our ample homestead, and in a moment were toasting by a huge open fire, enjoying the snugness and comforts of "Purdy's." All ramblers know how welcome is a hot supper and a rest under snowy counterpanes; all of which were ours, with dreams of midwood ponds that may find realization in our next.

L. W. L.

HEDGE HOG SHOOTING.

EDITOR FOREST AND STREAM:—

In the fall of 1861 I took a ramble over on the north side of Ossipee Mountain, for the purpose of having a little sport shooting hedge hogs. We left our home bright and early, and after a rough tramp of three miles arrived at the base of the south side of the mountain. The scramble up its side was toilsome in the extreme, over yawning precipices and broken granite slabs, which if near our large cities would be a mine of wealth for building purposes. Among these vast piles of broken granite the rattle snake makes his home, and after a long dull spell of weather they come out and lie on the rocks for the purpose of sunning themselves. We were so lucky as to miss seeing a single one, and arrived at the crowning peak. The trees were so thick we could not make the observations we wished, so we climbed to the top of an ancient spruce tree. What a splendid panoramic scene burst on the eye, one that well repays any one for the toils of the way. Hills and mountains, lakes and rivers were all around, and the forest foliage touched by the early frosts flamed out magnificently. After a long look we descended the north side, and as we progressed the trees grew larger, mostly spruce, and oh! what spruces, running up straight as a gun barrel to the height of eighty or ninety feet. We soon began to see indications of hedge hogs. The "quilling" of spruce trees seems to be their delight, if we could judge by the number of dead ones. As we stood listening to the chirping of the squirrels and drumming of the partridges, we heard something scratching up the side of a spruce, and turning round there was a hedge hog of large size standing on a limb looking down at us. We got a rest for our rifle, and let her sliver; down he came with the top of his head gone. I had barely loaded when I saw another, and popped him over, and I kept shooting as I descended the mountain, until my tally counted ten. I emerged from the forest into what is called the Perkins settlement, and it being nearly night, we directed our steps to the home of John Evans, and received a kindly welcome, and tarried over night. Evans said the hedge hogs had destroyed his crop of corn, and in the morning we took a look at it; it was all torn down. He said they came to his apple trees, climbed the trees, shook off the apples, then came down, rolled over on the apples and stuck them on their quills, and went for the woods! We did not see a single porcupine on our tramp, though many say the hedge hog and porcupine are all one, but I consider there is a marked difference in size, color, weight, and food. On our return tramp we shot five more, making fifteen. When on the ground and tackled by an enemy, they roll themselves up like a ball, placing their tails up against their side, and when the dog or any animal comes up to smell of them they strike round their tails suddenly, filling whatever it hits with quills, which if not pulled out immediately will work through flesh, bones and all.

J. L. HERSEY,

THE OLD BARN.

THE ghostly old barn, with its weather stained frame,
 How often it rises to view!
 In its narrow, green lane, cut in parallel tracks,
 Where the heavy farm wagon rolled through.
 Its broad folding doors, and the stable door next,
 And the roof soaring upward in gloom,
 Save the network of light from the knot holes and chinks,
 Which scarce could the darkness illumine.

The hay mow, how fragrant and welcome its scent!
 How soft and elastic the hay!
 The nooks, what safe coverts for "hide-and-go-seek!"
 The floor, what a platform for play!
 On that floor, like the beat of the pulse went the flail:
 And the huskers, the corn how they hulled!
 And, when ceased the husking, how merry the dance
 Till the stars in the daybreak were dulled!

Next the yellow brimmed oat bin the straw cutter stood,
 The barrel of chaff by its side;
 And a cast-away plough, broken off at the top,
 With clay stains all over it dyed.
 A space, a cleft grindstone, a saw buck and cask,
 With a brace of bright pitchforks, stood near;
 And I envied the strength that the loads to the loft
 With their crescent bent handles could rear.

The old barn is gone, like the past with its dreams,
 Which crowded, chaotic, my brain:
 All are gone—all are gone! and yet often I wish
 I could live in their Eden again,
 Though the barn, low and dark, is a dwelling of mark
 And the lane is a street wide and bright,
 Yet I long to go back to that paradise track,
 All flashing and living with light.

All are gone—all are gone! the soft pictures I draw
 Not one has Time's cruelty spared:
 All are gone; and I wonder and smile to myself
 That for such things I ever have cared.
 Yet, somehow they bear in their presence a glow
 That the present can never display;
 'Tis the light in the urn alabaster of youth
 That soon fades forever away.

And in that sweet light the heart grows pure and bright
 In the paradise smiling around;
 And we wish, o'er and o'er, we were children once more,
 And roaming that magical ground.
 Its scenes, how grotesque, and how trivial and tame!
 And yet, as upon it we dwell,
 Like the pool of Bethesda, it freshens the heart,
 And brightens our thoughts with a spell.

ALFRED B. STREET, in *Appleton's Journal*.

A DAY WITH THE SAGE GROUSE.

THE cool mists of an October night are still hanging heavily over the valley, and rosy fingered Aurora, hastening from the East, is only commencing to paint the leaves with the glowing tints of approaching day. A solemn stillness seems to fill the air. The varied sounds of animal life have not yet commenced to make themselves heard; the very brook by which we stand babbles with a subdued murmur which serves to make more impressive the universal calm.

We are camped by a pleasant stream among the Uintah Mountains in Wyoming. North, south, east and west the eye rests upon mountains piled on mountains. Some covered to their summits with dark, green conifers, others ragged and rough with immense masses of rock, and seamed with deep cañons, between the precipitous sides of which hurry in spring the melted snows which gather to swell the volume of the mighty Colorado as it sweeps toward the Pacific. Still on every side, but farther away, lofty and now glistening, as one by one they are touched by the growing light, rise others, crowned with eternal snows. Untrodden as yet by the foot of man, they know none of the larger forms of animal life, save the sure-footed mountain sheep and the snow-loving ptarmigan. Truly it is a grand scene, and a lover of nature may well be exercised if, for the time, he forgets all else in contemplating it.

But my reveries are soon rudely disturbed by the clatter of dishes, and turning I see that Joe is commencing to prepare breakfast. And here let me tell you who Joe is, and how I happened to be in the Uintah Mountains.

Four of us, members of one of the numerous scientific exploring expeditions of the last few years, tired of continual "bone digging," had determined to devote a short time to pleasure alone, and our chief, Prof. M., assenting, had started off to have a day with the sage grouse.

Jack N., Johnny G. and Jim R., three royal fellows, with myself made up the quartette, and we had taken Joe along to cook and keep camp.

Joe—or to speak more respectfully, Señor José Alleyo Felemanches—belonged to that much despised class denominated in frontier parlance, "greasers." Born in California long before it became a part of the United States, he had on reaching manhood commenced a series of wanderings which had finally brought him to a point near Church Buttes, in the Rocky Mountains. There he dwelt with his squaw and two or three half-breed children, and tended half a dozen horses and as many cows, which constituted his sole possessions. He was a merry, good-natured fellow and a very favorable specimen of his class.

We had left the main camp on the afternoon of the previous day, and travelling fifteen miles before evening, had reached a point about ten miles from our shooting ground. Our outfit was of the lightest, as we expected to be away only for a day or two. Rifles had been laid aside for the time, and we carried only our double-barrels with a sufficiency of No. 6 shot and C. & H. powder. Tents had been left behind as an unnecessary luxury, and a single pack mule employed instead of a wagon, on account of the roughness of the trail, sufficed to carry all our effects.

A shout from Joe soon aroused the remaining sleepers, and a few minutes were devoted to a hasty toilet. Then comes breakfast, consisting of trout caught from the stream the evening before, and ducks shot on the march. That over and the pipes lighted, we collect our horses, which have been grazing over the creek bottom, and saddling them and packing our mule we are soon under way.

How delicious is the fresh morning air, how invigorating and exhilarating! Some one has said that each breath of that mountain air is equivalent to one glass of champagne in its effects on one's spirits, and I think the comparison not inapt. Be that as it may, I know that our little party was in a most hilarious frame of mind, and laugh, jest and song enlivened the march as we rode briskly on, while Joe and the pack mule followed gravely in the rear.

Our destination was a little park in the mountains on the banks of the same creek on which we had camped. At this point the bottom was wider than usual, and the bluffs which bordered it, instead of forming merely the lowest benches of the foot-hills, stretched out in a plain several miles in extent. On all sides, except where the stream entered and passed out, the mountains rose in a stately wall, forbidding and impassable. This plain, intersected by one or two small brooks and covered with sage brush, was where we expected to find the grouse.

To reach this park the trail followed the bed of the creek and unfolded to our delighted gaze new scenes of beauty at almost every step. At times the creek widening would spread out into a placid lake, fringed with tall cottonwoods, whose glossy frondage glistened like silver in the morning sun, and disturbed only by the movement of some water bird startled at our approach, or the spring of a trout after his prey. Again the mountains would close together, and we would pass between lofty precipices so near to one another as almost to shut out the light of day.

The stream murmured pleasantly over its stony bed, the sharp cry of the Western flicker (*Colaptes Mexicanus*) and the grating note of the Clarke's crow (*Picicorvus Columbianus*), mingled with the hoarse croak of the sand hill crane (*Grus Canadensis*). No sounds but those of nature broke the peaceful quiet of that happy valley.

Entranced by the beauty of the scene, our boisterous humor soon softened into a more contemplative mood, and we rode silently along until we reached the park, where we made camp and prepared for action. Dividing our forces we started off in opposite directions. Each pair was to follow the plain along its edge, skirting the base of the mountains until they reached one of the little brooks that entered it at various points. This they were to follow down, beating on both sides until they came to the main stream. Jack and Jimmy went south and John and myself north. And now, before we start our game, let me give you some idea of one of the finest and at the same time one of the least known of our game birds.

The sage grouse (*Centrocercus Urophasianus*), which is the largest of the North American *Tetraonidae*, is found only west of the Rocky Mountains, and then only upon those sterile plains which produce the wild sage (*Artemisia*). Upon this plant it feeds, and from this fact its flesh is frequently so bitter as to be almost uneatable. In the fall of the year, however, they frequent the borders of streams and feed upon berries, insects, and the leaves of various plants, and at that time the flesh of the young birds is tender and is most delicious eating. The very old birds are always tough, bitter and unpalatable.

The birds congregate in packs of from ten to fifty, get up rather hurriedly, and when fairly started fly with great swiftness and for a considerable distance. After being put up once they prefer running or hiding to flying a second time, and will lie very close. I have never known of their being hunted with dogs, nor indeed do I believe that any dog could or would face the sage brush and cactus among which they are found.

The male bird is over two and one-half feet long. The upper parts are variegated with black, brown and yellowish gray; the sides of the lower part of the neck are whitish and are furnished with curious stiff feathers, each of which terminates in a long hair or bristle. The lower part of the breast and the abdomen are black. The females and young males of the first autumn are smaller and lack the stiff neck and feathers of the old males. Such in brief are some of the principal characteristics of this fine grouse.

A brisk walk of two miles brought John and myself to the foot-hills and to the locality where we might expect to find birds. The numerous ravines which run down from the mountains, bringing the waters of winter and spring from the high ground, were still moist and were filled with a luxuriant growth of vegetation. Here were occasional pools frequented by ducks, and on the margins of which we noticed the tracks of deer, elk and bear.

The first of these pools which we approached was covered with mallards (*Anas boschas*) and black ducks (*Anas obscura*). Carefully drawing near, we had advanced within easy gunshot before being perceived by the birds, and as they sprang up were enabled to give our four barrels, dropping two in the water and two more in the high grass. To have lain in wait here for the ducks that were continually flying would have been grand sport; but eager to get at the grouse, we merely stopped to pick up our birds and then pushed on. As we walked along the faint echoes of distant shots saluted our ears and notified us that our comrades on the other side of the valley were already at work.

We reached the brook, and John, pushing aside the willows which at this point lined its banks, was stepping across it, when almost from under his feet sprang a pack of ruffed grouse (*Bonasa umbellus*) which with much bustle

flew off toward the mountains. Not swiftly enough, however, to escape his ready gun, for snapping at them as soon as his feet touched the opposite bank, the last bird turned neatly over to the shot, while his companions with hurried flappings disappeared up the ravine.

Before proceeding far down the stream we came upon the first flock of sage grouse. There were only about a dozen of them, but beckoning John over, we went toward them. They paid little attention to us until we were within forty yards of them, but then seemed to avoid flying and would have crept off through the bush. As soon, however, as they lost the hope of escaping unobserved they got up with a good deal of noise, uttering a clucking cry, not unlike that of a hen when frightened.

The old cock that flew first fell to John's right barrel, and the two next I stopped before they had got far, while John, who shot beautifully all that day, made a long shot at a fourth, killing it clean at about ninety paces. The flock had scattered badly, and as we knew the futility of trying to find the birds when once frightened, we kept on down the stream looking for a fresh lot.

Two more flocks had been found from which we had secured five birds, when noticing that it was long past noon, lunch was suggested. It was a scanty meal, consisting of the remains of our breakfast, but it was heartily enjoyed and at its close a pleasant lazy half hour was spent in the enjoyment of a cigarette. At length we rose to our feet about to resume our guns, when a splash was heard in the brook below which we knew must have been made by a beaver. Stepping quietly down to the water's edge we were looking about for it, when suddenly I saw John throw forward his gun and fire into the water, and then stooping down draw forth a little beaver kitten about eighteen inches long. John had fired at it as he saw it swimming under the water without exactly knowing what it was he shot. With a sigh for his untimely fate the little fellow was added to our bag and we hurried forward.

The birds seemed to become more numerous as we approached the main stream. We no longer crossed over when a flock was discovered, but each shot what he could of those on his own side. At last when we reached the creek and sat down to rest and count our birds, we found John's bag to consist of seventeen sage grouse, two ducks, one ruffed grouse, and the little beaver. I had not done quite so well, having only sixteen sage grouse, two ducks and a snow goose (*Anser hyperboreus*), that scared by John had flown from the brook and crossed before me within easy gun shot. The thirty-nine birds made a pretty heavy bag, and with what we expected our companions to bring in would be enough to supply the main camp with birds for some days.

As we were gathering up our game we heard a faint shout, and turning saw Jack and Jim hastening toward us. They were fairly loaded down with birds, and in answer to our inquiries, produced twelve mallards and black ducks, twenty-one sage grouse, three ruffed grouse, and five blue-winged teal (*Querquedula discors*). The teal had all fallen at a single shot which Jimmy had fired into the flock as they rose from the water. The numbers of ducks that our friends had seen at the head of the stream had caused them to linger there so long that they had finally been forced by the approach of night to hurry toward camp, rather neglecting the grouse, although from their account these must have been as plentiful on their ground as on ours.

We were soon in camp, where we found Joe, who had not passed the day in idleness. A dozen or more silvery trout lay upon the grass, and near them the saddle and hams of a yearling buck, which Joe had killed while on his fishing excursion down the creek. He had prepared everything for supper, and ere long the savory odors that rose from our camp fire would have attracted men less hungry than we were.

Fish, flesh and fowl, together with the little beaver—a sort of *mélange* of the two former—combined to allay the "rage of hunger," and we sat around the fire talking of the day and its incidents, of by-gone years and future plans. From time to time college songs, so well known 'neath the grand old elms of New Haven, but new to these regions, broke the stillness of the clear night air and were echoed back from the mountains in a grand refrain. But at length the camp grew more quiet, the fire burned down, and knocking the ashes from our pipes we wrapped our blankets around us and one by one lay down to dream of our day with the sage grouse.

ORNIS.

NARROW ESCAPES.

HAPPENING to be conversing with some friends on the narrow escapes from death which are continually occurring among men, I was induced to narrate the subjoined incidents in my own experience.

The first occurred when I was a boy in Michigan, and was to this effect. With a view of punishing me for some disobedience, my father had sent me to one of his farms, where, under the instruction of a worthy Englishman, I was expected to become learned in the science of agriculture. For one week I had devoted my evenings to the story of Eugene Aram, and my days to the free and healthy employment of driving two yoke of oxen; (attached to an immense harrow, ornamented with thirty iron teeth,) across a newly plowed field. It was about noon, and the old tin horn had summoned me and the other workmen to dinner. Having often seen teamsters step in between yoked oxen for the purpose of unfastening the chain that hooked them to a wagon or plow, I thought I could do the same thing

with my cattle. I attempted the task and frightened them; they came together, and as I endeavored to free myself they became frantic and started to run; they kicked me under the harrow, where I became wedged between the iron teeth; in this position I was dragged perhaps fifty yards, and was only extricated by the interposition of a clod or stump, which sent the harrow flying some ten feet into the air, and left me "master of the field," but apparently dead. One of the cruel iron teeth had gone entirely through one arm, and another had made a hole in my head. The overseer, who chanced to witness the accident, rushed forth to pick me up; he and his wife were confident that I must die, she insisting that I should be sent to my mother. So in the arms of a man, seated in a small wagon, I was taken in less than an hour to my home, where I spent two months in bed, since which time I have studied agriculture in the abstract and not practically.

But the hair-breadth escapes of my boyhood were not connected only with my waking hours, as the subjoined particulars will prove. I had gone to bed on a certain evening in my usual health, and excepting the harrow scar, my limbs and body were without a blemish. When summoned to breakfast the following morning, I uttered an incoherent reply, but made no attempt to get up. The more I thought "the more my wonder grew." Instinctively passing my hand to my hip, I found there a flesh wound which was altogether a new experience. The bed clothes all red with blood now caught my eyes, and a kind of mysterious horror took complete possession of my mind. I shouted for help, and the whole family were immediately in attendance, when a small chair, the back of which had been broken the day before, was found near my bedside, with the top of one of its splintered pieces covered with a crimson stain. The truth was, I had walked off the bed in my sleep, had fallen upon the chair, and inflicted a wound more than an inch deep in my hip, and had resumed my position in bed without being conscious of the accident. The recollection of this accident always filled me with wonder, and I do not know that a similar one has ever been recorded.

Another incident to which I would allude, was as follows, and I hope the reader will forget my egotism in thinking of my novel predicament. It was in the year 1836, and I was a boarder in a house which then stood at the corner of Broadway and Morris street, in New York. The house was five stories high, and had a flat roof, and while my fellow boarders were in the habit of resorting thither to smoke their cigars in the cool of summer evenings, my only visit to this roof was performed at midnight in a deep sleep. Clothed in my morning gown, I had strangely found my way upstairs, and whilst looking out upon the Bay of New York, and watching the play of the moonlight upon the waters, I was suddenly awakened, and found myself standing within five feet of the edge of the roof, from which two steps more would have precipitated me to the pavement below. The terror which overcame me on making this discovery can hardly be imagined.

Two other narrow escapes which I can never forget, occurred among the Catskill Mountains. On the first occasion I was alone. After having scrambled to the top of a very large boulder, lying in the bed of the Plauterkill stream, and overhung with foliage, for the purpose of sketching a particular view, I suddenly heard a crunching noise, felt myself moving, and by the time I had seized a limb above me, the great rock had tumbled into a basin several feet below its previous insecure foundation. Had I remained upon the boulder, instead of jumping as I did, I should probably have been crushed to a jelly. On the other occasion alluded to, I was the guest of three very dear friends with whom I performed my first tramp through the wild scenery of Plauterkill Clove. In our upward passage, we were obliged to scale a precipice which was well nigh a thousand feet high, and in doing this it was necessary to turn a corner, where the passage between an upper wall of rock and the abyss was not over twelve inches wide. At this particular point there grew a small cedar bush, the roots of which had hitherto afforded a needed projection for the foot of the climber. With this locality my companions were quite familiar, and after they had scaled the precipice, or rounded the corner, and stood upon a secure rock beyond, the three "rascally sprigs of divinity," as I subsequently called them, began to yell and howl as if for the very purpose of frightening me out of my wits. If they did not succeed in that they certainly did in reducing my nerves to the consistency of rags. Vowing that I would not budge until my tormentors were out of sight, I rested for a while, and then passed around the dangerous point in safety; but in doing this my pressure upon the cedar bush was so great that it gave away and disappeared in the abyss below. During the night which followed this day of mountain climbing, while my three friends were quietly in a huge room which we occupied together in a Dutch farmhouse, they were suddenly startled by a most horrible and unearthly moan, only to discover the deponent in mortal conflict with a *nightmare*, born of the Devil's Chasm in Plauterkill Clove.*

Another, and last incident worth mentioning in this connection, occurred on the lower St. Lawrence in 1852. In this escape, however, there were no less than six persons interested besides myself, viz., one of my Plauterkill friends, with our wives, and the three Canadian sailors who managed the noble little schooner in which we were voyaging to the river Saguenay from Quebec. The day

*As all these friends have since then acquired considerable reputation as Episcopalian clergymen, a spirit of harmless revenge, as well as the truth of history, compels me to give their names as follows: Rev. Louis L. Noble, Rev. John S. Kedney, and Rev. A. Frank Olmstead.

had been bright and beautiful, but the sun went into a cloud as if unhappy. A cooling breeze gathered over the waters, then came a fog and after it a series of ugly gusts from the northeast. At midnight something like a hurricane swept across the waters, but our splendid little vessel shook herself like a duck, and then dashed again into the opposing billows. The wind and the waters had it all their own way, and the only voice that was heard in our vessel came from our captain, and his words were: "Don't fret, don't fret." In answer to one of my questions he did reply: "I think we are near Saguenay," and as I thought of the terrible rocky reef and interminable sand-bar which I knew were coiled under the waters, ready for our destruction in that treacherous place, I felt myself growing pale as death. We threw the lead and the cry of "thirty fathoms" caused a glorious smile to beam from the face of our captain; another swing with the sudden shout of "three fathoms" made each one hold his breath. At that moment I felt that our doom was sealed. I flew to the little cabin, and to my astonishment, found the ladies comparatively quiet. They were sick and also ignorant of our real situation. They asked me why I trembled so, and I told them I was *cold*. That was indeed almost a lie, but the thought that all these precious lives had been brought to such a dreadful end through my instrumentality, distracted me beyond measure. In this condition did we continue for about an hour, when the light of day began to appear, and in thirty minutes more we were snugly and safely moored in the little harbor, just within the mouth of the Saguenay. Our heroic captain, with the help of Providence, had fought his way against the wind into the secure haven; and we subsequently heard that during this dreadful storm no less than sixty vessels had been wrecked on the river and Gulf of St. Lawrence, between Gaspe and Quebec.

Woodland, Lawn and Garden.

HEDGES AND THEIR USES.

NO IX.—THE OSAGE ORANGE.—*Maclura*.

"The shady nook
Of hazels and the bright leaved *maclura*
Intermingle in hedge row trim."

THE *Maclura* is found growing in great abundance, perfectly rampant near what is called the "Red River" plantation in Texas and Arkansas, and it is also to be found very abundant in all the country east of the Rocky Mountains. This plant or tree, is found as far north as the thirty-fourth degree north latitude.

This plant will grow perfectly well in all parts of the United States, as has been most satisfactorily proved by numerous well tried experiments. The question: "Will the *Maclura* grow and make a good hedge in the United States?"—no longer needs an answer, for every experiment has given its testimony in the affirmative.

This very interesting tree in its favorite localities, the Arkansas River, and the western tributaries of the Mississippi, attains the height of 50 or 60 feet. The Osage orange is in its branches a light-colored wood, and is armed with sharp spines at every joint, a very formidable armor, or self-protection; these spinal points being very strong and sharp are about an inch and one half in length. The leaves of this plant are long and ovate, and acuminate, or pointed at the extremity; in color deep green, very glossy and of brighter color than the true orange leaves. The blossoms of this plant are of a greenish color, and the fruit about the size and shape of an orange, but the Osage orange possesses a very rough skin or outside covering much more tough than the orange of Florida.

Previous to the year 1858 but little compared with what is now known of this plant, was then known. It was at that time regarded as a sort of curiosity, having been first introduced into the American gardens from seeds procured of the Osage Indians. From this circumstance the plant derived the common name of Osage orange.

The final introduction of this tree as an aid to the horticulturist may be said to be due to Lewis and Clark's expedition. By them it was called *Maclura*, in honor of Wm. Maclure, President of the American Academy of Natural Sciences. The Osage orange is one of that peculiar class of plants called the Monoecious; it does not perfect its fruits unless both male and female trees are growing in the same vicinity. The Osage orange cannot be called very beautiful as an ornamental tree for the reason of its looseness of habit, or inclination to throw out many and widely spreading branches. Its bright, glossy, shining leaves, and the very unique and peculiar appearance of the full grown tree compensate in a good degree for what would otherwise be called defects in its character.

This tree when covered with its large orange colored fruit, is indeed a beautiful sight to behold, and was justly styled by Mr. Downing "one of our most interesting and valuable ornamental trees."

One of these trees introduced upon a small lawn where but few specimen trees are growing, gives a decided and rich variety to the grouping that cannot be obtained from the use of any other kind of tree. As a combination tree, we call it first-class, and by no means to be omitted from the selection of trees for a beautiful garden. It is one of the finest of our shade trees, a hardy growing, clean, desirable wood. By many amateurs the stout growth and formidable thorns have been thought admirable qualities, adding much to its usefulness as a plant well adapted to hedges. These are undoubtedly qualifications in its favor,

and this plant has, as is well known, made a steady advance in securing the public confidence as a very useful and cheap live fence plant. In all our middle and southern states the Osage orange has been adapted as a hedge plant, and as far we can learn has always given entire satisfaction. This plant requires, to grow well and fully develop itself as a tree* a rich, deep loam. As it is quite tender when young, the soil should be also somewhat dry; perhaps a dry soil is preferable to a very moist one.

One of the best ways of procuring this hedge plant is raising the same from the seed. And in this more of care than real difficulty occurs. The ground for the reception of the seed must be prepared in the most thorough manner; deeply trenched and well pulverised; the seed when prepared for sowing is to be planted in drills, eighteen to twenty inches apart, with about twelve seeds to one foot in a row, or the seeds as near as you can drop them one inch apart. October and November the planting months of the fall.

For the fall planting the seeds are to be planted soon after they are gathered. It is always best when one can (say many authorities) to plant the Osage orange seed in the fall. For spring planting you will be quite particular to observe the following directions:—

Your seed must always be frozen or soaked. If you prefer to plant frozen seed it should be well mixed with sand and placed in boxes that will not hold water, and then exposed to the cold freezing weather of the winter months. These seeds can then be planted in the spring as soon as they begin to sprout. If you wish to soak your seed, as soon as first of April put the seeds to be soaked in a tight vessel, and cover them with hot (not boiling) water and let them soak in warm water about seven days, changing the water thrice or more times to prevent fermentation, which is to be avoided. Then put these seeds in boxes of four to six inches in depth, and mix well and intimately with sand. These seeds are to be kept moist and warm until they show signs of sprouting, which in most cases will be in a few days; then plant your seed as before recommended: If your ground is good and friable and does not crust or bake as it is termed, you may be sure of soon seeing the seeds peeping up under the form of the hedge plant. If the above directions are fully carried out you may rest assured of success in the future.

To set out the young plants in the hedge row in which they are to stand is the next consideration for the gardener or the proprietor to consider. We pre-suppose the ground to have been before this deeply ploughed and thoroughly pulverised and broken up. A line is now to be stretched, and the plants to be carefully taken from the nursery and selected with much care as to size and distances apart. The Osage orange is reckoned in the catalogue of hedge plants as a third rate forest tree—and all such trees when used as hedges require natural or artificial dwarfing. We recommend in all cases the natural system as being always the best, and our own treatment of hedges in this manner has given us the utmost confidence in the utility of this method.†

We do not like to cut the *Maclura* when we can help it, and have found when the same has been set six inches apart in single row it has almost invariably taken on the dwarf form, growing nearly into a fine shrub, still retaining in a singular degree all its wonted health and vigor, and making a good firm protection, sooner, and at a much less cost of time and money, than any other mode of planting that I am conversant with.

The cultivation of a hedge of this kind for the first two years is mainly keeping the ground about the same clear from all weeds and well pulverised.

In some sections of our country these hedges sometimes suffer the first winter from the "heaving of the frost," as it is called. This will not occur on well drained grounds. Every one knows, or should know, that the process called hedge draining, is formed by turning a furrow towards the plant on each side late in the fall to carry off the winter rains. The Osage orange in two years generally acquires a strong vigorous root, and is now to be cut down and put in, trimming for future use. This is the heading down and training.

In the spring of the third year the trees should be cut down to the surface of the ground. Each root will then send up a number of strong thrifty shoots, and when these have grown to be one foot in height they should be like the old plant, cut down to within two inches of the ground. These shoots—for the roots have become strong and vigorous—will in their turn again send up an abundance of shoots from the place of the former cutting. When these last have grown to ten or twelve inches, cut them off down to within two inches of the last cutting, pruning several times during the season, for—these plants having got good soil rapidly approximate towards a good hedge—being quite particular to keep in view the final shape and appearance of your hedge. In order to have a fine hedge you must keep in your mind as a fixed fact, that no hedge can be called good which is destitute of proportion and regularity of form from the beginning.

*A fine effect may be produced by a peculiar mode of pruning called "cutting back." Mr. Downing showed us the effect of this mode of pruning upon a fine specimen near Baltimore. The English call this method of pruning "stalling," compelling the plant to send out a dozen leading shoots instead of one. A plant thus treated becomes in a few years a gigantic bush, perfectly round headed, and very luxuriant, as was the one we saw at Dr. Edmondson's. The plant was twenty-four years old, and measured in circumference one hundred and sixty feet, the growth of the limbs being perfectly wonderful to behold. Had we not had the pleasure of seeing this wonderful specimen of the gardener's art we could scarcely believe it to have been a fact.

†Planting the plants within six inches of each other when they are of equal size gives all an equal start, and consequently they take the shrub form alike.

Your first and greatest care is to secure a good wide base at the start; then let your beautiful green, compact hedge fence rise gradually and evenly, and train it into whatever form your fancy or taste may suggest—always avoiding the system called the "topiary trimming."

By the use of the foregoing rules and observations, any skillful farmer can have a splendid hedge of the above named plant. It is not necessary for him to raise his seed plants, for he can secure them ready to his hand of any responsible nurseryman. But as all may not be able to procure plants, who can procure seeds, we have given at considerable length our own experience and knowledge of this hardy, reliable plant and our manner of handling it.

OLLIPOD QUILL.

BEST TIME FOR EXTERMINATING BUSHES.

A FARMER in Western New York says:—"Having been brought up on a farm I used to hear much said by farmers in regard to the 'best time for cutting bushes,' etc., and remember well the many uncertainties that existed and the various opinions given on the subject. Some recommended to cut at one season, some at another; some regarded the 'moon,' others the 'signs,' etc. I also remember that the same kind of underbrush, if cut at one season, would start again and grow luxuriantly, but if cut at another would be completely used up. I have also, within the past few years, had opportunity to notice the same facts, and the conclusion that I have arrived at is, that different shrubs may be cut at different seasons. Some are killed by cutting at the first of August; others in October or November. The rule is this: 'Cut any plant or shrub about the time it has done growing for the season, and its destruction is almost certain.' If cut before this it will generally start again the next year. The exceptions are few. So much for the fact; now for the theory. First, in the spring of the year all roots are vigorous; hence, if a tree or shrub be cut at this time, or while in full growth, the root will send forth a new set of shoots. The exceptions are—first, evergreens generally, as pine, hemlock, spruce, etc.; second, those that have a copious flow of sap in the spring, as the maple, birch, etc. Yet even some of these will start again if cut soon after the buds have opened; that is, after the spring flow of sap has ceased, except in the case of old trees, in which the root appears not sufficiently vigorous, or the evaporation from the new stump too rapid, to allow of the formation of new shoots. Second—in autumn, when a shrub or tree has done growing for the season, the active energies of the root cease, being perhaps somewhat exhausted by its summer action. If, then, the bush or tree be cut, after it has done growing, but while the stem and leaves are fresh and full of sap, the vital force of the root will scarcely be sufficient to cause a new growth; but if left till the foliage is dead or dying, the energies of the root are restored by the return of the sap, and are ready for action as soon as the season of growth shall return. Hence, too early or too late cutting will be equally unsuccessful. Cut your underbrush, then, at the time above specified, and it will rarely start again. If it does, the growth will appear stunted and sickly, and soon die of its own accord, or a second cutting at the proper time will insure success. The same rule applies to all plants, as Canada thistles, milk weeds, etc., with greater or less certainty, according to the greater or less vital force or tenacity of life peculiar to the root of each kind of vegetable. The 'proper time' can easily be determined by observing whether new leaves continue to appear at the ends of the prominent branches. If deferred long beyond this time, or till the leaves begin to turn yellow, or fall, cutting will be of little use, as the root will be 'strong' for a new start on the opening of a new spring.

NATURAL GROWTH ON THE PRAIRIES.—A correspondent to *Appletons' Journal*, writes as follows:—

IRVING, KANSAS, October, 1873.

"Having read in the 'Scientific Notes' for the issue of October 11th the opinion of Dr. Newberry, of Ohio, that prairies are the result, and not the cause, of a diminished rainfall, will you allow me to state what I have observed, during a residence of four years, in the heart of the district put down as having the minimum rainfall, and lying between the Missouri River and the Rocky Mountains?

1. Hundreds of magnificent oaks, from one to three feet in diameter, far from any perennial streams, but protected by a rocky hill-side from the fire.

2. Many groves of cotton-woods (preëminently a water-loving tree), the product of chance seeds blown up on the high prairies, and which now are often to be found thirty feet in height and a foot in diameter.

3. Groves of young trees, oftentimes covering an area of a hundred acre and more, and as thrifty as any I ever saw among my native Catskills.

4. Thousands of acres, now covered with tall, long-jointed grasses, which ten years ago produced nothing but the short, wiry buffalo-grass."

Respectfully,
LEVI CHASE, M. D.

NOTED ENGLISH TREES.—On the picturesque domain of Sir George Cornwall, of Moccas, a tree known as the Monnington Oak, measures 31 feet in circumference, at the height of 5 feet from the ground, which exceeds by 6 feet the largest growing at Longleat. It is in a somewhat decayed state, but still a splendid specimen of antiquity.

The belief is common in Herefordshire that the true old British Oak (*Quercus robur*) lives upon an average to the age of twelve hundred years, and which is not inaptly expressed in the following somewhat quaint lines:—

Three hundred years the oak expands in growth;
Three hundred years in majesty stands forth;
Three hundred years declines and wastes away.
And then takes three hundred to decay.

Solo, MSS.

A very beautiful elm in the rectory garden, at Stretton Sugwas, near Hereford, 21 feet 2 inches at 5 feet from the ground, and running up as one mass of timber, without diminishing much in size, for 35 feet, and there dividing into two principal stems, it ascends to a total height of 93 feet.

A picturesque elm at King Acre, in the same vicinity, has a girth of 18 feet 8 inches at 5 feet from the ground, and 95 feet high. And a noted elm, very full foliage, at Trevil, near Whitfield, 17 feet 8 inches in girth, 86 feet

high, and with a diametric spread of 93 feet, which is very large for an elm. In old coaching days, both the horses for changing and the passengers awaiting the Hereford and Abergavenny coach were always in shelter under this elm, around which there is a spacious seat, sufficient to accommodate some twelve or fourteen persons.—*Land and Water*.

Natural History.

× FOOLING A COON.

EDITOR FOREST AND STREAM:—

While hunting on Banana river, one day, I was a witness to one of those episodes in animal life that seem to warrant the belief that many birds are possessed of higher attributes than are generally accorded them, and something more than mere instinct.

My guide had waded a long ways ahead in the shallow water and was cautiously approaching a "drove" of spoon-bills, leaving me to follow with the boat.

Not relishing the idea of wading about in the muddy water with stingrays and saw fish, pushing the heavy craft before me, I concluded that such proceedings were not in my line of duty, and so sat upon the rail, idly plashing the water with my feet.

My attention was called to a disturbance among the mangroves of a little islet near, and soon there flapped into view, a black duck, a female, evidently wounded. Close in her wake followed a sly looking coon, his attention so occupied with the duck, as not to notice me, till fairly in view. Then he hesitated, but the duck brushed so near his nose that he again took up the pursuit, throwing a glance occasionally at me. It was interesting to watch them; keeping just ahead of her pursuer, the duck would beat the water quickly all the time in evident pain, and would so delude the old fellow that he finally seemed to think of nothing else but catching her. What a puzzled expression his shrewd face wore, when, after nearly placing his paw upon her, she would escape. Then he would stop, look at me as if to say "what the deuce does all this mean?" and arching his back, would again pursue with long leaps. For over a quarter of an hour did the duck play with him, till having enticed him a sufficient distance from her nest, she flew away. If ever the face of a sharp-nosed coon wore a sheepish look, it was the face of that same coon. I accelerated his sneaking trot by a charge of duck shot.

FRED BEVERLY.

RAMBLING MARTINS.

EDITOR FOREST AND STREAM:—

SEVERAL years ago I was going on a steamboat from Green Bay to Little Baie de Noquet, and while sitting on the deck my attention was attracted by two martins. They were winging in their restless way about the boat, now lighting upon the spars and braces, now sailing in circles, easily adapting their flight to the rapid motion of the boat. We were many miles from shore, and as they showed no inclination to depart, I asked the officers on duty if these birds were usually so companionable, and from them learned that these birds were in the habit of going out from Green Bay with the morning boat, and remaining with it until the boat from Baie de Noquet came in sight. This I verified, for when about mid-day the return boat appeared, the birds at once left us, and beyond doubt joined the south bound boat, as I was informed. This would secure their return to Green Bay before dark, after a round trip of over one hundred miles. It was in June, the nesting season, and as ordinarily the martin is a very domestic bird, devoted and courageous in caring for and defending its young, these gay wanderers must have been bachelors trying by change of scene to overcome their grief at disappointments in affairs of love, or to seek a less romantic cause for their wanderings, they may have found their rural home too quiet. It is well known that they frequent noisy bustling places, indeed the merriest family of martins I know, live and revel amid the din of standing engines, and the roar of more than one hundred daily trains.

L. W. L.

× THE HARES AT THE CENTRAL PARK.—On our inquiring of Mr. Conklin, the Director of the Central Park Menagerie, in regard to the English hares imported some time ago by Mr. Reiche for the Park, we are in receipt of the following: "I am sorry to say the hares have not increased so far as I can see, owing, I have no doubt, to the number of wild cats that have burrowed into the lower portion of the Park. They have eaten up the leverets. By wild cats, I do not mean the *Felis Catus*, but the common domestic cat, which have come from the neighboring shanties which adjoin the Park. We are shooting these pests off as fast as we can. The old hares have not changed their location a great deal from where they were first let loose on the grounds."

W. A. CONKLIN.

Here is evidently an authentic account of a snake swallowing her young:—

EDITOR FOREST AND STREAM:—

In the summer of 1860 I watched the movements of a large striped snake, unseen by her. She crawled out of the stone wall into the sunshine, opened her mouth, and out came ten young snakes, four inches long I should judge, and began to play with the old one. I watched them for some time, then made a movement, and the old one gave a hiss, and in dove the young, and before I could get a club she was out of harm's way.

J. L. HERSEY.

CAN TIGERS CLIMB?

THERE is quite a lively discussion going on in England in regard to the climbing capacities of the tiger, and as to whether he should be shot from a high platform or from a hole. We copy an incident of tiger shooting given by a correspondent of *Land and Water*:—

The commissioner of the division and an officer of the Royal Engineers were out shooting, and were beating down a nullah, having, as is usual, stationed men forward in the trees to give notice of the brute's whereabouts, should it get on foot. Of these, a Bunjara, who had taken up his position on a branch 18 or 20 feet from the ground (the exact distance was afterwards measured and was found to be one of the two above numbers) was the first to see the animal stealing along, and immediately began to wave his turban, and to shout to the line, then about 200 or 250 yards off. The tigress, a small one, stopped, as the native afterwards related, looked up, and seeing him, made straight for the bottom of the tree, and began to climb it. Of course the terrified man screamed out, and the line, which had been coming on as fast as possible, being now some 150 yards off, the officer of Engineers caught sight of what was going on, and seeing that the man, who was too paralysed by fright to try to climb higher, would be sacrificed in another instant, pulled his elephant up, and risked a long shot—150 yards measured—and luckily dropped the tigress just in time to save the man. Other instances might be adduced, but I should think the above one ought to satisfy one that tigers can climb; somewhat in corroboration, however, is the following extract from the *Bengal Sporting Magazine*: "After relating an anecdote of a tiger who selected a tree to die in (their resorting to one is not uncommon), and last year, during the rains, Lieut. Nares, of 53d N. I., shot one who had perched himself in a tree to escape being drowned." Of course if anybody chooses, he may say these tigers sprang into the trees, and did not climb; but the mere fact of their being so commonly found in them would be strongly in favor of their being able to climb when requisite, even were there no other evidence on the subject.

PRE-HISTORIC REMAINS AS DESCRIBED BY THE FRENCH SCIENTIFIC CONGRESS.—From the *Revue des Deux Mondes* we take the following interesting account of an exploration in search of pre-historic remains, made by various members of the Scientific Congress, on the occasion of their late visit to Lyons:—

"Salutré is a small village some twelve kilometres from Mâcon. Our expedition was under the charge of several scientific people from Mâcon, assisted by members of the Conseil General of Saône de Loire. Under the guidance of the Maire of Mâcon we soon got to Salutré. The lamented M. de Ferré first explored this region and brought to light its treasures. Here we found in hollow trenches of three to four metres in depth, stone flaggings, such as are usually discovered in researches of this character. Whether these stone platforms were used as hearths, or as sepulchres no one can tell. Near these platforms we found innumerable utensils made of flint, such as arrows and lance heads, all neatly cut, either lozenge shaped or resembling in form the leaf of the willow. Here were knives, scrapers and the broken remains of innumerable tools. No hatchets nor saws were upturned. The bone instruments were evidently used as polishers (for dressing skins—Ed.) or as bodkins, or for the handles of their flint implements. Any objects of art distinguishable by the least idea of design were wanting. Near the remnants of this early civilization, we found an enormous quantity of bones belonging to the horse, the rein-deer, the elephant, the stag, the ox, the bear and the hare. The remains of the horse and deer were in the greatest quantity. Salutré is quite remarkable for the enormous accumulation of horse bones, which are all splintered and broken, or have been partially burnt, and which are found covering an area of several metres in depth and breadth. Calculations seemed to prove that no less than the bodies of forty thousand horses must have been brought together and slaughtered at this particular place. In vain all kinds of suggestions, some of the most curious character, were advanced by members of the Association, to explain the presence of this mass of animals. Human remains were by no means rare. They were disinterred before our eyes. The skulls brought to light seemed to prove that two different races must have died at Salutré, the older of which was dolichocephalus and probably existed at the close of the quaternary period.

STRUCTURE AND ACTION OF FUR.—"A fur is so arranged that its fine hair projecting into the air intercepts all the heat which flows from the surface of the body by radiation and conduction, and distributes this heat through the air which circulates between the single hair-cylinders. Thus the air, however cold it may be, reaches the nerves of our skin as a warmed air. Furred animals in winter, when touched superficially, give a very cold sensation; it is only near the skin that their hair feels warm. In a severe cold, certainly little of our animal heat comes as far as the points of the hair, from which it would escape by radiation or conduction, as the current of the air in the fur cools the hair from its points towards its roots, and a severe cold penetrates only a little farther into the fur, without reaching the skin of the same. This can take place only at an exceedingly low temperature, or when a very cold air is in violent motion. In a well-furred animal the changes of temperature in the surrounding air only change the latitudes at the cold and warm zones in the fur; the place where the temperature of the body and the air equalise each other, moves between the roots and points of the hair, and for this reason a furred animal is not warmer in summer than in winter. In summer its heat leaves at the points, in winter near the roots of the hair."

—Some months ago a Lithuanian lynx escaped from a traveling menagerie at Altona, Holstein, and \$20 reward was offered for its capture, but in vain. Not long ago a sentinel at Kiel observed a strange looking cat-like animal coming out of the mouth of a large cannon on the ramparts, and after a short time returning with a duck in its jaws. The man got assistance; a net was spread over the muzzle of the gun, and the missing lynx was recaptured, together with a domestic cat and a litter of three young ones. These curious kittens have been transferred to the botanical garden of Hamburg, where they have been visited by many naturalists.

The Magazines.

REMINISCENCES OF AN ECCENTRIC SPORTSMAN.

THE recurrence of another 'Second October' recalls the remote days when the Cesarewitch and Cambridgeshire were unknown names, and when even the Two Thousand and One Thousand Guineas Stakes did not exist. Few will remember that it is little more than a century since the distinctive names of the various Newmarket meetings were invented by the Jockey Club when in its feeble infancy. Students of *Bailey's Racing Register* will discover that the First and Second Spring, or the First and Second October, were unknown titles to the sportsmen of the first two Georges, and that 'the Houghton' appears for the first time in the calendar of 1777. Unconsciously our modern frequenters of Newmarket are celebrating the memory of a Lord of Houghton who was one of the most eccentric characters that the Heath ever saw. No man, said the *Sportsmen's Cabinet*, in an article that appeared shortly after his death, ever sacrificed so much time or so much property to practical and speculative sporting as the late Earl of Orford. Incessantly engaged in the pursuit of sport, and of new inventions, he introduced more whimsicalities, more experimental genius and enthusiastic zeal than any man before him, or than any will ever employ again. It is indeed hard to disguise that George, the third Earl of Orford, although grandson to the great Sir Robert Walpole, was little better than a madman. His chief mania was for greyhounds, of which he had often 100 couples in training, and which he crossed with every variety of dog. But the freak with which his memory was identified long after he had passed away was his habit of driving a four-in-hand team of red deer-stags, which he reduced to such perfect discipline in his own park that he was at last tempted to make an excursion with them to Newmarket. The incident that befell him is well known to sporting antiquarians, and excited no slight degree of amusement among the then Prince of Wales's set, of which Lord Orford was an *habitué*. As the phaeton, with its strange team, approached Newmarket, the cry of a pack of stag-hounds was suddenly heard in the rear. The huntsman of the pack had been exercising his hounds in the neighborhood of the heath, and was astonished, on crossing the road, to see his dogs put their noses to the ground and give tongue in full chorus as they set off in pursuit. The scent left by four stags was naturally breast high; nor was it long before the deep-voiced music of the eager pack smote upon the sensitive ears of Lord Orford's team. Fear prevailed over discipline, and, in spite of all the efforts of the noble charioteer, the stags dashed off at lightning speed, and whirled the light phaeton after them with the celerity of a whirlwind. In vain did the trained grooms on horseback take part in the head-long race. The stags rushed along the main street of the little town, and never stopped until they turned at full speed into the open portals of the Ram Inn. The doors were slammed just in time to exclude the foremost hounds, and this singular circumstance, adds a contemporary writer, although attended with no accident, effectually cured his lordship's passion for deer driving."—*London Telegraph*.

A HIGHLAND FOX.—A tremendous traveller, and always in prime wind and condition, with a ravenous appetite that never fails, he will cover almost any distances of a night with that long, easy, slinking canter of his. As you catch a glimpse of him as he goes by in the gloaming you might easily enough mistake him for a wolf. He preys on everything, and delights in variety just as much as you yourself do. He snaps up the little blue leverets while looking out for a more serious feeding on their full grown relatives, scatters death wholesale through a brood of young grouse or ducklings after he has sprung upon the setting mother and made her ready for plucking. When you have been out for a long day with your gun he will take note of your beat, and then make a cast round the ground in the evening, picking up the wounded game that may have escaped your retriever. He thins down the young roe-deer too; and roe are not very plentiful in your birch woods. No wonder the sportsman regards him as his natural enemy; yet the feelings of the sportsman are mild compared to those of the shepherd. For with the exception of the eagle, who will occasionally swoop on the new-dropped lambs, the fox is the only animal that takes serious liberties with the flocks. Everyone's hand is against the fox; but when he is full grown and fairly launched on his career of crime he is as hard to corner as a Greek brigand. The best chance is to follow the vixens to their strongholds, where they have their litters of cubs early in the season; and then you often have grand Highland field-days that remind one of the immortal fox-hunt in Guy Mannering.

A SPORTING ECHO.—Jean Paul, of the *Tribune*, is at Canandaigua Lake, and tells the story of an echo there: "There are famous echoes on the lake. Last evening Thompson piloted us to one; resting on our oars in mid-channel, he drew his horn from its case and sounded the various bugle calls. No response from the rocks. Another round. The hills were voiceless. Yet again. Not a sound from the shores. 'Surely this is just where the echo should be,' remarked Thompson, and he blew a tremendous flourish. Never a note came back. 'W-h-y d-o-n-t y-o-u a-n-s-w-e-r?' he shouted, putting his hands to his lips like a speaking trumpet and hailing the banks. 'Cause I'm a laying here for black ducks, and if you don't clear out with that cussed tin horn of yours, I'll slip a pint of shot into you!' was the return off the shore, and the rushes began to move as though a boat were shoving out. We returned to Pine Bank; but Thompson still insists that there's an echo there where he blew, if one can only hit the angles right."

—How many a boy has burned to shoot a bear! How many boys have, after a proper preparatory course of reading, shot bears in the abstract! How many will envy the great good fortune of young Ole Jacobsen of Pelican Rapids, Minn. This noble youth discovered a larcenous bear in his father's corn and destroyed him by sending a rifle ball into his spinal column. The beast weighed 296 pounds, dressed, and by the generosity of this thoughtful child everybody in the neighborhood has had bear's meat for dinner.—*Tribune*.

—Riflemen—pickpockets.

Athletic Pastimes.

Secretaries of University and College Athletic Clubs will please mail their reports not later than Monday in each week.

—The Base Ball season has terminated, and the result is the success of the honorable nine of the Boston Club as the champions, the Philadelphia nine being second on the list and the Baltimores third. But for the action of Cummings, the pitcher of the Baltimore nine, in leaving his Club in August, the Baltimores would probably have been near enough to the goal to have from the Bostons a tussle for the lead. At any rate they would have come in second. Our local club, too, but for the lack of earnest efforts to win on the part of one or two of their nine would have been close to the winning post. Instead, however, they are fifth in the race. The following table shows the number of games actually played, won and lost in the championship arena during 1873:—

Name of Club.	Athletic.	Atlantic.	Baltimore.	Boston.	Maryland.	Mutual.	Philadelphia.	Resolute.	Washington.	Games won.	Best five won.
Athletic.....		5	4	5	0	5	1	2	6	28	4
Atlantic.....	4		2	1	0	2	2	3	3	17	0
Baltimore.....	3	7		2	3	6	3	3	6	33	3
Boston.....	4	8	7		0	6	5	4	9	43	5
Maryland.....	0	0	0	0		0	0	0	0	0	0
Mutual.....	4	7	3	3	0		4	4	4	28	1
Philadelphia....	8	7	6	4	0	4		4	3	36	3
Resolute.....	0	1	0	1	0	0	0		0	2	0
Washington.....	0	2	0	0	2	1	2	1		8	0
Games lost.....	23	37	22	16	5	24	17	21	31	196	16
Best five lost.....	1	5	2	1	0	3	1	0	3		

The record which will count in the series of legal games won and lost is as follows:—

Clubs.	Games played.	Won.	Lost.	Won by forfeit.	Total won.
Boston.....	54	39	15	0	39
Philadelphia.....	49	32	17	4	36
Baltimore.....	49	27	22	5	32
Athletic.....	49	26	23	5	31
Mutual.....	49	25	24	3	28
Atlantic.....	50	14	36	4	18
Washington.....	36	5	31	0	5
Total.....	336	168	168	25	189

—The last championship game of the season was played on Saturday last, the contestants being the Atlantic and Philadelphia Clubs. The Atlantic won the first game of the series in May last, and the last on this occasion when they defeated the Philadelphias by a score of 12 to 1, the latter barely escaping being "Chicagoed." The Atlantics played a fine fielding game, Boyd's play being especially noteworthy.

—On Thursday next the new game of Base Ball—ten men and ten innings—is to be practically illustrated on the Union Grounds, Brooklyn, in an exhibition game between the Atlantic and Mutual tens. The following is the record of the champion club with opponents during 1873:—

Boston vs. Washington.....	141 to 5
Boston vs. Baltimore.....	124 to 9
Boston vs. Atlantic.....	121 to 4
Boston vs. Philadelphia.....	104 to 9
Boston vs. Mutual.....	94 to 7
Boston vs. Athletic.....	71 to 65
Boston vs. Resolute.....	71 to 21
Total.....	726 453

The Bostons defeated the Philadelphias at Boston on October 29th by the appended score:—

Boston.....	0	2	2	0	5	3	1	2	1	16
Philadelphia.....	0	0	0	0	0	0	3	0	2	5

On the 30th, at Worcester, the "Reds" again defeated the "Whites," the score being as follows:—

Boston.....	0	0	3	6	2	0	1	5	15
Philadelphia.....	0	0	4	0	0	2	1	2	9

—The officers of H. M. S. Practice Ship "Royal Alfred," now at Halifax, Nova Scotia, have frequent foot ball matches with picked men of the garrison and of the citizens.

—Maurice Daly plays G. F. Slosson, at Chicago, on November 8th, a match game of French three ball caroms, 600 points up, giving his opponent 100 odds.

—On December 2d Cyrille Dion and Albert Garnier play a match of French caroms at Chicago for the championship of the world.

HARVARD COLLEGE, Nov. 1st.

EDITOR FOREST AND STREAM:—

The Base Ball field is still frequented with unflagging interest. On October 18th the Sophomore nine were beaten by the Freshmen with a score of 16 to 4. This is the second defeat from the same source and shows a demoralization of the nine since its victorious contests with Yale last year.

In looking over the just published records of the University nine of last year I find that they were defeated thrice by the Bostons, once by the Princetons and were twice victorious over the Yale University.

The accidents on the ball field have been numerous, and Captain Perry, of '76, is about to leave college in consequence of serious injury to his eye, from a swift-flying ball at Springfield.

Cricket and Foot Ball are popular and supported by organized clubs, but space forbids any further mention of them here.

HOLDEN.

—Wild pigeons have made their appearance in Canada West. A large flock, flying from the eastward, passed over London, within easy gunshot, last week.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, traits, species governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

E. F., Baltimore.—Much obliged for fish; name undecided; came in good order. Write more fully.

DOR. FORSTER., 154 Bolton street, Baltimore.—Communicate with Loring, Brook & Sons, 438 Broadway, New York.

X. X., Poughkeepsie.—It is cruel, and we have no faith in your practice of plunging birds in cold water in order to tame them.

N. H., Buffalo.—Some years ago we think we read of a sturgeon caught in the Tees in England nine and a half feet long.

DUBIOUS, Brooklyn.—1. Address R. A. Fitzgerald, Esq., Secretary Marylebone Club, London. 2. Would be glad to give it publicity. 3. See the *Field* of August 10th.

HAM, Patchogue.—We have heard of brandy used for curing rabbits of the rot. A tablespoonful was a dose. 2. Address *American Agriculturist*.

DALE.—Would not advise your attempting to have your muzzle loader converted to a breech loader; cost you more than it is worth, and possibly be, when finished, unserviceable.

AMSTER O., Watertown.—We must adhere to our rule. We cannot decide on the quality of your gun. No maker, however, stands higher. We never heard of his having made rifles. 2. It will cost you \$125.

ANDREW G., Princeton.—We do not know of any instance of ring doves associating with pigeons. We had a pair; they were quite tame. One day the cage was opened and they flew away, never to return. Do not trust them.

MISS H.—Your chinchilla suit you say you are preparing for winter, and want to know where the fur comes from. From an animal, a rodent, a burrowing animal, living in South America. It digs subterranean homes and lives on vegetables.

JOHN Y., Trenton.—Canvas backs are very uncertain. Go down to Havre de Grace, and you can ascertain the best point there more reliably than we could give you. Be careful not to place too much confidence in the market gunners.

BOBS' BOY.—1. Boil carefully your little animal, and then get out bones. Do not bleach with chlorate of lime; it eats off the enamel. Have found sulphur fumes better, though bleaching under glass alone is the best plan. 2. Too late in the season.

K., Brooklyn.—Difficult to reply to in our limited space. On making any hot or cold impression of vegetable or animal substance, covering it all you can to exclude outside spores, animalcula will be formed in time. Best authorities—Pouchet, Ebleman, Bennett, Jolly.

FORD, Norristown, Pa.—These are the principal English gunpowders you should experiment on: Pigeon & Wilks, Charles Lawrence & Son, John Hall & Son, Curtis & Hervey. Think all of them can be procured here. Inform us about the matter. The idea is quite novel.

L. H., for Club.—Makes all the difference in the world on gun trial as to the character of the paper targets to be shot at. Best way would be to send to Mr. W. W. Greener and get the same paper as was used at the English gun trials and keep it as a standard. See last number.

"JUST A TRYING," Brooklyn.—To make arsenical soap take half pound white soap and melt it over a slow fire, having cut in slices; take quarter pound white arsenic and one and a quarter ounces of white chalk in powder. Melt all together. When cool add a little camphor, keep it securely closed, and label POISON.

DADDY, Brooklyn.—Dr. Boate is the authority for the size of the horns of the ancient Irish Elk. "From the tip of the right horn to the tip of the left, 10 feet 10 inches. From tip to root of horn, 5 feet 2 inches." The head, from such fossil remains as have been found, was not as large as that of the present elk.

SETTER AND POINTER, Fall River, Mass.—A brace of setters, thoroughly broken, and about four years old, will cost from \$100 up; a pointer dog from \$75. We will import them for you at a much less rate from reliable kennels, or put you in the way of securing them here.

T. S. S., Hartford, Conn.—Certainly not. The only fair way to kill wild geese is over stools and call them; stalk them if you can. Another plan is to send a man out on the lake or bay in a small coffin-shaped boat, the gunwales covered with brush, and so drive them in on the stools, this method requiring great practice and patience. One and a quarter ounce of shot. The charge of powder is right.

H. M., Eve. Mail.—While the varieties of game found in Eastern Florida during winter are excessively numerous; the list for spring is very meagre. The season really closes at the end of February. The only game really in season during March and April are several varieties of plover, namely:—Black belly plover, *squatarola helvetica*; golden plover, *charadrius virginicus*; Wilson plover, *Agialitis Wilsonius*; and piping plover, *do. melodius*.

G. T. U., Andover.—We copy from Holden's Book on Birds, Reiche & Brothers, which is the best practical authority. "Bird's claws grow very long, and require cutting. This is a particular operation, and care should be taken not to cut up into the blood vessels, which can be easily seen by holding the bird's claws in front of a strong light, and then not cutting within a sixteenth of an inch of the red vein."

W. L. P., Brooklyn, N. Y.—Four drams and a half of powder, and one ounce and a half of No. 1, or B shot. All kinds of duck and snipe. Take railroad to Tom's River, then stage. It will cost about \$6 a day, including gunner. Latter end of March, according to weather and temperature. You can try Bay View House. Good ground. Long Island now.

M. W. D.—If the water of the Bronx is good trout water, and your land is so situated that you can tap it, and, after letting it flow through your ponds, turn it back into the river again, then you have a fine place for trout breeding. As to your other question, "How trout may be raised," that cannot be answered within the limits of a letter. In the course of a week or two we will commence a series of articles on practical trout culture in FOREST AND STREAM.

S. R. B., Baltimore.—The story of all that remains of the Dodo in the Ashmolean Museum at Oxford, is worth recording. Almost the whole skeleton was there in 1755, but because it was in bad order, it was destroyed, all of it except the foot and the skull. The former is 9½ inches long 2, inches across the joint, and 2½ inches at the spread of the toes. The skull is 8½ inches long by 4½ inches wide. There is another skull at Copenhagen. Other remains of the Dodo, though imperfect ones, have been found by Clark at Mauritius.

KALEFU, Washington.—Certainly the "American brook trout" (*salmo fontinalis*) have scales, and you can see them without "specs." After a day's fishing, when you have been handling trout, examine your fingers when dry, and before you wash them, and see the minute scales adhering to them; look into your basket when dry and observe them there. On large specimens they are of considerable size. We have just examined a specimen in the glass case of G. Shepard Page, President of the "American Fish Culturists' Association." It weighed ten and a half pounds when caught. Its scales are as large as those on a black bass. We have known persons who would not cook a large trout unless it was scaled. On fingerlings, when wet, the scales are not perceptible, but they are wiped off with the slime. Scrape a fresh trout with a knife, let the slime dry, and then with a microscope see what you will see.

A WEEKLY JOURNAL,
DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY
Forest and Stream Publishing Company,

AT
103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.
In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOV. 6, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Managing Editor.

Calendar of Events for the Current Week.

NOVEMBER 7th.—Trotting at White Plains, Westchester county, New York.

NOVEMBER 8th.—Athletic Tournament, Academy of Music.... Billiards at Chicago, Maurice Daly vs. Slosson.

NOVEMBER 10th.—State Auxiliary Joint Stock Company, Columbia, South Carolina.

NOVEMBER 11th.—Wilmington Fair, Cape Fear, North Carolina.... State Auxiliary Joint Stock Company, Columbia, South Carolina.

NOVEMBER 12th.—Wilmington Fair, Cape Fear, North Carolina.... State Auxiliary Joint Stock Company, Columbia, South Carolina.

NOVEMBER 13th.—Wilmington Fair, Cape Fear, North Carolina.... State Auxiliary Joint Stock Company, Columbia, South Carolina.

WOOD COLORS.

RUSKIN, in a clever book, expatiates on the beauty of a landscape, laying special stress on the harmony of the soil colors. Rosa Bonheur, when she painted her happiest picture, shows you a field through which a plow drawn by patient oxen tills the ground. Are you the least bit critical you can see that the furrows beyond were upturned early in the morning, for they are now faded, the rich amber tint is gone; but where the steers now drag the plowshare the upturned earth is full of warmer color.

Ruskin, while he may with the most exquisite word painting make you feel what is the scale of colors, and their harmonious blending, somewhat drops you down from your poetry when he dryly tells you that all of nature's most charming effects in soils are solely due to iron and the amount of oxidation.

Our forests this month have changed their dress. Now they are clothed in

"Green and yellow and crimson and gold,
Out of the loom of the Infinite rolled,
In wild luxuriance fold on fold."

The walnut turns to dainty shades of auburn, as lustrous as a woman's hair, and to maroons and russet browns, running to rich chocolate, while the wild honey-suckle assumes palid ghostly shades of white. The poplar, horse-chestnut and lime take at times a buff, a saffron, a crocus, a sulphur hue, from delicate straw to golden lemon. These are the more quiet, the subdued tones of nature. Now flashes out the rose, the ruby, the crimson, the wine hues, the blood-clot reds of the sumac, the wild ivy, the dog-wood and the creeper, as they flush and flaunt and blaze with garish, gaudy, gorgeous, and burning hues of lurid splendor.

Chlorophyll! Is it to its absence that is due this metamorphosis, this harlequinade? Must some learned botanist, as did Ruskin in regard to soil, tell us that in the fall of

the year the sap in the trees is acid or alkaline, and so has changed the colors?

It is nature dying, but dying in a halo of light, as the sun sets. It may be oxidation of the leaves, but what we see in this protean change recalls to us the coming spring, when "the melancholy days" are past, and nature will again deck herself in all her budding beauty. It is but the foretelling of a resurrection.

POSSIBLE CHANGES IN THE ENGLISH GAME LAWS.

"IT may be said indeed that at the present time, those persons who for political objects are striving by speech or print to sow enmity between the owners and the occupiers of the soil, find no arguments so ready to their hand or so persuasive as this excessive increase and effeminate pursuit of game. It may be said that in several of our English shires, the rabbit is now the best ally of the English radical."

The above from Earl Stanhope, and found in an admirable book of his, comes uppermost to our mind, in reading the account of the Report of the Game Laws, as it appeared in a late issue of the London Times.

In 1845-46 Mr. Bright's Committee on the Game Laws, held their meetings, and the result was a voluminous book of 1,578 pages, containing no less than 25,603 questions and answers.

Last year, at the instance of Mr. Carnegie, a measure was brought forth in England to make game property, and accordingly a second committee was formed, whose labors we must now consider. With commendable regard to obtaining "the truth and the whole truth and nothing else," witnesses were called by the committee and they examined persons learned in the law, tenants, farmers, game-dealers, agents, factors, laborers, foresters, and those peculiar personages unknown to us, designated as "retailers of shooting"—that is persons who hire a moor in bulk and underlet it in smaller lots to various parties.

The attack on the present Game Laws made by the farmers, arises not only from material grounds but as affecting the laborers' morality, and they as the producers of food, claim to represent the interests of the whole community. The opposition to the Game Laws as emanating from the English farmers, is tame when compared with the violent attacks made on it by the Scotch.

There are some strange and peculiar anomalies about English Game Laws, which would drive a Philadelphia lawyer crazy; for instance, game when alive is legally nobody's property, the right to shoot it is however a valuable property, guarded by severe laws, and of the kind known as an incorporeal hereditament.

The disparity of customs in leasing land in England and Scotland makes a wide difference between the good feeling which should exist between landlord and tenant in the two countries. In Scotland the exactions of the landlord appear to be much more severe than in England. His power of control over the crops and animals of the lessee, have the strongest retrospective action. If rent is not paid a landlord has the right by law of even reclaiming the price of cattle sold by the farmer to other parties a year before. Exactions of this character, taken in connection with the peculiarities of the Scottish disposition, necessarily make the Scotch unwilling to allow the least infringement of their rights, and the more bitterly to resent any encroachments. The right of shooting in absence of any agreement in England belongs to the tenant, but it is customary in a lease to reserve this right to the landlord. The trouble seems invariably to arise from the selling of this right to outside parties, who having no vested interest in the land, who only buy the license to shoot over the grounds, invariably are looked upon as interlopers by the tenant.

The presence of rabbits and hares is the great bone of contention. Instances are cited where the right to shoot over a property was sold by the landlord for £200, while the losses occurring in wheat fields alone from the rabbits and hares amounted to £300. In regard to general winged game and their preservation, excepting pheasants, the objections made by farmers were very few. As to partridges, one important witness said that he considered the partridge "as one of the best friends the farmer had."

It is the rabbits and hares which come in for all the abuse. Some farmers declared that the presence of these animals, absolutely forced them to plant only such crops as these creatures would not eat, and that because they did not like oats, but would eat up all the young wheat, they were obliged to grow only oats year after year.

The present agitation against the Game Laws in Great Britain dates from Aberdeen, and the returns of the Aberdeen Game Conference showed that on an average of 184,211 acres, the direct damages caused by game amounted to no less than £19,000. Tenants in Scotland taking the law into their own hands, have formed Trapping Associations. One of such associations caught on 56 acres in one year 1,000 rabbits and another 400 hares in 75 acres. One most absurd fact which must strike the American reader is this, that the landlords, on a point of dignity, will not allow their tenants even by purchase, (notwithstanding that they may offer the same amount of money as would be taken by the landlord from another party), to have the right to shoot the game on the lands they have rented. This is carrying out *ad absurdum*, a question of privileges, and is incomprehensible; much as we are in favor of game preserving, this seems to smack of barbarous feudal times.

The English Chamber of Agriculture, an important and influential body, partly composed of proprietors, have taken the matter under consideration and have recommended that

hares and rabbits should wholly be taken out of the protection of the Game Laws; secondly, that tenants and landlords should have a joint right to kill the ground game (hares and rabbits), and that it should be impossible for either party to part with this right. The Scotch Chamber, having previously voted the same joint and inalienable right to ground game, at last, in 1871, "put itself right with the country" and with "the Radical boroughs" by petitioning Parliament for the total abolition of the Game Laws.

RESEARCHES AFTER THE BIRDS OF PARADISE.

SINCE Mr. Wallace's account of the Papuan Islands, some eight years ago, in search of new varieties of that most gorgeous family of birds, the *Paradiseide*, Signor D'Albertis' late travels as a naturalist into the interior of New Guinea are particularly interesting.

The expedition of this Italian naturalist was undertaken last year, and he has been able to add quite a number of specimens of Birds of Paradise to the already quite large collection. At 3,600 feet above the level of the sea he found the superb Bird of Paradise (*Lophurina atra*), and at a higher level was able to obtain several of them. Arriving at Corono, Signor D'Albertis found a fine young male of the Six-shafted Bird of Paradise (*Parotia sepiennis*) which has never yet before been secured by a European. Signor D'Albertis says it feeds on fruit and a kind of fig, found in quantity upon the mountain ranges. To clear its rich plumage it scrapes a round place clear of grass and leaves, where the ground is dry, and rolls itself in the dust like all other gallinaceous birds, elevating and depressing its plumage, and raising and lowering the six wonderful plumes on its head, from whence its name is derived. Being in want of food, Signor D'Albertis skinned his bird and found it delicious eating. Imagine a dish of roasted Birds of Paradise! During his month's residence at Corono Signor D'Albertis obtained 122 specimens of birds, and a large collection of insects, besides some mammals and other specimens.

To track the Bird of Paradise in his native wilds must be the dream of many an ornithologist. A correspondent of *Nature*, in writing in regard to Signor D'Albertis' travels, says "this interesting narrative serves to show us that the dangers and difficulties of penetrating into the interior of New Guinea, though considerable, have been somewhat overrated." The inhabitants seemed to be kind to the traveler, the only drawback was the pestilential character of the country.

SYBILLINE LEAVES.—III.

HINTS TO SPORTSMEN.

IN the second paper of this series we were surprised to read this sentence in type:

"Fires should be built so that the smoke should not blow into the tent or shanty."

How that "not" came in there is a question too knotty for us to determine; but whatever the explanation, it entirely reverses our intended meaning. Certainly there is no quicker or more effective mode of clearing a tent of flies and mosquitoes than by letting the smoke of the camp fire blow into the door.

One great point gained in learning woodcraft is to acquire a habit of close and continued observation. All dense woods look so much alike that the novice without a guide is almost helpless. In travelling it is important to turn frequently and survey the ground behind, especially if one intends to retrace his steps. A locality looks entirely different from different points of observation. Hence it is always prudent to blaze the route by occasionally scoring a tree or breaking the top of a bush or limb. Where small spruces are frequent, the broken tops of these are most easily seen. In passing through alder brush, cut them well down toward the butts with a hatchet, remembering to bend them well over with the left hand and giving a smart clip on the bend. A greenhorn will be surprised to see how easy it is to cut brush in this way, and how much hacking is required to cut even the smallest sapling in any other way. Alder brush makes a good "blaze," as the under sides of the leaves are much lighter than the upper, and show distinctly. In following a blind trail, the eye should always run casually in advance. If it is cast down directly in front, the sign is lost; but if raised, the trail can usually be traced quite distinctly. In all cases where a man discovers himself, lost, he should stop short and carefully consider the situation—the position of the sun, direction of the wind, character of adjacent prominent objects, &c., and then retrace his steps as nearly as possible. It is senseless to plunge headlong into trackless uncertainty, when it may be quite possible to go back on one's own track to the point started from, which though a loss of time in reaching a desired destination, is better than a loss of way and an involuntary bivouac in the woods. The writer remembers having once tracked back through a laurel brake with such nicety of calculation as to pick up a handkerchief which had been pulled out of his pocket, and was clinging to a bush. As a general thing, a man does not go far off his course before he discovers his mistake. A quarter of a mile in a jungle or strange forest seems a great distance. It is not impracticable either, when one is in doubt, to climb a tall tree and take a survey from the top. Caribou hunters often adopt this practice when looking for barrens where game are likely to be found. Rivers and streams are certain highways to deliverance provided a person has previously some idea of the general lay of the land.

One never should be without a compass; though in some persons animal magnetism is so strong that they determine the cardinal points instinctively. Indeed there are individuals who cannot sleep with their heads to the south, but instantly detect a bed so placed. Back-woodsmen acquire by practice and careful observation a certain craft in reading signs which is almost infallible. As a rule, but not always, moss grows more densely on the north side of trees, nature providing against the cold that comes from that quarter. But a more reliable sign is the limbs of trees, which grow longest on the south side, those on the north side being exposed to the wintry blasts which twist, scathe and stunt them. A laurel swamp is the worst conceivable place in which to get lost. The tendency to travel in circles well known. It is a physiological freak not easily explained. In an article on this subject which we clipped from the *Scientific American* fifteen years ago, the writer, who is a Texan, says:—

Bewildered persons frequently travel in a perfect circle, sometimes keeping the same track until they have made half a dozen equal rounds; at other times making the circle larger or smaller each time. It is not, by any means, always the case, when a person is lost; but it is so frequent that it is within the experience of every one who has been much in the woods. In calm and cloudy weather and in a country of much sameness of appearance, the best woodsmen get so bewildered as to "take the circles." Persons not accustomed to the woods will sometimes do so, when the sun is shining and a steady breeze blowing. On the level or gulf prairies of this country on a calm, foggy morning, no man can travel without a road. It is an incident of every day occurrence in the spring and fall seasons, that men are thus becalmed on the prairie as effectually as are ships at sea; nor will a compass mend the matter, for it cannot be carried steadily enough to keep its meridian, and the course it points cannot be kept for fifty yards; if a man attempts it he will make a circle and come back to the place he started from. The circle will be large or small generally in proportion to the density of the fog—sometimes only a hundred yards in diameter; at other times a mile, but seldom more. The circles thus made are perfect. This kind of wandering seems to arise from an attempt to go a straight course when there is nothing to guide the senses, or when the usual guides of sun, wind, or the general contour of the country are disregarded. It rarely befalls children, who do not attempt to get on a *course*, but only run from one visible point to another equally perceptible.

Many apparently trivial traits in the disposition of animals, which are of great use to woodsmen are omitted in books of natural history; chiefly from ignorance no doubt. One of these is the disposition of the horse, when frightened, to run *against the wind*, if any is blowing. Thousands of horses which would be otherwise irrecoverably lost annually on this frontier, are recovered by observing this simple rule in pursuit. All animals have similar inexplicable traits in their disposition; and men are no exception to the rule. White men, when they are scared, will retreat *in the same direction in which they came*. The Indians know this, and lay their plans accordingly; and many a gallant company has been cut to pieces simply from ignorance of this fact. But those who understand these matters, when they find it necessary to make a hasty retreat, always do so in a straight line, and in a direction different from the one in which they came.

We frequently see notices in Northern papers of children being lost. Such things rarely occur on this frontier; though children often wander, and there are but few neighbors to help to search for them. Perhaps the cause of humanity might be subserved by publishing a few rules to be observed in such searches. Any child will make a track or trail plain enough to be followed by the eye over any ground, unless there be much passing of men or animals to spoil the trail; and it can be followed by almost any person of good sight, although he may not have had any previous experience. Go to the place where the child was last seen and look for the trail, glancing along the ground with a sharp scanning look; when it is found, a faint kind of a line will be seen, which may be followed at a fast walk until a well-defined track occurs. If the trailer stops to look for a track he will probably lose the trail, and must go back and take it up again with the same scanning glance along the ground. The trails which hunters and Indians follow skillfully, is not so much composed of tracks or footprints, as of indescribable little signs, such as leaves and blades of grass bent or turned, twigs broken, and other things so small and faint that they cannot be shown to any one, yet which, when all put together, make a kind of *line* along the ground, which line can be seen by a rapid glancing look, but which will disappear when looked at steady. The trail of a human being is more easily followed than that of any other creature, because there is a kind of *purpose* in it different from the trail of irrational animals. A child will change its course around every thick clump of bushes, and go nearly straight when the ground is open. If it is scared and running, it will run *from* the wind, if much is blowing, and from any voice it hears; in such cases, therefore, it is not good policy to call much upon the lost child's name.

HONOR TO WHOM HONOR IS DUE.

IN the *Tribune*, under date of October 30th, there is an able letter from Virginia, written in the clearest, plainest style and backed up by the strongest arguments, which gives to Maury what he is so fully entitled to, the distinction of having been the first to comprehend the use of the telegraph as a means of not only getting meteorological information, but of distributing it. The classification of all meteorological data had been to him the study of his life; in the telegraph he found the instrument for its collection and diffusion.

Maury's labors were not exclusively devoted to the study of the ocean currents, but were of the most comprehensive kind. Twenty years ago, when called to the Brussels Conference, Maury urged the formation of a system of meteorological observations embracing both the sea and land, it being evident to him that the same laws governed them. "Early in 1858," says the correspondent to the *Tribune*,

writing on this subject, "Maury had produced such an impression in the Northwest of using the telegraph for the purpose of making weather forecasts according to the present plan, that no less than eight of the lake cities, Buffalo among them, memorialized Congress in the same year—1858—to establish a general system of daily telegraphic reports for discussion at a central office. In 1859 Maury, at Decatur, Ala., at a public meeting used these words: "Some years ago I proposed, you recollect, a system of agricultural meteorology for the farmers, and of daily weather reports by telegraph from all parts of the country for the benefit of mankind." Are any stronger proofs necessary in order to show that to Maury alone is due the honor of having originated the present plan of weather signals?

To General Myer should be awarded full praise for the organization of a system which is, however, as yet in its infancy, the perfect development of which may only be arrived at in a century yet to come. But the germ of thought, the creative power which first brought practical meteorology to where it is now is to be credited to Maury alone.

Political differences are insignificant in a question of this kind. Who cares now whether Newton had a Round-head or Cavalier tendencies? It is time we had forgotten our own troubles. But surely the day will come when the grand conception by means of which the very elements are not only shorn of their powers, but even made subservient to man's ends, will cause the name of Matthew F. Maury to be classed not only among the greatest of America's illustrations, but of the age we live in.

HOW OLD IS MAN?

ANTHROPOLOGY, or the study of man, has received additional strength, as a science, from the publication of Sir Charles Lyell's last edition of the geological evidences of the antiquity of man. This book was first written fully forty years ago, when anthropology as a positive study was almost unknown. By its bold flight of thought at that time, Lyell's views of the age of man were considered ingeniously paradoxical. To-day a better knowledge of geology, and the assistance given by philology have added such a mass of evidence as to place the views of this most distinguished of English scientists entirely beyond the vague position of speculative hypothesis.

In the researches of the history of man, the leading question—the fundamental one—is "How old is man?"

A curious phase of human thought, and by no means an unnatural one, is here discoverable. Man's comprehension as to the vastness of numbers seems to be at all times quite vague. Between a million of years and a billion of years, though appreciating numerically the difference when it is expressed by written figures, the measure of such a notation of time is, to many, almost incomprehensible.

In regard to placing the antiquity of man's presence on the earth, there has seemed to have been a tendency to choose the lowest possible estimate. Now, strange to say, when calculating the positions of the stars, the inclination of the human mind has been to place them at the greatest possible distances from the earth, from the sun, or from one another. It was perfectly easy for us to accept the theory that such and such a star was millions on millions of miles distant from us, while when we studied man's first presence on the earth, the bold geologist who should have dared to have made man's advent on this globe to recede a mere thousand of years or so, would have had his dictum received not only with considerable doubt, but, strange to say, would have been taxed with irreverence.

To have gone past the traditional six thousand years, was thought to have been a reckless endeavor to unsettle preconceived ideas. But as has been most wisely asked, "How can the truth of this vital question as to man's age be possibly arrived at by always adhering to the lowest estimates? Shall we be always safe by calculating wrongly?" With exceeding accuracy from the lacustrine habitations of man found in Switzerland, the evidences are almost positive that they were built some 5,000 to 7,000 years ago, and a wide margin for error is allowed. At sixty feet deep in the Nile alluvium, fragments of brick have been found. Calculations of how long it has taken the Nile mud to deposit to such a depth were not difficult. In a century the data were almost positive that $3\frac{1}{2}$ inches represented the thickness of the deposit. Sixty feet then represented a period of 30,000 years, according to M. Rosiere, Agassiz, when studying human remains found in Florida, coming from a lacustrine structure, declared them to be fully 10,000 years old. A human skeleton discovered under four buried forests, seems to point to an age of 50,000 years ago.

But these traces of the antiquity of man, whether positive or not, are as if but of yesterday, in comparison with other evidences which are much more definite in character. In Torquay is Kent's Cavern. It is a cavern where stalagmites are constantly forming. The carbonate of lime dissolved in water containing an excess of carbonic acid, dripping through the upper surface of the cave is deposited as solid carbonate of lime. This simple chemical process, though constant, is a very slow one, a pellicle or film of lime being formed of exceeding thinness. In this particular cave, where this process has apparently been going on forever, names of persons which have been cut two hundred years ago into the stalagmites are still visible, though covered over by a coating or varnish of fresh carbonate of lime. Very careful estimates of how long it would take to form an inch of stalagmite led the British Association to determine that a foot could be only produced in 20,000 years. Now far below the stalagmite floor, specimens of man's handicraft have been found. At the very lowest es-

timate, the flint weapons in Kent's Cavern were made half a million of years ago.

Isolated cases of this character might perhaps take away from the general value of such estimates of man's age, but when we find them multiplied, we must give them a certain positive value. The evidences of man in Northern Europe before the ice period, seem doubtful, or if he did exist, all traces of him have been lost.

With questions of how far the pre-historic man differed from the present man we have little to do, save to indicate some curious researches made in the late Lyons Congress, where De Mortillet's opinions in regard "to the existence of a species of man different from the present race," found advocates and opponents. The argument is upheld strongly by linguistic proofs, and has for its basis the much disputed Development theory. It may be summed up as follows: "That a certain number of animals without the faculty of language were capable of acquiring it, and did actually acquire it, and were entitled to be called men. Then came a certain divergence. Those who had the power of transmitting their thoughts by means of words, improved until they became in time the men of to-day, while the other portion declined mentally, though gaining certain physical advantages, until they became anthropomorphoid apes—chimpanzees or gorillas."

In another portion of our columns will be found notice of a skull, said to have been found in Kansas, imbedded in the solid rock. Should future examination prove it to be a human skull, it will add much additional interest to this already most absorbing study, especially as an evidence of man's antiquity in America. If we are credited with having some of the crust of the earliest world yet known above the surface of the sea, the exact locality of which is, we believe, somewhere in the neighborhood of St. Catharines, in Canada, perhaps we may yet upturn the primitive skull, and the newest world be proved to be the home of the oldest man.

—We deviate for our established rule not to print editorial notices that may be construed as advertisements, to call the attention of our readers to a rare opportunity to purchase the Fish Farm of a professional pisciculturist, the whole complete and paid for, well stocked, and supplied by one of the purest and most copious springs in the country. The gentleman desires to sell to a Club and manage the concern for it. We regard this opportunity, which is a legacy of the hard times, as exceptional, and deserving the consideration of sportsmen or fish culturists. Address this office.

☞ We trust our readers will appreciate the good quality and general usefulness of the information we are giving them in our paper from week to week, as well as the novelty and freshness of it. Since our first issue we have introduced them to regions little known—our Great West, the Lake Superior region, Anticosti, the Saguenay, and other places remote and seldom visited, covering sufficient new ground and geographical range to entitle our paper, if it were a book, to a place in the Historical Library. We wish to call particular attention to the articles we are now printing on Florida, extending to districts never explored and almost mythological in character. We shall give the whole State, lengthwise and athwart, such ventilation this winter as it has never before had in books or papers. We have arranged to pay the expenses of a gentleman who will take up his abode in "Tiger Tail's" camp, taking with him drawing materials and photographic apparatus which will some day serve to illustrate in book form the information we shall print of this wonderful region; and although his investigations will not extend to confines so remote as those of Livingston and Baker, they will nevertheless prove more interesting, and we hope fully as useful. If the *London Times*, the *New York Herald*, or the Government, were to undertake this mission which we propose to accomplish by our own enterprise and private expense, the achievement would call forth world-wide comment; but we suppose that coming merely within the limited, modest endeavor of FOREST AND STREAM, few people will ever hear of it.

AID FOR MEMPHIS—AMATEUR GYMNASTIC TOURNAMENT.

—We would call special attention to an exhibition given by the gentlemen of the National Amateur Gymnastic and Athletic Tournament Association, to be held at the Academy of Music on Saturday, November 8th. The entries embrace amateurs from New York, Brooklyn, Boston, Albany, Pittsburgh, and Providence. Prizes will be given of gold medals, diplomas, etc. The judges of the games will be Prof. John Wood, Prof. Wm. Wood, Prof. Geo. Goldie, Princeton College; Mr. Hessler of New York Turnverein, and J. C. Babcock of New York Athletic Club; Prof. Burnham, manager of games and stage; Mr. Willis Van Tine, treasurer and manager of house. The exercises consist of jumping, lifting dumb-bells, vaulting, club swinging, climbing the rope, trapeze performances, and general gymnastics. A display of calisthenics will end the performances.

Aside from the certain excellence of the performances, it should be remembered that the proceeds of the exhibition are to be given to the Memphis sufferers. We sincerely trust the Academy will be crowded.

—A new economical use for the fungus which grows on trees has been indicated. Caps are made out of the beaten out interior mass of *Polyporus fomentarius*, the amadou or German tinder of commerce, which is described as being both warm and light. It is stated that large use is made in Hungary of this material for caps and waistcoats, and it is also used for caulking boots.

Sporting News from Abroad.

SOME time ago, enthusiastic as we were after seeing Mr. Reiche's collection of English pheasants, in Chatham street, we ventured to expostulate against calling shooting pheasants as practiced in England—sport. If the pheasants are as tame as canary birds, and petted and cared for up to a certain point, we declared it in our humble opinion to smack something of brutality, all of a sudden to turn into the aviary with cruel breech-loaders and treacherous dogs and blaze away at the poor birds without a moment's warning. But all things have their remedies. In this case the cure does not come from the fact that every bird of the pheasant species can be shot off from the ground and the race destroyed for the season, (for with their perfect method of preserving, the English game keeper ought to know to a bird how many there are on the preserve), but from the exceedingly rational reason, that such is the press of sportsmen, the *mitraille* of shot, all converging to a certain centre in a well arranged battue, that it is quite as often that the sportsmen get loads of No. 8 sent point-blank into their precious selves, as into the poor birds. It must be something amusing in a thick copse for the timid man when the game-keeper cries: "mark cock," to notice the element of self-preservation displayed on the part of the sportsman, and his taking to a tree in order to get out of the way of the fire. If direct manslaughter does not arise in these coverts, very certainly many a man's legs get riddled, and as a leading English paper expresses it: "Of course shooting in a covert even with beginners, is attended with less danger than making a railway journey; indeed sportsmen are safer as a rule in the field than they are in crossing London streets." But our contemporary goes on to say: "It might not be a bad notion for a host who entertains on a big scale for the coverts, but who leaves to fortune and good luck the lives of some of his guests through the incompetence of some disguised Winkle, to supply each of the party with a suit of leather similar to the coats of protection worn by some of the Cromwellian troops. A stout rhinoceros jerkin, a pair of double buckskin breeches, a thick vizor with a small aperture in it to see through, would compose a striking and lively-looking costume for a covert shooter." In fact, as is intimated, shooting parties in England, like dancing parties, have become too large and extensive in their proportions, and just as there is a crush of dancing men who clutter the stairs, so we may suppose every field at certain seasons to be thronged by sportsmen until even to bring a gun to one's shoulders can only be accomplished at the inconvenience of somebody else's comfort—of course the risk of life is a secondary consideration.

—What a vast amount of dogs they must have in England. When one notices the net duty on dogs, which ending on the 31st of March last, produced the handsome amount of £302,017.153, about \$1,500,000, there is no wonder why Mr. Lowe is so proud of the surplus in his budget. Guns of course, or the right to carry them, must bear a certain proportion to the dogs, and the Chancellor of the Exchequer rejoiced last year in the neat amount of £63,363 produced from this service. As to the price of that rare animal the dog, there is no limit to it, for we notice 125 guineas offered and refused for a dog, the winner of a late cup. Practical are our English friends, and admirably so. After the pointer and setter trials at Bala, full accounts of which we gave our readers in our last number, they have had on the same grounds a sheep-dog trial. Substitute sheep for grouse and the matter is understood. Not only was it a trial of dogs but of shepherds and of sheep. There was a prize for good looks, and a prize for good behaviour, and one collie combined most of all these qualities.

—It is now the close of the rod fishing, and on the Tweed the Forth, the Yore, Swall, Tay and Spey, all streams familiar to us, the fish have a chance for another year. On this Spey the sport before the closing must have been grand, as we read of salmon innumerable, of good size, of thirty-five pounds and upwards having been caught. Last season a salmon of seventy-five pounds was caught near Taymouth Castle, on the outlet to Loch Tay. The Scotch rivers, thanks to better preserving of the salmon, have afforded admirable sport this season.

—A human skull is reported to have been found near Osage Mission, Kansas, embedded in a solid rock, which was broken open by blasting. Dr. Wiley, of the mission, compared it with a modern skull which he had in his office, and found that; though it resembled the latter in general shape, it was an inch and a quarter longer in greatest diameter, and much better developed in some other particulars. He says of the relic: "It is that of the cranium of the human species, of large size, embedded in conglomerate rock of the tertiary class, and found several feet below the surface. The piece of rock holding the remains weighs some forty or fifty pounds, with many impressions of marine shells, and through it runs a vein of quartz, or, within the cranium, crystallized organic matter, and by the aid of the microscope, presents a beautiful appearance."

Sharp birds rooks and crows are. In Munich, where several cases of cholera have occurred, these birds, which before flew about the steeples and thronged the trees of the public promenades, have all emigrated, and the same thing is said to have occurred during the cholera seasons of 1836 and 1854. The fact, if it is a fact, may be worth noting.

—A hippopotamus, which escaped from a menagerie, is sporting in Savannah river, and the farmers are turning out by scores to capture him.

The Kennel.

—We have seen wonderful precocity in dogs, both at public exhibition, and at home, but never intelligence so nearly akin to reason as was possessed by poor "Mac," who died in Brooklyn last week, aged 7 years, weight 20 pounds. Mac was of the black and tan variety, and in early infancy was picked up an outcast and nearly dead with hunger and cold. His assiduous nurse in those days, and his constant companion ever since, was a negro dwarf, classically named "Romeo," who is now in his twenty-second year, stands thirty-eight inches high in his stockings, and is about the same weight of a three years old grandchild of his master living in the same house. It was by the care of Romeo that the dog survived, and it is quite probable that by subsequent daily contact the full measure of the intelligence of the one was imparted to the other, and so, in this way, Mac came to be the very extraordinary dog he was. Certainly, if Mac did not know fully as much as Romey, both understood each other perfectly, and communicated their ideas by processes familiar only to themselves.

Of course our readers expect to hear that Mac was a lithe, active dog, fully up to the most remarkable of the tricks we are accustomed to read of and see. He could find articles hidden, follow his tail backwards and reverse, sit on his haunches and stand on his hind feet, pick a piece of biscuit from the back part of a mantel-piece without touching his paws, catch and retrieve balls, run up a perpendicular wall to the height of nine feet and pick up a ball placed there; and in one instance he ran fifteen feet up the trunk of a tree and brought down a piece of paper which he had been told to get. Then he would meet the carriers at morning and evening and bring in the newspapers, and once when his master was sick in bed for many days he never left his room, but watched carefully until he improved, and when he was convalescent, brought spectacles, newspapers, handkerchief or whatever else he was desired to do—for it was the most remarkable feature of this dog's intelligence that he seemed to distinguish words when spoken to in ordinary tones. He would take any place on table, chair, or floor, where designated, would lie down, or stand, leave the room and enter, go up stairs and down, call Romey, or indicate his understanding of any ordinary want or word with the quickest intelligence. That he was a good watch-dog may be supposed.

One Sunday morning, about one o'clock, he heard some one prowling about the house; he first went to his master's bed and woke him—then tried to get out of the door. As soon as he was let out, he jumped a five-foot board fence into a vacant lot adjoining, gave chase to, caught, and tripped up a negro who had attempted to enter the house by the rear, and then stood over him until a policeman arrived and took him to the station. Of course he was a great favorite with the police ever afterwards.

Moreover, as a bird or rabbit dog, Mac was equal to any pointer or setter, which is remarkable for one of his breed. He would stand on a bird as well as any dog, and retrieve from the water as well as on land, never mouthing a bird, and in one instance bringing a winged snipe from a pond in such condition that it lived for some weeks after as a pet at the house of his master. As a pet among the children he was equally famous, and it was interesting to see him sitting side by side with his master's grandchild in a little wagon drawn by a white goat, with the redoubtable dwarf Romeo for charioteer.

Ordinarily, Romey stood by, a quiet but intensely sympathetic observer of Mac's traits and antics, but the gleam of pride that beamed from his great white eyes when the performances were concluded, showed how much he felt his own reputation to be involved in the success of his friend. It was not often, however, that an exhibition of the dog's qualities was called for, for Mac was not ostentatious of his own endowments, and his master, (a modest thoroughbred sportsman by the name of Dan Hughes, who keeps a quiet chop-house and billiard room in a three story brick house with vine-covered verandah and well-kept flower garden in front,) did not often call them into requisition. There was a *role*, however, in which both Mac and Romey appeared together, and which gentlemen in the neighborhood got wind of, and at last it became quite a set thing to take a stranger in to see it. It was no less than an imitation on a small scale, of the sports of the ancient arena, when gladiator met wild beast in deadly encounter—though no more than a half dozen spectators were allowed at a time. When the floor was cleared, the dwarf took position in one corner of the room, and with foot and fists advanced, sleeves rolled up, and grim determination portrayed on every feature, awaited the onslaught of his opponent who was held between Dan's legs, bolt-upright and paws presented. At the signal both met in the centre and then came a sparring match and struggle for vantage which would bring tears to eyes most stolid. At last the dog would get his lock on Romey's legs and never let go until he threw him. Then came the tussle, sometimes one on top and sometimes the other, with scarcely a sound perceptible except the labored breathing of the dwarf, until at last the dog would invariably retire the victor, leaving his opponent to pick up the quarters and dimes from the spectators, not the least bit injured by the fracas, but with an exchequer considerably improved.

Recently, after repeated offers from exhibitors of less note, the merits of this wonderful pair came to the notice of the irrepressible P. T. Barnum, and an engagement was closed at the rate of \$3,000 a year, to have begun on the very Monday before the dog died. It is needless to say

that there is mourning in the house of Hughes. All the doctors could not avert the catastrophe, though many were summoned at highest rates. After ten days of suffering from malignant sore throat, the dog choked in a spasm, and his stuffed body now looks down on the disconsolate Romey from its glass case above.

—The Harrier, as its name implies, is used for hunting the hare, and is nothing more nor less than a small fox hound and would be found a very useful animal for tracking rabbits. The American rabbit is a somewhat different animal from its English cousin; the latter in a wild state live together in warrens in immense numbers. The warren is a series of burrows or holes in the ground, of extremely irregular construction, and often communicate with each other to a remarkable extent. The American rabbit, so called, on the contrary live together in couples, bring forth their young on the surface, and when their offspring are able to take off to themselves they quit the parental roof and forage on their own account. The scent of the American rabbit is much stronger and holds to the ground as it were for a longer time, and in this respect bears a marked similarity to the English hare. The points of a good Harrier are similar to those of the fox-hound. There are necessary points in the shape of a hound which ought always be attended to by a sportsman, for if he be not of a perfect symmetry he will neither run fast nor bear much work. Keep in mind that the hound has much tedious labor to undergo, and should have strength proportioned to it. Let his legs be straight as arrows, his feet round and not too large, his shoulders well back, his breast rather wide than narrow, his chest deep, his back broad, his head small, his neck thin, his tail thick and bushy, and if he carry it well so much the better. Many of our friends will say it is impossible to procure such a dog, so perfect in all his points. Get one so nearly like the description as possible, and such hounds as are weak from the knees to the foot—mongrel breeds of pointers and setters—shoot them at once. To use the expression "shoot them," would perhaps seem cruel, but we can suggest no other method to rid the country of a breed of puny, miserable dogs generally found in a litter of whelps, which if allowed to grow and subsequently breed from, are sure to propagate animals as worthless as themselves. Attention to the proper weeding out of bad stock is the only way in which good staunch strains can be bred.

LOST, A BLACK-AND-TAN DOG.—If anybody has seen a black-and-tan dog, answering to the name of "Judge" going down street in company with a hard-shell-turtle, that won't answer to anything, and certainly won't answer to tackle, as the dog can tell you if you can get him to stop long enough, please halt the eloping pair, as they are the property of the editor of this paper. We are fondly attached to the dog on account of his vagabondish Bohemianish habits. He knows every dog in Peoria by name, and is on speaking terms with nine-tenths of the granger dogs that come in under the wagons, and he knows more of the inhabitants of this city than the tax collector does. The turtle is a more recent acquisition. It was placed in the back yard yesterday, and the dog spent an hour and a half trying to entice it to come out of its shell and be sociable. The old iron-clad maintained his reserve, however, until the dog crammed his nose against the forward part and began to sniff. The pair seemed to come to some sort of understanding at once, for the dog made an impetuous remark on a very high key, and they both started immediately on a trip after Donaldson's balloon. When the dog jumped over Fisher's barn we thought he had struck the eastern current and would go right through, but we learn since that he landed and was seen sauntering along like a whirlwind, the turtle staying right by him. We should be very sorry to lose the dog now, as he has acquired another important and valuable quality. He knows more about turtles than any other dog in the country, and it's mighty hard to find a real good turtle dog.—*Peoria Review*.

BOY RESCUED BY A DOG.—Stories of boys saved by dogs are perhaps more numerous than well authenticated. Here is one, however, from the *Glasgow Herald* which we feel certain is truthful:—

"Yesterday morning, about ten o'clock, a most exciting affair happened at Kilean river, about one mile from Tarbert, by which a little boy aged about eight years, named John McCallum, son of Donald McCallum, road-contractor, Kilean, nearly lost his life, and was only saved as it were 'by the skin of his teeth' from a watery grave, by the extraordinary sagacity and fidelity of a collie dog belonging to the boy's father. It appears that the boy was at the time along with an elder brother, amusing himself near the river by leaning over a wire fence on its banks and endeavoring to catch the small pieces of wood and other waifs borne down by the flood, when suddenly the wire on which he was leaning broke, and he was precipitated into the angry flood below, and borne along with the current towards the sea. His brother, unable to save him, ran to the house and alarmed his father and other of the neighbors. His father immediately rushed away along the banks of the stream, closely followed by his faithful collie dog. For a time no trace of the boy could be seen, but after proceeding about a quarter of a mile along the bank towards the sea, the dog apparently saw the object of their search coming to the surface, for he bounced into the stream and in a few moments was seen struggling to regain the bank with what seemed to be the lifeless body of the poor boy. Seeing that the noble animal had succeeded in securing his son, the agonized father, greatly at the risk of his own life, sprang into the torrent and seconded the frantic efforts of the dog to bring the boy to the bank, and in this way he was ultimately successful. When taken to the bank the boy was perfectly lifeless; but after he had been handled in the usual way for restoring animation by an old 'salt' named Neil McAllister, he gradually recovered consciousness, and is not much the worse for his dip. The little fellow was carried along by the current for nearly half a mile at a very rapid rate.

—A gentleman having his hair cut, was asked by the garrulous operator: "How he would have it done?" "If possible," replied the gentleman, "in silence."

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

COAST FISH.	LAKES.
Bluefish, Skipjack, Horse Mackerel, Black Bass, (<i>Micropterus nig</i> and <i>arabigan</i> .) (two species.)	
Weakfish, Squetang (Trout) Otolit-Pickrel, (<i>Esox reticulatus</i> .)	
thus.)	
BAYS AND ESTUARIES.	
Striped Bass, Rockfish. (<i>Labrax lineatus</i> .)	
SOUTHERN WATERS.	
Pompano, Snapper, Grouper, Rockfish.	Sheepshead, Tailorfish, Sea Bass.
	Trout, (Black Bass.)
	Drum, (two species.)
	Kingfish.

—The sea bass with which many anglers are now amusing themselves in lieu of something better, is a large-mouthed fish, with ample fins and tail, and having no teeth, the fisherman extracts the hook by inserting a finger in the mouth, clasping it by the under jaw. The sexes are readily distinguished, the female being of a dingy brown, while the male is of a beautiful bright blue-black. They are found inshore on reefs and mussel-beds, and are usually caught in company with the blackfish, though at certain seasons they are quite abundant on shoals and banks along our northern and eastern coasts. They vary in size from three-fourths of a pound to twelve, and are considered fine for boiling and for chowders.

Although the sea bass is a bottom fish, yet once on an outward-bound voyage to the southward of the Gulf Stream, we made fast to a ship's lower mast found adrift on the surface, which was covered with clam barnacles and surrounded with sea bass. We caught all that we wanted, and cut loose. They weighed from five to twelve pounds each, and were all male fish. The mouth of the sea bass is so large that in hauling them in from a depth of several fathoms the "sport" is reduced to a minimum by the time they reach the surface, the process almost drowning them. They are caught as far south as Florida, where two species are found.

—On Sunday, November 2, two striped bass were caught with hook and line, still fishing, by Messrs. W. H. and E. T. Walker, of 47 East Twelfth street, N. Y., on the Staten Island shore, near New Brighton, one of which weighed 8½ pounds, and the other 11½ pounds. As these are the largest bass taken at New Brighton in several years, they made quite a sensation among the experts who thronged to see them. The fishing ought to be good from now until ice comes.

NEW YORK, November 3d. 1873.

EDITOR FOREST AND STREAM:—

I am glad to see that Mr. Mather has taken an interest in the matter of stocking the Hudson, and hope that his communication in your paper 30th, ult. will draw attention of others to the importance of the subject.

And now is the time to try the experiment. The announcement is made in your paper and other journals that Livingston Stone is about to bring, or has already commenced to bring, eastward some two million of salmon ova, which he has been gathering from salmon from the Sacramento river. His operations have been conducted under directions of Mr. Baird, the Fishery Commissioner of the United States, and at the expense of the whole country. Whatever may be the doubts as to the salmon which are raised from eggs gathered in more northern latitudes seeking, or flourishing in rivers whose mouths are so far south as the Hudson and Delaware, there should be no question in regard to success with California salmon ova. The temperature of the Sacramento and its branches is much higher than that of the Hudson, as all know. A proper representation of the claims of the Hudson to a portion of these eggs by influential papers, and by our Fishery Commissioners—if they can be urged into showing some life—must result in Mr. Baird giving our river a trial. The cost is too great to be met by private purses; and Mr. Baird will be only too glad to have the opportunity of proving the usefulness of his work. The eggs could be hatched at the State hatching works, and the upper waters of the Hudson can now soon be reached by the Adirondack Railroad, to North Creek, and thence by stage. At Newcombe near the old Adirondack Iron Works, on the road to Long Lake, and thereabouts, there are many small and pure streams suitable for fry, and from thence down to Glenn's Falls there are long stretches of the river itself entirely free from tan-bark, saw-dust, or other deleterious matter. A little inquiry at Glenn's Falls would doubtless find many people acquainted with every mile of the Hudson and its tributaries above that place. I have seen many a river in Canada apparently less adapted to salmon, and where protection gives the seineries large hauls of that fish in the tide waters thereof, and good rod fishing above the flow of salt water.

There is no reason why, in a few years, with proper efforts now the new fisheries in New York Bay and the tidal waters of the Hudson, should not get their salmon as well as they now get shad. And it is just here that the importance of the subject appears; for as the value of the shad fisheries is great, so can our salmon seineries become valuable. It is as a question of commerce and food that I urge action. Rod fishing will necessarily follow, and when done in season cannot harm. In fact, as you know, rod fishing in Canada is the very preservation and safety of the supply of salmon for the purpose of commerce.

In regard to the saw-dust, I do not think that any great impediment, although doubtless injurious. Salmon can easily find spawning places above Albany and Troy, and the presence of a few dyes or other foulness in as large waters as the Hudson, at these and places below, will not prevent their going through and up until they do reach

pure water. In Scotland and the North of England the mouths and lower waters of their salmon rivers are often foul with every refuse which accompanies manufacturing, commerce, and civilization, and yet the fish know by instinct and memory that pure waters are above; and they go through thicker messes of scum in small rivers, than any refuse you can find diluted in the broad and deep waters of our river. They do not seem to mind the steamboats there, although the tugs fairly make the mud boil in the narrow channels of the small Scotch and English rivers.

Now, Mr. Editor, it will take four or five years to find out whether this salmon experiment will succeed (I heartily believe it will; vide Mr. Wilmot's success in Canada in the streams running into Lake Ontario, where salmon are now quite plenty, but whence they were driven years ago.) Will not our Commissioners apply to Mr. Baird for a fair proportion of these two million of California eggs, hatch them, and place them in the upper waters of the Hudson? Mr. Slack, of the New Jersey Commission, has done something; need our Commissioners do less? Salmon fry should be deposited next spring, and additions made for five years to come. Then will the expense of our State Commission have been indeed money well laid out. But now is the time to commence, at a small outlay. Apply for the salmon eggs now.

PISCATOR.

NEW YORK, October 2, 1873.

EDITOR OF FOREST AND STREAM:—

I cut the enclosed paragraph from a copy of the *Sun*: "A salmon weighing some seven pounds was taken near Governor's Island on Friday last. It is supposed to have belonged to the myriad of young ones let loose in the upper waters of the Hudson river two or three years ago."

Can you inform your many readers when and where the myriads of young salmon referred to in the above slip cut from the *Sun* of to-day's issue, were put into the Hudson?

I hope the facts are so; if not, then why not endeavor to put into the Hudson some of the two millions of California salmon eggs which Livingston Stone is announced to bring on from the Sacramento River? Surely, the Hudson is as important a stream to stock as the Susquehanna, Schuylkill, or Delaware, and as well adapted for salmon. As these two million eggs are paid for by the United States Commission, we have a right to demand that some of them be placed in the Hudson. Will you urge this matter upon Mr. Baird?

Yours,

SALMO SALAR.

[We do not know of any "myriads" of young salmon put into the Hudson, nor of even one fish. Some private parties are hatching salmon in a tributary, and are succeeding well, we believe. See No. 11 of this paper, page 168.—Ed.]

Yachting and Boating.

HIGH WATER, FOR THE WEEK.

DATE.	BOSTON.	NEW YORK.	CHARLESTON.
	h. m.	h. m.	h. m.
Nov. 6.....	ev. 36	9 23	8 36
Nov. 7.....	1 27	10 11	9 27
Nov. 8.....	2 18	11 00	10 18
Nov. 9.....	3 09	11 54	11 9
Nov. 10.....	4 01	ev. 48	ev. 1
Nov. 11.....	4 56	1 43	0 56
Nov. 12.....	5 49	2 35	1 49

—Yachting and boating being virtually closed for the season, and in order that our subscribers should not lose the interest that they have manifestly taken in these manly pastimes, we shall give from week to week during the fall and winter months a short review of all recognized Yacht and Boat Clubs, throughout the United States and Dominion of Canada. If secretaries of clubs and friends of yachting and boating will kindly "lend us a hand," and send us items of service to those who take an especial interest in aquatic sports, they would be furnishing information which will be read with profit and pleasure. As the New York Yacht Club is the oldest organization of the kind, and an acknowledged authority on all matters pertinent to its name, we give it the first place and will start with their August cruise. The season has been one of varied success, both as regards weather and the comparatively small list of entries to contend for the large number of cups, prizes and purses, which have been presented by several officers of the club. The August cruise was sadly interfered with, as Long Island Sound has scarcely ever witnessed such a succession of bad weather during the first four days. The vessels of the fleet rendezvoused at Glen Cove on the 11th of August, Rear Commodore Kingsland taking command of the fleet in consequence of the absence of the Commodore and the Yacht of the Vice Commodore. The Squadron started for Newport under very adverse weather, which compelled several of the yachts to make harbors for shelter where they remained for two days weather bound, and after a series of delays finally arrived at Newport. The fleet started from Newport on the 18th on a cruise to Martha's Vineyard, but the weather was again very dirty. After cruising and tacking for sometime, several of the yachts becoming disabled, the Commodore signalled the order to return to Newport. The Bennett Cups were sailed for August 21st. Schooners Alarm, Eva, Foam, Idler, Josephine, Madeleine, Madgie, and Tidal Wave; Sloops Ariadne, Qui Vive, Vision and Vixen, were the starters. The Madeleine won the cup, and in a run of forty miles made the fastest time on record—3h. 22m. 23sec. On August 23d the Douglass Cups were sailed for; the Madeleine again winning the Cup for Schooners. The Vision won the Cup for Sloops. James Gordon Bennett, Esq., the Commodore of the Club, presented a series of cups, prizes and purses, which were sailed for in October last.

The race for the Schooner and Sloop Cups each of the value of \$500, was sailed on October 2d. The wind was very light and the weather just the opposite to that of August. At the south-west spit the wind freshened a little, barely sufficient to fill the sails of the smaller craft, the larger boats having no chance at all in the race. As the race by the rules had to be sailed within eight hours, the Eva won the Cup for Schooners, and the Vision the one for Sloops, with but a few minutes to spare. The ocean races were sailed one week later on October 9th. These races are so fresh in the minds of our readers that we will only give the winners of the different prizes. The Enchantress won the \$1,000 Cup for Schooners. The Thomas S. Negus won the \$1,000 Purse for Pilot Boats. The W. H. Van Name the \$250 Purse for Working Schooners, and the Wallace Blackford the \$250 Purse for Smaeks.

As we finish this short resumé of the New York Yacht Club, it suggests itself that if the club in question would build their yachts stauncher, make the spars a little shorter and stouter, they would better withstand the wear and tear of the season. The fact cannot be concealed that the expenses of keeping up such yachting establishments must be excessive, and thus debar many gentlemen from entering into this most exhilarating sport, owing to the example shown them of building pretty, light, racing craft which must be constantly requiring repairs and large outlays of money.

—The American Schooner Faustine, E. Y. C., Mr. Peabody Russell, is now hauled up on Hansen's slip at Cowes, England, having a false keel put on, which will enable her to go to wind better than she at present does.

—Mr. Loubat's Yacht Enchantress, is undergoing a thorough refitting, and will have a new set of sails preparatory to making her European voyage. She will most likely start on or about the 12th inst.

HARVARD COLLEGE, November 1, 1873.

EDITOR FOREST AND STREAM:—

Notwithstanding Harvard's defeat at the Springfield regatta, which, by the way, she has the grace to acknowledge with all candor, the interest in boating continues unabated. The Scratch races held on October 4th, were more than usually successful. In the single scull race Stone, of '74, came in ahead, and showed some excellent rowing. In the race for double sculls, Appleton and Wetmore were victorious over their opponents of '76. The race for six oars was contested by two crews miscellaneously made up. The fall regatta took place on the 25th of October on the Charles. Owing to rough water only the last race on the programme was rowed, that between the class crews. The Senior, Sophomore and Freshman classes were represented. These crews pulled respectively 37, 38, and 39 strokes per minute at the start, and held to that rate until the end of the race. The Seniors came in ahead, closely followed by the Sophomores. The Freshmen did well for the short time they have practiced together, and raise some hopes that Harvard's defeat in the Freshman race at Springfield will be atoned for next season. The following is the time:

Senior crew.....15 min. 7 sec.
Junior crew.....15 min. 15½ sec.
Freshman.....15 min. 35 sec.

An important meeting of the University Boat Club was held October 21st. The treasurer's report showed the club to be in an excellent financial condition. The debt on the boat-house, which at the beginning of the year amounted to \$3,000 has been reduced to six hundred. An amendment was made to the constitution to the effect that the treasurer shall be a graduate of the University, who, it is supposed, would keep the accounts more systematically than an average undergraduate. HOLDEN.

—THE SPANISH SAILOR'S PARROT.—Mr. Bret Harte, in a charming letter to the *Tribune*, tells of meeting an old lady of past a hundred, who had seen Washington. From the old dame he gathers the story of a sailor and a parrot, which Mr. Harte tells in his inimitable way:—

"It was a terrible night, that winter's night when she and the century were young together. The sun was lost at three o'clock; the snowy night came down like a white sheet that flapped around the house, beat at the windows with its edges, and at last wrapped it in a close embrace. In the middle of the night they thought they heard above the wind a voice crying "Christus! Christus!" in a foreign tongue. They opened the door—no easy task in the north wind that pressed its strong shoulders against it—but nothing was to be seen but the drifting snow. The next morning dawned on the fences hidden, and a landscape changed and obliterated with drift. During the day they again heard the cry of "Christus!" this time faint and hidden like a child's voice. They searched in vain, the drifted snow hid its secret. On the third day they broke a path to the fence, and then they heard the cry distinctly. Digging down they found the body of a man—a Spanish sailor, dark and bearded, with ear-rings in his ears. As they stood gazing down at his cold and pulseless figure, the cry of "Christus" again rose upon the wintry air, and they turned and fled in superstitious terror to the house. And then one of the children, bolder than the rest, knelt down and opened the dead man's rough pea-jacket and found—what think you?—a little blue and green parrot nestling against his breast! It was the bird that had echoed mechanically the last despairing cry of the life that was given to save it. It was the bird that ever after, amid outlandish oaths and wilder sailor songs that I fear often shocked the pure ears of its gentle mistress and brought scandal into the Jerseys, still retained that one weird and mournful cry."

—Why is moose calling allowable in hot weather? Because it is a low device; (load of ice).

—Desdemona's destiny—amour; (a moor).

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, *Alces Macchis.*) Caribou, *Tarandus Rangifer.*)
 Elk or Wapiti, *Cervus Canadensis.*) Red Deer, *Caracus Virginianus.*)
 Rabbits, common Brown and Grey.) Squirrels, Red Black and Gray.)
 Wild Turkey, *Meleagris gallopavo.*) Quail, *Oplyx Virginiana.*)
 Woodcock, *Scotopax rusticola.*) Pinnated Grouse, *Tetrao Cupido.*)
 Ruffed Grouse, *Tetrao umbellus.*) Pigeons, and all kinds of Wild Fowl

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—We learn that there is an extraordinary current of winter travel setting toward the semi-tropical resorts of the South. All our immediate friends and acquaintances are preparing for the journey, and many hotels report orders for board coming in rapidly. The same is true of Nassau and Bermuda. The Victoria Hotel at the place first named has had all its rooms engaged for some time, and are turning away applications. In addition to the usual company of invalids and valetudinarians, a larger number of sportsmen than usual will go to Florida during December and January. For the information of such, we print herewith a list of the game of Florida, which we have obtained with some little difficulty, and beg those sporting papers who prig from us every week, to give us the proper credit in this instance, if they copy. We have the scientific names and classification of the varieties mentioned, so that there can be no doubt of our perfect accuracy here.

Animals.—Panther, common in all the unsettled parts of the State, lynx, abundant and do; gray wolf, some nearly black, not common; grey fox, common; raccoon, very abundant; common bear do; red deer abundant but very small; southern fox squirrel, abundant, confined to pine woods, afford fine sport; gray squirrel, very abundant and very tame; gray rabbit, marsh rabbit, and opossum, very common.

Birds.—Wild turkey, quail, killdeer plover, wilson plover, piping plover, golden and black belly, very numerous; woodcock, not very abundant; snipe, very numerous, fly in large flocks and cover the whole country; red breasted snipe, very numerous; willets, yellow legs, and godwit, very common; Hudson curlew and esquimaux, rare; long-billed curlew, abundant; black-neck stilt, rails, galannules, herons, cranes and ibis, all common.

Ducks, Geese, &c.—Mallard, very abundant; black duck, common; this bird is of a lighter color than ours, its neck being more like the female mallard's, it is said to breed in Florida; pintail, green winged teal, blue winged teal, blue winged shoveller, wood duck, scaup duck, red head, all abundant; bald pate, canvas back, butter ball, ruddy duck, all common; hooded meganser, abundant; Canada goose, common in western Florida.

—Duck-shooting is at its height in Canada now, and the fowls are constantly passing South in large numbers. Local papers report individual bags of 150 to 180, and bets are up on a bag of 200 before the season closes. We announced the opening of the ducking season last week, and now hear through our private correspondence of good sport all along the coast line from Montauk to Currituck. Duck shooting is one of those sports which cannot be enjoyed in the fullest perfection in warm weather, and the advent of these fowl means northeasterly storms, driving sleet and chilling blasts, the force of which only those can appreciate who lie over their stools for hours together. By the way, we hear of a man down on Long Island who has seventeen educated wild geese which he has tamed and employs as stools. What a mean business to engage in, and how mean those wild geese must feel to engage in such a business, wheedling their unfortunate relatives within gunshot range day after day! Why, it is the worst kind of coquetry! The most abundant species along our coast are the canvas-back, red-head, black duck, blue and green winged teals, shoveller, bald-pate or American widgeon, coot, and pintails. The pintail, black duck, coot, gray duck, wood duck and blue-winged teal, are properly fresh water fowl, and are not abundant along the coast. The coot is often confounded with the cider or sea duck, but is quite a different bird, inhabiting fresh water and frequenting the weedy margins of streams, but as they dive, hide among the plants, or fly, as the humor takes them, are somewhat difficult to procure. Mallards are abundant in the West, but are seldom seen to the eastward of New York. There are two varieties of black duck, the smaller species now here giving place soon to the more hardy northern race. Pintails usually fly in very large flocks. The English teal, *anas crecca*, occurs very rarely on our coast. Gunners should be continually on the lookout for them, as specimens found here are quite valuable. The shoveller is very abundant down South, and frequents fresh and salt water. The gray duck is rarely found in New England.

—Those who are not sportsmen are sometimes skeptical in regard to tolling ducks, and even some duck shooters scarcely put credence in this device. Undoubtedly the plan of "tolling ducks" in the United States was derived from the Indians, who imitated the fox. "In Norway and Sweden," says Mr. Lloyd, in his exhaustive work on the game birds and wild fowl of these countries, "ducks collect in large flocks in the neighboring lakes and rivers, the strands of which are in general flat. The fowler, in observing the birds, walks as near to them as he can in safety

when, falling on his hands and knees, he makes his further approaches slowly and cautiously. In the meantime he causes his well-trained dog, who should be of a reddish color, to gambol before him, which he effects by every now and then throwing the animal a crumb of bread that it catches in its mouth. The ducks, attracted by the antics of the dog, gradually approach the strand, and thus the man is often enabled to get sufficiently near them to fire with effect." According to the accounts of the men in question it was from seeing the way in which the fox at times secures his prey that they were induced to adopt the plan spoken of, for that cunning animal in the autumn resorts to a similar ruse to capture young ducks. He then promenades near to the water's edge, sometimes vaulting high in the air, and at others crawling on his belly, his brush meanwhile trailing along the ground. These manoeuvres of his so excite the curiosity and tickle the fancy of the ducklings that they gradually swim towards him, occasionally so near, it is said, as actually to seize hold of his tail with their bills; but they usually pay dear for their temerity, for the wily fellow seizes his opportunity and pounces on one or other of them. "To the devices of the fox," says a Swedish gentleman, "I have been an eye witness, and it was only last autumn that my bailiff shot one of these animals in the very act of beguiling young ducks in the manner described."

—Mr. Phillip Reid Howard, a prominent citizen of Long Island and one of its large landed proprietors, was most cruelly shot by two gunners last Sunday while remonstrating with them for shooting on his premises. His shoulder and left side were literally blown to pieces. Mr. Howard had arranged to celebrate his fortieth birthday with his aged father and mother, who were present to meet him on that occasion. Two men, who are probably the criminals, have been arrested on suspicion, and are in jail at Jamaica.

—A letter from Brainard, Minnesota, says: "The brush about town almost swarms with grouse. Three of us were deer hunting last week, the first day we killed a buck and a doe, next day four grouse (no dog,) and the third day one buck. Deer are very plenty this fall. A few days ago I met the "Baron" Evans, of the New York *World*, who was off on a hunting expedition to Red Lake with some of the Yellowstone Expedition party. He speaks very kindly about you and your FOREST AND STREAM."

—The Staten Island Shooting Association, organized only a short time ago, is now in quite a flourishing condition. It now numbers, including honorary members, about eighty, all gentlemen connected more or less with the interests of the island, and desirous of preserving game according to the requirements of the law. It is proposed to import a large stock of quail, which will be set free over the whole island, which affords abundant facilities for cover, shelter and breeding.

—Captain Wild and party, four guns, killed last week on the flats at Kinderhook, Columbia County, N. Y., twenty-seven reed birds and eight English snipe, twenty-two black ducks, and four widgeons.

—Dr. A. and friend killed last week at Katonah, Westchester, four woodcock, thirteen ruffed grouse and eight rabbits.

—Colonel C. and party, three guns, killed at South Oyster Bay, L. I., twenty-seven quail, fifteen willets and thirty-two wild fowl of all kinds.

—At Olive City, Ulster County, N. Y., a party of three killed two dog foxes and one vixen.

—The prices of furs generally are lower than last season, though no schedules are yet published.

FOURTH CONTEST FOR THE AMATEUR RIFLE CLUB BADGE.

On Saturday last, the fourth contest for this much coveted badge, offered by the Amateur Rifle Club, took place at Creedmoor.

There has been no small amount of interest excited in these particular matches, and almost all of the best shots were present on Saturday. The weather as far as light was concerned and absence from haze, was all that could be desired; the great drawback was the wind, which blew in puffs, from right to left, across the line of fire, somewhat disturbing the accuracy of aim. Such accidents of wind are beyond the power of the rifleman to prevent, and as the gusty days must be taken with the calm ones, in order to make up the average, such natural obstacles to correct shooting only demand greater skill of the marksman, and allowances for the wind were accordingly called into play by the crack shooters.

To insure accuracy on this particular match the most successful shots made three feet allowance for effects of wind, and this too with a charge of eighty-five grains of powder.

As may be seen by the score, the shooting was remarkably good, Mr. Robert Omand securing the badge with a score of 25. The badge must be won three times by the same person in order to become the property of the rifleman. It has been won so far by Mr. Thomas Lloyd, with a score of 14 on the first match; by Mr. John Bodine, with 27 on the second match, (28 possible,) and by Mr. J. P. M. Richards, in the third match, with a score of 26. Between the 14 score which won the badge the first time, and 25 which was made by Mr. Omand on Saturday on the fourth match, the vast improvement made at Creedmoor is manifest. The total averages of the various matches for the Amateur Rifle Badge has been as follows:—

First match.....	14
Second match.....	101
Third match.....	191
Fourth match.....	191-18

This shows even better than does the individual scores the average made.

MATCH FOR THE AMATEUR RIFLE CLUB BADGE, NOVEMBER 1.

Name.	Arm.	Seven shots at 500 yds.	Total.
Robert Omand.....	Remington sporting.....	3 3 4 4 3 4—	25
G. W. Wingate.....	Remington sporting.....	4 2 4 3 4 4—	25
J. Bodine.....	Remington sporting.....	3 3 3 4 4 4—	24
J. P. M. Richards.....	Sharpe.....	3 3 4 3 4 3—	24
H. Fulton.....	Sharpe.....	4 3 2 4 2 3—	22
A. Pyle.....	Remington military.....	2 2 3 4 4 3—	21
G. Strube.....	Remington sporting.....	4 3 4 3 3 3—	22
J. S. Coulin.....	Sharpe.....	2 3 3 4 3 2—	20
G. W. Yale.....	Sharpe.....	4 3 4 0 2 3—	20
W. Robertson.....	Remington sporting.....	4 2 0 4 2 4—	20
J. Hamilton.....	Sharpe.....	2 4 3 3 0 3 4—	19
A. V. Canfield, Jr.....	Remington sporting.....	3 0 2 3 4 4 3—	19
L. M. Ballard.....	Remington sporting.....	0 4 3 0 3 3 4—	17
L. M. Bruce.....	Sharpe military.....	3 0 3 0 3 3 4—	16
A. J. Hennion, Jr.....	Sharpe sporting.....	3 4 0 0 3 2 3—	15
J. E. McEwen.....	Remington sporting.....	2 3 4 0 2 0 3—	14
G. Crouch.....	Sharpe.....	3 0 3 2 2 2—	12
A. Alford.....	Remington.....	0 0 0 2 2 4—	8

Wind variable in intensity, blowing from right to left. Clear.

The three best scores, 25, 25, and 24, were made with the Remington rifle. Between Messrs. Omand and Wingate the shooting was very close; the outer on Mr. Wingate's third round making him lose the match. Mr. Bodine's score, 24, was a fine one, closing with three bull's eyes. Mr. Richard's score, 24, with a Sharpe, was also an excellent one. Of course by this time, what may be called the "dead wood," has been knocked away, the noble company of marksmen are getting weeded out, and the best shots, as may be seen, are always coming to the front. Let not however those who tail the score be abashed. Practice and perseverance will do everything, and those who are last, may be some day first.

By reference to the score of Saturday, it is noticeable that as far as the weapons are concerned the contest appears to be narrowing down to a struggle between the Sharpe and Remington rifles, few others being represented. Those used in this match were very much alike in their model, all using a long, hardened and swedged bullet about 44 calibre, with a paper patch; charge about 85 grains, loaded by hand. The former appeared to have a little the best sights, being provided with a wind gauge on the fore sight, the want of which on the Remington rifle was greatly felt, but the victory was undoubtedly with the latter. Both are good guns, however, and those manufacturing them recognize the fact that Creedmoor is the place where their reputation is to be made, and spare no pains to produce a weapon from which the best results can be obtained.

Mr. Omand, the victor of last Saturday's match, is one of the crack shots of Canada, having been a member of the Victoria Rifles, of Montreal, and having gone three times to Wimbledon as a member of the Dominion team, being one of the winners in the match for the Rajah of Kolapore's Imperial Challenge Cup, won by the Canadians in 1870. It is therefore not only no disgrace for the Amateurs to be beaten by him, but rather a subject of congratulation that with as little practice as they have had they can hold their own so well against marksmen of such experience. In order to afford a comparison between the skill displayed by the crack shots of the English and Canadian volunteers and that of our Amateurs, we give the scores made at 500 yards in the above mentioned match, in which the Canadians have been conceded to have covered themselves with glory:—

Canadian Team.	Score.	United Kingdom Team.	Score.
Captain Werner.....	26	Ensign Tomlinson.....	26
Lieut. Birch.....	23	Sergt. Michie.....	25
Sergt. Major Harris.....	23	Sergt. McCreath.....	24
Sergt. McMullen.....	23	Sergt. Leeson.....	22
Captain Bell.....	22	Sergt. Hutchinson.....	22
Sergt. Wilkinson.....	22	Private Coulson.....	21
Sergt. Omand.....	22	Ensign Gray.....	21
Private Jennings.....	22	Sergt. Lowry.....	21
Private Morrison.....	22	Sergt. Cooper.....	21
Sergt. Kincaid.....	21	Sergt. Hooper.....	21
Captain Gibson.....	21	Sergt. Lane.....	21
Private Oronhyateka.....	21	Private Easton.....	20
Sergt. McDonald.....	20	Private Waller.....	20
Sergt. McNatchan.....	20	Corporal Downes.....	19
Sergt. Sache.....	20	Corporal Hewson.....	18
Captain Cotton.....	19	Captain Burt.....	18
Captain McClingham.....	19	Lieut. Eddrain.....	17
Private Mason.....	17	Private Clark.....	17
Ensign Waste.....	15	Ensign Snelus.....	17
Lieut. Little.....	13	Private Buchell.....	16
Total.....	411	Total.....	407
Average, 20.55.		Average, 20.35.	

Comparing these scores with those made in the Amateur Match, which are given above, it will be observed that out of the forty picked English and Canadian sharpshooters, there were but two who excelled the score made by Messrs. Omand and Wingate, and these did so but by a single point, and that there were but four out of the forty that made 24 or over, which was done by a like number of the Amateurs, viz.: Omand, Wingate, Bodine and Richards, out of but eighteen competitors, a number which if Messrs. Collins, Burton and several others of the Amateurs had been present, would probably have been increased. As it is, the average of score of the Amateurs as a whole, is 17 points, (or if the lowest score is excluded, 19.22 points,) as against 20.55 of the Canadians, and 20.35 of the Englishmen.

The announcement of the Diamond Badge placed at the disposal of the National Rifle Association by Messrs. Remington and Son, and now in course of manufacture, has caused quite an excitement amongst our riflemen. This badge will be the most elegant and costly yet offered. It is to be won by the most skillful of our many good shots at long ranges, 500, 800, and 1,000 yards, being the distances. The following are the conditions of the contest: Open only to members of the Association; weapon, any breech loading rifle, weighing not over ten pounds, trigger to pull not less than three pounds; sight, any but telescopic; distance, 500, 800, and 1,000 yards; seven shots, (two sighting shots at each distance;) the twenty competitors in each match making the highest score at 500 yards to be alone allowed to fire at the 800 yards, and the ten making the highest at that distance to shoot at 1,000, the prize to be given to the highest aggregate score, the badge to be won

three times, (not necessarily consecutively,) before becoming the property of the winner. In case ties are made at any range that cannot be decided under the rules without "shooting off," the competitors making them will be allowed to shoot at the next distance. No practicing to be done on the day of the match. The first contest will occur on the 14th inst.

We intend giving our readers the fullest description of these and all other matches.

On Saturday next, at 3:30 P. M., the fifth regular match for the Amateur Rifle Club Badge, will take place at Creedmoor. Open only to members of the Amateur Rifle Club, with any rifle not over ten pounds in weight, the trigger not less than three pounds test pull; telescope sights excluded; distance, 500 yards, position, any, but without artificial rest; rounds, seven, with the privilege of one sighting shot. The badge to become the property of any member winning it three times.

The Horse and the Course.

—At Prospect Park Fair Grounds near Brooklyn, a match of \$500, mile heats, best three in five, to wagon, between Lady Pell and Ruby, came off on October 30th. Lady Pell won. On October 31st, the first race at Prospect Park was for a purse of \$500 for 2:28 class. Joker won the race in splendid style in three straight heats. Time—2:27½—2:28½—2:27. The next race was a match of \$500, mile heats, best three in five in harness, between Louise and Lady Wood. Louise won the first heat and Lady Wood the next three and won the match. The next race was a match of \$1,000 against time, ten miles in forty minutes. D. Gilmour's Delver trotted the distance with ease in 33m. 46sec. On November 1st, the great race between Judge Fullerton, American Girl and Camors, for a purse and stake of \$4,000 took place. Judge Fullerton won. Shortest time—2:21.

—The last day of the annual meeting of the Maryland Jockey Club took place on October 28th. The attendance was much more numerous than on the previous days. The first race was for a purse of \$400 for two-year-olds; one mile. Six horses started. McDaniel's bay colt won by two lengths. Time—1:56. The second race was a two-mile heat handicaps for all ages. Chickabby won the first heat and Bessie Lee the two last, distancing all the others. Time—4:06½—4:06½. The third race was for the Consolation purse of \$500 for horses that had run and not won during the meeting. Mile heats. Eight horses came to the post, all of which were distanced after the first heat, (not being ready when the bell rang), except Artist and Merodac. Artist won the second and third heats and the race. Time—1:57—2:00½. The fourth and last race of the meeting was a steeplechase post stakes, \$25 entrance, with \$750 added by the Club. Distance about two miles and a half over a fair hunting course. Duffy, the favorite, won.

—There was a good attendance at Deerfoot Park, near Brooklyn, on October 29th, to witness several exciting trots. Purse of \$300 for horses that had never beaten 2:34. Mile heats; best three in five in harness. There was some unpleasant feeling manifested in regard to the driver of Tanner Boy after winning three heats. The next race was the 2:30 class, for a purse of \$400, and was finished October 30th. Five horses started. Spotted Colt won.

—At the Suffolk Driving Park, Babylon, L. I. Crown Prince beat Young Bruno in three straight heats. Time—2:27½—2:31½—2:30.

BOTS IN HORSES.—In the *Popular Science Monthly* there is a short article relative to the power of endurance manifested by the larvæ of some insects, and among them of the bot fly. It mentions a case where a piece of the stomach of a dead horse, which was covered with bot worms was spread on a board, and spirits of turpentine was poured on the worms, yet after an hour not one was detached from the flesh. Then whale oil was poured on them, when they let go their hold, and died almost immediately. Hence the inference that whale oil should be used to detach the worms from the living horse, when attacked by bots.

Says one of our correspondents, the following is a sure cure for bots in horses:—Give the horse two quarts of new milk and one quart of molasses mixed; in fifteen minutes give two quarts of strong sage tea; in thirty minutes give three pints of raw linseed oil, a sure cure in the worst cases. The molasses and milk make the bots let go, the sage tea will pucker them up, and the oil will carry them off.

Bots are the larvæ of the bot fly, which deposits its eggs upon the hair of the fore legs of the horse, whence, via mouth, they are swallowed and cause the 'bots' in horses.

FEEDING HORSES.—Waring says: "Very much of the value and availability of the horse depends on the quality and quantity of his food and on the manner in which it is given to him. Too much at one time, too little at another, food of improper kinds, or in a bad state of preparation, is the foundation of one half the ills that horseflesh is heir to. There is no worse economy than the stinting of food, or the administering of bad food because it is cheap. Also, there is no more wasteful practice than the giving of too rich and expensive food. Neither is there a greater source of loss in connection with the keeping of farm horses than the neglect to which they are systematically subjected. The horse, even in the rudest state, is of a somewhat delicate organization. His powers are very great—greater than is generally supposed; but in order to their development and to their long endurance, it is necessary that he be fed with the greatest care and with an ever watchful judgment. Probably the capital investment in farm horses in the United States would go twice as far—that is, the animals would last in the useful condition twice as long—if they were thoroughly well fed and cared for.

Art and Drama.

WE assert that all experience in England and this country shows that there is no real feeling for the higher development of music in the Anglo Saxon people, whatever that designation may mean. Englishmen and their descendants in the United States are, as a rule, incapable by nature of their blood and brains of feeling sublime emotions, from the representations of the Grand Opera. We venture to assert without fear of contradiction, that a healthy, well developed American citizen of the best type does not exist, who, however much he might affect raptures over "Trovatore" or "Don Giovanni" and their attendant train, does not, deep down in his interior judgment, feel a sovereign contempt for the whole conglomeration. We can recall many of these artificial admirers of the opera who, fifteen or twenty years ago, went in for building an Academy of Music, and who were to be seen night after night in the boxes waving their white kids with enthusiasm over the reigning stars who, now that they are matured men, would deny with much promptness that they ever did such a thing; yet a love of music understood, is inherent, and strikes with equal sweetness upon the mind old or the mind young.

What is the character of the music one hears trolled in our streets, giving to the true observer the key-note to our national taste? What are the tunes one hears dinned by the tired mechanic or whistled merrily by the boot-black, if they have no "brunette blood" in them? In fact what are the tunes you hear ventilated in the highways, by whomsoever sung, whether by the traveled coxcomb, newsboy, broker, or policeman? They are just such eccentricities of melody as "Popsey Wopsey," "Down in the Coal Mine," "Molly Darling," "Dat Leetle German Band"—in fact whatever may happen to be the reigning favorite of the hour. The American nature musically, runs as naturally into something that is a stirring air, or the simple ballad, or it runs to speculation and recklessness. Our people get off their enthusiasm in business, and they have no time because they have no desire to see a "six-foot" gentleman bewailing his misfortunes under the really grotesque situation of musical accompaniments.

With two operatic companies, during the present season, struggling for supremacy, with competent artists in the various departments, with the stock of operas equal to those that delight the Parisians at the Italian Opera and the Theatre de l'Opera Comique, and quite on a par with the ones which amuse educated John Bull at Covent Garden and her Majesty's Theatre, Haymarket, we have, doubtless, some reason to believe that we are a musical population. Mr. Max Maretzek, during the brief engagement of his superior troupe, has had no cause possibly to quarrel with his receipts. As for Mr. Strakosch, he has so far given no signs that the opera has not been fairly patronized, but with less enthusiasm than in former years, when he has marshalled his operatic hosts to victory and legitimate plunder.

That the opera has no home in the hearts of our people is eloquently illustrated by the uncertainty of its appearance. Even if expected, its friends have to preliminarily draw up subscriptions and recruits and prepare the way for its coming by artificial excitement. It is nothing more than a guest which we receive with honor; for it is respectable and of courtly associations "over the water." But we soon get wearied of its peculiar and anti-republican ways; the masses which wait upon its presentation, if gentlemen, chafe under the discipline of the "straight-jacket dresses" and the ladies are rapturous because they can display their last new dress.

But there is one American city—New Orleans—(an adopted child) where the opera for more than half a century has had a home, enshrined in the traditions and hearts of an entire community. Old men of that city who still maintain their love, talk with enthusiasm of what they saw and heard in the days of their youth. Opera in New Orleans "from the earliest times" has been performed from October to May, opening with a crowded and delighted audience, and closing at the end of the season with a brilliant ovation.

The truth is, it is a curious thing to see how this love for the higher graces of music pervades the entire Creole population of that city—that is, that portion of the population directly descended from the original French and Spanish inhabitants. They do not seem to be educated into this love, so much as born with it. The opera is one of their necessities, like their dinner and their sleep. No Creole is too old, no Creole can hardly be too young to enjoy it. Your true Creole has his "seven ages" (as we all have) like the man in *Monsieur Jacques'* world; but whatever may be his time of life from the "whining school boy" era, to the "lean and slipped pantaloon" epoch, he never loses his deep and critical sense of enjoyment in the opera.

To the Creole, music is the spirit of his existence. During the day, in his walks, at home, at work, wherever it may be he hums some favorite *aria*; and at night the old French quarter, up to the small hours, is often alive and ringing with cleverly executed *cavatins*. This is not imitation; it is only the expression of keen enjoyment and genuine appreciation. To such a community, whether man or woman, youth or maiden, the drama has no innate claim upon nature or imagination, it is only the opera that fills the soul.

In explanation somewhat of this absorbing sentiment we should say that the Grand Opera of New Orleans is French, that it is consequently sung in a language familiar to the delighted audience. That the action, the stories told, the

traditions suggested, appeal to the imaginations, the main springs of which "are still in Normandy," and the proverbial love of these people for home and its hundred associations, is the last to die in the child of La Belle France.

Our recollections of a grand night at the Opera House of New Orleans can never be effaced. It presented the musical taste of the most musical of American cities, brought face to face with the stranger. The parquette crowded with the young bloods and their experienced elders. The box circle (with its back-ground of *loges* brilliant with olive complexions, and great dark flashing, fascinating eyes—their owners dazing with toilets fresh from the most artistic hands of Paris; the gallants, with exquisite grace loitering in the corridors; the substantial tradesmen and their families in the *loges grillees* in the third gallery; the hard-handed workmen thronging the *quartriemes*, insensible, for the moment, to the cost of the ticket, but with all his senses riveted upon the most subtle touch of the musicians of the orchestra, or the most delicate note of the favorite singer; while up near the mythological chariots of the frescoed ceiling, the "colored population," with its native love of harmony cultivated by the surrounding atmosphere, was in goodly numbers, absorbed in ecstasy.

But there was another charm. The fashionable schools of New Orleans under the charge of Parisian teachers, where was gathered the brightest and most beautiful of the Creole and American population, had as part of their "regular studies" a weekly visit to the opera, the expense of the ticket, the carriage hire and other incidentals being charged in the bill, along with "use of the globes." It was a fascinating sight to see these youthful beauties, charming representatives of two conquering nations, one of the Northern and the other of the Southern type, file into their *loge* under the guardianship of the teacher, who directed their every motion with the precision of an army martinet; if one of the young ladies needlessly rumbled one fold of her dress, or shook one ringlet, or gave one too emotional look for the occasion, this earnest chaperon would flash her eye in reproof, and shake her gloved finger in condemnation. And then, when the curtain rose, how these young beauties, with hearts palpitating with absolute rapture had to suppress their feelings, so as to keep the full demonstration of their pent-up joy until the duenna gave the signal, and then, and not till then could they flash their bright eyes and wave their fans and flash their gloves at the opera singers, as understood by the watchful duenna, but really at the admiring beaux who were gazing at them from the box circle.

Nor should we forget to mention the "happy conceit" of having delicate refractions handed in at the *loges* between the acts, and the visiting of intimate acquaintances; in fact the absolute "ceremonious receptions," so full of compliment and grace, that went to fill up and enrich these delightful entertainments—delightful because thoroughly enjoyed. Nor were the interludes, though long, ever heavy to any, for the neighboring *salons* are filled by the members of the audience, sipping delicately the harmless claret or indulging in an ice, or talking of the last song and the last musical triumph, the discussion made piquant by two or three puffs of a cigarette.

Overall was the wonderful spell of appreciation which would, on the spot, detect a false note from a popular favorite, and surely applaud a fine burst from a subordinate. We can gather up most noble and imperial audiences in New York; but for a delighted, brilliant assemblage the members of which, though in the height of fashion, could for the moment forget its severe rule, where the sons of labor could mingle with the children of art, where the whole soul of all present for the nonce was annealed into one great heartfelt appreciation of music that never was in our city—never in our country, except in New Orleans.

The reception of Mr. Lester Wallack on the night of his first appearance was turned into a floral ovation. He gathered up bouquets until he was fatigued, then he was assisted in his work by his fellow actors; finally the labor was found to interfere with the progress of the play, and flowers were literally crushed into the boards of the stage.

Miss Clara Morris is announced to appear at the Union Square Theatre. We have no doubt of her cordial reception. Her hold upon the public is created by excellent acting, great natural ability, and a quietness of manner that is invincible in its charming effects. We hope the day is not far distant when she will be seen in some *role* requiring a more intense dramatic action and breadth of illustration than is afforded in the "society play."

On Monday evening Mr. Edwin Booth appeared at his own theatre, in his favorite part of *Hamlet*. It is evident, from remarks we see, guised under the head of criticisms, that Salvini has upset some of the traditional ideas of how the "melancholy Dane" should act. We presume that commentators on Shakspeare will never understand that a character in a play, when illustrated on the stage, is the actor's conception, and not Shakspeare's. If this were not the case what would be the difference between a clown's rendition of Shakspeare, and Kemble's rendition, both reading the same text?

Mr. John E. Owens, the best of comedians, is engaged for the week at the Park Theatre, Brooklyn, in his favorite *role* of "Solon Shingle" and "that bar'l of apple sass." He will be supported by a company whose strength has been sufficiently tested already this season to guarantee the success of the week's programme. The Park Theatre, under its new management, is certainly deserving of liberal patronage.

Don't let your children spend their money for trash, but let them get a game of Avilude. If the pictures and descriptions comprising this game were in book form they would cost many times the price of the game. Sent post paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

"Must have a large sale, and deserves it, too,"—*Harper's Weekly*

New Publications.

BOOKS.

THE BUYER'S GUIDE to the manufacturing Towns and Manufacturers of Great Britain: London. A complete guide to the leading Hotels, places of Amusement, objects of interest, Parks, Clubs, Markets, Docks, &c., and The Hotels of Europe, all three superb books, published by Henry Herbert, of No. 2 Charterhouse Buildings, Aldersgate, London, 1873.

These are what the French call *édition de luxe*, are elegantly bound, gilt edged, and each page, a master-piece of typography, is surrounded by a delicate mosaic border of blue, red and gold. This collection of books—a library in itself—may be called a faithful representative of the huge metropolis of the world—London. In these volumes can be found not only a complete guide to all places of importance in England, but an absolute directory of all the best manufacturers and tradesmen in that mighty kingdom. Full details may be found of every place of amusement, not only as to the locality, but the names of the lessees; names of actors are given, and prices of admission. If not for their size and elegance one would almost fancy that if an American should travel with these books under his arm he could find out all he wanted to know, where he should buy, and what he should do with himself. All railroad routes and lines of steamers are given, and a hotel can be found by means of Mr. Herbert's publications from Aaran in Switzerland to Zwickan in Saxony, thus running through the whole alphabetical table of European towns.

In looking at our feeble books treating of topics dwelt on in Mr. Herbert's volumes we cannot but feel amazed at the rare excellence of Mr. Herbert's publications, which must be the best mediums of advertisement ever produced either in England or America.

MAPLE LEAVES, NEW SERIES. J. M. Le Moine: Austin, Cote & Co. Quebec, 1873.

This most pleasant and readable book, dedicated to Lady Dufferin, is a charming compendium of Canadian history, literature and sport. The early annals of Canada, the Canada of D'Iberville, of Saint Helene, of Longueuil, of Chateaugay, all cids of this New France, read like pages taken from the story of the heroic period. What more doughty warriors than Dollard des Ormeaux and his followers who, when Montreal was beleaguered, sallied out against the Iroquois and died to a man? Stories, too, of Canadian Joans of Arc are also found in "Maple Leaves," how Mademoiselle de Vercheres, who came of the true stock, her father having been an officer in the famed French regiment of Carignan, rivalled Flora McIvor. Her noble deeds against the Indians, her courage, her fortitude, once rang through both new and old France, and Marquis and Marquise, as they sipped chocolate at Versailles, must have talked of her, for Louis XIV it was who instructed the Marquis de Beauharnais, then Governor of Canada, to obtain from her a written report of her own brave deeds. A grand, noble character in history, she died in 1737, known as Madame de la Perade. Full, too, is "Maple Leaves" of stories of old *voyageurs*, such as the wanderings of Cadieux, who tracked the Ottawa river, and at last fell a victim to the dreaded Iroquois. Not only does this most pleasant book contain historical information but is cram full of nice bits of archæological lore. Manners, habits and customs of the old French stock are lovingly, minutely told; it is as if you were rummaging in some provincial chronicles of an *oïl de Bonif* and strange ancient feudal customs and rights are dwelt on. To the student of American history there is an interesting chapter to be found in an outline of the conspicuous loyalists who fled from the United States and found refuge in Nova Scotia and Florida. No less curious is that portion of the book which treats of Canadian names and surnames. One very amusing story, showing how far verbal transmutations go, is in regard to a certain Canadian village on the St. Louis Road. First it was settled by a Mr. Shepherd, and Shepherds-ville it was called. Shepherds-ville was, however, apparently unpronounceable by the French *habitant*, so it was transmogrified to Bergerville, Berger being the French for shepherd. It might have thus gone on prospering had it not been for the advent of

some Irish, who not liking your Frenchified names, worked at last, until Bergers-ville became Beggarsville! Some of the names of the well known places are novel to us—thus Lachine comes from chine (China), having been supposed by the early settlers to have been on the direct route to Cathay. Restigouche is the Indian for finger and thumb, a name given from the supposed resemblance of the river and its tributaries to an open hand. The Bay of Fundy is a corruption of the French "Fod de la Baie." To the sportsman—for M. Le Moine's book treats most cleverly this subject so dear to us—"Maple Leaves" will be found of great interest. His "Fin and Feather in Canada" show how admirable are his tastes, and how he must not only be a sportsman in heart, but how, with a naturalist's fine taste, he can write most pleasantly about these delightful topics.

In our last number we made liberal use of "Maple Leaves," but to fully understand the charms of the work, we would advise our readers to add it to their library.

JESSAMINE. Marion Harland. G. W. Carleton & Co. publishers: New York, 1873.

Of Miss Harland's works the best known are "Nemesis," "Alone," "True as Steel," and "Helen Gardner." A new creation from the pen of this clever authoress is sure to find a large circle of readers. It requires on the part of publishers, no matter how successful they may have been, no small amount of courage to bring forth books in these times of financial peril; but nothing seems to stop the enterprise of the Messrs. Carleton. The secret of their success, we suppose, may be found in the good judgment they employ in selecting such books as meet the intellectual wants of their readers. The new story of "Jessamine" will compare most favorably with any of Miss Harland's former works, and in delineation of character and graphic power will yield to none. In "Jessamine" may be found how true, honest manhood asserts its rights, and how deceit always, sooner or later, betrays itself. There is a grace, a sympathy, a pathos in "Jessamine" which will carry many a heart along with it. One thing about Miss Harland's works is this: She has never written a line that "dying she might wish to blot." Her books are always welcome and may be read in the family circle, for they leave no taint, but always point to some excellent moral, and the precepts she teaches in her books are always worthy of imitating.

A WONDERFUL WOMAN. Mary Agnes Fleming. Published by G. W. Carleton & Co.: New York, 1873.

This novel, by the authoress of "Guy Earlcourt's Wife," a book which found so many readers in the United States, bears impress of the same lively style, amplitude and variety of plot which characterizes all Miss Fleming's works, and is written in flowing and graceful English. The story is constructed with care and the interest of the reader is kept alive from the first page to the finish. In it may be found scenes drawn from English life, treated with all their peculiar surroundings, showing a thorough acquaintance with the incidents narrated. Differing from many writers of these peculiar phases of life, "A Wonderful Woman" carries with it a salutary lesson. The book has merit sufficient in it to insure a large sale and the good fortune of "Guy Earlcourt's Wife," which went through numerous editions, we feel sure will be accorded to "A Wonderful Woman." We trust the accident Miss Fleming met with lately, having been thrown from her carriage, will not interfere with her literary labors.

MAGAZINES.

In the *Overland* for this month we find an interesting notice of Professor John Le Conte's visit to Lake Tahoe, the "gem of the Sierra." Its depth has always been uncertain until the researches of Mr. Le Conte. Said to be unfathomable, he has plumbed Lake Tahoe and found that its greatest depth is 1,540 feet. To make a sounding of this character requires some forty minutes. Specimens of the bottom were secured, but as yet their microscopic forms have not been determined. The relations of temperature to depth are quite interesting. At the surface it was 67 deg., decreasing gradually one degree to two, 500 feet being 44, until at 1,506 feet the temperature was 39 deg. A curious portion of the paper is in regard to

the fact that bodies drowned there are never found, which is perfectly explained in this way: "The distribution of temperature with depth affords a satisfactory explanation of this fact, and subverts the opinion which ascribes it to the extraordinary lightness of the water. It is scarcely necessary to remark that it is impossible that the diminution of atmospheric pressure, due to an elevation of 6,300 feet above the sea level, could sensibly affect the density of the water. The specific gravity of the water of this lake is not lower than that of any other fresh water of equal purity and corresponding temperature. The reason why the bodies do not rise is evidently owing to the fact that when they sink into water which is only 7 deg. Fahrenheit above the freezing temperature, the gases generated by decomposition are not produced in the intestines; they do not become inflated, and therefore the bodies do not rise to the surface. The same phenomenon would, doubtless, occur in any other fresh water, under similar circumstances."

The water in Lake Tahoe does not freeze and the same fact is known in regard to some of our own lakes in the State of New York. The true reason, as clearly shown, is the great depth of the lake, and in the agitation of its waters by the strong winds of winter. In relation to the influence of depth, it is sufficient to remark, that before the conditions preceding freezing can occur, the whole water—embracing a thickness of 800 feet—must be cooled down to 39 deg. Fahrenheit; for this must occur before the colder water will float on the surface. To cool such a mass of water through an average temperature of 14 deg. requires a long time, and the cold weather is over before it is accomplished. In shallow and detached portions of the lake, as in Emerald Bay, ice several inches thick is sometimes formed.

THE TWO SUCCESSFUL BOOKS OF THE SEASON.

I.

Hallock's Fishing Tourist.

The Fishing Tourist, Angler's Guide and Reference Book.

BY CHARLES HALLOCK,

Secretary of the "Blooming-Grove Park Association

ILLUSTRATIONS, CROWN 8VO., CLOTH \$2.00.

Mr. Charles Hallock is one of the few gentlemen who write a book mainly for the reason that they have something to write about—have something to tell the public which the public desires to know. The shortest routes to pleasure are laid down, and correct information is given as to the best means of conveyance, the expense of the trip, the secrets of the commissariat, etc. The author has avoided the use of technical terms, and thus made his volume all the more acceptable.—*Turf, Field and Farm*.

II.

Prime's I Go A Fishing.

I Go A Fishing, by W. C. PRIME, author of "Boat Life in Egypt," "Tent Life in the Holy Land," etc.

CROWN 8VO, CLOTH, BEVELED EDGES, \$2.00.

It abounds in pleasant episodes, charming and vigorous descriptions of scenery and character, is distinguished by a refined wit, a droll humor, a strong love of the beauties of nature, and an enthusiastic devotion to the piscatorial sport. This book will please all who admire heartiness of style and exuberance of animal spirits in their authors. There are some interesting and well-told stories scattered through the volume, which exhibits on almost every page the handwork of a man of graceful culture and wide reading.—*Boston Daily Globe*.

Published by Harper & Bros., N. Y.

HARPER & BROTHERS will send either of the above works by mail, postage prepaid, to any part of the United States, on receipt of price.

FOREST AND STREAM.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Co.

103 FULTON STREET, NEW YORK.

Terms, Five Dollars A Year, Strictly in Advance. A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over one month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. We especially desire to make the FOREST AND STREAM the recognised medium of communication between amateurs and professional sportsmen. All of us have something to impart, which if made available to each other, will in time render us proficient in all those several branches of physical culture which are absolutely essential to our manhood and well-being, both as individual men and as a nation. A practical knowledge of natural history must of necessity underlie all attainments which combine to make a thorough sportsman. It is not sufficient that a man should be able to knock over his birds dexterously right and left, or cast an inimitable fly. He must learn by study and experience the haunts and habits of the game or fish he seeks. If he depend altogether upon his dog's nose, or upon his henchmen, he will some day have to retire from the field in mortification and disgrace. Therefore it is that we shall study to give practical instruction in the most attractive departments of natural history. We shall not forget the technicalities of the craft either, but take pleasure in designating the best localities for hunting and fishing, outfits, implements, remedies, routes, distances, breeds of dogs, &c. Each number will contain a paper descriptive of a particular animal, bird, or fish, with some instruction as to its habits, haunts and mode of capture, and the period when it is in season. We have arranged to receive regular weekly reports of the fishing and shooting in various parts of the country.

Yachting and boating will be encouraged, and yacht news be made an especial feature of the paper. A reasonable space will be given to athletic sports and those out-door games in which ladies can participate. In a word, every description of game that is in vogue among respectable people, and of value as a health-giving agent or recreative amusement, will be considered and its practice encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by that low order of beings who, in their instincts are but a grade higher than the creatures they train to amuse them, will find favor in these columns.

To horse news we shall devote some space, giving a record of leading races and meetings and current events, but we shall not make it a feature of this journal. We leave this department to others, much more competent than ourselves, who are recognised throughout the country as exponents of the turf, and as authority in stock, pedigree and kind. We yield to no one, however, in our love and appreciation of the horse and his estimable qualities. The noblest of all animals, and the companion alike of men of high and low degree, he has never become contaminated by the moral atmosphere by which he is often surrounded, or degraded below the high rank to which his attributes entitle and assign him.

To the forest, lawn and garden we assign full place. For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy—even our supply of drinking water is threatened, from the depletion of our timberlands by fire and axe. It is but proper to state here that the gentleman in charge of this department is the well-known "Olipod Quill," who was connected with the *Agriculturist* newspaper from the start, and a co-laborer with the lamented Downing for many years. Much valuable information will be found in this department.

Our military department is intended to comprise merely a weekly summary of news for officers and soldiers upon the frontier—such news as the castaways would enjoy to receive in a "letter from home;" and we trust that many of them will be inclined to send us in return some account of their hairbreadth experiences among the Indians, the buffaloes, the grizzlies and the antelopes. We of the East are not thoroughly familiar with the varied species of game in the far Northwest, and would like to receive full information especially of the numerous *Cervus* family and of the Rocky Mountain sheep. This department is under the charge of a distinguished army officer.

Our dramatic and art column will be prepared by Colonel T. B. Thorpe, and must at once become popular with all our readers who are interested in these matters. We shall occupy an independent position, and throw our efforts in behalf of competent reform. We shall perhaps even clamor for it.

Our columns will always contain the cream of the latest foreign sporting news.

In a word, we are prepared to print a *live* paper and a useful one. We shall not be parsimonious in securing the best material for its columns. We are convinced that there is a standard of eminence and usefulness not yet fully attained by any sporting journals in this country. To this we aspire. It will be our ambition to excel; and we have relinquished a life of ease and semi-indolence to take charge of the enterprise. This not of our own free choice, but at the solicitation of many hundreds of friends and strangers. We are ably assisted in our labors by a corps of valuable associates—men of age and experience, all of whom, with single exception, have been identified with leading journals for years.

Mr. SIMON A. ATKINSON, connected with the Georgia press for over twenty years, has charge of the business affairs of the Company.

CHARLES HALLOCK, Managing Editor.

For Forest and Stream.
HUBERT THE HUNTER.

LORD Hubert lived, long years ago,
In good King Pepin's reign,
The highest heart and heaviest hand
In all broad Aquitaine.

He loved his home, he loved his king,
He loved a winsome face
He loved right well his noble self—
But better loved the chase.

The foremost in the knightly joust,
The first in hunting train;
The bravest brand in all the land
Was crossed with his in vain.

Small favorites with Hubert bold
Were bookish clerk and priest;
And some he chafed when sport was barred,
By frequent fast and feast.

'Twas in the blessed Lenten time,
The holiest week of all;
The silence of the Day of Woe
Fell like a funeral pall.

No joy-bell rang, no light was there,
Nor sight or sound of mirth;
The sadness of the Sacrifice
Was on the mourning earth.

By holy men, in penance garb,
The shrouded cross was borne,
When o'er the hill rang loud and shrill
A merry bugle horn.

The baying of a hound boomed loud
Along the distant road;
With bow and spear and hunting gear,
Lord Hubert reckless strode.

With mock obeisance, spoke the knight:
"Good father, ban me not;
No saint nor Pharisee am I,
But sinful man, God wot.

"But deeds of grace may wash out sin—
I pledge a hunter's word,
The fattest buck in gloomy Hartz,
This night shall grace thy board."

Then answered mild the holy man:
"Forbear the awful crime,
Of him who sheddeth sinless blood,
In holy Easter time.

"An erring servant of the Lord,
Nor ban nor curse may say,
But may the gentle Christ forgive
Thy foul affront, I pray."

The town is passed; the forest deep,
Is still and cold and gray;
So silent, you might deem the brutes
Revered the sacred day.

Now deeper, deeper grows the wood,
And darker grows the gloom;
And colder chills assault the heart,
Like breezes from the tomb.

The broken twig hangs motionless,
The budding leaf is still;
The sunless winter of the North,
Is not more dark and chill.

Lord Hubert bore the stoutest heart
In all broad Aquitaine,
Yet, but for very shame, had wished
Him fairly home again.

So deadly calm the awful wood,
The winding of his horn
Was lost in space; nor echo e'en
Was backward to him borne:

"Good faith!" he cried; "the holy man
Shall venison lack to-day,"
When lo! before his startled gaze
A quarry stood at bay.

Stout Hubert drew a deadly shaft,
His aim was true and keen;
And fairer mark a hunter's skill
Had seldom found, I ween.

He drew the arrow to the head,
His aim was keen and true;
Then sudden fell the bow and shaft,
And fell stout Hubert too.

For mid the branching antlers there,
Upon a forehead white,
The symbol of the gentle Christ
Was marked in dazzling light.

At holy cross on beastly front,
The huntsman pressed the sod,
And heard, like him of Israel,
The accents of a God.

* * * * *

The joy-bells rang on Easter morn;
The good folk held the feast,
And watched the conscious rising sun
Dance gladly in the East.*

Lord Hubert knelt in humbled heart,
And prayed for grace to teach
The lesson taught by Heaven to him,
Through brute's inspired speech.

That gentle sport in season meet,
Awakes not Heaven's wrath;
But woe the wretch for sinless life,
Who no compassion hath.

That bird and beast are in His care,
Whose lives are but a span,
And he that wastes offendeth God,
Who gave the breath to man.

And honest sportsmen evermore,
Are merciful indeed,
For good Saint Hubert blesteth him
Who heeds his gentle creed.

J. J. ROCHE.

*It is an old tradition that the sun dances with joy on Easter Sunday morning.

Wild Life in Florida.

CAMPING AMONG THE SEMINOLES.

NUMBER TWO.

THE SEARCH FOR LAKE OKEECHOBEE—LOST IN THE CYPRESS SWAMPS—CATTLE HERDERS—INDIAN PARKER'S 'HONESTY'—MYRIADS OF GAME.

LAKE OKEECHOBEE is almost as little known now as it was one hundred years ago, when it rejoiced in the name of Mayaco. Then everything mysterious and inexplicable was referred to Lake Mayaco. The source of the river St. John's, even now unsettled, was said to be there. Another river, the St. Lucie, had its rise there, and strange tales were told of the wonderful lake by a Spanish captive, who reached it by this river. The wonderful sacred culture of Bartram, so vividly described by that naturalist, was said to be a resident of Okeechobee, and hasn't been seen since its first description, a century ago. With a few rare exceptions, during the Seminole war, Lake Okeechobee has not been visited by white men. There is no portion of our great western domain of the same area so completely unknown to us. There the Seminole is said to have his best plantations and choicest hunting grounds. In the secure fastnesses of the Everglades he may bid defiance to our largest armies, and laugh at every effort to secure him.

When I found myself within six miles of the great lake, I thought that I should soon penetrate the dark belt of cypress that surrounded it and disclose some of the wonders locked within its mysterious shores. I had the promise from my Seminole guide that he would fetch me to its shores ere another sun had set. Making every preparation, the morning agreed upon I sought my guide. To my surprise, he refused to go, alleging, as his only reason, that Tiger wouldn't let him. All my persuasions were useless. Offers of revolver, bowie knife, and money were alike unavailing. Tiger was chief in the head chief's absence, and could not be disobeyed. The reason of Tiger's veto, as I

afterwards ascertained, was that I had not counselled him first, and he felt affronted. At last a happy thought struck me. Would he go within a mile of the lake? Yes, he would do that; and we were soon on the trail leading westward. We passed through a small settlement of shanties, the inhabitants of which had gone on a hunt, leaving all their household goods stored away beneath the palmetto thatch. Over broad prairies we travelled without seeing an indication of life, and through pine barrens without a single animal visible; all had been killed, probably, by the Indians. Soon we left the dense swamp that circled the edge of the piney woods, and struck a wide stretch of prairie extending north and south as far as the eye could reach. West we could see the tall cypress said to border the lake. Just as we reached a little clump of palmettos, about midway the prairie, a thunder storm—such as only Florida is capable of—burst upon us. For an hour the flood came down, and drenched us and our goods, although we were covered with the broad leaves of the palmetto.

Soon it was over, and the sun came out, and there was a solemn hush, broken only by a low, sullen roar, like the roll of the sea, coming from the west. I knew without other explanation what that was. It was the breaking of the surf upon the shore of Lake Okeechobee. So near, yet likely to remain as unseen as though I was a hundred miles away, for my Indian guide refused to go further, and to seek a trail was an almost hopeless task. No present would tempt him; no amount of persuasion move him. So we left him to return to his camp, and pursued our way toward the north. All that afternoon we hunted for a trail that would take us to the lake; but none was found, and so we made our fire beneath a lone clump of pines at night, having accomplished nothing. Over thirty years before had the troopers, hunting the Seminoles, camped in this very place. There existed here but one trace of civilization, and that was the old wagon trail over which the supplies for Fort Van Swearingen and the lower forts were drawn. Though unused since the Indian war, except by some settler fleeing from the dread of conscription during the rebellion, it still showed to the experienced eye where the wheels had worn. How strange that impression should remain so long! Though at first unable to discover the slightest trace of it, I could soon follow its course almost instinctively, as sometimes the evidence of its existence were so indefinite that I could hardly tell what it was that showed it. It might be a worn palmetto root, a different kind of grass, or a slight depression in the retentive soil; sometimes, seeing it rods away, a close examination near would fail to reveal its presence. Next morning we followed the trail till it lost itself in a swamp, and then we struck the piney woods, intending to swing around till we could fetch Fort Bassenger, on the Kissimmee river. On and on we went, till our passage seemed stopped by a black, deep creek, overhung with dark cypress, and swarming with alligators. This creek was no doubt flowing directly into Okeechobee, but, as much as I wanted to go with it, I was powerless for the want of a boat. There was nothing for us but to cross it, though we were obliged to swim with the criticising gaze of dozens of alligators fixed upon us, and dodge fallen trees and tangled vines as best we could. Beyond was another swamp, and still beyond this a broad stretch of blessed prairie. Over this we cantered for miles, then through deep woods, now through swamps, belly deep in mud, and still no signs of the signal smokes that were to indicate the hunter's camp at Fort Bassenger. Before night it dawned upon us that we were lost. Now, so long as a man will fight off the conviction that he is lost there is hope that he may eventually find his way out. But my guide, no sooner than this idea had dawned upon him, gave himself over to the most unreasonable of actions and doings. Heretofore I had trusted in him implicitly, but I now saw that his reason was gone for the time, and my heart sank. Yielding to my persuasions, he camped in a palmetto clump, and we ate our last biscuit and piece of

pork. We had saved this same pork till the last, hoping that we could induce some unwary Indian to accept it in lieu of more palatable food. But no Seminole was so accommodating, and we chewed it in silence. The rind was an inch thick, and had the appearance of amber. I sliced my piece thin and bolted it, and when my guide said it was six years old I didn't raise a doubt.

In the morning we awoke refreshed, and heading our horses northward we set out. Notwithstanding his age and experience, my guide allowed his fears to control him, and would not stop to secure one of the many deer that grazed about us for fear that we should not reach our destination, and should have to pass another night in the woods.

Towards noon we emerged upon the Kissimer prairie, and then could tell with tolerable certainty the course to take. Abandoning all hope of reaching the river we struck for the old military road, hoping to reach it before night. Faint and weary as we were, he would not rest, but pressed insanely on, with but one idea—to reach a settler's cabin before night set in. As for me I did not care. I was at the mercy of my guide, and could do nothing with him in his present state.

To turn my back upon Lake Okeechobee, and give over all hope of seeing it required a hard struggle. But I had to yield to necessity, and so every hour saw us further and further away. Towards noon we stopped at a brackish pool to quench our thirst, and here I ate my dinner, though I didn't mean to, as it consisted of two small fish, which went down alive in the muddy water and met an untimely death. On and on we rushed. The deer sprang up from their noonday rest and skipped away, with their white banners waving tantalizingly near. Sand hill cranes flew screaming from under our very noses. Thousands of cattle now appeared dotting the prairie. In the midst of plenty we had passed nearly twenty-four hours without food. In the afternoon I grew weary of the continual striking of my saddle-bags against my legs, and lightened ship by throwing over the heaviest of my treasures. A bottle of arsenic went first, then five pounds of shot, a lot of cartridges, and everything not actually necessary.

The fender will be suitably rewarded.

Just before we reached the trail we were seeking a beautiful fox sprung up, and, stopping a minute too long to look at the first men he probably ever met, I gave him a flying shot from the saddle that tumbled him over. Then I was sorry that I had killed the animal for mere sport, and vowed I'd not do it again. Yet so strong is the instinct that, riding within forty yards of a deer—offering too beautiful a shot to resist—I handed my gun to my guide and let him shoot. But he didn't hit him, and I wished I'd fired instead. As the sun dipped below the horizon we rode out upon the old military road that crosses the peninsula from the Atlantic to the Gulf. We struck it near the site of old Fort Dunn, the parade ground of which is still in tolerable condition, and cantering a mile or two further soon sighted the settler's house and were happy.

Though this man owned hundreds of cattle, and counted as his all the acres he desired, he had nothing in the larder but a few sweet potatoes; but he freely shared those few. After a man has fasted twenty-four hours, buttermilk and sweet potatoes will fill a void acceptably. That night we slept beneath a roof, and I shared a bed with four vigorous boys and about three millions of very active fleas. Yet, though the fleas possessed uncommon agility, and showed decidedly phlebotomous dispositions, and though there was music in the air, and everywhere else, from the joint and several efforts of the various noses in the room, and though the boys aforesaid procured a corner in blankets, and left me open to the attacks of several very bloodthirsty bands of mosquitoes, I slept. And it was sweet potatoes and buttermilk that awoke me in the morning. Thirty miles we accomplished before dark that day, riding across the St. John's prairies, which fairly swarmed with turkeys, and over the Alapattie flats, where we found the creeks, so dry when we left, full to overflowing. What was my surprise, when I reached my guide's cabin, to find Indian Parker there with a lot of deer skins, which I had bought, paid for and left—since then giving up all hope of seeing them. Such is Seminole honesty!

What white man would have ridden sixty miles to restore another's goods? I knew of one who wouldn't.

FRED BEVERLY.

—It having been a long disputed question, even among well informed anglers, whether the common brook trout had scales, the editor of the Washington *Sunday Herald* addressed letters to many of the leading naturalists and sportsmen of the country, and has received such testimony, including that of Professors Baird and Agassiz, as compels a full conviction that they have.

—From the circular of a distinguished dancing master, we extract the following mild sarcasm: "Dancing, when properly taught and practiced, is the very best safeguard against the evils of over-mental education, to which American young ladies are so subject. This education is often carried to such an extent, that the children have scarcely any leisure for recreation."

—Digby, the other day, found some money in the street. "Ah," said he, with a knowing look, "papers have been saying that money's tight, but I wouldn't have believed it if I hadn't found it in the gutter."

AUTUMN IN NOVA SCOTIA.

NUMBER TWO.

IT was quaintly said by Charles Lamb that he never got up "until the day was well aired," and it must be confessed that on the morning after our arrival at Purdy's, we indulged ourselves in a long rest, until the sunlight had dried the dew from the mountain tops and driven the shadows from the valleys. It was a Sunday morning, and from Sugarloaf to the distant arms of the sea, a hush hung over all until one turned at the rustle of a falling leaf, and almost started at the movement of a bird.

A rumor came to us that a bear was making havoc with a settler's sheep, so after breakfast we wandered down to a valley near by, following paths that a lady would deem easy, yet they led at once to the mysteries of the wild woods.

Little brooks struggled up into the sunshine from deep mossy banks, and prattled with a playfulness that waters do not possess in "the open," any more than children's glee carries its sparkle under observation. Ferns waved in their shadow dance, and grew with that luxuriant plume that characterizes them only when the air playing with their dainty sprays is the damp breath that has come for miles under the cool shade of unbroken forest; bright berries, coral hued, set in nests of leaves, were everywhere; mosses in infinite variety crept out to the very roadway, while lichens on the granite rocks, and vines clinging to the varied trees, gave evidence that here the wild power of nature was yet supreme, and her untrammelled sway was beating back with insidious growth, and an eager press of beautiful foliage, the narrow open lines that man had made.

It is one peculiar feature of this land, the ease and comfort with which one can reach and enjoy the real wilderness. Here, not far from an old stage road, a few steps carried us from a house with every comfort, at once to woods that will stand for years as they are now, and as they were when discovered. And here we rambled, following a well beaten road, where in the forests about all the game animals still remained, (with perhaps the exception of the wolf,) and in which if man keeps his destructive instincts within bounds, they will remain; for now nearer and more genial soils are open to the emigrant, while the hardy sons of Nova Scotia are more inclined to seek fate or fortune on the ocean that surrounds them, or to employ the energy that comes as a birth-right to all Americans, in our great cities, than to contend at odds with the chances agriculture has in the brief uncertain summer. Here and there a settlement of charcoal burners are invading the forest; and in winter there are raids into the backwoods for spars, knees and timber; but miles and miles of wilderness, vast wastes of Moose plains and Caribou barrens, are known only to hunters, where if the laws of production are not too ruthlessly violated, game will maintain itself in abundance, while in stream, pond and estuary, fish and aquatic game are striving with full natural instinct to breed and multiply. And the wild inhabitants of Nova Scotia are among the most noble of our great continent. The Moose has no peer, and it is man's best cunning and greatest skill alone that overmatch this superb "monarch of the glen;" the Caribou, fleet, alert, and suspicious, is worthy of the courage and endurance that are needed to follow and surprise them; the large bear with strength to fell an ox is no mean foe before the best armed hunter, while smaller game is on every side, less in size, but full of the cunning and secrecy so interesting to the naturalist. In the boiling streams that come from the mountain ponds, bearing the amber color that tells of a birth-place far from homes or clearings, arising as it does from the mass of vegetation of the deep swamps—are the salmon, the sea trout and many less worthy fish; while in all the noisy brooks and silent, shadowy ponds, the brook trout abound, often where the king fisher, the heron and the otter are the only enemies that arouse timidity.

When we crossed the larger streams, we cast grasshoppers into the eddies, and watched their perilous voyage. Now and then a drooping sedge or broken branch rescued the castaway, but usually a gleam, a flash as of a jewelled hand, a dimpling circle widening over the spot, and the bait was gone.

There is an infinite pleasure in a woodland Sabbath. Following a brook intent upon a heavy basket, the fish are quickly caught or alarmed and wounded, seek refuge; birds and game fall or fly before an eager shot to be seen no more, but when one divests himself of rod and gun, and with no haste or purpose lingers among the "aisles of God's first temples," he may feed the shyest fish and almost tame them, and with a glass find more to admire in the beauty, fitness and gentle wildness of even larger game than could ever be learned over the bead of a gun or the fall of a fly. Some of our most accurate observers of all the minutia of forest life, by whose pens we are carried in easy chair and slippers almost into the breath and shadow of the woodland, carried no guns, nor used a rod; and the keenest sportsman may gain a new pleasure, with a deeper insight into the "good in everything," by taking one day of seven to linger with eye, ear and heart among the wonders no hand has wrought, which were in all their grace and beauty with no recognition until the refined mind and discriminating eye of the lover of nature came.

With all this wild life about us we idled our way to the settler's home with the hope of finding such indications of bruin's ravages as would enable us to learn his ways and watch for his coming, but in this we were disappointed. He had killed some sheep, but it was in a remote pasture, and we could not awaken animosity or energy enough to

organize a hunt for him, so abandoning our sanguinary ambition we sauntered homewards to look over the limitless view commanded by our windows, and make plans for visiting trout ponds on the morrow. And here pardon our discursive pen, for of this said pond-fishing it was our purpose now to write, while after all the pen has only been a truant to the aim, and the letter reaches its limit without the cast of a fly. It shall not again so sin, but in our next will end with pond-fishing, an Autumn in Nova Scotia.

L. W. L.

QUAIL SHOOTING IN MARYLAND.

EDITOR FOREST AND STREAM:—

If you can spare enough space in your valuable paper, I will write a simple account of two days' quail shooting down in Maryland, hoping that it may interest a few of your many readers, and possibly furnish information to some who would like to know where good shooting can be had.

On Monday morning, October 20th, my friend Harry J. and your humble servant, who will always answer to the name of Al, started with a brace of dogs, a pointer and setter, named "Fred" and "Gypsie," a Scott breech-loader No. 10 each, and a trunk containing hunting suits and ammunition, for Cambridge, on the eastern shore of Maryland. It rained in torrents, but not at all discouraged by the weather, we jumped aboard of the nine o'clock train for Baltimore, expecting to take the boat that night down the Chesapeake. After putting our dogs in the care of "Sam," the well-known baggage master, feeling assured that they would be well cared for, we seated ourselves as comfortably as possible, stuffed our pipes, and settled down for an eight hours' ride. Upon our arrival at Baltimore, we met our first disappointment—the boat did not run Mondays, so we could do nothing but wait until the following night, thereby losing one day's shooting, quite an item when your time is limited. Not wishing to stay in the city a full day and night, we, upon the recommendation of a friend accidentally met, procured a carriage and drove across the long bridge spanning the Patapsco River, to "Sam Acton's" Road House, and put up for the night, expecting to pass the following day by tramping around the country, hardly hoping to run across any birds. We however returned to the hotel at night with ten quail, my friend Harry having all the luck, shooting nine of them. We were told that it was a very good bag for that place, and I assure you we worked hard to get them. After partaking of a good and hearty supper, we again started on our journey, this time with success. The boat—the old Highland Light—started at nine o'clock that night, and after attending to our companions, the dogs, and procuring state-rooms, we turned in, expecting and dreaming of glorious sport on the morrow. Long before sunrise we were dressed and on deck, enjoying the lovely scenery down the Choptank River. As soon as old "Sol" made his appearance, the river seemed alive with water-fowl; it made no difference in what direction we turned our eyes, they were sure to rest on ducks, flying over and around us. We passed some that were sitting on the water, which were actually too lazy to get out of the way of the wash from the paddles. We arrived at Cambridge about eight o'clock in the morning, and were directed by the clerk of the boat to put up at the Dorchester House, on account of the proprietor being a thorough sportsman. We soon found out that he hardly knew the difference between a gun and a fishing-rod, so we had to beat the country the best we could, without any directions whatever, and when night came we returned to the hotel minus birds, tired out and discouraged, and ready to pack up and start for home. Fortunately for us we met the proprietor of a rival hotel, "Vern Rea," so called by all his friends, and a whole-souled, thorough sportsman and gentleman we found him. We soon "scrapped" up an acquaintance, and heard from him that birds were plenty about four or five miles out of town, and if we would stay he would take us to the grounds the following day. Our drooping spirits revived immediately, and in an amazingly short space of time we had our "traps" transferred to the Bramble House, ate a tip-top supper, loaded our metallic shells, smoked a pipe, and "turned in," anxiously awaiting sun-up, and impatient to commence our sport, so long delayed; nor were we disappointed this time. Day broke bright and clear, and by seven o'clock dogs, guns, and sportsmen were snugly packed in a wagon, driving down the road at a spanking trot; after a ride of about an hour, we drew up at the side of a wheat stubble and tumbled out. Our party consisted of four—Vern Rea, George Dale (as good-natured and as lazy as you can possibly imagine), Harry, and myself.

"Now, boys," commenced Rea, "if you watch us and do as we tell you we will teach you how to shoot; mind, take your time."

"All right," replied Harry, winking at me, "we need a little instruction, so let's start; I am crazy to burn a little powder, if it's only in the way of a salute. Al, you take this side of the hedge, and Rea and myself will hunt the other; Dale is going further on with the horse; Hie, on Fred!"

Off we started; my setter pup was as wild as a hawk, it being her first lesson in the field, consequently I had my hands full attending to her. Presently I heard Rea cry out "Look sharp, boys, the pointer has struck a trail; now he stops, here is a bevy sure, now don't waste shot." Up jump some twenty full-grown birds. Bang! bang! Rea has two down. The next instant Henry knocks down one with each barrel, and as they pass on my side I let drive the right hand barrel, and drop a fine cock bird. After reloading and retrieving our dead birds we start off again; my pup

suddenly comes upon her maiden stand, as staunch and firm as any old hand at it. After admiring her a short time she becomes a little nervous and seems at a loss to know what is expected of her. A simple "steady, Gyp," is all that is necessary, and there she stands a perfect picture. I step forward, and soon flush a bevy of some thirty birds, but do not shoot, as they are only about a quarter grown. The pup seems bewildered, a single word is sufficient. "Down charge, Gyp, good dog, good dog." I am amply paid for all my trouble in bringing up and house-breaking her. She is a success, and I am satisfied. The birds all struck for every thick cover, where we found it impossible to follow them. So we spent the remainder of the day, all shooting well and in luck, with the exception of Dale, who only had some five or six shots all day long, it being too much exertion for him to climb fences or beat runs, consequently we were always ahead of him, and of course had the shooting all to ourselves. Just before dark we started on the back track, stopping only once where we had put up our first bevy in the morning, expecting to find them out feeding. We had no sooner struck in the stubble before Fred came to a dead stop, a lemon and white setter hunted by Rea backed him beautifully, and Gyp came up on the other side and stood like an old 'un. What a sight to look upon! Either of us would have given considerable for a photographer for just five minutes. Whir! whir!—Bang! bang! off go the bevy, *minus* two. It being too dark to cover any more, or to follow them, we let them go on and start for home, sorry that we can't have longer days. The next morning we were at it again, but can only have some two hours' shooting, as we start for New York in the afternoon. We hardly get into cover, before our dogs are standing and we spring a fine bevy and get two. Now our sport commences. "Fred" stops, Harry's gun comes up, and down comes a fine one. "Gyp" makes game, up jump two, one quartering to the right and one straight from me. I knock down both in fine style, and in a short time up get two more. I cover both and drop them, but can only find one, and cannot spare time to look carefully for the other, so am compelled to leave it to find the rest of the party, who have done nothing, with the exception of Harry, who had killed all his birds, as Rea said, "in fine style." We find it time to stop; we can hardly leave the birds, but boats and cars have a mean way of starting on time (sometimes), so we have to bid the birds a long farewell, regretfully 'tis true, but manfully. By twelve o'clock we returned to our quarters, a brace of tired, wet, and hungry sportsmen, but with feelings considerably alleviated by the result of our bag. Some sixty quail, three pigeons, and one gray squirrel footed the score, and we are in hopes of another trial next season, when we can have more time and make better connections. We made many very pleasant acquaintances, and found them all warm, genial and hospitable fellows, and we were exceedingly sorry to leave them. To any and all of your readers we advise them to try Cambridge for quail, or as they call them down there, partridge, and we can heartily recommend the Bramble House, kept by our fellow sportsman Vernon Rea.

A. P. V.

LOOSE LEAVES FROM A SURVEYOR'S JOURNAL.

"INJUN WHISKEY."

We were following a gig path around the rapid, when we came in view of a rough log shanty, evidently thrown up in haste and ready to be vacated at a moment's notice. This was a whiskey trader's camp, far in the woods, miles from any settlement, and though there was a severe United States penalty against either giving or selling an Indian intoxicating liquors, yet more than one individual I wot of made small fortunes by doing the latter. Old Antonio—a Kanuck—was one of the most successful of these for several seasons. He sold whiskey that probably cost him not over ten cents per gallon (made up of high wine, water, oil of vitrol, and he only knew what else) to the poor Indian for a dollar, took their maple sugar (large quantities of which, and of a good quality, are made by the squaws in the spring) at three cents per pound, thus getting 33½ pounds of sugar for ten cents. After making up a load of sugar, with perhaps a bale or two of furs, &c., he would ship them down the river on an easily constructed raft to the settlements, fifty or sixty miles below, where the sugar was freely bought from eight to ten cents cash, or twelve cents in trade—a pretty good profit.

As we were passing, we noticed four or five of the redskins laid out by the side of the shanty, evidently oblivious of all passing events—dead drunk, sure. But one young and rather good-looking fellow, that probably had no sugar or mink skin to barter (and their credit is not of the best) was sober. He came up to me (the rest of the boys had gone by), and with a leer of the most supreme contempt on his face, pointing to the recumbent bodies, he said: "Gausch darn fool, Injun drunk; give Injun fippunce buy cracker; Injun hungry."

I looked at the poor fellow, and an idea struck me, rather a demoralized one I must confess, and hardly to be approved of by the Evangelical Alliance. I had heard of the sudden, almost lightning-like effects of Indian whiskey, and I wanted an ocular demonstration. Here I had the material before me. Though not a chemist myself, it is with great satisfaction that I look upon a successful chemical experiment, when there is no danger or personal inconvenience to myself connected therewith. I took out a sixpence, and looking the Indian in the eye, said: "If I give you this you will buy whiskey and get drunk like those fellows there."

He replied: "Me honest Injun, no drink; me hungry Injun." "Well, here then," giving him the coin, "you go in there and get some crackers; don't you buy whiskey." Thus, you see, I gave him the benefit of the doubt (if doubt there was), and quieted my conscience. He seized the piece with chuckling avidity. I pretended to go on by the shanty, but I noticed a window on the farther side, around to which I whipped as soon as he had entered the door. It gave me a clear view of the only room in the place, at the back end of which was a rough slab bar, and behind that a bloated specimen of a half-breed, ready to deal out the liquid—what shall I call it?

It was a sight to see that Indian walk up to that bar, and with all the air of a Wall street millionaire (before the crash) plank down his coin. The barkeeper set on the counter an old-fashioned smooth glass tumbler, holding, I should judge, about half a pint, then raised from below and placed beside it a black half-gallon bottle or jug. The Indian, taking it in both hands, filled the tumbler to the brim. "Pretty good drink," I thought, "means to get his money's worth in quantity, at any rate." With both hands again he then carefully raised up the glass, his eyes glistening with eager anticipation; viewed the liquid first on one side, then on the other, then on top, then underneath, gave a grunt, tipped back his head, placed it to his lips and did not remove the glass until the last drop had disappeared down that cavernous throat.

Then spoke the barkeeper, who evidently knew Indian character, and from many an experience what would happen. "Now git out, out with ye!" The Indian gave a grunt of deep satisfaction, turned around, paused a moment (and even then the drunken leer was visibly spreading over his countenance), started for the door, stopped, reeled twice, caught against one side of the door, bore over toward the other, caught again, gave another reel and a swing, and in a twinkling he was around the corner and down among the others—gone! My life, is it possible! Several of the boys watching my motions had come back and joined me at the window.

We went around, and we poked, we kicked that Indian; we pulled his hair, his ears, his nose. He was drunk, dead drunk, too drunk to grunt—clean gone.

"Boys," I said, "I want to see some of that whiskey." We went in. I called for "something to drink." The proprietor brought out a cut-glass decanter. "No," I said, "I want some out of that big black bottle." "Oh no," he replied, "that is Injun whiskey, this is first rate, best corn, cost me 28 cents a gallon." "No, but I want the other, and it was only his fear that we might be deputy United States Marshals, or kick up a row, that finally, with many apologies and protestations, he brought it out. I poured certainly not over a teaspoonful into a tumbler and filled it about one-third full of water. It turned it the color of old lead. I tasted it, and like a fool, let a small portion pass down my throat. Christopher Columbus! it was red hot lava; a potato right from the pot was nothing to it. It scorched, it burned and seared all the way down, and after it got there I drank tumbler after tumbler of water, but it would not wash out. It lasted me, that fire, all the day. I had had enough of Indian whiskey, being thoroughly convinced that between my internal organs and that element there could be no affinity.

No wonder it laid out those fellows so suddenly. I should have thought they would never have waked up. Is it longer a matter of astonishment that the Lo's are passing so rapidly from the face of the earth? JACOB STAFF.

OYSTER PIE.

JUVENAL'S writings seem to show that as early as A. D. 60, the Romans enjoyed the oyster. Sallust 110 years afterwards, is loud in his praises of the bi-valve, though slightly indifferent to the early Briton, as he remarks. "These wretched Britons, after all there is something good about them, they produce oysters."

It was Sergius Orata the Coste of that early period, who went regularly into the oyster business, for as Pliny says "he did not do it because he loved oysters, but because there was money in it." The Romans not only eat them off the half shell, but cooked them, for says Athenaeus "They are eaten raw and sometimes roasted, they had, too a custom of seething them with mallows and docks, (perhaps like our cellery) and with fish, which was esteemed as very wholesome." How to cook oysters has, however, run through the strange phrases. In the twelfth century, (it was indeed a dark age) they absolutely used the oyster for dessert. Here is a receipt for cooking the cherry stone or blue point of that period. "Shyl him (shell your oyster,) and seeth him in wyne and inhare (their) own broth." So far so good, and not at all objectionable. "Take almandes blaunched, grind him and ayle (mix) with floor of rys (rice) and do (put) the oyster thereinne. Cast in powder of gynger, moult (much) sugar, macy's (mace) and seeth it not too thicke." We cannot exactly recommend this for an oyster stew.

Rules and regulations in regard to catching oysters are, too, of old date, for in the time of Henry II (1154) a company of free dredgers paid annually to the crown the sum of twenty-three shillings and fourpence for the right of getting them.

We have so far sketched quite lightly some of the oyster history, but here comes in an important question. Some years ago a subject agitated the whole people, and that was, how much lager beer it would take to intoxicate; now the question of to-day is how many oysters will it take to satisfy a hungry man. If Vitellius, the great Roman emperor whetted his appetite with 1200 oysters, what amount of

real nourishment is there in an oyster, sufficient for a normal blessed man with an ordinary stomach? For his daily nourishment a man of fair size and strength, employed in usual labor, requires a quantity of food equal to twelve ounces about of nitrogenised matter. According then to this calculation, a man to do a day's work on oysters alone, would want to eat somewhere in the neighborhood of two hundred good big oysters. Perhaps some of our native Indians, who in old days existed on oysters alone, consumed this quantity, for how account otherwise for the enormous heaps of shells they have left as evidences of their oyster devouring capabilities, on the banks of many of our estuaries.

There is a sad and wierd story of an oyster eater, which still floats around the wharves of Baltimore, where oyster boats do congregate. One morning, 'twas years ago, the sloop Martha Mary came from some oyster bed on the Chesapeake laden gunnel deep with prime oysters, and was moored safely along a Baltimore wharf. The skipper pleased with the prospects of his voyage, lounged on the wharf, awaiting a customer. There came to this Captain, a lean lank and sallow faced man, who said with a cavernous voice, "I would eat some oysters?" "Plenty on board there!" was the bluff reply. "But I would pay for what I eat" interposed the stranger. "All right, go aboard, eat your fill, for a quarter," cheerily replied the skipper, for in those early times oysters were worth not more than fifteen cents a bushel. "Willingly," said the thin man producing with alacrity the old Spanish quarter with the pillars on it, the coin of that time, and drawing a large rusty oyster knife from his pocket. Then the thin man opened the hatch of the little vessel and dived below.

The Captain went to his breakfast. The meal over, he returned to his sloop deck. Below he heard the measured click of an oyster knife. He thought little about it, only said "he has a good appetite." Oysters were not rapid of sale that day, as two more oyster smacks had come in, and purchasers were slack. "Makes no matter" said the Captain, "the weather is cold, them oyster is sound, and they will keep in prime order for a week." That Captain went to dinner. Again he faced his little vessel's deck, and still he heard the monotonous, incessant "click," "click," from below, working away with mechanical regularity. Anxiously then that Captain strode along, and was full of fear. As the sun set, still the click of the oyster knife was heard. In terror the Captain fled from his smack. Next morning early, as he approached the wharf, still his affrighted ear heard the click—He could stand it no longer. Rushing below, scattering aside whole heaps of empty shells, he found the lean, lank and cadaverous man, still opening away at the very bottom of the vessel. "They was good," said the cadaverous man, swallowing with artistic flirt a singularly large oyster, "but scarce as salty as I like em, ef I had had a cracker, or just a dash of vinegar, mebbe I might have engyed em more. See here, Captin, its jest a case of knife with me. This ere oyster knife, and he held up the attenuated blade, worn now to the size of a small pen knife "warn't good steel or I might have hed my fill," and saying this he slowly and deliberately climbed up the hatchway, and still lank and lean disappeared in the distance. This is the story of the oyster fiend, as whispered about in a low voice among professional oyster openers of Baltimore, and just as it was told to SHREWSBURY.

POTATO PADDING.

Gay says:

"Leek for the Welsh, to Dutchman butter's dear,
Of hardy Irish swain potato is the cheer."

Peter Cicca, in 1553, calls the potato *papas*, while Clusius some forty odd years later calls it *taratouffi*. Now one Thomas Harriot, in 1586, calls our Murphy *openauk*. Lord Bacon says *potato* roots, and thus severely writes about it: "If potato roots be set in a pot filled with earth, and then the pot with earth be set likewise within the ground some two or three inches, the roots will grow much greater then than ordinarily."

South American Indians called the potato *papas*, *arracha* and *battata*, which is quite comfortably near our rendering of it, though before we got to it quite, and settled down on it permanently it ran through the mutations of *batato*, *batata*, *patata*, *potata* and *pottato*. In the Pennsylvania Gazette of 1756 (Benjamin Franklin being the high-toned, enterprising, spirited and accomplished editor) there is an advertisement as follows: "Just imported, and sold by John Troy, master of the Snow Polly, a parcel of choice Irish potatoes, and a few good servant men and women at Mr. Sim's wharf, near Market street."

It is difficult to state whether the elegant gentleman who lost his heart and his head in Queen Bess' time, did absolutely introduce the potato into England and Ireland. Sir Walter Raleigh's claims are, however, fair. There is an old Cork ballad as follows:

"By Raleigh 'twas planted in Youghal so gay,
And Munster potatoes are famed to this day."

In 1619 potatoes were in England perhaps something like pineapples are to-day, worth a shilling a pound; even as late as 1796 potatoes—early ones—were sold in London at five shillings a pound.

There are lots of pleasant associations clustered around potatoes. The boyish escapade, the Robinson Crusoe life in the fields, where for three mortal days a wild urchin lived on potatoes roasted stealthily at night in the ashes of a smouldering fire, the camp life, where the potato was cooked by the camp fire, and such finer remembrances of the potato, as the wonderfully cooked potato of the Café Procope (a café Oliver Holmes loved) and the delicate morsels of Saratoga Lake. What says the rustic verse?

"The sweetest devarishin that's under the sun,
Is to sit by the fire till the p'rates are done."

PEACH BLOW.

For Forest and Stream.
GREAT NORTHERN PICKEREL.
(*Esox Luciodes*.)

A MID the Thousand Isles that gem
St. Lawrence with a diadem,
When winds are soft and waves are calm,
And pine woods steep the air with balm,
The angler dreams away his days,
Mid scenes beyond the poet's praise;
Wafted across that fairy flood,
He sees in Nature naught but good.

Mid islets, wood-embower'd and green,
The fisher comes when day is new,
Lapp'd in Elysian dreams to float,
Enchanted in his light canoe.

High up on drooping boughs entwin'd,
The grapevine twists its garland wreath,
Or droops its purple clusters down
To kiss the wooing wave beneath.
The red bird from the topmost branch
Pours out its mellow burst of song;
The larks and blackbirds down the shore,
Their sweet harmonious trills prolong,
And when the evening shades prevail
The whippoorwill repeats its tale.

Here is the angler's paradise,
A dreamy, Eden-like retreat;
With balmy perfumes in the air,
And wild flowers springing at the feet:
And far beneath the lucent deeps,
The gay-hued, floating fish are seen,
Quick darting in the depths serene.

Here *Esox Luciodes* dwells,
With bristling teeth and mighty jaw,
Insatiate, savage, swift to seize
The prey that feeds its hungry maw.
And here the angler's utmost skill
Is task'd the struggling foe to kill,
To land him, gasping and supine,
With humming reel and spinning line.

I. McLELLAN.

THE GREEN RIVER COUNTRY.

FROM where it rises—a little brook in Fremont's Peak—the Green River rolls southward an impetuous torrent, its volume constantly increasing as it receives the tribute brought by a thousand channels from the lofty mountains through which it flows. Its waters are dark and black as it sweeps through some narrow passage where the sun's rays never penetrate, but assume when spread out in the clear light of day the pale green color from which it takes its name.

It is a glorious river. The territory through which it passes presents some of the most majestic scenery that our country can afford. For miles it rushes through deep and gloomy cañons, whose precipitous sides offer no inequality that might serve as the resting place for a bird; or through stony valleys, where the water leaps and dashes against the rocks as though they were enemies, that it would tear from their beds and carry captive toward the Colorado. It roars between high mountains, rock-ribbed and dark with their evergreen foliage, or sublime with their mantles of everlasting snows, and glides pleasantly through fertile valleys, where Nature is the only husbandman and the deer and elk the only cattle.

Parks there are, where the tall pines and the cottonwoods, with their silvery foliage, stand as if arrayed at the command of the most skillful of gardeners; where green meadows, dotted with clumps of trees, or with little copses, stretch away toward the rocky heights beyond and seem almost to reveal the hand of man in the artistic beauty of their design. But no gardener planted these towering trees, nor was human skill evoked to lay out these delightful parks; the hand of a greater being than man is visible in all these beauties—the hand of God.

Each mile of the river's length presents fresh charms, and the thoughtful mind is awed and purified by the contemplation of these, some of the grandest works of Nature.

Nor is animal life, in all its varied forms, wanting to complete the picture. Here we have perhaps the finest hunting ground in America. Owing to the rocky and mountainous nature of the country it offers but little to attract the farmer, and the few dwellers on the river are the wandering trappers who, like the Indian, driven by the constant influx of settlers from the plains and from the eastern slope of the mountains toward the setting sun, find here a resting place whence they will not soon be expelled. These, however, are few in comparison with the myriads of furred, feathered, and finned denizens of this wild region, and cause but slight diminution in their numbers. The brooks furnish trout by thousands—from half a pound to four pounds in weight—active, plucky fish, that it is a pleasure to hook and a satisfaction to land. Beaver are very plentiful, and their dams may be found at intervals of half a mile on every moderately large brook. Otter, too, are trapped in considerable numbers every winter, though not so numerous now as in former years. These, with the mink and fisher, are the finer fur-bearing animals of the country. The felidæ are represented by the lynx and the mountain lion, or cougar; the latter rarely seen, but sometimes making his presence felt by killing a calf or a colt while the herds are out on the range.

Deer and elk are numerous in the bottoms and on the mountains, a few antelopes frequent the elevated plateaus that occur from time to time along the river, while the loftiest peaks afford a secure refuge to the wary mountain sheep. When hunting along the river or some of its tributaries you will often notice the track of the ferocious grizzly, or of his smaller and more timid congeners, the black and cinnamon bears; and should you desire a closer acquaintance with these kings of the mountain it may be

formed by following the tracks into the higher lands.

For the birds, who shall tell their numbers, or who shall enumerate their varieties? Sand-hill cranes, together with geese and ducks in countless numbers pass over in spring and autumn, and pause at various points to feed and rest. Three species of grouse—the sage, the blue and the ruffed—are found in the bottoms and on the mountain's sides, while close beneath the snow line breeds the white tailed ptarmigan.

In fine, the sportsman or naturalist will find here much to attract and delight him. And perhaps he may even be tempted, as I once was, to sever for a time the ties that bind him to his eastern home, and, building a little cabin, settle in this country until he shall have exhausted its pleasures.

But why should I attempt to awaken in other breasts the enthusiasm I feel for this fascinating region, or to picture to you the beauties of this fascinating river? To delineate them aright would require the pen of a Ruskin and the experience of a Powell. Its glories are only known to one who, like the latter, has floated on its hurrying tide down to where it unites with the Grand to form that mightier stream, the Rio Colorado of the west.

Fifty miles below the Union Pacific Railroad crossing the river becomes wider, and its mad rush for a while is checked as it flows slowly through a broad valley. Here its surface is dotted with little sand bars, against which the water ripples with a gentle murmur, far different from its usual angry roar. On the north and south the mountains, stern and immutable in their rugged magnificence form an almost continuous barrier, and seem to open unwillingly the narrow channel through which the waters pass. On the east the bluffs rise one after another in bare, gray walls until they become part of the foothills and at last run into the mountains a few miles away. On the west the valley is bounded by a range of lofty buttes, almost perpendicular on every side, but occasionally affording a path by which an active climber may reach the summit. The surface of the plateau is level and clothed with short bunch grass, here and there diversified by a few tall weeds, which wave wildly in the never-ceasing breeze.

From this elevated post the country may be seen stretched out in a glorious panorama. The dark green ribbons, which run back from the river in all directions, showing where the brooks descend from the higher land, contrast finely with the silvery gray of the sage plains; while the cloud-capped mountains beyond, touched by the declining sun, form a gorgeous setting for the picture.

Near the base of one of these buttes our camp is pitched. Three or four tents, their white canvas showing bright against the green willows, stand at a short distance from the water. Four Government wagons are drawn up not far off, and the baggage of the outfit lies on the ground beside them. The horses and mules, dispersed over the plain, are cropping the luxuriant herbage, tended by their watchful herders, who occasionally drive in those that stray too far, and prevent the more restless from wandering away from camp.

Around the glowing fire a dozen men are stretched upon the ground. Bearded, bronzed by exposure to all weathers, and clothed in buckskin, you might take them all at first glance for a party of trappers; but their speech betrays their occupation, and shows you that they are members of some scientific expedition.

The evening meal over, they have lighted their pipes, and are discussing with animated voice and gesture the various prizes obtained during the day. Some exult in a new fossil, others examine some rare bird, others still are looking over their tools, while two who are cleaning their rifles converse about to-morrow's hunt. The two last are John N— and myself. The last morsel of fresh meat in the camp has been consumed to-day, and we have resolved to make an early start to-morrow morning and see if we cannot renew the supply. So, soon after the sun goes down we wrap our buffalo robes around us and ere long are soundly asleep.

The stars were shining brightly from the cloudless sky, when we crossed the river and turning north, directed our course up the stream. The wind blew chilly down from the mountains, causing us to gather our blankets closer about us we trotted silently along. At length we reached a deep and rocky cañon, where, on passing some days before, we had noticed numerous tracks of deer and elk; here, turning away from the river, we commenced to ascend the heights.

A silent ride of about two miles between the gloomy rocks brought us to the commencement of the timber just as the light began to appear in the East. Pushing on through this until we were well up on the mountain, we came to a slight opening among the pines, where a little spring bubbling out of the ground fertilized a small extent of land and nourished a rich growth of grass. Here we halted and unsaddled our horses, and after picketing them out to feed, started off to look for the game which we expected to find near at hand.

We took the precaution to notice with the utmost care the various landmarks that we passed on our way. This was necessary for the reason that among those extensive forests each tree looks so much like the next one that unless great care is exercised the traveler becoming bewildered by this similarity, is almost sure to lose his way.

As we proceed through the sombre aisles of the forest our moccasin-shod feet fall noiselessly upon the thick carpet of fine needles with which the ground is spread. The breeze blows softly on our faces bringing with it the faint damp odors of decaying vegetation and sighs with a

gentle rustling through the tops of the lofty pines. A dim, uncertain light pervades the scene, rarely relieved by a ray of sunlight, which breaks through the dense foliage and flecks the ground with spangles of waving gold. The ruffed grouse, with sedate step and dignified bearing, stalks a few paces away from our path, while the little pine squirrel, startled from the ground, hurries to some elevated perch, whence he gazes at us with his round, black eyes, wondering, no doubt, what the strange creatures are that invade these mysterious solitudes. No sound is heard save the whispering of the pines and the distant cry of the Clarkes crow, borne faintly to our ears from the peaks above.

At length we reach a spot where the trees grow farther apart and the light becomes stronger, and as we round the prostrate trunk of a huge tree, an object catches our eye which causes us suddenly to stand motionless as statues. A fine two-year-old black tail buck is feeding on the edge of the opening not seventy-five yards from us. The wind blowing from him to us has not notified him of our presence, nor have his eyes or ears warned him to hurry away through the forest. We draw cautiously back to the shelter of the fallen tree, John kneels, and, as the buck presents his side, fires. The crack of the rifle echoes over the mountain and is thrown back from a hundred crags. The buck gives two or three sudden bounds and stands gazing wildly around for a moment, and then moves slowly off through the trees. But we have seen the life blood pouring from the wound behind his shoulder, and we know that he will not go far before lying down, and that when he lies down he will never rise again.

We step leisurely forward to the spot where he disappeared and find a thick trail of blood, and following this for about thirty yards we come to the beautiful creature lying dead, his muscles still quivering and the steaming current just ceasing to flow.

Half an hour is devoted to skinning and breaking up our quarry, and as much more to the enjoyment of a cigarette as we recline on the soft pine needles and dreamily watch the waving tree tops; and then seeing that the sun is approaching the zenith, we resume our rifles and advance again. Two or three little openings are passed revealing nothing, and the afternoon is wearing away, when, as we stand on the edge of another little glade consulting upon the advisability of an immediate return, we see a large buck and two does emerge from the woods on the other side and walk down toward the little pool which lies half way across the opening. They are three hundred yards away, but if they continue to advance after drinking will pass within shot of us. They remain near the water, however, and we determine to crawl upon them.

The grass, fortunately, is moderately high, and conceals us as we creep slowly along. At length we are within one hundred and fifty yards, the grass becomes shorter and we can advance no nearer. We carefully raise our heads above the grass and fire together, and the two does drop. The buck runs a few paces and stops and looks back to see why his companions are not at his side. As he stands broadside toward me, I raise up again, and, firing quickly, have the satisfaction of seeing him come to his haunches. We run gleefully up and administer the *coup de grace* to John's doe, which he has shot through the shoulders, and to the buck, which has a broken back. Then hastily bleeding the game, we hurry off to bring up the horses.

And we were none too soon in doing so. The time taken in packing the loads, and in looking for John's buck, which on our return we had almost missed, and the fact that we had to walk, leading our burdened horses, delayed us so that the sun was setting as we emerged from the timber. A little later and we should have been forced to camp in the forest. No great hardship, you will say. True, but we preferred the dinner that awaited us in camp and our warm buffalo robes to dry deer meat and a single blanket in the mountain.

We hurried down the cañon, and in a short time after reaching the river bank were opposite the camp. Here our shouts soon attracted the attention of the crowd around the fire, and a couple of horses were led over to us by one of the party, which we mounted and rode across the river. And now while we enjoy our dinner by the cheerful firelight, some skin the last three deer and others tell us of what they have done during the day and demand an account of our trip. This is soon given; and when an hour later the rising moon silvers the mountains, the plain and the river, and floods the camp with its clear, pale light, dimming the flickering rays of the fire, no sound breaks the stillness of the air save the monotonous cropping of the feeding herd and the low murmur of the water as it ripples softly against the banks; *lenes susurri sub noctem.*

ORNS.

PRACTICAL FISH CULTURE.

NUMBER ONE.

UNDER this head the writer proposes to give full and complete instructions regarding the building of ponds, dams, screens and the manner of keeping trout, together with the modes of taking spawn, handling and hatching it, the rearing of the young fish, their diseases and enemies so far as known, and such other matters as may be necessary to thoroughly post one that has not the slightest knowledge of the first principles of fish-breeding, so that he will be able to manage a trout farm successfully. Therefore, the reader that is already well posted is informed that these articles are for a much larger class who must perforce commence at the A B C, and if he should be so well learned that there is nothing possible for him to gain from the ex

perience of another, then he may skip the whole series, for he is much better informed than the writer thereof.

And if it should seem that too free use is made of the first person singular, then it should also be remembered that one who has nothing but his own personal experience to draw upon, is of necessity compelled to use it often, and all the knowledge of trout-breeding that I possess can be truthfully said to have been acquired in that school that is reported to be the most expensive of all, and which is well patronized by a certain class of whom it is said that they will learn in no other; but until quite recently there was no other, of any kind. Within the last few years there have been several books published of more or less excellence, but there are new discoveries and modes of operation continually claiming attention, so that a book soon becomes old in this new business, and besides this, they are all deficient in details, and it is in these where men have failed.

Some of these writers have had but little personal experience, have lived at a distance from their ponds which have been cared for by an attendant, who did all the work and gave the proprietor all the information he possessed about them; and right here it would be as well to say that the writer makes no claim to any scientific knowledge, which the much regrets, and as he often has questions of that nature asked, he is always obliged to refer them to more competent authority, but having dug and built his ponds with his own hands, taken the spawn and cared for it and the fish, without help most of the time, he feels competent to give advice of a practical nature.

It was thought necessary to state these things in order that the readers of FOREST AND STREAM may know exactly how much value can be placed on the statements hereafter to be made.

Having had many letters from the Southern States containing inquiries concerning trout, wherein it was doubtful if the writer thereof knew our brook-trout of the north, I will say: I do not know the exact southern limit in which trout occur. There is a fish called trout everywhere, a chub in the James River is so called, and a variety of bass is known in Alabama by the same name, so that it will be seen that the common names of fish are almost as badly mixed as those of birds, and probably the inhabitants of those places who have heard their fish called trout all their lives would laugh to scorn the pretensions of our fish to the name, and as this paper is not limited in its circulation to the habitat of the *Salmo fontinalis*, I will merely say, that that is the name of the fish referred to here, for description of which see any scientific work on fishes. It has also been called *Salmo nigrescens*, and *Baione fontinalis*, but the name given above is adopted by Richardson, Kirtland, Mitchell, Ayres, Gill, DeKay, Storer, and other prominent scientific men.

It is popularly called brook-trout, speckled trout, spotted trout, and mountain trout, in different localities.

There is a variety called silver trout which is entirely without spots or markings, and whose sides glisten with a beautiful silver sheen, not so handsome however as the spotted kind. This fish is found occasionally in western New York, in Vermont and perhaps in other States. I had both kinds on exhibition at a fair once, and a man from Lycoming Co., Pa., after examining the silver trout, said: "Those are trout, but what are the others?"

After explaining that they were our common brook-trout he looked them all over and said that they must be what he had heard called "black trout," but had never seen them, although he was breeding the silver ones. Naturalists who count but little for color in fish, as it is so much more variable in them than in birds and animals, make no difference I believe, between these fish, or it may be that the silver ones are albinos; if so, then it appears that there are sections where the trout are all albinos. I have never thought enough of them to try to breed them, and none have ever occurred among my stock which originally came from streams where they are occasionally found.

There is a great difference in the markings on our trout, not only in the crimson dot, which often varies on the sides of the same fish, but in the pencilings on the back, which is sometimes mottled, and at others marked with broad irregular bands; the latter are my favorites and are known on the trout farm as "mackerel-backs," a name that describes their appearance exactly.

A person with more leisure could have easily determined if it were possible to breed these fish "to the feather," as the poultry men say. This is among the possibilities of fish culture and will be accomplished some day. Why not? Marks are fixed by selection of breeders in all other live stock, and it may require several generations to establish a strain that will be true to pattern.

The lateness of the season, however, demands that the different modes of taking spawn should come first in order, and therefore we will leave these minor questions and proceed to consider those.

There are three ways by which trout are increased in ponds and streams; first: by making spawning places and allowing the fish to make their own nests in which they spawn, and the young hatch without further aid from man; second: taking the eggs from the ripe fish, impregnating and hatching them; third: by making nests in the ingenious contrivance known as Ainsworth screens, where the fish lay their eggs in gravel that rests on wire cloth and it is caught on a finer screen below, from which it is taken to be hatched in the same manner as those taken by hand.

In order to clearly describe the last two processes, it will be necessary to show how the fish deposit their ova when left to themselves. It is always interesting to lie at full length upon the board covering of the spawning race and

watch the proceedings below through the cracks, and notwithstanding the fact that the writer has done it hundreds of times it is not only just as interesting as ever, but as unsatisfactory, for there are some parts of the operation about which there seems to be as much obscurity as ever. Most, if not all efforts at pairing seem to be on the part of the males who often appear on the spawning beds several days before the females, and when the latter arrive and begin the nest-making, each one is appropriated by one of the sterner sex who keeps close to her unless driven off by some more powerful rival. The female pays no attention to these skirmishes, but busies herself in making a depression in the gravel wherein to deposit her treasure. This she does by turning on her side and whipping the gravel with a succession of short quick strokes of her tail which causes her to move forward and upward until she is beyond its reach, when she again returns to her position to rest. The male fish now renews his attentions by rubbing against her sides, sometimes going clear around her head, all the while trembling with excitement until the spectator can almost imagine he can hear a rumbling sound as he rounds the point of her nose.

This is kept up until a nest is made several inches deep and a foot or more in circumference, which sometimes occupies two or three days. When all is ready she depresses her abdomen by bending her head and tail upward and by gently pressing against the stones as she moves forward, the eggs flow in an amber stream. The male, watchful of every move, seems to know the exact moment, for both seem to move by one impulse and discharge eggs and milt together, which are then covered up, but whether by one or both, I have never been able to determine. Some say the male alone does this, but there is always a great flurry and a cloud of milt that has prevented close observation.

It often happens that when two ripe males are battling for possession of a female that the fight ends in the death of one or both. A fin will be torn out, or scratches on the sides from the adversaries' teeth will have caused a slower death from the fungoid growth with which the wounds will be covered.

For ponds and streams where the trout are to be left to do their own spawning, all that is necessary is to provide graveled beds in or near a spring if possible, or just below an eddy formed by a log or stone where the water is not too swift. The beds should be covered over by boards which not only prevent their being disturbed by the sight of persons or animals passing, but also gives the fish a feeling of security.

The increase is very small by this method as the eggs that are laid by one pair are thrown out and devoured by the next fish who may happen to choose the same locality for a nest, still it is much better than nothing if the owner is not able or inclined to do more. The first artificial pond that the writer ever saw was managed in this way, and the owner took many trout for his own use from it each year, besides allowing a limited number of visitors to fish in it at one dollar per pound.

This pond was 80x100 feet, and from one to nine feet deep. It was simply scooped out with a plow and scraper below a couple of small springs which were made into spawning beds, and a ditch plowed around the pond to carry off the surface water.

FRED MATHER.

—There are 1,500 vessels engaged in the Baltimore oyster trade, which in season average 1,200 bushels of oysters each trip. These have mostly suspended operations. A short time since pungymen bought oysters at 40 cents per bushel at the beds, brought them to Baltimore, expecting to realize 60 cents, the price paid when they left, and were compelled to sell for 10 to 15 cents. This has had the effect of intimidating the oystermen, and hence receipts are light. Some of the packing-houses which at this time are usually very busy, are doing nothing. A few others again who in busy seasons employ 500 and 1,000 men, have from one-third to one-sixth this number now at work. It is estimated that over 12,000 persons are engaged in the oyster trade, including the dredgers.

—A lot of minstrels went to a town not far from Boston lately, and advertised to give a performance for "the benefit of the poor—tickets reduced to ten cents." The hall was crammed full. The next morning a committee of the poor called upon the treasurer of the concern for the amount said benefit had netted. The treasurer expressed astonishment at the demand. "I thought," said the chairman of the committee, "you advertised this concert for the benefit of the poor." Replied the treasurer: "Didn't we put the tickets down to ten cents so that the poor could all come?" The committee vanished.

—The Emperor said to Nelaton (the famous French surgeon, who has just died), when he cured his Prince Imperial in 1867: "I thank you, Monsieur Nelaton; you have saved my son." "I am glad of it, sire," was his answer, "for I have at the same time saved my reputation."

—"If you are unlucky enough to sever a man's carotid artery," said Nelaton, the French surgeon, recently deceased, "remember that about two minutes must elapse before syncope takes place, and as many more before death supervenes. Now four minutes are just three more than is needed for binding a ligature, provided that you do not hurry."

—The funny man on the *World* says that "seven cars full of eggs were sent to the Milwaukee and Northern Railway in one train last week—an unparalleled instance of ova-loading."

—A hundred thousand salmon, the eggs being received from California, have been hatched at the State Hatching House, and will soon be placed in the tributaries to Lake Ontario.

—A Sophomore at Lewisburg University describes an ellipse as "a circle kinder rounded at both ends."

—"WANTED," says a country paper, "young ladies who can play at croquet without cheating."

Woodland, Lawn and Garden.

THE VALUE OF FOREST TREES.

"Woodman, spare that tree."

WE are much gratified to know that more of an interest is beginning to be taken in the preservation and cultivation of our natural forests, and that a consciousness of the necessity of planting out large tracts of hitherto waste lands with timber and forest trees, is beginning to be appreciated. All this is a step in the right direction and deserves our thanks. So great has been the destruction of some of our large forest lands, that in some sections of our country its effects have already been seriously felt. Droughts of long continuance, great dryness of the atmosphere, and the drying up of quite a large number of streams—some of them not inconsiderable streams, have in fact disappeared altogether, while some streams of water, which once made sweet music in their serpentine meanderings through the forest, are dry, and they, like the green sheltering forest over their heads, have become a shadow of what they once were. We behold no tall green forest with its deepening shade making glad the heart of man; no pebbly brooklet murmurs over its many-colored mosaics; its diversified channel lies bare, and a universal dryness of the atmosphere has taken the place of the former cooling melow climate. We sigh in vain for the cooling breeze that once swept over these hills, that coursed through these vales, bringing comfort and cheer to the weary traveler. We sit again upon an old and well known seat—a pile of rocks amid the hemlocks—once covered with moss and violets springing at their bases. Alas! the hemlock's shade has departed with the hemlocks, the green moss and violets have become dried up and withered, and they have left no trace behind, where all this beauty had been.

We might cite many interesting scientific and philosophical facts to prove that, wherever a thorough investigation of atmospheric and other phenomena attending the cutting of our forests has been fully and thoroughly studied, a great dryness of the atmosphere in the immediate neighborhood was always the result. To an observing mind of only moderate capacity, the life study of such an one has given ample proof of the necessity of preserving our forests intact. Said a man of only ordinary intelligence: "I have had no opportunity for studying these occurrences in the way you have, I know but of the reason why it always follows that when you cut off the wood from a swamp, you dry up the brooks; but I know it is so in nine cases out of ten. I am satisfied there is something in it more than accident."

"Of what tracts do you speak now in particular, and what proof do you give that these swamp grounds are not to-day in the same condition as to mean temperature and density of atmosphere, as they were at the first period of which you speak?"

"Why, sir, I used to be quite a sportsman once; twenty years ago, when I was a younger man, I used to go into these Henny swamps, as they were called, and in six hours' time, with a good dog—Dash—and myself, used to bag twenty woodcock, and then we were not tired in the least. I could, had I been so minded, have easily made my twenty birds twice twenty in number before five o'clock."

"Why did you not keep on shooting, if you relished the sport? I should have found it hard to have stayed my hand."

"And this was the case with myself. I confess to the wish to have kept up the 'banging away' until night, but I never was a pot hunter or 'slaughterer of birds or fish,' for the mere sport of killing the same. I shot what I then wanted, as all good and true sportsmen do. I never committed bird or fish murder."

"You once made these Henny Swamps your game ground. You would find it difficult now to flush much game there."

"You are right," answered my friend. "You would be as likely to find black duck on a July pasture as a woodcock in these dry barrens, once fine, damp, shady swamps, just the best of feeding grounds for the woodcock. They are gone never to return again, and the brooks are dried up."

Of what benefit, therefore, may or may not be a knowledge of the temperature of the earth in forest or open lands?

Ebermaye, a celebrated Bavarian physicist, passed many months of his active life in the study of external influences upon the atmospheric temperature of forest and plain. Among his conclusions pertinent to the discussion of our paper, we would note that, upon causing very careful notices to be made of the temperature of the ground by means of thermometers sunk from the depth of from one to six inches, and of one, two, and three and four feet, he found in the upper layer of earth, within one foot of the surface, the minimum monthly mean temperature, occurring both in open and in wooded regions, in the month of January; and only on the high mountains does the lowest temperature occur in February. He also found an increase of temperature from February, or until its maximum in July; at the high stations only does the maximum occur in August. All our observations have convinced us that from the months of July or August the temperature decreases to January or February.

These facts, to the common understanding, may seem very trivial or scarcely worth the mention, yet, my friends, to the agricultural interests of a country they are of great

*A more efficient argument for the preservation of forests we do not remember to have heard recently, although we are in possession of many which prove the value of forests.

weight—of priceless value. It is important for many men to know that the monthly increase of temperature is most rapid in May, and is nearly as great in April, and it is least in June and July. At a lower depth in the earth than that of one foot, we find the temperature to be greater in June and July than it is in the upper stratum. There is loss of temperature, the most rapid in the months of October and November, and least in the very coldest months of January and February.

In all our forest covered lands we find the lowest temperature to be in February. From February to June we have often an interval in which the common, or unscientific observer notices, if he notices anything at all about the weather, that the ground is cooler than the air, and in July and August the ground is warmer than the air. Consequently the greatest difference between the temperature of tree and forest lands occur in May, and least in June, these fluctuations always being less in the forest than in the open glade.

The great influence of our dense forests in preventing the cooling of the ground by the radiation of its heat, is always a noticeable fact, most observable in October and November, and least in January and February.

Should we further discuss this question of "Woodman, spare that tree," we may present other reasons why our prayer for the forest should be heard.

OLLIPOD QUILL.

THE BOIS D'ARC FOR LUMBER.—In a recent visit to Northern Texas we saw large numbers of the Bois d'Arc or Osage Orange trees in the river valleys, and heard marvellous stories of the endurance of the wood in situations where it was much exposed to alternate moisture and drouth. It was much used by the Indians for bows, and the early French *voyageurs* gave it the name of *Bois d'Arc*, or bow wood, a name often corrupted into "Bodock." The tree grows sometimes to a diameter of two or three feet, and is sawed into lumber for wagons. It is close grained, and the tire once set upon the wheels never becomes loose until it is worn out. This is a great advantage in any climate, and would be invaluable in the almost rainless region of the plains. They tell of wagons in Texas that came in with the first emigration, and after thirty years are still serviceable and in good condition. The wood is also much used for fence posts, and resists decay longer than any other wood in that region. If these claims are well founded there must be an immense demand for the lumber west of the Missouri, where wood is so scarce, and where there is no hard wood at all. The forests of this wood in Texas should have protection by law, and it should be extensively planted in the more northern States as a timber tree.—*American Agriculturist*.

The Kennel.

THE Terrier, although not used to any great extent in the field as a sporting dog, is death on vermin, and being very intelligent, apt at learning, delicate of nose, and quick of eye and scent, will be found the best dog for raccoon hunting. There are several varieties of the Terrier—the English, the Bull, the Fox, the Scotch, the Skye, and the Dandie Diamond, so called, in honor of the character of that name in Walter Scott's "Guy Mannering." The English Terrier possesses a smooth coat, a tapering muzzle, eye small and bright, and has an habitual custom of digging the ground with his fore feet and dragging away the stones and other substances in his mouth. The Scotch Terrier is a quaint-looking animal, broken or wire-haired, always ready for work or play, good to hunt rats, and in fact will dig a fox out of his hole when he fancies himself in safety. The color of the Scotch Terrier is generally the same as that of the English dog, he has so long been kept as a pet that unless a pure breed is obtained from his native country, he will be found valueless as a sporting dog. All these dogs would be of the greatest value for successful raccoon hunting. In the *London Field* a gentleman writes the following about Terriers, and if raccoon is substituted for badger, it will be found serviceable:

"I have witnessed the digging out of a great many badgers, both old and young, and have frequently found as many as three cubs; and on three occasions that I can remember, four in a litter. Badgers are a great nuisance; they take possession of the best earths, and as far as my experience goes, drive foxes away from them, although I know it is generally supposed to be quite the reverse.

This spring, while in Devonshire, I dug out nine badgers in two days, including a litter of four cubs. There is a considerable amount of excitement in unearthing an old badger from a deep sandy earth, and it is one of the best tests of the capabilities of a Terrier that can be obtained. Some of the Devonshire earths are very extensive, covering nearly or perhaps quite half an acre of ground; and unless you have two or three really good Terriers well up to their work, it is quite useless attempting to dig—unless, of course, you are lucky enough to find a badger in a very small earth, which is not often the case. I have tried at different times Terriers of all sorts, shapes and breeds, and I certainly think that for going to ground there is nothing to beat the Fox Terrier proper, and his cousin the wire-haired variety. I have seen many capital wire-haired dogs, one of the best being a little dog weighing about fifteen pounds, and sent to me not long ago to try; not many dogs that would beat him for sheer gameness, yet for going to ground, I have never seen a better. He has a most wonderful knack of keeping a badger from shifting his quarters in a deep earth, and of preventing him digging. Bull-Terriers are, as a rule, of little use to go to ground; it does not seem natural to them, and they would vastly prefer a few rounds with the badger in the open air to seeking for him in an earth, perhaps some ten or fifteen feet below the surface."

Natural History.

—A correspondent writes from Lawrence, Kansas, that while shooting quail the other day he bagged an albino which was pure white with the exception of three delicate brown feathers on the breast and three quill feathers on one wing—a bird of the most beautiful description. Its legs and bill were also pure white, which is the strangest part of this freak of nature; for although albinos are not uncommon throughout the animal creation, the bills of albino birds and their legs when not feathered, are usually of a delicate pink shade. In the case of ptarmigan, all members of that species assume a winter garb of pure white, excepting a few feathers on the tail and wings, but these birds are in no sense albinos, as their dress changes with the recurrence of the seasons, and in autumn is as dark a brown as that of the ruffed grouse. Were the bill of this quail (*ortyx*) not pure white, we should be ready to believe that in this particular instance these characteristics of the ptarmigan were developed in this bird. We trust that our correspondent has had the forethought to get this bird mounted.

—Some interesting information relating to the ravages of insects was given by Mr. C. O. Groom Napier to the House of Commons Committee of last Session on the protection of wild birds. In 1782 the caterpillars of the brown-tail moth were so numerous as to defoliate the trees of a very large part of the south of England. The alarm was so great that public prayers were offered in the churches that the calamity might be stayed. The poor were paid 1s. per bushel for collecting caterpillars' webs, to be burnt under the inspection of the overseers of the parish; and fourscore bushels were collected daily in some parishes. The brown-tail moth is a beautiful little white insect, about an inch in expanse of wings. Mr. Napier noticed that in 1853 it defoliated about 20ft. of hedge near Parkstone, Poole; and in 1855 the caterpillars riddled and deprived of their leaves two plum trees in his garden at Lewes, one of which died. The caterpillar of the gamma moth is one of the most injurious to garden plants; it principally feeds at night, and concealing itself by day, is unperceived. The gamma moth overran France about a century ago and devoured a very large portion of the crops, but, fortunately, the corn was not attacked. The antler moth is sometimes extremely destructive to grass crops. Mr. Napier once saw millions of these on the Wrekin, and in the following summer the grass of that mountain was in a miserable state. The lackey moth is very destructive to filbert plantations, cherry orchards, and other tree plantations. The buff tip, the cabbage moth, and the small ermine are very destructive to the leaves of fruit trees and garden shrubs. But, on the other hand, the benefits derived from the labor of some insects should not be overlooked; some species feed only on noxious weeds, and others prey on still more noxious insects. One of the greatest friends of the agriculturist is the family of ichneumon flies, which lay their eggs in the bodies of living caterpillars, in which they are hatched, thus destroying them; although the caterpillar, after being "ichneumonized," has still a voracious appetite. The caterpillars which feed on the cabbage eat twice their weight in a day; the larvæ of some of the flea flies eat a much larger proportion than this. The productive powers of insects vary very much. Some lay only two eggs; others, such as the white ant, forty millions, laying them at the rate of sixty a minute. The queen of the hive bee is capable of laying 50,000 in a season; the female wasp, 30,000. The majority of insects, however, lay but about 100, in general, the larger the insect the fewer eggs it lays. Most insects have two generations in the year; some have 20; others take seven years from the time the egg is laid until their natural death in a perfect state. But probably not above five per cent. of the eggs laid become perfect insects. Among the flies the daddy-long-legs is one of the most destructive, especially in France; it feeds on the roots of grass, and Mr. Napier in 1859 noticed meadows in La Manche devastated by it. The starling is a bird most useful in destroying these larvæ, and those of the horse and cattle flies. The orthopteris insects, of which the locust, grasshopper, and cockchafer are examples, are very destructive. The numerous species of grasshoppers lessen the amount of our grass crops. Locusts are seldom found in England now in sufficient numbers to do any damage, but they have done considerable damage here in former generations. Their greatest enemies are the starling and rose-colored pastor, which follow them in flocks and decapitate them by hundreds. The beetles are immensely numerous, as regards species. In 1574 the cockchafers gathered in such numbers on the banks of the Severn as to prevent the working of the watermills. On another occasion, in Galway, they formed a black cloud that darkened the sky for the distance of a league, and destroyed the vegetation so completely that summer seemed turned into winter. They made a noise resembling the sawing of wood. The people, threatened with famine, were obliged to devour them. In 1804 they were alarmingly numerous in Switzerland. The female lays about 30 eggs; in six weeks they are hatched. They live from three to four years in the larvæ state. The first year they do not do a great amount of damage; but in the second year they attack the roots of all plants within their reach. They often ruin the crops of corn, lucerne, strawberries and various plants on which man depends for food. In a field of twenty-nine acres in France, above 43,000 larvæ were found—quite sufficient to destroy the entire crop during the season. Our insectivorous birds are diligent in destroying the larvæ of insects, but they will not do all that is required; hand labor is also needed. Mr. Napier is of opinion that the extensive diffusion of information on the habits and means of destroying our more noxious insects would be the means of saving millions of pounds worth of valuable food every year. He says that in the United States the importance of this subject is felt, and almost every State has a government entomologist, whose business it is to make inspections and reports of the ravages of insects, and show the remedy. In France government returns were published, from which it appeared that the damage done in Normandy by the cockchafer alone amounted to twenty-five million francs. A law was passed in France a few years since for the protection of birds. Not, however, that all birds are to be welcomed; the sparrow does more harm than good, by feeding so much on green crops, and the wood pigeon does much mischief. But on the whole Mr. Napier is certain our birds do a great deal more good than harm.

DO SNAKES SWALLOW THEIR YOUNG?

THIS is what naturalists have been asking each other for more than a century. In that most fascinating of books, "The Natural History of Selborne," Gilbert White mentions the popular belief, but does not venture to endorse it. M. Palisot de Beauvois, a member of the French Institute, and a councillor of the University of France, who traveled in the United States early in the present century, claimed to have seen five young rattlesnakes, "each about as thick as a goose quill," run down their mother's throat, run out, and then down a second time. John D. Hunter, in his celebrated "Memoirs of a Captivity among the Indians of North America," gives similar testimony. Sir William Jardine, an eminent English naturalist, wrote in 1853: "We have always looked upon this as a popular delusion, and the supposed habit is so much at variance with what we know of the general manners and instincts of animals, that without *undoubted proof* we are still inclined to consider it as such." In 1865 Mr. M. C. Cooke, of *Science Gossip*, strongly advocated the affirmative, citing many instances observed by his friends. In 1869 Mr. F. W. Putnam, of the *American Naturalist*, considered the case unproved, though he inclined to believe with Mr. Cooke. During the last year a lively discussion has been carried on in *Land and Water*. Mr. Frank Buckland, one of the keenest of English naturalists, strenuously opposing the idea. So stood the question, the authorities being about equally divided. To the *American Agriculturist* is due the honor, it seems, of finally deciding it. Last February the editors kindly inserted a paragraph asking for information, and in a few weeks about eighty letters had been received from subscribers in twenty-four different States and provinces. Some of these were not to the point, but most of them contained the statements of those who had personally observed this very curious habit. Many were, very naturally, indignant that a fact so well known should be called into question. These statements, together with many others collected by diligent personal inquiry, were embodied by the writer in a paper read at the late meeting of the American Association for the Advancement of Science. The paper elicited some discussion but no opposition. Prof. Gill, of Washington, one of the most skeptical, as well as one of the ablest of American scientists, expressed himself as convinced by the testimonies of so many witnesses, and so did many others. Many of the letters received deserve to be printed in full; but since want of space forbids, only figures can be given. Our witnesses are 104 in number, 58 saw the young enter their mother's mouth; 19 heard the mother warn them by a sharp whistle or hiss or click; 3 were considerate enough to wait and see the young reappear when danger seemed to be passed; 18 saw the young shaken out by dogs or running from the mouth of the dead mother; 32 who saw the young enter killed the mother and found them living within her; while only 14 of the 58 allowed the poor affectionate parent to escape; 29 found the young in the body of the parent, but as they did not see them enter the mouth, this testimony is rather dubious. Among the witnesses are four naturalists of reputation, whose word is as good as gold in other departments of Natural History. Eminent physiologists admit that there is nothing impossible in the habit, for living tissues are not easily affected by the gastric juice, and reptiles could not easily be smothered, even in the mother's stomach. The habit is known to be shared by the English scaly lizard. The males of certain species of South American fishes related to the "cat-fish" and "bull-head" carry their eggs in their mouths and gill openings, depositing them in places of safety and removing them at the approach of danger. Equally singular though not similar habits of protecting the young are found in the well known Surinam toad, in the kangaroo and opossum, and in the pine fish and his cousins. There is room for many interesting observations, especially to determine what species afford their young this protection. About the garter-snake and the ribbon-snake, the water-adder, the Bandel rattlesnake, the copperhead, the moccasin, and the Massasauga there can be little doubt, and the habit probably extends throughout the genera which these species represent. The case of the hog-nosed snake, sometimes called the blowing or puffing adder, needs farther investigation, and so also that of the black snakes. It seems more than likely that the racer or mountain black snake, which is distinguished by a little ridge or carination in the middle of each scale, does thus protect its young, but it has not been shown that this is the case with the common smooth-scaled black snake. It is very desirable to learn whether, as has been supposed, the habit is peculiar to those snakes which are ovoviviparous—that is those in which the young are hatched from the egg while still in the body of the parent. As was remarked, there is no proof that the black snake swallows its young, and this is the case with all the egg-laying genera, as the milk-snakes, grass-snakes, brown-snakes, ringnecked-snakes, and bull-snakes, although they are common and easy to observe. If any reader of the *Agriculturist* should observe a snake with young running down its throat, or should have reason to believe that she had them in her stomach, it would be a capital plan to tie a cord tightly about her neck to prevent their escape, and then carry her to some naturalist or some physician and have a careful dissection made. This would forever settle the question, and might be done without the least difficulty, for all our snakes except the rattlesnakes, moccasins, copperheads, and massasaugas are perfectly harmless.

Accurate statements are much needed of cases of snakes *charming* men, quadrupeds, and birds. It would be interesting to know whether the cast-off skin of a snake is always left as the snake wore it, or whether it is sometimes turned inside out.—Prof. G. B. Goode, in *American Agriculturist*.

A GREAT HERDSMAN.—The greatest herdsman in the world is the title claimed for Samuel W. Allen, of Texas, who owns 225,000 cattle. He has one ranch eighty miles long and forty wide, between the Nevada and Colorado Rivers, the largest on the continent, which pastures 120,000. Two others accommodate respectively 70,000 and 35,000. These cattle all subsist on native grasses of a part of Texas. His herds require the attention of at least 400 herders and branders and the use of 3,000 horses. He brands 60,000 calves every year to keep up the supply. The value of his stock, exclusive of the land, exceeds \$5,500,000. He is the chief meat purveyor for New Orleans and the neighboring counties of the Gulf coast.

There is every indication of an unusually gay winter in Washington. The financial troubles do not, as a rule, affect the class of persons who make Washington their winter residence.

The Magazines.

AN OTAHITIAN ROMANCE.

IN *Le Tour du Monde* M. de Varigny, in his travels in the Pacific tells this pretty story: "Fatigued with the day's travel, we sought a pleasant grove, and were all just taking a half hour's rest, when our quiet was broken into by a troup of mounted ladies going towards Honolulu. In the lead there rode a young woman, and beside her galloped some ten Kanakas. She was some petty Princess just returning from a visit to her plantation. The gentleman who directed the movements of our party introduced me to the young lady with all the forms of English etiquette. She was exceedingly handsome, beautifully formed, with a certain marked air of distinction. What was most remarkable about her was her hair, which was massed in luxuriant folds around her head, though strangely enough there was a tress of pure flaxen colored hair mixed with it, which stood out in contrast.

The young lady observed that I noticed it, and pleasantly asked "if there was anything extraordinary about her hair?" Driven to confess what had attracted my attention, I stated to her the charming effect the flaxen hair produced when seen in the midst of such raven tresses. Not a bit disturbed, laughing at my astonishment, in a trice she unloosed her flowing locks, as if to show me that all her hair was her own. "The story of my hair is curious," she said, "and providing you have any faith in our legends I will tell you all about it. When Kealikoloa reigned, that was the thirteenth grand chief, counting backwards from the arrival of Captain Cook, which according to our present computation of time was at the beginning of the 17th Century, a strange ship ran on the coral reefs near Pale on the Island of Hawaii. All the crew were drowned, save a woman. As soon as she had struggled to shore, overcome with fatigue, she sank to the ground, and knelt and prayed. At Pale, near a big rock, which is called Kulon to-day, was where it all happened. The natives treated her kindly, gave her a cabin, brought bread and fruit and fish, and showed the woman all respect. Some of the goods from the vessel floated on shore, and these were kept by the natives for the use of the stranger. Little by little the poor lady acquired our language. There was a noble young Chieftain who used to come after fishing and talk with the strange woman. He was amazed at her beauty and wondered at the pale color of her hair, for she had blue eyes, so says the story, and a skin as white as milk. There is still an old native ballad that tells all about this and sings her charms. Need I say that the chief loved the pale woman with the light hair? They were wedded, and soon two children blessed their union. The chief loved his wife dearly, but this wife—she went to the sea-side and passed hours on hours there, gazing on the rippling waves, I, brim full of sadness and woe, and as if searching for something far beyond the ocean. Little by little she wasted away, until at last, sadly and mournfully she passed away. Before her death she had made her husband swear that he would make no human sacrifices over her tomb, and he solemnly kept his promise. Of his two children, they were both girls, one died very young, but the other lived, and in time became the wife of a chief. Her hair was as black as mine, but like mine, there was a flaxen strand in it. Her children—only the girls, all have this peculiar mark of their mother. That pale woman with the blue eyes and the locks of golden hair was my great-great grandmother. I don't know how many removes back, say fully two hundred and seventy-five years ago." "This story," says M. de Vangny, "has been embodied in quite a charming native romance, called Kiana, the name given to the foreign woman, and Kiana is the Hawaiian for Jane.

D'ORSAY'S WIT.—"The wit of Count d'Orsay was more quaint than any thing I have heard from Frenchmen (there are touches of like quality in Rabelais)—more airy than the brightest London wit of my time, those of Sydney Smith and Mr. Fonblanque not excepted. It was an artist's wit, capable of touching off a character by one trait told in a few old words.

"I have heard the count tell how, when he was in England for the first time (very young, very handsome, and not abashed), he was placed, at some dinner-party, next the late Lady Holland. That singular woman, who adroitly succeeded in ruling and retaining a distinguished circle longer than either fascination or tyranny might singly have accomplished, chanced that day to be in one of her imperious humors. She dropped her napkin; the count picked it up gallantly; then her fan, then her fork, then her spoon, then her glass; and as often her neighbor stooped and restored the lost article. At last, however, the patience of the youth gave way, and, on dropping her napkin again, he turned and called one of the footmen behind him. "Put my *couvert* on the floor," said he. "I will finish my dinner there; it will be so much more convenient to my Lady Holland!"—*Charley's Autobiography*.

THE WANT OF A MICROSCOPE.—In 1833, when Heinrich von Bulow destroyed the village and church of Wilsnack, drops of blood were found eight days afterwards on the Host placed on the altar. But the victims of superstition have the bump of causality remarkably developed; and in 1510, thirty-eight Jews were burnt to ashes because they had tortured the consecrated Host until it bled. Again, the sight was seen on the Moselle in 1824; and in 1848 the famous Ehrenberg analysed the terrible portent. After stooping with his microscope over the red stains on bread, cheese, and potatoes, this savant declared that they are caused by small monads or vibrios, which have a red color, and are so minute that from 46,636,000,000 to 884,736,000,000,000 distinct beings adorn the space of one cubic inch. Unfortunately, when, in 1510, thirty-eight Israelites, as we have seen, were burnt to ashes, no scientific Ehrenberg existed to point out to their superstitious butchers that what they called a proof of the consecrated Host being tortured until it bled, was merely due to aggregation of hungry red insects.

DOCTORS OUGHT TO DRIVE.—We look upon sport rather as a means of preserving health than of restoring it when lost, and we think that professional and business men in town are far too prone to disregard healthful recreation. It is not the three weeks' shooting or fishing to which we allude, but the oft-recurring weekly "outing" to which all who have wisdom and the necessary means treat themselves. The man of business, or the barrister or doctor, who is able to get a day's hunting once a week more than makes up for his lost time by the additional vigor with

which he prosecutes his labors on the remaining five or six. Many of the foremost men of our own profession have been and are noted for ardor in the prosecution of field sports. There is a kind of mild sport which is open to many of our profession, viz: driving; and there are several of our foremost London practitioners who are noted for the dexterity with which they drive their mail-coaches. We have always admired the wisdom of these medical Jehus. When a doctor leaves the harassing case, over which perhaps he has been sorely anxious, and takes the ribbons to drive to his next patient, he must, willy-nilly, get his nose off the grindstone, and the excitement of threading his way through the London thoroughfares must for the time drive away the cares of practice. His animated countenance is generally a striking contrast to that of his professional brother whom we see boxed in his brougham poring over his morning paper or his visiting list.—*The Lancet*.

The Horse and the Course.

—The first day of the extra trotting meeting at Fleetwood Park, Westchester County N. Y., took place on November 5th. The first event was for horses that had never beaten 2:32. Five horses came to the post. Joe Clark won the three last heats. The second event was for the 2:42 class. Nine horses started. Ledger Girl won. In the match for \$200 mile heats, best three in five, in harness, Fred. Tyler won. There were two other matches on the programme and in both cases forfeit was paid. The second day was largely attended by friends in the interest of trotting. The gentleman's race to road wagons had eight entries, six of which started. Buffalo Dick won, Rosie second, all the others being distanced. The next event was the 2:38 class. There were eighteen entries, ten of which started. Fred. Tyler won in three straight heats. In the 2:29 class, eight horses came to the post. Spotted Colt won in three straight heats. The third day of the meeting, notwithstanding the unpleasant weather, brought a fair attendance. The first event was the unfinished match between Tanner Boy and Ella Millard. The former won. The second event was for horses of the 2:26 class, which was finished November 8th. Charley Green won.

—The match at Dexter Park, Chicago, between Lady Mac and Nourmahal, five miles in harness, came off on November 6th. J. C. Simpson's Nourmahal won in 13:39.

A CORNER IN THE COUNTRY.—Poor dear Peggy was a pony. She died thirty-four years old, two Sundays ago, at about half past eleven. She simply lay down and died. The day before, she was quite well. Many a time I have driven her over to our neighboring town, between four and five miles off, in twenty minutes, without touching her with the whip. She won trotting-matches in her youth; and my father, who had a wonderful eye for horses, bought her, promiscuously, out of a common cart in London, having seen how she was stepping out. Now she is dead; and I pray the Royal Commission on horses to tell me where I can find such another. She is buried on the common—a field so called from the date of the Inclosure Act—and is buried where she lay down and died. I wish I had been here to have saved one of her hoofs for a snuff-box. She dies lamented, having done her duty well through a long life. Ned, I expect, will never die. Donkeys never do, they say. Ned is really a she, but has somehow come to be called Ned. She hunts me to sniff my pockets for a bit of bread; but though docile, is hard to ride. I tried her the first evening of my arrival from town. I had given her slices of our loaf, and she stood with her soft nose under my elbow. My wife was close by, and I said: "I'll see now if I can ride her a few yards." So I threw my leg over her, and in less than a minute was flat on my spine in the carriage-road. Up went her back, like a dish-cover, down went her head between her fore-legs, and I was floored. Talking of falling! I had another spill that evening. In that hot July afternoon I hung my South American grass hammock in the shade between two beech trees on the border of the lawn, I had not the proper rope to sling it, but what I had I thought would do. So, after dinner, I lay in my hammock, perfectly still, gazing up into ten thousand million leaves, when all at once the temporary rope broke, and I fell whop on my back, like Newton's apple. The laws of gravitation! If Newton had only so fallen himself, he would have unravelled the still hidden secrets of the cosmos.—*Chambers' Journal*.

HUNTING.—Forward riding, to a man who means to ride at all, is decidedly the best method of crossing a country, both on the considerations of pleasure and profit. Horses take their leaps in a more collected form when they see none of their own species in front of them; the hounds create quite excitement enough in a hunter to make him do his utmost, while the emulation he conceives of his own kind is apt to degenerate into jealousy, that makes him foolhardy and careless. Also a great amount of unnecessary exertion is entailed upon him, by being pulled off and set going again, which must be done repeatedly in a run by a man who follows another, however straight and well his leader may ride. Also, the sportsman's nerves are spared much needless anxiety and misgiving. Can anything be more distressing than to see our front rank man fall, in the uncertainty he has attained on the further side of a thick fence, or cover it with an obvious effort and struggle? Caution whispers we had better decline. Shame urges that "what one horse can do another can." Self-esteem implores us not to fall back into "the ruck" behind. So we first of all check our horses from hesitation, and then hurry him from nervousness. The probable result is a "cropper" with the additional disgrace of having been incurred at a place which the Pioneer cleared easily, and assumption, as unjust as it is unwelcome, that our horse is not so good as his. Now, in riding for himself, a man preserves his confidence till he is in the air. Should he be luckless enough to light in a chasm, he has at least the advantage of not being frightened to death in advance, and I am convinced that all the extraordinary leaps on record have thus been made by these forward horse-men, who, trusting Dame Fortune implicitly, find that she nearly always pulls them through. With regard to the distance a horse can cover when going a fair pace and leaping from sound ground, even with thirteen or fourteen stone on his back, it is scarcely credible to those who have not witnessed

it. Two and three and thirty feet from footmark to footmark, and on a dead level, have often been measured off. There are few fences in any country that would let us in, if we could trust to such a bound as this; and the activity displayed by a good horse when he finds the ditch on the landing side wider than he calculated, is perhaps the noblest effort of the bodily powers of the animal. In the blank forest in Germany there are two stones standing to this day, sixty feet apart, to commemorate the leap made across a chasm by a hunted deer.—*Whyte Melville*.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, trails, species governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

ALFRED G.—Rule XXII of the game laws of the Marylebone club says "the striker is out if any part of his dress knocks down the wicket."

AMATEUR ONLY.—Address Mr. Bethel Burton, Brooklyn, L. I., the inventor of the gun.

CLUBS.—Write to I. H. Stead, Esq., No. 20 Beekman street, New York, Secretary of the New York Athletic Club.

T. O. AND N.—Blondeau is the best reference on the influence of electricity on plants. It is an intricate but beautiful subject.

BRUNGE, Philadelphia. Albino squirrels are rare though there was a notice of one in the New York Times a year or so ago.

CREEDMOOR.—Hall's breech loading rifle was in actual service in the United States army in 1825. Consult General Norton's book on American breech loading small arms.

Sometime ago a correspondent asked us who sold us a Lafanchoux gun, and we replied that we did not know. We find since that Schuyler, Harley & Graham have them.

AMATEUR, Brooklyn.—Ducks are here to-day, and gone to-morrow. On some points around Fort Schuyler you might kill a few ducks and wilets.

HACKLE, N. Y.—Any respectable gun house will furnish you with the pistol requisite for the game you mention. We have our opinion, but decline to give it. Almost any one carrying a heavy ball would do.

SABORUS.—According to Dalton, the dew deposited on the soil in average localities is fully five inches per annum, or about five hundred tons of water per acre. Dew follows, even in India, the banks of streams.

N. S. L., Brooklyn.—Think you are correct. Madler, who measured the mountains of the moon with Ross' telescope, declared that if a body of men or mass of troops were to march together on the moon's surface, they would be discoverable with this telescope.

TROUT FISHING.—There are a few black bass in the Susquehanna. Most of the streams which empty into the Susquehanna contain more or less brook trout, but there are many places preferable, such as Tobyhanna, on the Del. & Lack. R. R., and in the counties of Elk, McKean, Potter, and Warren, Pa. In the mountains you speak of, ruffed grouse are plentiful; also, squirrels and the white hare.

READER, New Britain. Keep your trout line always straight by the motion of the hand, and your fly will keep to the surface whether in still or quick water. In a running stream draw your fly up and athwart the current, sometimes letting it drop down a little. What you want in fly fishing is motion, always motion; but it may take a dozen years to learn all the niceties of the art, and some persons never learn.

NIMROD SHOOTING CLUB.—For regular shooting, one pink edged wad. For wild fowl shooting you can use two wads, or where great penetration is required. The wads ought to be one size larger than the cartridge. About three drams for ordinary shooting, increase the charge slightly when shooting over water. Lallin & Rand, or Curtis & Harvey's.

AMATEUR, Hoboken.—To preserve insects we have found the following useful: Quarter of an ounce of corrosive sublimate in one ounce of water, and add three ounces of spirits of wine. Steep insects in this, then dry; and especially if spider specimens be treated this way they will be found to be pliable.

E. S. CROSER, Custom House. Louisville, Ky.—For a Newfoundland retriever write to Robert Bustin, St. John's, New Brunswick. The pure breed of Water Spaniel is worn out in the United States. We can import one for you through our London agent, H. Herbert. The price would be somewhere about \$50.

TEACHER, Utica.—Ambergris, Tennant says somewhere, is always "an ambiguous and exceptional substance." There is very little doubt but that it is the faeces of the sperm whale. Word seems derived from gris (gray) amber. Some years ago its value was calculated as being eight times its actual weight in silver.

CANTER, N. J.—A recipe that we don't know the origin of says that white marks caused by the friction of the saddle may sometimes be removed from a horse by applying, morning and night, an ointment made of lard and tincture of cantharides or Spanish fly, made in the proportion of a few drops of the latter to an ounce of the former.

ONE WHO GOES TO MENAGERIES.—Zoologists are quite in the dark about it. The only known specimens were in China, and preserved. The name of *Elaphurus Davidianus* was given to it. It was a stag, but entirely unlike any living species. We should like some information about it ourselves. Can any of our readers give us a full description of it?

GEORGE N., Washington, D. C.—The bird you refer to must be we think the *Predia Saxatilis Mayeri*, or rock partridge. We should infer this from the fact of your having shot it in the grisons this summer. It is a genuine mountain bird, and unlike the gallinoidae, does not live in polygamy. They are not found north of the Alps.

HERMAN T., Sacramento.—All true carnivorous whales are distinguishable from the proportional size of the head. Best type of this is the *balonoptera rostrata*. Biggest whale is the rorqual (*Physalus Boops*). One hundred and twenty feet long seems to be an absolute measurement. There is a skeleton somewhere in England the bones of which weigh thirty-five tons.

GUSTY BAINES, Providence.—Lammergeyer (*Falco*, or *Gypatus barbatus*), called also Steingeyer in the Grisons, and Barteeyer in various parts of Switzerland. Measurement, four and a half feet; ten feet from wing and wing, and will weigh from thirteen to twenty-one pounds. Other bird of the same region, golden eagle, (*Aquila chrysaetos*.) He is bolder and stronger than the lammergeyer. There are, we think, three other varieties of the eagle in Switzerland.

S. L. HARVEY.—The experiments tried by you this summer are indeed interesting. We recollect to have seen somewhere an experiment of the same kind tried with the flowers of the *Dictamnus albus*. When you apply a flame to them they apparently catch fire. The explanation is that the flowers when fully developed contain some etheric oil which burns. When you take a bit of fresh orange peel and press it in a candle flame, the same phenomenon takes place.

EXPERIMENTING.—The cartridge of the Prussian needle gun differs essentially from any other. It can only be used for the gun. It consists of four parts, enclosed in a paper cover. Parts are, the powder, the fulminating cap, the carrier wad, and the bullet. Ball is an elongated ovoid, rather blunt at point. The carrier paper wad covers more than one half of the ball; the fulminate is ahead of the powder, the powder behind it. The carrier wad is of paper made under pressure—*papier mache*. The wad flies with the bullet, when it becomes detached at about fifty yards, but at this distance the wad will hit heavily enough to kill a man. Nothing is left in the gun when it is fired.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, NOV. 13, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Managing Editor.

Calendar of Events for the Current Week.

SATURDAY, November 15.—Pacific Club, San Francisco, running race for \$20,000. Grand Remington Diamond Badge Match, Creedmoor.

TUESDAY, November 18.—Meeting of the Natchez Jockey Club, Natchez, Mississippi.

WEDNESDAY, November 19.—Meeting of the Natchez Jockey Club, Natchez, Mississippi.

THURSDAY, November 20.—Meeting of the Natchez Jockey Club.

OUR CONTENTS TO-DAY.

THE number of FOREST AND STREAM which we issue this day does no discredit to its predecessors. Indeed, in the absence of an *index rerum*, we feel at liberty, without blowing too brazen a trumpet, to direct attention to the quality and value of the material which is contributed by its friends and supporters, waiving any reference to the remainder of the contents. In the first place, the beautiful introductory epic entitled "Hubert the Hunter" is indited by a master mind, while the little poem on the fourth page is as fresh and sparkling as any of those that fall from the familiar pen of the author. "Wild Life in Florida" is written by a most indefatigable naturalist; the description of hunter-life in the Rocky Mountains by a member of the late Yale Scientific Expedition, whose habits of close observation, assisted by the rare faculty of portraying them with the nicest accuracy, constitute the chief charm of his writings; of a like quality and character are the poetic emanations of him who indites his lines from the forests of Nova Scotia. In addition we have those valuable lessons of practical instruction in Fish Culture and Taxidermy of which almost every amateur is anxious to know something.

As to the article on "Indian Whiskey," we confess it has nothing whatever to do with sport. The subject is anything but sportsmanlike; yet the experience is one that some time or other comes under the observation of every frontier sportsman. And unfortunately, until such opportunity is offered, no sportsman, or any other man, can ever realize the enormity of the whiskey traffic, or the real causes, direct or remote, of all our difficulties with the Indians. This article is most painful in the horrible accuracy of its delineation; it is the only one we ever read that gives an adequate conception of what people generally have only a faint idea of. We wish that it could be read by every official, from Washington to the remotest frontier, and printed where everybody can see it. The great wonder is that Indian atrocities are as few as they are; for the

Indian is not only irresponsible when drunk, but fiendish under the stomach-and-brain suffering of the excruciating reaction of a debauch. His faculties are first scattered, and then concentrated on revenge for the woes that follow the demoralization.

There are other subjects treated of in this issue of equal material value; and to combine the useful and instructive with that which is novel and agreeable, will always be the aim of FOREST AND STREAM.

We have a rare budget for next week also.

THE BRIGHTON AQUARIUM.

PUBLIC attention having been brought to the question of an aquarium, to be located in New York, either at the Central Park or in its adjunct, the Morningside Park, a full description of the largest and most successful aquarium—the one at Brighton—will be doubtless interesting to our readers.

To the Messrs. Appleton, the publishers of *Appleton's Journal*, will be due the credit of having first practically taken this important subject in hand, and in a former number of FOREST AND STREAM we mentioned that a correspondence had already been entered into between the Messrs. Appleton and Mr. W. Saville Kent, the late manager of the Brighton Aquarium. From an admirable article in *Nature*, from Mr. Kent himself, we are enabled to understand fully the plans of construction and working of this aquarium.

The Brighton Aquarium, though there are several other aquaria in England and on the Continent, still holds its own as being on a scale of magnitude hitherto unsurpassed; more than one of its tanks being large enough to allow of porpoises and other lesser cetacea to live in them. Mr. Edward Birch, a well known English engineer, having seen a smaller aquarium at Boulogne, first entertained the idea of constructing a perfect one on a much enlarged scale at Brighton. The work was commenced in 1869, but was not completed until 1872, when the present aquarium was formally opened under the auspices of the British Association. The area occupied by the Brighton Aquarium is 715 feet in length (somewhat over one-seventh of a mile), and is 100 feet in width. There are 41 principal tanks in all, numbered from 1 to 41. The smallest is 11 feet long by 10 broad, and will contain 4,000 gallons of water; the largest is No. 6, with a frontage of 130 feet by 30 feet width, and will hold 110,000 gallons. Every gradation of depth is found in the aquarium, from 5 feet to 30. Supplementary to these larger tanks are a number of smaller ones, adapted to starfish, anemones, &c., so that the smaller creatures may be examined perpendicularly through the water. The whole bulk of water, both fresh and salt, utilized, amounts to no less than 500,000 gallons.

The style of architecture of the building is a highly ornate Italian, constructed of variegated brick, with columns of Bath stone, serpentine marble, and Aberdeen granite. The floor is laid in tiles. The tanks are divided into sections composed of three sheets of plate glass, each plate having a thickness of one inch, and measuring six feet high by three feet wide, and are separated and supported by upright massive iron mullions. A small tank may have but one length and width of glass, while the larger ones have as many as six plates of glass, something like a large window in a shop front, made up of various pieces of glass.

The system adopted in the aquarium is that of continually renewing the oxygen necessary for the health of the animals, and streams of compressed air are constantly forced through tubes at the bottom of the water, each tank having a greater or less number of tubes appropriate to the size of the tank. Each tank is perfectly independent or isolated from the other, so that should an accident occur inmates could not escape from their tank, or if the water should become turbid the water in a particular tank alone is affected.

The water is derived directly from the sea by means of a six-horse centrifugal pump. "This system," says Mr. Kent, "while practical in aquaria at the sea side, when the supply of water is unlimited, does not answer inland, as exemplified by the decadence in a scientific point of the one from which that at Brighton is copied." The aquarium at the Crystal Palace, and those at Hamburg and Copenhagen will not sustain (the size of tanks and volume of water being the same as at Brighton) the same amount of fish.

One great difficulty arises from the fact that certain kinds of fish foul the water and make it turbid, and by so doing not only prevent the movements of the fish from being studied, but may seriously affect their own health. The flat-fish or *pleuronectidae*, is of this character, and if placed in a tank of the clearest water, under the best circumstances, will make the water in a few weeks become so opaque that at a short distance from the glass the fish becomes invisible. To remedy this fresh water was used; but as the Brighton pipes were at times drawing water at low tide, certain impurities were drawn up with the water which rendered it objectionable. Mr. Kent's predecessor, Mr. J. K. Lloyd, having suggested the introduction of oysters and other bivalve mollusca for the purpose of removing these organic impurities, though they proved useful, Mr. Kent states that the evil remains undisturbed, and can only be remedied, he thinks, "by the application of the circulatory system, securing with it the more thorough oxygenization of the water." Mr. W. A. Lloyd, who has had charge of the Crystal Palace and Hamburg Aquaria, initiated the system referred to by Mr. Kent. A bulk of water exceeding four to five times the capacity of the tanks is stored, which is pumped by steam power and circulated through the buildings, taking up in its course, by exposure to the at-

mosphere, a certain amount of oxygen which, says Mr. Kent, "not only permits the preservation of the health of a much larger number of inhabitants in each tank, but at the same time communicates to the water a degree of clearness and brilliancy unattainable by other means." The objections to such a circulatory system is, that should any noxious substance, such as paint or oil, be introduced into the water, it would be diffused throughout all the tanks. But, Mr. Kent states, that with ordinary care such accidents ought to be impossible. This same most reliable authority informs us that, until this circulatory method of feeding the tanks is used at Brighton, the greater or less turbidity of tanks must continue as hitherto, and be a constant source of dissatisfaction to the directors and the public.

To conclude our brief analysis of Mr. Kent's most clear statements of the Brighton Aquarium, he is of the opinion that, so far as to size and its proximity to the sea, the Brighton Aquarium has been able to achieve results unrealized by any other institution of its description, but that these results are by no means commensurate with the expenditure involved in its establishment, and Mr. Kent expresses the hope that "steps will be forthwith taken to remedy the defects indicated."

With, then, all the experience gained by Mr. Kent, and the advantages and defects of the various systems employed having been well considered, let us hope that when the New York Aquarium is built it will be, if not the largest in the world, at least perfect in all respects. Had an aquarium existed at Central Park the manatee, whose untimely end we regret to announce, would have been probably still alive.

If San Francisco has an aquarium, surely the metropolis of America should have one. We look forward, then, with great interest to the erection of an aquarium in New York, believing that the time is not far distant when our hopes will be realized.

AMERICAN OARSMEN vs. ENGLISH.

WE print for the benefit of our boating readers a very interesting but somewhat inflated article from *Land and Water*. Very certainly the tone in which the article is conched is not wanting in satire. We think no people were more free to admit English supremacy on boating matters on their own waters than our Collegiates and Amateurs. That it is an evident fact is shown by Yale having sent one of her best oarsmen to Oxford to learn the English stroke. The journal also assumes that an American four would stand no chance even on our own waters. How does its editor know? Public performance it is true, is an excellent criterion generally, but not when change of water makes such a material difference. We have sent thoroughbred horses to England, and have been beaten. American yachts have crossed the Atlantic and won cups, and the best of English yachtsmen have had to acknowledge our superiority. The Oxford crew beat the Harvards on their own water. The London Rowing Club won the race from the Atalantas on their own water. Now it seems to us that fairness and justice would be equally carried out by the London Rowing Club sending a crew over here next spring. We would be willing to guarantee them every facility, and what is more, they would be personally supported, and every courtesy shown them by all American amateur oarsmen.

"The next subject of importance in aquatics is a challenge from the States. A challenge from this quarter is not uncommon, and sometimes amusing. It is, however, one that frequently opens portentously, and ends in smoke. An American sculler, a good man for the States, named Brown, of Halifax, has beaten another sculler, Biglin. This Brown is not Walter of that name, who came over in the train of Harvard as aquatic supervisor, but another Brown of far higher calibre. Walter came over ostensibly to wrest the sceptre of single shell supremacy from Joseph Sadler, of Putney, but when he arrived, he paid court not to Joseph, but to William Sadler, and after an exciting race on the Tyne, in which both men at halfway were so rowed out as to forget their own names, the champion of the Stars and Stripes won. He tempted fortune no more, and returned home a wiser man. The present Brown of our story figured in the sculling races two years ago, when Sadler swept the board at Saratoga, Halifax, Lochiel, etc., and he showed the best style that our men have ever seen from the New World. He was sculling them with the most primitive machinery, short sculls, rough boat, etc., but nevertheless managed to beat H. Kelley and R. Bagnall. Some enthusiast in the States suggests a subscription to send him over to whip creation, including J. Sadler, our present champion; but R. Bagnall, now improved by two years, does not see the matter in the same light, and since Joseph Sadler does not respond to the offer, he, Bagnall, challenges J. Sadler, Brown, or any other man to scull for the championship. This must lead at last to something—let us hope it will, that Brown will come over, and that he, Bagnall, and Sadler, will all three be brought out.

The next act is also American: Stanley found Livingstone, more credit to him! The *Graphic* inflation burst up, so much the worse for the *Graphic*, and now the originator of finding Livingstone has offered a £1,000 cup for a race between Harvard, Yale, and a crew from Oxford or Cambridge. The offer is a very liberal one, but it would be a poor speculation: Oxford and Cambridge men would not stand the daily interviewing of Mr. Bennett's organ, even if four or six worshippers at the shrine of aquatic notoriety could be collected for the journey. From what we have seen of American rowing in the Harvard, and latterly the Atalanta crew, the £1,000 cup would be simply a matter of the journey over there of a good second-rate four; our cousins are not sufficiently improved for our first-class men. But the time will come if they stick to rowing as heartily as they have begun."

Sandusky, Ohio, has a machine that belheads, opens and dresses from sixty to ninety fish per minute.

GUN COTTON.

SEVERAL of the recent experiments made in England with gun cotton are worth recording. This substance, somewhat modified, is now quite serviceable for fire-arms. In its crude condition, as an explosive material for projectiles, the fault lies in the spontaneous nature of its combustion, as it is quite as likely to burst a gun barrel as it is to drive out the ball or shot. In fact, like the fulminates, it requires to be tamed down. The curious point worthy of note in gun cotton is this: That its intensity of action, strange to say, depends upon the nature of the substance used to explode it; or in other words, gun cotton is *sympathetic*. If gently exploded with a spark, gun cotton in the form of yarn smoulders; if set on fire by a flame, it burns rapidly, behaving like gunpowder; but if fired by a fulminate it detonates with terrible energy. Prof. Able and Mr. E. O. Brown have shown that even when dampened and exploded with a fulminate, gun cotton does not lose a particle of its strength. This discovery is of the utmost importance, as it allows this dangerous material to be stored when wet. In this condition it is absolutely inert, there being no more danger about it than in wet paper; but once apply to it the fulminate of mercury, and all its tremendous latent powers are called into play. A quantity of gun cotton can be thrown into the water, one cake of it only being dried, and when to this is applied a fuse terminating in a charge of fulminate of mercury, an explosion of the most violent character takes place. It is the wonderful rapidity of the ignition of gun cotton which is attracting the attention of those interested in these subjects. With the exception of light and electricity, so says *Nature*, "the detonation of gun cotton travels faster than anything else we are cognizant of." About three miles a second is calculated to be the rapidity of the communication of gun cotton, one piece to another, or about 19,000 to 20,000 feet per second. Now, the transit of a bullet is about 1,800 feet per second, or 1,400 at the utmost. Sound travels, under normal conditions, about 1,100 feet per second. It may then be safely asserted that, save electricity and light, the detonation of gun cotton is faster than that of any other known substance. A train of gunpowder would act as if at a snail's pace when compared with it. We repeat that the curious point in these researches is not only in regard to the rapidity of the explosion, but the remarkable fact that gun cotton acts in sympathy with the method of firing it. *Nature* thus expresses it quite clearly: "That a certain number of vibrations require to be set up, a certain key-note to be struck, in order to secure the decomposition of the material." These subjects are worthy of our attention, for it is not impossible to imagine that, before long, in the United States, compositions of gun cotton may be in general use for our guns. In England, what is called Reeves gun felt for sporting purposes, finds every day strong advocates.

LOUISA MUHLBACH'S GRAVE.

IT may not be uninteresting to the many literary readers and admirers of this gifted authoress to know that her ashes now repose in the grave which for eleven years has been the repository of the remains of her husband, Theodore Mundt, the author of "Mirabeau." Among the mourners on this occasion were many men and women eminent in art and literature. Here with reverend head uncovered stood the aged Carl Gutzlow, Adolph Glassbrunner, Germany's great humorist; Dr. Max Ring, the celebrated author of "John Milton and His Times." Janke, the eminent German publisher, was quite a prominent personage. The Emperor William sent a representative of His Majesty in one of the Court Carriages, and otherwise signified his great respect for the gifted authoress.

The grave of Louisa Muhlbach is between two celebrated men, Hegel, the eminent philosopher, reposing on one side, and a celebrated German actor on the other.

The funeral oration was delivered by Rev. Dr. Lydow, who, it will be recollected, played so prominent a part not long since, and whose triumphant acquittal of heresy and the charge of infidelity by the Brandenburg Consistory created so great a sensation throughout Germany.

The coffin was opened and a glance at the deceased, in a rich black suit, whose face still maintained the peaceful quiet smile so remarkable in life, produced a thrilling effect upon all who stood around the casket. In his opening remarks, the Doctor said: "Far beyond this country will this mournful scene excite regrets in innumerable hearts. Critical judgment grows dumb in view of an open grave. Her works will live after her. Millions have read and admired them. Her's was a life of work. For years she was an invalid, and yet she never wavered in performing what she deemed the great duty of her life. Heroes greater than they who face the cannon's mouth, are those who, with the germ of death within them, come smiling up, day after day, to their life's work. It has been said that she whose death we mourn to-day has been a disbeliever in the immortality of the soul. I know it is a calumny, and I will repeat here what I heard her exclaim eleven years ago at this very grave at the moment when her husband's coffin was lowered into it, and she stood here, frantic with grief, with her two little daughters. 'No,' she cried, in a voice choked by tears, 'no, a mind that has created so many original works, in which it will live here on earth, cannot sink back into nothing.'"

Then Carl Gutzlow laid a laurel wreath on the coffin, saying only, "Adieu, dear gifted, faithful friend." The procession filed away in sadness. On the next day after the

burial a plain slab was placed upon the mound, upon which was engraved: "Clara Mundt, aged 59: the historical novelist of Germany."

THE YAP, FINANCIALLY.

IN this period of panic, when questions of gold and silver, of a metallic basis, of greenbacks, of fractional currency, are agitating men's minds; when the solemn words of Adam Smith or Ricardo are forgotten, what a comfort it is to find a really national people, the Yaps, by name, who have as a basis of currency a money which is indeed as solid as a rock. No fluctuations can affect the Yaps' money. It has a fundamental value about it which defies all the vicissitudes of fortune.

The Yap, whose financial skill we are about to explain, dwells on an island of the same name, which is to be found in the Caroline group. The bullion which passes current there is even more cumbersome than the iron money of the Spartans. Small change is represented by stones. A penny is about the size of a Swiss cheese, while a dollar is about as big as a mill-stone. Every stone is neatly rounded, and has a hole cut in the middle of it so that when a Yap lady wants to go shopping, a stout pole is run through the stones and attendants must be employed to transport her money. The natural Yap Mint is situated on an island called Pilau, and is a rock of a whitish-yellow color. The Yaps go far out to sea to procure it, and loading their frail canoes with the crude article, the stone ingots, take their rocks home and cut, bore and coin them at their leisure.

The advantages of such a circulating medium must be immediately apparent to those the least familiar with monetary affairs. For instance, a misanthropic Yap, a miser withal, desirous of hoarding to the very last his sordid gains, could most conveniently take one of these hard cash mill-stones, tie it round his neck and drown himself. Then again, if an importunate tailor should be too persistent in his calls, what would be easier than for a spendthrift dandy Yap, goaded to death by the dun, to clamber up to the top of his hut and let his little bill be settled by dropping the money in a lump on the tiresome tradesman's head. It might be, too, quite available for the purposes of collecting revenue. On the approach of the tax collector this functionary might be pelted with stones, and yet receive his dues. There is something admirable, too, in the idea of converting one's treasures into a handy weapon. The Yap highwayman, attempting to waylay the wealthy Yap, might have his brains knocked out by the very object he was feloniously trying to obtain. One thing certain, with stone money would be, that such common events as we hear of every day in this most civilized country, of treasurers and cashiers running off with other people's money, would indeed be rendered physically impossible.

SYBILLINE LEAVES.—I V.

HINTS TO SPORTSMEN.

IN preparing for a winter's campaign in Florida, one should take with him, if practicable, a tent and small boat. If they can be shipped by sailing vessel two weeks in advance of his sailing, they will reach Jacksonville in season for use and at little cost. If sent by steamer the charge for freight will be enormous. A shot gun, rifle, ammunition, and fishing tackle should be taken from the north. The tent should be as light as possible and so constructed that all the room can be utilized. The boat should be small, flat-bottomed and light. A large sail boat can be hired in Jacksonville at a reasonable price, and a man to sail it and do the cooking. Gun and rifle should be breech-loading, thus securing safety and dispatch in loading. Revolvers and big bowie knives are superfluities. Everybody takes them, and everybody finds them in the way. Wear old clothes; half the pleasure in camping out is to be able to rough it. Don't put on fancy costumes expecting to "make a spread," as no one will appreciate the effort or effect. Wear woollen clothing at all times. For the feet, take good stout shoes, lacing up tightly about the ankle. A pair of tight (not tight fitting) boots, may be very good for a short, wet walk, but for an all-day's tramp, through swamp and pine-woods, shoes are far superior. Two pairs good woollen, and one rubber blanket. A mosquito bar is indispensable, as many nights the tormenting insects call their own. If the country on the coast be visited, the "bar" should be made of thin cotton or lawn, to keep out the "sand-flies," insects so small as hardly to be discernible, but with a bite like the burn of a hot iron. It would be well to take a little salve and thin plaster for cuts and bruises. In the line of medicine, one can take a whole apothecary's shop, if so disposed, but, excepting a little whiskey and quinine, the former for snake-bites, which never occur, and the latter for imaginary fever, no medicine will be needed, except for particularly squeamish folks who think life not worth the living out of sight of an "R," or quack-doctor's laboratory. For light at night, a lantern and candles will be sufficient, though kerosene, where little transportation is to be made, is preferable. Buy it in New York in 5 gal. can, boxed. It will always sell for twice its cost. The keen bracing air gives more pungency to a haunch of venison or brace of quail than all the sauces piquante ever concocted. A bunch of Spanish moss is infinitely superior to a napkin, and the clear waters of some spring to the finger-bowl. And here a word as to water.

Nearly all the water in East Florida is impregnated more or less with lime or some mineral or salt that gives it a "flat" taste to the uninitiated, and a drink of raw unadulterated water is not always acceptable. Some people

"qualify" it—indeed the majority of settlers "qualify" it so much that the original taste of the *aqua* is lost in that of the qualifier. That is all—a word to the wise. We advise a plain mode of living. Take hard-bread, "self-raising flour," pork, salt, potatoes, brown sugar, rice or harmony, Borden's condensed milk and coffee, a little jelly for venison, butter, pepper and mustard. Venison, fish and game birds may be on the bill of fare every day, but again they may not. No one should start down the river depending upon a supply, as the game is regulated and controlled by a multitude of laws that the visitor knows nothing about. Preserved fruits, meats, etc., are not necessary, though sometimes found acceptable—they don't stay in camp long. Regarding cooking utensils, if cooking is to be done in the usual way over an open fire, they should be a "bake kettle" or oven, a foot diameter; frying-pan, same dimensions, with a long handle; tin plates, plated knives and forks, pint tin-cups, iron or tin spoons, and butcher knife. A regular camp kit is preferable, however. If a stove is preferred, go to the tin-smith's and have him make a sheet-iron box, two feet long, one broad, open at one end. The door a sheet of iron, to slide in a groove, perpendicularly, acting as draught regulator. The legs should be flat, fastened to the box by hinges, shutting under it when packed. The pipe small and in joints, to be packed in the stove. A piece of tin should be taken to fasten to the tent to run the pipe through. With such a stove, well supplied with "light wood" or pitch pine, a fire can be sustained that will vacate the tent in short metre. If the camper-out prefers to embark upon one of the many steamers that navigate the St. John's, he can reach any point available in East Florida. To assist him a list of prices will be given to the different places on the river, as they are reached in a sail down the stream. The steamers "City Point," "Dictator," "Nick King," and "Lizzie Baker" make the trips to Palatka, (75 miles from Jacksonville), upon arrival from Savannah and Charleston. The "Florence," a fine steamer, makes daily trips to Palatka. The "Darlington," "Hattie" and "Starlight" to Enterprise, 200 miles, twice a week, each. The "Ocklawaha" and "Silver Springs" to Lake Harney and Salt Lake, one a week.

HOW TO STUFF BIRDS.

[We are so often asked how to stuff birds that we feel we can do no better than to turn our inquirers after knowledge over to a well known taxidermist, Mr. J. H. Batty, who will supplement the instructions here given by others of equal value. We trust our readers will appreciate the kindly and generous motive which prompts him to overstep his professional line and give them *free gratis*, some portion of the knowledge which he has gathered by hard study and constant practice.—ED. F. AND S.]

EDITOR FOREST AND STREAM:—

Being a taxidermist, and having had a great deal of experience in mounting all objects of natural history, I give the following details on bird stuffing for the benefit of the readers of FOREST AND STREAM. The first step is to secure the bird. Every one knows how to load a gun with a light charge of fine shot, and shoot a bird at a proper distance, so it may not be blown to pieces at a few paces away from the collector. Therefore, supposing the bird to be already cleanly killed, we will prepare it for the cabinet at once.

When a bird is first shot a piece of cotton should be put down the throat to prevent the saliva from flowing out of the mouth and soiling the plumage. The larger birds should have their nostrils stopped up by means of cotton crowded tightly into them with some pointed instrument. When reaching home the bird should be prepared as follows: Lay it on its back, having first broken the wings close to the body. Make a longitudinal cut from the base of the breast bone (*sternum*) to the vent. Taking hold of the skin with the thumb nail and forefinger of the left hand, push the flesh from the skin with the scalpel which is held in the right hand. The knife should not be used to cut, unless it be at some part of the skin that is attached to the body of the bird by small tendons, or at the base of the tail, or when severing the legs, wings and head from the body. As the skin is removed sprinkle corn meal or sawdust (meal is preferable) on the flesh exposed, thus absorbing all moisture of the body, and preserving the plumage from becoming bloody. Remove the skin as far as the legs, severing them at the knee joint, and cutting entirely through the flesh around the bone until the skin is bare between the severed leg and the body. Sever both legs alike, and when that is done, cut off the extremity of the body below the vent, thus removing the skin from the body, to which the tail is fastened. Proceed to remove the skin as far as the wings, cut those off where the bone has been broken, and when the wings are freed from the body, continue to skin down to below the eyes.

Great caution is needed in removing the eyelids from the eyes and the ears from the skull without cutting them. The skin is now turned inside out. Cut the body free from the skin, severing the neck close behind the skull. Cut away the under part of the skull, and from the hole thus made remove the brains. Cut the flesh from the leg bone, and skin the wings from the inside of the skin down to the first joint, (extremity of fore arm,) removing all flesh and the broken bone at the second joint, where it is attached to the double bones of the wing; also cut away all superfluous flesh from the base of the tail, and dust the whole fleshy side of the skin with dry arsenic. When this is done crowd the eye holes in the skull full of cotton or tow, and tie the wing bones nearly together, and return the skin. In no case should the wing bones be left untied; if

so the wings are left free to dangle at their full length, making it almost impossible to put them in their proper place on the bird's sides or back. When the skin has been returned, smooth down the plumage, prick out the eye holes in their proper shape with the point of a needle or small tweezers. Close the bill together by passing a needle and thread through the nostril and base of lower mandible, and tying them together. Fill the skin out lightly and do not crowd it out of natural size by using too much stuffing. If the bird be a large one, a little cotton or tow should be wound around the leg bones. When the skin is filled, sew up the open space where the body has been taken out, cross the legs, and tie them loosely together with thread, put the skin in a paper ferule (pinned together) to keep the wings in position, and put it away to dry. When dry, dust the skin with the wing of some bird, and the specimen is ready for the cabinet.

For small birds cotton is best for stuffing material, but with the larger birds, such as ducks, gulls, hawks, &c., &c., I would recommend sea grass or excelsior.

An ordinary penknife and tweezers will answer for making small skins, but the following tools will greatly facilitate making skins: 1 pair dissecting scissors; 1 pair forceps; 1 pair small tweezers, and 1 scalpel. A brain spoon can be made by flattening one end of a piece of wire, (brass wire is best,) and putting the other end in a handle. The next article will be on mounting birds. J. H. BARRY.

THE NEW YORK ASSOCIATION FOR THE PROTECTION OF GAME.

On Monday evening last a meeting of this most useful Association for the Protection of Game was held at the residence of Royal Phelps, Esq., in this city. The attendance was a good one, comprising many of our leading sportsmen. The counsel for the club gave an interesting account of the prosecutions entered into by the Association since the commencement of this season. Some twenty-seven suits had been brought into court for infringements of the State game laws, all of which, with the exception of three, had been decided in favor of the Association. It is most gratifying to learn that, at least in the city, the game laws are pretty well observed, and that all first-class hotels and restaurants have given aid to the society. A very just complaint was made by the president in regard to the inaction of other associations in the State and throughout the country for the preservation of game, who allowed the most flagrant cases of killing and marketing game to occur every day without taking proper notice of the same. The indifference of sportsmen in Connecticut, New Jersey and Long Island was particularly commented on. Sportsmen should remember that the following rules are now in force:—

Deer—Shall only be pursued and killed in the county of Suffolk, between the 10th day of October and the 10th day of November, in each year, under a penalty of \$50, or imprisonment not exceeding three months.

Woodcock—Can only be killed or had in possession, between the 3d day of July and the 1st day of January, under a penalty of \$50 for each bird.

Quail—Can only be killed, or had in possession, between the 20th day of October and the 1st day of January, under a penalty of \$25.

Trespass—Any person who shall knowingly trespass upon lands for the purpose of shooting, hunting, or fishing thereon, after public notice by the owner or occupant thereof, as provided in the following section, shall be liable to such owner or occupant in exemplary damages to an amount not exceeding \$100, and shall also be liable to such owner or occupant for the value of the game killed or taken. The possession of implements of shooting or fishing shall be presumptive evidence of the purpose of the trespass.

Sign-boards—The notice referred to in the preceding section shall be given by erecting and maintaining sign-boards, at least one foot square, in at least two conspicuous places on the premises; such notices to have appended thereto the name of the owner or occupant; and any person who shall tear down or in any way deface or injure any such sign-board shall be liable to a penalty of \$100.

Catching Trout—No person shall, at any time, catch any speckled trout with any device save a hook and line except for the purpose of propagation, as hereinafter provided, or place any net-lines in waters inhabited by them, under a penalty of \$50 for each offence.

No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any speckled trout, save only from the 15th day of March to the 15th day of September, under a penalty of \$25 for each fish. But this section shall not prevent any person from catching trout with nets, in waters owned by them to stock other waters.

Private Ponds—Every person who shall be convicted of wrongfully and wilfully taking any fish from any private pond, without the consent of the owner thereof, shall be adjudged guilty of malicious trespass, and shall be liable to a penalty of three times the value of the fish taken, and shall also be liable to indictment for a misdemeanor, and on conviction, shall be punished by imprisonment in a county jail not exceeding thirty days, or by a fine not exceeding \$250, or by both fine and imprisonment.

The manatee at Central Park is dead. We doubt if his demise will have much effect upon *men at ease* in general, however much it may affect our men of science in particular.

—We are so overwhelmed by the tidal wave of greenbacks which comes careering in upon us in these hard times, that we begin to think it a great "bore." Dwellers on the riparian precincts of the Bay of Fundy will appreciate the under-current of wit and humor which flows silently though deeply beneath this ultramarine quidity.

—The article entitled "Narrow Escapes" and printed in last number of FOREST AND STREAM should have been credited to Charles Lanman, Esq.

Sporting News from Abroad.

SHALL it be the light or dark blue, from Cambridge or Oxford, Balliol or Jesus, who will be the future champions of the oar? Just now the English university men are hard at work, (a spell of bad weather has kept them back for a while,) but thews and muscles are at it again, and oars bend until they snap, and coxswains scold, and "coaches" howl anathemas at the crews. How the picked men settle to their work, and who shall be "bow" or who "stroke" is definitely determined. On the 18th of this month the Colquhoun race will take place. When the great event does come off, time, speed and endurance will we feel sure be quite satisfactory. Undoubtedly these English University men are the best oarsmen of the day, and it behoves us to accept this fact with the best possible grace, though we must consider the tone of assumption of such prowess, as we find used in some of our English contemporaries, as rather emanating from the journalistic writer, than representing the expression of the University oarsmen. That they can beat our rowing in the United States is certain; that at least for the present we all accepted such defeat without a murmur is very sure, but we think all bluster on the part of the victors as out of place. It is bad policy on the part of the English journalists to swagger about such matters, and supercilious references to the "polishing off of Yankee crews," are as untimely as they are out of place. We shall be perfectly resigned for a score of years to take second place, and be their pupils, hoping that if not in this generation at least in the next we may equal them. Can there be any good reason why an University crew cannot come over here? If a picked eleven of the best cricketing gentlemen with Grace at their head, paid us a visit and trounced us badly, would it be the least "infra dig," for the University gentlemen to honor us with their presence? We promise them a most cordial reception. They need have no fear of newspaper inquisitions, or interviewing pests, for they would be the welcomed guests of every boat club in the United States. Returning to our English boatmen, the FOREST AND STREAM reviewer, must for the thousandth time, call attention to the fact, that the training of the English oarsman is first commenced in his school days. Then he plays cricket, foot ball, and gets himself into condition. In looking over the columns of our contemporaries we see that just now, all the boys at the public schools, from such famed cradles of learning as Charterhouse and Westminster, and from a hundred others of minor repute, are all at work at foot-ball.

—Like Alexander the great, who sighed because he had no other world to conquer, so W. G. Grace having subdued all the realms of cricket, has been forced to find other shores where he could reap fresh laurels, always providing this much prized tree grows in the anomalous country where he has gone to. Last month the cricket Leviathan, with a tremendous cricketing eleven left for Melbourne. The cricketers will arrive in Australia sometime next month, in the summer of that strange country. Of course the wickets in Ultima Thule, will go down just as rapidly as they did in our New World, and the casual kangaroo in some Australian glade, getting in the way of one of Grace's lost balls, hit slashingly with his bat, will get killed as unerringly as if the marsupial had been struck with a native boomerang. Say what you will, there is something grand in the idea of these Englishmen, stalking the wide world over, like the conquering Goths of old, and becoming the victors in every field of athletics from one Continent to the other.

—Of shooting we hear little. St. Partridge must be sought for it seems in foreign lands, so we have only meagre accounts of some adventurous Englishmen getting occasional birds in France and Belgium. The stags, however, come forward in prominence. Noble fellows they must be, as we hear of some killed weighing over three hundred pounds.

—Polo has been resumed, and the ponies and riders are again being kept to their mettle, there having been a famous match between Liverpool and Manchester lately, one match having been closely contested for an hour and a half. What kind of ball should be used in polo, has not yet been exactly decided. Willow and box wood are suggested for England. Would it be considered as a presumption on our part to ask, whether such a thing as game of a polo could be played in New York? Have we no good riders among us? If it was but a second or third rate imitation of the thing, could not a riding school, (there are plenty such in New York, and quite good equestrians attending them) attempt it? Can our gentlemen do anything else than amble in the park? Cavalry officers might start it, and civilians would follow.

—There has been quite a long bicycle ride just announced in England, a distance of six hundred and six miles having been accomplished in nine days, with the most easy going.

—Newmarket has secured the services of the Prince of Wales, who at the last meeting of the Jockey Club, took for the first time his place in the Legislative chambers. One of the questions under his most august deliberation was in regard to changing some of the restrictions in regard to racing two year old horses. Possibly as the English horse increases in leggyiness, and according to the development theory, can better withstand the hot-bed forcing system, so opposite to nature, and when at the same time the English turfite will in exact inverse proportion lose his common sense, when this happy period arrives, we may expect one year old races, or cups established for foals before they are fully weaned.

A SINGULAR FACT—To-day will be yesterday to-morrow.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

COAST FISH.	LAKES.
Bluefish, Skipjack, Horse Mackerel, Black Bass, (Temnodon saltator.)	(Mycioperus nig and arohigan.) (two species.)
Weakfish, Squetang (Trout) Otol-Pickerel, (Esoc reticulatus.)	thus.)
BAYS AND ESTUARIES.	
Striped Bass, Rockfish. (Labrax lineatus.)	
SOUTHERN WATERS.	
Pompano, Snapper, Grouper, Rockfish.	Trout, (Black Bass.) Kingfish.
	Sheepshead, Tailorfish, Sea Bass.

—Our readers are doubtless aware of what is being done by the United States in regard to the multiplication of salmon in American waters, and especially, at the establishment at Bucksport, Maine, where six hundred salmon have been kept penned up during the summer for the purpose of securing their spawn at the proper season. The period for taking this spawn has now arrived, and Mr. Atkins, the Superintendent, commenced this work on the 27th of October, and it is expected that from two to four millions of eggs will be secured during the season.

—There is a splendid display of Chesapeake sheepshead on the market slabs this week, large, dark, and in very fine condition. We have also seen some sea-bass that would turn the scarles at ten pounds' weight.

—Seth Green and brother have returned to Rochester from their month's labor near Cape Vincent, St. Lawrence River, bringing with them two million trout eggs which will be hatched at the State Hatching House at Mumford and then distributed. The government is now busily gathering white fish ova at Detroit and sundry places on Lake Ontario, and salmon trout eggs in Georgian Bay. The Messrs. Green lost three of their fishermen who were drowned from a sailboat on the 4th instant.

—Our attentive correspondent at Cornell University, is an angler as well as a boatman, and states from his own experience, that the black bass will take a fly during part of the season at least under certain conditions of the weather. He says:—

"Whether the weather has any thing to do with the biting, is beyond my power to say; but one day they will take bait readily and not touch the fly; on the next, with a slight change in wind or atmosphere, they will rise to the fly and hardly notice bait. My experience as regards bass fishing has been confined mostly to the lakes of central New York. Bass are caught during the entire fishing season, but the best time, when they bite the most readily, in fact the sporting time, is during the latter part of July and the months of August and September; and it is during these months, almost solely, that they will rise to a fly. As to the time of day: from 7 P. M. till it is so dark you can't see where your fly drops. Where to fish: on the edge of a sloping bank, where the water is from ten to fifteen feet deep, and off from which the water drops to unknown depths, or over a submerged island, where the water is of about the same depth as on the bank. Fly to use: white miller, red ibis, or any bright colored (red, ect.) small sized salmon fly. Almost any thing used upon the hook in place of the fly, as a bit of red flannel, a grasshopper, a piece of pork or fish, will attract their attention and prove so seductive that they will be induced to cultivate your intimate acquaintance. Trolling along the edge of the bank, just at dusk, with forty to sixty feet of line out, and a red fly is also very killing. I have known black bass to be caught with the fly in such places as above mentioned, varying from a half to seven pounds in weight as fast as the flies could be cast, and the gamey fish killed and brought into the boat, the fly scarcely touching the water before it would be taken. This occurred in the month of August, day after day, from 5 to 6 P. M., when the fish began to bite, till 9 or 10 o'clock at night. The moon shone brightly, so that one could see almost as well as in the day time. Undoubtedly bass bite differently in different parts of the country, and the experience of others in other places may be entirely at variance with mine in the central part of this State. H.

—The fish-way long demanded at Holyoke Dam, on the Connecticut river, has at last been finished, and the Connecticut Fish Commissioners, with those of the other New England States, are to meet at Holyoke during the present month. The fish-way is constructed on the South Hadley Falls side of the river, and will give shad, salmon, and all anadromous fish ample chance to pass the dam that has so long obstructed their course to the upper waters. The cost of the work was \$25,000. The Hartford Post says: "The State appropriated \$12,000 in 1869 for its construction, and assigned the construction thereof to the Holyoke Water Power Company. But that company wouldn't touch the money, nor would it build the fish-way, and thus the matter got into the courts, where it was finally decided that the water power company must construct the "way" and bear the expense. They then gave the contract for building it to Messrs. D. H. & J. C. Newton of Holyoke, by whom it was completed Thursday, Oct. 30th. The structure really begins in a pool about 350 feet below the sheet of the dam, extending thence fifty feet down the current, and for this distance is all the way under the water at its present height, which is no less than during most of the spring-time. At the end of the fifty feet the flume makes a right angle toward the east, connecting with the other section that is close to the river bank, and makes the rise of about 22 feet to the top of the canal in a distance of about 400 feet. Its total width is 15 feet, and 13 feet in the clear. The plan of the structure is something like a system of

continuous locks, only the locks are always open. This arrangement, of course, greatly lessens the velocity of the current, and gives the fish a chance to rest, as at the foot of every "check" the water is still enough for that purpose. The depth of water in the "checks" is to be twenty inches, and it takes about half an hour, with full head of water on, to fill them all."

—Our intelligent correspondent, W. E. N., of New York, sends us some pleasant observations upon the habits of brook trout, which he thinks we do not describe with sufficient explicitness in our paper. He says:

"Their habits change with their age. When very young they play a great deal together, usually choosing the parts of the brook which have a muddy bottom, and will sometimes if startled, suddenly bury themselves in the mud. This, however, does not often occur; they usually make for the first little projection that juts out over the water, and there hide until the danger is over. As they grow older they seem to dissolve partnership in a great measure, and every one chooses his own particular hiding place, the larger trout taking, as if by reason of their superior strength, which to all appearance is understood among them, the deepest holes and largest projecting sods, and leaving the smaller ones for their less officious kin. The older they grow the more wary they become, and therefore it requires considerable skill to catch a very old trout. A worm is, generally speaking, the best bait for them, but in the spring, after the rains that usually prevail at that season, which wash a great many worms and insects into the water, very few of which escape their observation, they bite better at the more tempting bait of a fly. In fishing with a fly always fish up stream, at the same time taking care to keep well back from the bank.

When fishing with a worm, the angleworm being the best for trout fishing, choose a cloudy day just before a rain storm, as the fish are then on the alert for insects; begin at the head of the stream, and fish down stream, at all times keeping well back from the bank. Do not in baiting your hook, merely cover the point of your hook with the head of the worm, but put on the whole worm running the hook through him in three or four places, and then covering the point of the hook with the head of the worm. It is considered much more sportsman-like to fish with a fly, as it requires more tact, in fact is quite an art; but there are times when fish will not bite at a fly, in which case it is *some sport*, although less, to use a worm. The trout should never be caught in August, as by catching one you are apt to destroy many.

GRAFTON, WINDHAM CO., VT., Nov. 3, 1873.

EDITOR FOREST AND STREAM:—

The receipt of your valuable paper is like an oasis in the desert. It is just the thing; exactly fills the niche long standing vacant for it.

Your various articles on taking the black bass have been read with much interest. I am pleased to see the subject well ventilated. My impression is that in some waters they will rise to the artificial fly, and that in other waters they will not do so. During the season of 1869 I was located in Kalamazoo county, Michigan. This county has numerous small lakes. I can name thirty-three within ten miles from Kalamazoo, all well stocked with black bass. In the town of Texas there are several lakes in a cluster, the principal of which are called Crooked, Eagle, Pine Island, and Pretty. During this season I was near them all, but my fishing was principally confined to Crooked lake, which I fished thoroughly every week, and sometimes oftener, using a light trout fly rod, and well stocked book of flies of all kinds, besides numerous nondescripts, which I made for the purpose. From the 1st of May until the 15th of October no week passed without my giving them a thorough trial. The result is, I have yet to see the first black bass rise to an artificial fly in those waters, although I could at any time take fish in plenty with spoon, minnow, or sometimes angleworms, a catch of from fifty to one hundred pounds not being unusual in a few hours.

We have a fair prospect for good bass fishing shortly in the Connecticut river. Some fine ones have this season been taken near Bellows Falls, which is 12 miles from us.

Yours, S. W. G.

—*Appleton's Journal* prints the following interesting facts concerning the menhaden fisheries of Long Island. It says:

Eastern Long Island is famous for its fisheries. Its vast bays and adjacent seas abound with bluefish, mackerel, and a small fish, valuable only for the oil extracted from it, called moss-bunker. This fish has built up in all this region an extensive and profitable industry. Numerous oil factories recently lined the shores of the main island, and greatly marred the beauty of Shelter Island; but the horrible odor perennially escaping from them at last aroused a popular crusade, which resulted in their being legally declared public nuisances, and their removal ordered. But the industry was too profitable to readily surrender; hence it devised large floating oil mills, and now, here and there over the surface of Gardiner's Bay, may be seen huge, black, uncouth, and picturesque-looking objects, always surrounded by waiting vessels, and ever vomiting into the blue air volumes of black smoke. But they scarcely mar the picture, and the odor of the decayed bunkers never reaches the shore. The moss-bunker, menhaden, or bony-fish, is a little creature of something near a pound only in weight, to the great whale what the fly is to the ox. But it is caught in prodigious numbers, as many as one million having been taken at a single haul of a draw-seine from shore, enough to yield fifteen hundred gallons of oil. The fisheries in this section, whether considered as an industry or as a means of sport, give it its peculiar interest. The huge reels for winding the immense nets, seen all along the shores, are striking and picturesque incidents in the landscape.

Athletic Pastimes.

Secretaries of University and College Athletic Clubs will please mail their reports not later than Monday in each week.

—The National Amateur Athletic Tournament or Gymnastic Exhibition took place at the Academy of Music on November 8th for the benefit of the poor of this city before a large and cultivated audience. It is pleasing to notice that already so many intelligent people give countenance to physical culture. Disinclined as we are to find fault, and remembering how novel these exhibitions are in the United States, and how difficult it is to get together the necessary elements, we must declare that the exhibition did not come up to our expectations. In the first place the programme was so long as to become tedious, and proper care had not been taken to arrange the various performances, so that the exhibition should be continuous. Secondly, the various athletic exercises were not chosen with good judgment, and last, the performers themselves were by no means the best. It is no easy task for amateur directors to arrange such performances, and though in this instance they might have received valuable assistance from some professional stage manager, the combination did not seem to us to have been fully qualified for their business. The best professional athletics understand very well their "business," and know that more than two hours of such performances invariably tire out an audience. We cannot in justice to Dr. A. Flint, Mr. Tine and Col. Van Wyck allow our criticisms to appear in print, without calling the attention of the public to the untiring energies of these gentlemen exerted in behalf of physical culture and of this particular exhibition.

The curtain rose with Professor Burnham's Calisthenic Class in position upon the stage. They went through a great variety of their beautiful and graceful exercises to music. This one feature was most interesting, and Mr. Burnham deserves great credit for originating such a fine system of exercises and drilling his pupils with such accuracy of time as to position and grace.

The next exercise was to test the comparative strength of the competitors by lifting a single dumb bell, the following gentlemen entering: George D. Parmly, of Princeton College, N. J.; Richard A. Pennell, of Wood's Gymnasium, New York; Ernst Bohlrig, of Wood's Gymnasium, New York; Dave Hegeman, of the Staten Island Turnverein; Charles D. Newton, of Wood's Gymnasium, New York; and Silas M. Stillwell, Jr., of Wood's Gymnasium, New York. Parmly lifted 140 pounds with ease, none of the others coming within seven pounds.

The second exercise was to lift a weight in proportion to the weight of the lifter. L. Kramer, of the New York Turnverein; Richard A. Pennell and James G. Sands, of Wood's Gymnasium; L. Siebert, of the New York Turnverein; and Charles D. Newton, of Wood's Gymnasium, entered. Pennell lifted 165 pounds with apparent ease.

Lifting dumb bells was the next exercise. Samuel Strasburger, of the New York Athletic Club; Fred Steinbuch, New York Turnverein; and Henry E. Buermeyer, New York Athletic Club, were the only three that entered. Buermeyer lifted 98 and 95 pounds, the others not coming within 10 lbs. Pennell lifted a hundred pound bell 10 times, Bohlrig and Stanbach 7 times, and W. E. Van Wyck N. Y. A. C., 6 times. The next exercise was to show which had the most muscular lifting power, Pennell, Parmly, Cain, Bohlrig, Sands, or Murray. Pennell lifted with his hands 1,150 lbs., the others lifting to within 50 lbs. After these wonderful exhibitions of muscular strength came rope climbing, parallel bars, club swinging; calisthenics by the New York Turnverein, vaulting, suspended rings, pole leaping, &c., and the exhibition closed at a late hour.

MCGILL UNIVERSITY, Montreal.

EDITOR OF FOREST AND STREAM:—

Our annual Athletic sports occurred for the first time on Friday last. I send an account of the foot ball matches, and in future, when any events of interest in your line occur I will send you an account of all athletic exercises that take place in Montreal.

You can see from our report that the competition in our sports was keen, and that the performances compare very favorably with those at other Athletic meetings. The time was not taken, on account of the heaviness of the track in places, except of the hundred yards and the championship, both of which were remarkably good if the condition of the ground be taken into account. I enclose a programme.

With regard to foot ball, I send you a copy of the rules we play as practice, and in the inter-faculty matches, also a copy of the Association Rules which our club adopts.

The Governors with their ladies, a number of the Professors, students and friends of the College attended the meeting, as the day was fine and the air brisk and invigorating. Lang jumped 10ft. 7 $\frac{1}{2}$ in. A 16lb. hammer was thrown by McDonald 60ft. 9in. The cricket ball was thrown by Lang 93yds. 1ft. The steeplechase caused the greatest interest, four out of the eighteen entries answered to the call, Fleming, Page, Baynes, and McDougall, the fourteen fences and two ten-foot water jumps in seven-eighths of a mile terrifying the rest. Over two hurdles and a stiff four foot fence they went with Baynes in front, then he mistook the course and the rest got in front; Baynes soon resumed his old place and led over two more fences and then the water jump. Here were at least four hundred people looking to see a splash—disappointment awaited them, for all cleared it but Page, who dropped out. Round again, when all cleared it in the neatest possible manner, and spurred for the finish; when they came in, Baynes was first.

The quarter of a mile Cup, presented by the Governors of the University for the championship, was another leading event. Five came to the post, Baynes, Thomas, Brouillette, Stevenson, and Taylor, A. D. Taylor led until the hundred yards' flag was passed, when Thomas, who drew up from third, where he had been running easily, passed him and came in a winner. Taylor second. Time—59 $\frac{1}{2}$ seconds.

A member of the Quebec Foot Ball Club kicked the ball 42yds.

I have seen several numbers of FOREST AND STREAM, and have been very much pleased with its tone and the news it gives.

Yours sincerely,

J. S. MCCLENNAN,

Editor University Gazette.

[It will be remembered that Mr. Bowie, a member of the University, carried off the two mile Bennett Cup.—Ed.]

CORNELL UNIVERSITY, Nov. 10, 1873.

EDITOR FOREST AND STREAM:—

The weather during the last two or three weeks has been just right for out-door sports, and accordingly every spare hour has been appropriated with Athletics of one kind or another—foot ball taking the lead, followed by base ball, and just enough of boating to keep some of the crews in due training. There have been four match games of foot ball lately, all hard, closely contested games, and showing much skill in the "kicking" art on both sides.

First game between the Buckeyes (Ohio) and Bark Peeters (Pennsylvania), they winning the 1st, 3d and 4th goals. Second, New York against the World; 40 men per side. This was a well fought game, but the New Yorkers proved too much for the World, winning in three straight heats. The third game played Nov. 1st between the Juniors and Sophmores, was perhaps the best played, most scientific game ever fought at the University; every man worked as if his life was at stake. Play was called at about 3 $\frac{1}{2}$ o'clock. The first goal was won by the Sophmores in 55 minutes and the second in 65 minutes. But the third was so warmly contested that darkness closed around the contestants and the flying ball; still, by the light of the moon the play went on till near seven o'clock, when an unlucky kick sent the ball into the creek, where it was seized upon by a town gamin, who put off to parts unknown and ended the game.

The victory was virtually with the Sophmores.

The fourth game, November 7th, was again between the Juniors and Sophmores, in accordance with a challenge from the Juniors. There was a strong south wind blowing during the game, rendering it certain victory for whichever side held the south goal. Accordingly the game was a draw, both sides winning two goals, and darkness ending the fifth.

Oct. 20th the second game of base ball was played between the University and Town; result a victory for the Town. Score—33 to 12. On Nov. 5th the third and last game was played, which also resulted in a victory for the Town. Score—45 to 10. There was some good playing on both sides, but the pitching of the Town boys was too much for our nine.

Thursday the 4th November, the scrub Athletics took place on the Fair Grounds. They consisted of a hundred yard race, five entries, won by Larned, '76, in 10 $\frac{1}{2}$ sec. Three-legged race, 100 yards, four entries, won by Copeland, '75 and Phillips, '76, in 15 sec. One mile race, four entries, won by Mallett, '77, in 5:35. Sack race, 100 yards, five entries, won by Cook, '77, in 45 sec. Hurdle race, 100 yards, five hurdles, four 3 $\frac{1}{2}$ feet in height, the 5th four feet; four entries, won by Copeland, '75, in 15 sec. Half mile race, four entries, won by Larned, '76, in 2:10 sec. The time—considering the condition of the track, which was very heavy—for all the races was quite good.

The Navy Boat House has been enlarged during the past two or three weeks, and can now accommodate comfortably twenty or more shells, with dressing rooms for the crews. This is a long needed improvement and adds very much to the convenience of the Navy.

It is to be hoped that we may be able to send out some fine crews next season, and we shall do our best to send a crew to the next inter-collegiate regatta at least as good as our crew at Springfield, which was recognised as the most muscular on the river. Arrangements are being perfected at present, whereby we shall have by the end of this month a new gymnasium building fully equipped for work. This is being done by the students, with the aid of some of the Professors, who see the necessity of physical as well as mental culture for the right and perfect development of the human body.

—The Billiard Tournament at Chicago opened on Nov. 10th at the Music Hall. The first game played was between Joseph Dion of New York and Peter Snyder of Chicago; Dion played with his usual care and unequalled nerve, and won the first game of the Tournament on the sixty-seventh innings by a score of 400 to Snyder's 272. Dion's largest score was 34; Snyder's, 45. The second game was between Francois Ubassy and John Bessinger. Ubassy playing with his peculiar nerve and nonchalant air, made several runs of double figures, the largest of which were 86 and 69. He won with great ease on the thirty-first innings, being 490 to Bessinger's 187. The average was 16 4-31. The games to be played are all three ball French caroms of 400 points each.

—The billiard match between Maurice Daly of New York and Geo. F. Slosson of Chicago came off in the latter city on November 8. The game was the three ball French caroms. Daly gave Slosson 100 points out of 600. The game was a remarkably close one, and was won by Slosson. Daly made 592 points.

—A wrestling match for \$2,000 a side is to come off at the end of this month between John McMahon of Rutland, Vt., and Patrick H. Doyle, of this city. Deposits have been put up and articles signed to wrestle square hold, best two in three, fair back falls. McMahon is the champion wrestler of America, and this match is for the championship and the stakes.

A foot race for \$200 a side was run at Toronto last week between C. Nurse and an Indian named Kerraronwe, the white man winning, making four miles in 21 minutes, 40 seconds.

Yachting and Boating.

—The Eastern Yacht Club, is the leading organization on yachting and boating matters in eastern waters, and has rapidly increased in strength and influence the past season. The muster roll numbers 260 members and some fifty yachts of all classes are owned by the club.

The first event of the season was the annual regatta of June 11th, the "ladies' day." The weather was dull and overcast, with now and then a shower, but it cleared off about mid-day. A good breeze prevailed throughout, varying from W S W to S W. Nine schooners and three sloops entered. The start was a flying one, the yachts crossing a line between Marblehead Rock, and a stakeboat about north of it. They were instructed to leave Half-way Rock on starboard, Pig Rock stakes on starboard, Egg Rock on port, Graves Bell buoy on starboard, Harding's bell boat on port, crossing the starting line; a distance of about thirty-five miles.

The steamer John Romer was provided for the accommodation of non-yachting men and the lady friends and relatives of the members. The schooner yacht Azalea, John M. Forbes Esq., took the first prize, leading the fleet in actual time. Halcyon, Brenda, Haze and Fearless did not appear, and forfeited their entrance fees. Vision made an excellent run, and would have won had she been in the first class, but having no competitor in the second class, she could not take a prize. Shadow was ruled out for starting too late, and Coming had no antagonist.

—June 28th, a regatta took place off Swampscot, eight schooners and four sloops entering. The day opened fine and clear, a light breeze blowing from the S W. In the afternoon a thunder squall came up from N. E. which caused most of the yachts to take in all sail, and some of them gave up the race. After the squall was over, the wind came out again from the old quarter.

Halcyon won the prize for first yacht, with the allowance, \$100; Fearless took the second class schooner prize, \$125; and White Cap the second class sloop prize, \$75. Rebecca, Clytie and Shadow gave up the race.

—The annual cruise began July 8th, the following named yachts comprising the squadron, under command of Vice Commodore Whitney: Schooners, Julia, Halcyon, Wivern, Belle, Haze, Edith, Vision; sloops, Coming and Elaine.

The fleet rendezvoused off Beverly at 11 o'clock P. M., and reached Portsmouth the same evening. Portland, Boothbay and South West Harbor were visited, and the yachts finally arrived at their destination, Bar Harbor, where a stay of several days was made. Returning, the

yachts visited South West Harbor, Camden and Portland, where the squadron broke up.

—Rear Commodore Jeffries offered a cup to be sailed for off Swampscot, September 4th, which brought out eight schooners. Wind south, very squally, shifting to south west, with a high sea. The cup was won by Silvie, though Halcyon beat her over the course, but as the owner gave the cup, he did not race for it. America sailed over the course, and in spite of the weather, so favorable to her from her greater size and power, was handsomely beaten by Halcyon and Silvie. Each schooner had to contribute an entrance fee of \$10 to make up a prize for second boat, which was taken by Fearless.

—The closing regatta came off September 16th. The weather was dull and threatening, though it cleared off, and the wind which was S W fell light. Four first class, and four second class schooners entered, and one sloop.

Halcyon took two prizes, one for best time without allowance, and one with allowance, \$100 each. Fearless carried off the first prize for second class schooners, \$100; Vision took second prize in same class, \$50. Silvie took second prize, first class schooners, \$50.

Most of the fleet are now in winter quarters between the railroad bridges at Beverly.

The following is the list of officers of the club: The office of Commodore is left unfilled as a mark of respect to the memory of the late David Sears Esq. Vice Commodore Stanton Whitney, Rear Commodore John Jeffries Jr., Secretary, Henry B. Jackson; Treasurer, Addison Child; Measurer, Frank D. Child. We take this opportunity to return our thanks to Henry B. Jackson, Esq., for his courteous information.

—The schooner yacht Tidal Wave, N. Y. Y. C., Mr. William Voorhis, is at Smith's Yard, Nyack, for repairs, and is to be furnished with a new bow.

—The Meta-Vision race has not yet been decided. The judges cannot agree on an umpire.

—Mr. Henry Word, sloop yacht Seline, B. Y. C., intends sailing to Florida and there pass the winter, shooting on the St. John River.

—The yachts Prospero and Magic, B. Y. C., have arrived at Port Jefferson to go into winter quarters.

—The Brooklyn Yacht Club will hold a meeting on Nov. 26th, when the prizes won during the season will be presented to the owners of the successful yachts.

—The Harlem Yacht Club held a meeting on Nov. 6th, the following gentlemen were elected officers for the ensuing year:—

Commodore, W. H. Johnson; Vice Commodore, Jos. Armitage; Treasurer, Maurice Campbell; Secretary, John McDermott; Recording Secretary, Thomas Mook; Measurer, O. P. Raynor. Directors, M. J. McCaffery, H. W. Genett, H. J. Campbell, Manfred Carroll, David Hanson.

—In Portland Harbor, Me., a boat race took place on Nov. 6th, between J. H. Kennedy and J. O'Donnell. The distance rowed was three miles; Kennedy won in 24h. 30 sec.

—Henry Adams, Jr., and Henry C. Seaman, of Brooklyn, both excellent oarsmen, rowed round Manhattan Island on November 4th. They rowed in a pair-oared boat weighing 150 lbs. The weather was very much against them, as at one part of the journey they shipped water almost every stroke, so much so, that Seaman had to stop rowing and bail out. The distance rowed was about thirty-six miles, which they accomplished under eight hours; allowing for bailing out, dinner, &c., and the actual rowing time would be about six hours and twenty minutes. This was a good performance, especially for young men.

AMHERST COLLEGE, November 8, 1873.

EDITOR FOREST AND STREAM:—

Though the best college time on record, and the manner in which its crews have usually acquitted themselves, have won for Amherst high rank among rowing colleges, the present has been a most unquatic season. The usual fall regatta was omitted for various reasons, and though there is a good deal of enthusiasm in college on the subject, there has been very little rowing done. The training of this year's crews will be in the hands of the Commodore of the navy, Mr. G. E. Brewer, who was bow oar of the winning crew two years ago. He already has a number of Freshmen at work. They have been in the boat but a very few times, yet give promise of coming quite up to the average. The University crew for the coming season has very little

decided about it as yet. All of last year's crew, with one exception, are still in college, and probably most of them will pull again this season. Several new men are also applicants for positions in the crew, and a great deal of hard work will be done between now and spring by those who hope to represent the college in the next regatta. The old boat house of the Association was crushed last winter by the accumulations of snow and ice, and the boats of the club are now stored in sundry tobacco barns. This boat house was four miles from the college, and will not be rebuilt until the completion of the Massachusetts Central Railroad, when it will be erected on the line of that, thus making the Connecticut more accessible to boating men than it has ever been. The facilities of Amherst for boating are not extensive, as most all our pulling has to be done on the Connecticut, which is so far from the college. There is, however, a small winding stream within half a mile of us, on which there is room enough for one boat. The finances of the club are not particularly prosperous, though we have no doubt of being able to present two crews at the next regatta, as usual.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, <i>Alces Melchis</i> .)	Caribou, <i>Tarandus Rangifer</i> .)
Elk or Wapiti, <i>Cervus Canadensis</i> .)	Red Deer, <i>Capreolus Virginianus</i> .)
Rabbits, common Brown and Grey.)	Squirrels, Red Black and Gray.)
Wild Turkey, <i>Meleagris gallopavo</i> .)	Quail, <i>Oxyechus Virginiana</i> .)
Woodcock, <i>Scelopax rusticola</i> .)	Pinnated Grouse, <i>Tetrao Cupido</i> .)
Ruffed Grouse, <i>Tetrao umbellus</i> .)	Pigeons, and all kindsof Wild Fowl

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—Black ducks are now very numerous in the vicinity of Fire Islands, particularly in the West Bay, near the head of Morris Channel. They are collecting in the creeks on the islands. Scattering flocks of coots (velvet ducks and scoters) and old squaws are occasionally seen, and there will soon be good shooting when the greater body of the birds arrives. Decoys are indispensable for ducking in the bays. Those who have no duck boats can have good shooting by setting their decoys off from some of the points near Eastern Island, Oak Island, or near Whig Inlet. There are also a great many ducks passing through Jones' Inlet, below the Fire Islands, which may easily be "stooped." Sail boats may be obtained at Babylon, Bay Shore, or Islip.

—Captain Toffey and party returned from Shinnecock Bay last week with sixty-five broadbills, the result of one and a half day's shooting in company with those efficient marksmen, Bill Lane and Cy. Foster.

—Here is some important information we gather from the Germantown Telegraph:

"The favorite region for Philadelphia sportsmen to visit is the waters of the upper Chesapeake and its numerous tributaries. The severe but necessary laws regulating the killing of game on the shores of Maryland have already had a salutary effect, as is observed by the unusual number of ducks which now annually visit those attractive grounds. Those who contemplate shooting there this fall may not be aware of the principal features of the game laws relating to that section, that the season for killing wild fowl commences on the 1st of November and ceases on the 31st day of March. The only days in the week that shooting is allowed are Monday, Wednesday and Friday. Shooting at night is very properly prohibited. During the day no larger gun can be used than the ordinary fowling-piece. For the violation of these laws the fines vary from fifty to five hundred dollars."

On account of the mildness of the season sportsmen have thus far not been very successful, as but comparatively few ducks have as yet made their appearance. As soon as the weather grows a little colder, the canvas-back, the red-head, the black-head, the widgeon and the wild goose will make their advent in increased numbers.

A contributor to the Germantown Telegraph has put strangers under obligations by informing them that the favorite locality for the canvas-back is the narrows at the mouth of the Susquehanna, between the Spesutic Islands and the western shore. These narrows are about three miles in length by three hundred yards in breadth. By the middle of the present month the canvas-back will visit those thoroughfares in quest of the wild celery root which grows there in great quantities.

—Messrs. Birdseye and Charman, of Brooklyn, accompanied by their dogs, Prince and Hero, killed thirteen brace of ruffed grouse in New Jersey last week.

—All kinds of game appear to be much more abundant throughout the country than for several years past. This fact is true of the moose and caribou of Nova Scotia, as well as of the quail and ruffed grouse throughout the United States. We hear of some fine bags of quail from Monmouth county, New Jersey, a dozen miles below Long Branch, and also from back of Plainfield. Bears are becoming a nuisance in Pennsylvania.

—George B. Greer, the sugar refiner of Wall street, writes us that he is enjoying himself among the buffalo, blacktails, and antelope near Fort Wallace, Kansas. Our friend is working like a beaver for FOREST AND STREAM, and has got us a goodly subscription list among the army officers at several of the frontier posts.

—A yearling Cow Moose, imported from New Brunswick by the editor of this paper, can be seen at the depot of

Reiche Bros., 55 Chatham street. The United States Government, which doesn't mind "turning an honest penny," when opportunity affords, charged *eight dollars duty* on the "animile," which was cheerfully (?) paid, since, "Where duty calls, I must obey;" and as the moose remarked, it was the latest style of "calling" moose outside of Parrsboro'. We hope to have influence enough at Washington to have the duty on moose so much increased that it will be no object for the critters to cross the line. If any gentleman outside of the Custom House can see anything funny in the remarks foregoing, he is welcome to a copy of this number of our paper free gratis for nothing.

—William C. Prime, Esq., has been hunting in the Adirondacks, and sends a letter from St. Regis Lake to the *Journal of Commerce*, in which he writes: "In the autumn deer do not often come down to the water for feed as in summer, when the grass is fresh and green and the lily pads are beginning to grow. It is tolerably certain that a deer found swimming in November has been driven by dogs. Watching for deer in pleasant weather is not unpleasant occupation for a man who knows how to do nothing. A watching point is generally one which commands an extensive view of water and land, and the watcher has simply to sit, or stand, or lie, and keep his eyes open in all directions. The dogs are put out wherever in the forests it is thought that the deer can be found, but when they have started the race no one can tell where it will lead. Thus, if the deer be put up on the slope of St. Regis mountain, he may go to Follansbee Junior pond, three miles north, or to St. Regis pond, as far west, or to Big Clear on the south, or to St. Regis Lake on the east, or to Spectacle, or Spitfire, or even to Barnum or Osgood; and there are a dozen other lakes, in any one of which he may seek to wash away the scent and throw his pursuers off the track. The watchers in a hunt are therefore scattered miles apart, each one taking a position on one of the customary runways, for the deer generally run on the same tracks through the forest. Hunting in this manner is necessarily, therefore a very quiet business, except for the few moments when the deer is coming in and shot or missed. If he takes to the water out of rifle reach he must be pursued in the boat, and there is little pleasure in thus overtaking him."

—The Yacht Eva, of the New York Yacht Squadron, and a party of gentlemen are up the James river on a shooting excursion.

—A hunting party from Webster, West Va., encountered fearful weather in the mountains last week, snow falling to the depth of sixteen inches, and remaining on the ground several days. They killed eleven deer, captured a bear alive and brought him home, and shot small game enough to supply their commissary. The mountaineers of West Virginia don't like strangers. They have always raised objections to hunters from a distance, who, as they say, run off the game. Parties from Virginia always calculate upon losing one half their dogs, shot by the mountaineers.

—There is very fair hunting in Bryan, Liberty, and McIntosh counties, in Georgia, along the line of the Atlantic and Gulf Railway. Messrs. Brailsford and Thomas keep pack of hounds, and so also do Randolph Spalding's Sons, on Sapelo Island. Every one keeps pointers, and game exists in great variety—deer, bears, turkeys, quail, snipe, and woodcock, besides otter, coons, mink, and opossums. The area of forest has increased since the war, and game has multiplied apace. There are no hotels or houses for entertainment; the sportsman must go prepared to camp, but the planters are kind hearted, and know a gentleman when they see him. The hunting season is now well on.

—A letter from Grafton, Vt., November 3d. says:—

"We have but very few sportsmen here, and not a good bird dog in town. Partridges are unusually plenty, and a few sportsmen with good dogs would undoubtedly find first rate sport, if accustomed to a rough country. Foxes are out in numbers; one local hunter has killed seven within a few days. We also have a pretty good show of coons. A party from Providence, R. I., a few days since took about a dozen in three nights. We have a fine hotel here at reasonable prices; for a few years past it has been much frequented during the summer months by parties desiring quiet and our good country air. Messrs. F. and H. Phelps, the proprietors, would be pleased to see a few good sportsmen."

—The Phoenix Gun Club of Brooklyn held a friendly pigeon shoot at Dexter's Ground, L. I., last week. The birds were in prime condition, most of them flying direct from the trap at the word "pull." It will be seen from the score that the shooting was very poor, as when a club is successful in getting good strong pigeons, the birds test the capacity of the shooters, and generally fly off unharmed. There were 120 birds shot at, and only 67 birds killed; 21 yards rise, 15 birds each.

Akurst.....	1 0 0 1 0 1 0 1 0 1 0 0 0 1 0—6

—Here is what even Nova Scotia papers style an extraordinary moose hunt. We quote:—

"Last Sunday, Capt. Joseph Newcomb, in schooner *Pride of the North*, while crossing from Parrsboro' to Port Williams, espied a moose about midway of the Basin, making from Parrsboro' to Blomidon. He manned his boat and made chase. He got a bowline about her, towed her to the vessel, hoisted her on board, where he butchered her, and on his arrival at Port Williams sold the meat for twenty-two dollars."

FIFTH CONTEST FOR THE AMATEUR RIFLE CLUB BADGE. AT CREEDMOOR.

—On Saturday last the weather was most inauspicious. The day was dark and cloudy, and rain was threatening. Notwithstanding the inclemency of the weather the contestants for the much coveted prize assembled fifteen in number at Creedmoor, and though the rain poured down and the wind blew, the shooting was of an excellent character. Under all circumstances the result was remarkable, the average comparing favorably with that of any previous match, and the winning score equalling that made by Capt. Bodine in August last. Mr. J. P. M. Richards, of the 7th Regiment, having scored 27 out of a possible 28, making six bull's eyes and a centre, thus securing the badge for a second time. In our last issue an error occurred which we now correct. The matches for the Amateur Rifle Badge have been won so far as follows:—

July 12th.	John Bodine.....	25
Aug. 9th.	John Bodine.....	27
Sep. 13th.	J. P. M. Richards.....	26
Nov. 1st.	Robert Omand.....	25
Nov. 8th.	J. P. M. Richards.....	27

In the match of yesterday it is to be regretted that press of business prevented many of our leading shots from being present, neither Mr. Bodine or Captain Wingate or Mr. Omand having been on the ground. We trust this match will not conclude the most pleasant contests of the Amateur Rifle Club. Another year we hope will see this association with a notable increase of numbers. The spirit which has characterized its members has been excellent, and in years to come the Amateurs will be remembered not only by seniority but by merit, as having given the initial movement to rifle shooting at Creedmoor. It will be in the ranks of the Amateur Rifle Club that the best marksmen will be found, and when Wimbledon competes with Creedmoor, they will take the post of honor.

MATCH FOR THE AMATEUR RIFLE CLUB BADGE, NOVEMBER 8.

Name.	Arm.	Seven shots at 500 yds.	Total.
J. P. M. Richards.....	Sharpe Sporting.....	4 3 4 4 4 4 4—	27
G. W. Hamilton.....	Sharpe Sporting.....	3 4 3 4 4 4 3—	25
I. S. Coulin.....	Sharpe Sporting.....	3 4 4 4 4 3 3—	25
A. V. Canfield, Jr.....	Remington Sporting.....	3 4 4 3 3 3 3—	23
S. J. Kellogg, Sr.....	Remington Sporting.....	3 3 4 3 3 3 3—	22
W. Robertson.....	Remington Sporting.....	2 3 3 3 3 4 3—	21
G. W. Yale.....	Sharpe Sporting.....	3 3 2 4 3 3 3—	21
A. Pyle.....	Remington Sporting.....	2 4 4 2 3 2 3—	20
L. C. Bruce.....	Sharpe Military.....	2 2 3 2 2 2 4—	17
Captain Ross.....	Remington Sporting.....	3 3 0 4 4 3 1—	17
Col. Gildersleeve.....	Ward Barton.....	0 2 3 3 0 0 3—	15
Thos. Lloyd.....	Sharpe Military.....	0 2 2 3 0 0 4—	11
A. Alford.....	Remington Sporting.....	2 0 2 0 0 0 3—	7
D. Cameron.....	Remington Sporting.....	0 3 0 0 2 2—	7
S. L. Hillier.....	Maynard.....	0 0 0 2 2 0 0—	4

Weather cloudy; light bad; rain falling during the match; wind blowing irregularly.

After the match a sweepstakes took place which was won by Mr. Lloyd. The following scores were made:—

Name.	Arm.	Score.
Thos. Lloyd.....	Sharpe.....	3 3 3 3 4—16
Col. Gildersleeve.....	Ward Burton.....	2 3 3 3 4—15
S. L. Hillier.....	Maynard.....	2 2 4 2 3—13

Before the match some very fine shooting was made by Mr. A. V. Canfield, Jr., of the 22d Regt., with a Remington sporting rifle, the following being the score:—

At 500 yards.....	4 4 3 3 3 3 3—28
At 800 yards.....	4 4 4 4 3 4 3—26
At 1,000 yards.....	0 4 4 3 3 0 2—16

Aggregate..... 63

It may be seen that Mr. Canfield repeated this number (23) at the regular match. Perhaps it is unwise when shooting for a match for contestants to work too much before hand, as it sometimes fatigues the eye and hand, and takes off their freshness; 26 at 800 yards in a possible 28 is very wonderful shooting. This match for the Amateur Badge showed the excellent quality of the Sharpe's rifle.

Next Saturday, Nov. 15th, the match for the Remington Diamond Badge will take place. The terms upon which this magnificent Diamond Challenge Badge valued at two hundred and fifty dollars and presented to the National Rifle Association by Messrs. E. Remington & Sons, will be shot for, have been fully given by us in our last number. Distances—500, 800 and a 1,000 yards. Badge to be won three times, not necessarily consecutive, before becoming the property of the owner; open only to members of the Association. Weapon—any breech-loading rifle.

The presentation of this badge will do much to stimulate long range firing, which in its turn will do more than anything else to build up expert marksmen and develop the best kind of rifles and ammunition. The gentlemen riflemen at Creedmoor take no stock in any gun for the gun's sake but "shoot to win," and would abandon their most cherished rifles for a flint lock Queen's Arm in a moment, if they could make a higher score with it. The terms of the match show a practical acquaintance with the necessities of a match of this description which will command general approval, particularly the clause prohibiting competitors from practicing on the day of a match, and it may not be improper to remark that the members of the Rifle Association are indebted for them as well as for the idea of the badge itself to Mr. A. Alford, who has always manifested the strongest interest in anything pertaining to rifle practice and the welfare of the Association.

—This appeared in a New York paper one hundred years ago:

"Whereas, the subscriber intends to leave the province early next spring, this is to inform the Public that he has on hand a parcel of Indian dressed deer skins, fit to make breeches, likewise, mill-leather, large and small, the neatest braces for breeches-makers, shammy, sheep-skins fit to make negro breeches, sorted in dozens to suit country merchants; likewise, a variety of buck and doe-skin breeches and gloves made in the neatest manner; a small quantity of wool. The above articles he will dispose of very reasonably. Joseph Lester, living near the Fly market, New York."

Art and Drama.

LAURA KEENE.

NO successful professional career is more exciting and more fascinatingly triumphant than that of a theatrical star; no reputation is so evanescent and so soon entirely forgotten. The recent death of Miss Laura Keene, and the flippant way it has been in many instances alluded to by the press, form a sad comment on our propositions.

More than twenty years ago, Mr. James W. Wallack, Sr., while in London, in search of some "bright light," saw "Miss Laura" on the stage and at once comprehended her superior talents, and made the arrangements that transferred her to the western world. On the trip across the Atlantic there occurred an incident that Miss Keene, in years gone by, related with great gusto. To beguile the time of the voyage she consented on one occasion to recite "The Maniac." Her success was great and cordially acknowledged, but the incident was embalmed in her memory by the subsequent receipt, when on shore, of a box of the finest gloves, a present in token of her dramatic powers, from A. T. Stewart, the merchant prince of New York.

Her advent before a New York audience was at Wallack's, corner Broome street, when, in 1852, she assumed the rôle of "leading lady" of the company. No actress was ever more successful from the start than she, for in a few weeks she carried the town, and for the time reigned supreme.

Between Miss Keene and Miss Ellen Tree (not the subsequent Mrs. Kean) we always fancied there were strong resemblances. The personal appearance of each was so slender that the least taking away would have suggested attenuation. The voice was one of the chief charms of each, and in the plaintive notes and sad expressions they were echoes and reflections of each other. It is, therefore, unnecessary to say that Miss Keene, in her younger and successful days, was the representative of perfect refinement.

The popular tradition is that she was as an unknown child, a bar maid in one of the public houses contiguous to a leading London theatre; this is but a paraphrase, probably, of the history of Nell Gwynne. Bohemian biographers generally start their heroes and heroines at some point where the writer has easiest access to inspiration. Miss Keene has, unfortunately, left no authentic record of her girlhood and early struggles. She stamped her humble origin, however, by once remarking to a friend that she had "worked in a factory." Here was indeed the last place in the wide world we should have looked for the bright spirit that once wielded such a charm; and in the lowly surroundings of factory life, we can easily conceive there was that neglect of juvenile training that probably made Miss Keene's whole life a struggle between one of the most beautiful natures and worst possible childhood training.

She commenced her professional career in the performance of the simplest parts, her fragile figure naturally carrying her into the ballet; but her intellectual superiority soon made way to preferment. Once comprehending her own abilities, she was suddenly inspired with an overwhelming ambition that soon became absorbing, and to the day of her death made her a martyr to the achievement of success. Industrious as the "busy bee," untiring as time itself, she fretted through her allotted years, never taking a breathing spell, never loitering on her journey through life, but even to the last, when the long wear and tear of consumption had left her scarcely a physical representative, her mind, in its restlessness, throbbed in its fragile and battered casement, and her bright unrivalled eye flashed at the conception of some conceived triumph.

Miss Keene divided admiration by the possession of unusual genius as an actress and wonderful judgment as a manager. Her appreciation of an untried play was better than any contemporary; it was almost fate. This great and rare power was illustrated in a wonderful degree when, as manager of the Olympic, she had in her stock company Jefferson, Owens, and Sothorn. Whatever may be now the triumphs of these gentlemen, they are largely indebted to Laura Keene's sagacity as a manager for their present success. It was she who purchased from Tom Taylor the MS play of "Our American Cousin." When she gave out the assignment of parts there was a pandemonium of rage and disappointment behind the scenes. We believe not an actor or actress who had standing enough to protest, that did not denounce the play, and what they were expected to do with it. Mr. Sothorn, at the risk of a law suit with the "plucky Laura," threw up the part of *Lord Dundreary*, and Jefferson, who was by the just judgment of Miss Keene to have the tide turned in his favor that would lead to fortune, fretted and fumed, and then, as a sensible, good-natured man as he is, gave us *Asa Trenchard*, the illustration of which was to develop into his *Rip Van Winkle*.

On the night of the presentation of "Our American Cousin" so much opposition had been expressed to its performance that even Miss Keene's firmness for once wavered, and she looked forward to the result with the greatest anxiety. The call for tickets was in the morning decidedly dull. About noon a committee of firemen waited upon her and said they desired a number of seats and expected to obtain them, if possible, at half price. Miss Keene said, "if you will, with your friends, come to the theatre to-night and enthusiastically applaud *Lord Dundreary* and *Asa Trenchard*, but take no notice of me, I'll give you all a free admission with pleasure."

The firemen, of course, were delighted, and at night presented themselves at the play. Whenever *Lord Dundreary*

or *Asa Trenchard* appeared, as in fact when anyone appeared, they made the house resound with a hearty welcome and most judicious approval. Upon the falling of the curtain the reaction behind it was wonderful—the play was a success, and Miss Keene added a new laurel to that already heavy wreath she had won as a good manager.

Of her struggles and sufferings after she disappeared as a nightly star before a metropolitan audience the public have no desire to know. Suffice it to say that a consumption, slow but sure, gradually crushed her body but never her undaunted spirit. Ill success brought her in debt to many people, and they "got satisfaction" by maligning her character and misrepresenting her motives. Strange as it may appear to the unthinking world, Laura Keene was by nature a woman made to shine in private life. Her affections were paramount even over her ambition. In her last days she toiled, lest she might tax the competency she hoarded for the comfort of her two nieces. She was the most brilliant woman, in the height of her popularity, in New York, in dress, manner, and charms in parlor, and shone resplendently with the most polished social and literary society.

To her few confidential friends she spoke of the stage with bitterness, as calculated to destroy all that quietness and peace of mind most essential to a woman's happiness. Her last positive declaration was that if she could be restored to her youth and could live over again, she would never speak to the manager of a theatre or witness a play.

Her towering ambition was the serpent that stung most severely. In her declining days she saw Sothorn, Owens, Jefferson, and Booth, and others who were her *protégés*, vital with health and abundant in wealth and the world's applause, and she fretted and beat helpless against the bars of her imprisonment as a petted eagle deprived of the mountain eyrie and the sun in its zenith.

She now sleeps quietly in the modest cemetery of Montclair. One of her last requests was that her funeral should be strictly private, and that no notice of her death should be given to the world until her body rested in the tomb.

At the Broadway Theatre, on Monday evening, was presented for the first time a play entitled "The New Magdalen." We presume, from reading some of the recently produced comments of the press, upon the intimate connection of female degradation and hard times, that this "New Magdalen" is the legitimate fruit of the prevailing panic. At any rate, we have Wilkie Collins' certificate that this "perfumed violet" is a genuine, and not a spurious article. Though refined gentlemen among themselves would, as a rule, refuse to discuss the character of the plot, for want of decent words to give a clear description, yet it is put upon the stage, and we can only find excuse for the women who witness it on the ground that they are no philosophers. Miss Leclercq, when we entered the play-house, was sitting on a sofa, dressed splendidly, giving a charm to a parlor set off with the richest furniture, the walls of which were richly frescoed, while the conservatory in the rear witchingly displayed its floral charms through the crystal glass. At her side stood her affianced husband, leaning over her with a degree of "spoon" that was dramatically effective and complimentary to her charms. The enraptured and successful lover was urging an early day for the prospective nuptials. With all these pleasant surroundings Miss Leclercq was not happy. She looked virtuous, innocent, and most loveable, and the audience heartily sympathized with the prospect that she had of settling down in the domestic circle, with a fair chance of being overloaded with olive branches; yet for all this and these things, she kept continually turning away from the earnest love expressions of her future husband, and informing the audience, in *sotto voce*, that she was a miserable, unprincipled outcast—an old Magdalen, who had been ruined by want of early education, poverty and temptation, frequently calling herself hard names, such names, indeed, as the veriest drab that staggers bawling at midnight through our slums will, if applied to her, resent with becoming indignation.

The high moral finale of the piece was simply brutal in her vinegary maidenhood, and probably no dramatist ever succeeded more effectively in making virtue despicable when brought in contact with gilded vice.

The leading comedian is a radical minister. When the affianced husband of the piece has had the "early history" of his future wife told him several hundred times, more or less, and still unbelieving, has a hole made in his head with an augur, through which is shoved a written affidavit that his sweetheart is a wanton of the worst kind, then he gives it up, and slapping his blonde wig over the top where his forehead ought to be, disappears.

Miss Leclercq—we beg pardon, we mean *Mercy Merrick*—having been abandoned by *Horace Homecroft*, she turns to the radical minister, and as if never tired of speaking of her early shameful life—while the audience and no one on the stage has even thrown it in her face—she commences again reviewing her shameless conduct, and seems to be desirous of making an impression on his pure mind by degrading herself to the lowest pit of infamy. The radical minister drinks in the impure words and dwells with seeming delight upon the pictures of revolting vice that are suggested to his imagination; at last overcome with radical clerical enthusiasm, he seizes the interesting heroine rapturously in his arms, presses her form to his precious person, and after the manner of Stiggins, announces, with a defiant voice, that her early education and trials implies that her subsequent systematic fraud have jointly and severally prepared her for a minister's wife, and at last the "New Magdalen" announces that she is happy.

Such is the dainty dish set before a New York audience by Wilkie Collins.

On Monday the favorite comedy of "Ours" was returned to Wallack's. There is so much in the play in the way of pleasant scenic effects, the completeness of the plot, and unexceptionable dialogue, that it seems never to tire a refined and appreciative audience.

At Booth's, the romantic drama of "Richelieu." As is too often the case at this theatre, one excellent actor is surrounded by indifferent players; the consequence is that much is seen that is incomplete and unsatisfactory.

At the Union Square the "Geneva Cross" is still in the ascendancy. The managers announce that on the 17th inst. it will give way to "The Wicked World," in which Miss Clara Morris will appear.

On the evening of the 21st instant the testimonial of Mr. William N. Griffith, commemorative of his entering upon the professional stage, will be given at the Academy in Brooklyn. This will be a fine performance. In addition to some of the best known and most popular amateurs, Messrs. E. Lamb, Owen Marlowe, Mrs. Fanny Foster, and Mrs. Charles Gaylor will appear in the dramas. Mr. J. N. Patterson, the pianist, and Mr. John Clark, the basso, will appear between the plays. "Ruy Blas" and a farce will be on the bill.

The new Park Theatre, of Brooklyn, maintains its unrivalled popularity; it is one of our best theatres for unexceptionable family entertainments.

CINCINNATI, November 7, 1873.

PIKE'S OPERA HOUSE.

We have been enjoying a treat this week in the shape of the Kellogg Opera Company. During the week they have sung "Lucia de Lammermoor," "Martha," and "Faust." Saturday afternoon, "Bohemian Girl;" in the evening, "Fra Diavolo."

WOOD'S THEATRE.

At this place the Maffit and Bartholomew Pantomime Troupe have appeared in "Flick and Flock." Business fair. November 10th—Lawrence Barrett.

ROBINSON'S OPERA HOUSE.

Miss Kate Putnam has been drawing not over large audiences in her plays of "Little Nell," "Fanchon," and "Blade o' Grass." Her "Little Nell" is poor compared to Lotta's. November 10th—Lydia Thompson Burlesque Troupe.

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

TRUFFLE NEPHEWS. A Collection of Stories; From the pen of Rev. P. Power. N. Y.: Robert Carter & Bros.

This is one of those attractive books that one reads through for pleasant style and its good, round letter press. These stories, aside from their attractiveness as well written tales of everyday life, exhibit important and truthful practical lessons for the encouragement and direction of all who would live in this world not an idle life. The nobler impulses of the good are strengthened: The evil disposed and selfish are kindly warned to let the past suffice, to turn over a "new leaf" in the journal of life; in short, to reform their lives. From "We" versus "I," we give the following extract by way of illustration:

"Neighbor Solus," said the Quaker, "betwixt thy name and ours there are but two letters difference; thou art called 'Solus' and we are 'Silas;' and in two letters lieth the secret of our success over thine. Thou standest alone, though thou hast a wife. Solus is the Latin for 'alone;' and as is thy name so is thy nature; with thee it is always 'I;' with us it is always 'We.' Thou and thy wife do not everything together as ye should; thou pullest one way at times, and she another; and as ye are yoked to the same pole the coach under such circumstances cannot go on. Thou art a drag on her, and she is a drag on thee; and dragging and drawing two different things."

LITTLE KAVEN: By Madame Sophie Schwartz. From the original MSS. by Selina Borg and Maria A. Brown: Hartford, Connecticut. Published by R. W. Bliss.

There is nothing wearisome, dull or monotonous in "Little Kaven," but a lively, healthy, sparkling story, told in a pleasant mood. In fact, we never find any of the productions from the pen of this ready writer other than improving. Her most trivial utterances have a meaning; all her sentences even have a mission. Some have charged her with a "masculinity" of style, somewhat too intense. We differ from them; Madame Schwartz never allows her fine imagination to lead her into foolish sentimentalism. She has no tears to shed over imaginary objects such as are often found in fashionable novels. We love that true boldness that clearly defines the reigning thought of the mind; that independence which dares assert a great moral truth, so well delineated in the character of "Kaven," the noble-hearted, impulsive and generous maiden. This character is truthful, strongly portrayed, and is as truly a delineation of real life as is her sister Lisbeth, with all her good qualities, and a pardonable share of vanity and self-love.

POPULAR SCIENCE MONTHLY, for November. New York: D. Appleton & Co.

The first paper is a strongly written, concise article upon what may well constitute the requirements of a liberal education. Professor Atkinson covers the whole ground in a most admirable manner. That he is in real downright earnest, every attentive reader (and may there be many) will at once admit. The Professor says in his opening sentence: "The collapse of the classical system of liberal education which has held almost undisputed sway since the revival of learning in the sixteenth century, and the now generally recognized insufficiency of the theory which makes the study of the languages of Greece and Rome the sole foundation of the higher education, are leading, as all familiar with the educational systems of the present day are aware, to the greatest variety of speculations as to the system which is destined to succeed it." The discussion of this subject comes in just the right time—the great question of so much interest to the future welfare of our Republic, makes everything bearing upon or developing new ideas upon universal education very desirable, and the whole people are thinking, as they should do, upon the educational system as applied to the schools of the American Republic.

A SIMPLETON, A Story of the day: By Charles Reade. New York: Harper & Bro.

Mr. Read, in this work, has taken up the pen to redress minor wrongs, or to expose minor evils. We notice none of the sturdy blows usually aimed at wrong doing in his principal characters. Why is this? Has the

world grown more virtuous, and is there a less need of rebuke? He discourses tritely upon the mysteries of the toilet, and gives us the manner in which many young and interesting ladies are "made up," and its effects upon health. He says: "A woman with her stays bisecting her almost, and lacerating her skin, can yet for one moment make herself seem slack to deceive a juvenile physician." We think the physician who would thus be deceived must be very juvenile.

The mysteries and trickeries of London auction sales, house agents, and the like, are made very plain to us poor unenlightened readers; and even the petty peccadilloes of the discharged house maid, made quite spicy in itself. This may be necessary to the development of the story, but truly we can see little good resulting from a history, composition and use of London poisons, even if they are used three times a day in the form of strong tea by "aristocratic English ladies." Many other abuses are spoken of, which are truly abuses, and would be better abandoned than continued. Every one knew before Mr. Reade told us that "invisible perspiration is a process of nature necessary to health and life."

Mr. Reade will pardon us if we disagree with him in the use of sundry expressions found in his book, indicating a lack of carefully chosen words. We notice in describing the mispronunciation of Lady Cicely, he says: "As for the letter 'r' she could say it if she made a hearty effort, but was generally too lazy to throw her leg over it." Then he tells us when she walked, "her elastic foot slapped the pavement as she spanked along." These, though minor faults, which may be tolerated in a popular author, are nevertheless sins against good taste. Lady Frehem is the best character of the work, the most skillfully sketched, but a peculiar compound of diverse elements.

While this novel would be pronounced by many as very readable and pleasant, we think it does not do the author credit, for he has given us many better stories, and therefore we look for a better book than this from Charles Reade.

In our last week's review of books, the names of Messrs. Wilbur & Hastings, No. 40 Fulton street, New York, were omitted, as having for sale the three following books: "The Buyers' Guide of the Manufacturing Towns and Manufacturers of Great Britain;" "A complete Guide to the Leading Hotels, Places of Amusement, Objects of Interest, Parks, Clubs, Markets, Docks, &c., of London," and "The Hotels of Europe."

MAGAZINES.

We are in receipt of "The Rural Carolinian," for November. It is an excellent periodical, containing an unusual amount of practical reading matter for agriculturists and the home circle. The Rural Carolinian has just commenced a new volume, the November number being the second issue of the fifth volume. The publishers are Walker, Evans, & Cogswell, Charleston, S. C. Subscription price to the Magazine, \$2 per annum, with liberal club rates.

IN PRESS.

Randolph & Co. have in press, and will soon issue, a new volume on Continental Travel, by Dr. S. I. Prime, under the attractive title of "The Alhambra and the Kremlin;" "The South and North of Europe." Also, "Literary Life;" by Francis Jacox.

The above works will contain much valuable information upon literature and literary matters never before placed before the public.

Publications.**THE TWO SUCCESSFUL BOOKS OF**
THE SEASON.**I.****Hallock's Fishing Tourist,**

The Fishing Tourist, Angler's Guide and
Reference Book.

BY CHARLES HALLOCK,
Secretary of the "Blooming-Grove Park Association"

ILLUSTRATIONS, CROWN 8VO., CLOTH \$2.00.

Mr. Charles Hallock is one of the few gentlemen who
write a book mainly for the reason that they have some-
thing to write about—have something to tell the public
which the public desires to know. The shortest routes
to pleasure are laid down, and correct information is
given as to the best means of conveyance, the expense
of the trip, the secrets of the commissariat, etc. The
author has avoided the use of technical terms, and thus
made his volume all the more acceptable.—*Turf, Field
and Farm.*

II.**Prime's I Go A Fishing.**

I Go A Fishing, by W. C. PRIME, author of "Boa
Life in Egypt," "Tent Life in the Holy Land," etc.

CROWN 8VO, CLOTH, BEVELED EDGES, \$2.00.

It abounds in pleasant episodes, charming and vig-
orous descriptions of scenery and character, is distin-
guished by a refined wit, a droll humor, a strong love
of the beauties of nature, and an enthusiastic devotion
to the piscatorial sport. This book will please all who
admire heartiness of style and exuberance of animal
spirits in their authors. There are some interesting
and well-told stories scattered through the volume,
which exhibits on almost every page the handiwork of
a man of graceful culture and wide reading.—*Boston
Daily Globe.*

Published by Harper & Bros., N. Y.

HARPER & BROTHERS will send either of the
above works by mail, postage prepaid, to any part of
the United States, on receipt of price.

FOREST AND STREAM,

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Co.

103 FULTON STREET, NEW YORK.

Terms, Five Dollars A Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over one month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects. We especially desire to make the FOREST AND STREAM the recognised medium of communication between amateurs and professional sportsmen. All of us have something to impart, which if made available to each other, will in time render us proficient in all those several branches of physical culture which are absolutely essential to our manhood and well-being, both as individual men and as a nation. A practical knowledge of natural history must of necessity underlie all attainments which combine to make a thorough sportsman. It is not sufficient that a man should be able to knock over his birds dexterously right and left, or cast an inimitable fly. He must learn by study and experience the haunts and habits of the game or fish he seeks. If he depend altogether upon his dog's nose, or upon his henchmen, he will some day have to retire from the field in mortification and disgrace. Therefore it is that we shall study to give practical instruction in the most attractive departments of natural history. We shall not forget the technicalities of the craft either, but take pleasure in designating the best localities for hunting and fishing, outfits, implements, remedies, routes, distances, breeds of dogs, &c. Each number will contain a paper descriptive of a particular animal, bird, or fish, with some instruction as to its habits, haunts and mode of capture, and the period when it is in season. We have arranged to receive regular weekly reports of the fishing and shooting in various parts of the country.

Yachting and boating will be encouraged, and yacht news be made an especial feature of the paper. A reasonable space will be given to athletic sports and those out-door games in which ladies can participate. In a word, every description of game that is in vogue among respectable people, and of value as a health-giving agent or recreative amusement, will be considered and its practice encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by that low order of beings who, in their instincts are but a grade higher than the creatures they train to amuse them, will find favor in these columns.

To horse news we shall devote some space, giving a record of leading races and meetings and current events, but we shall not make it a feature of this journal. We leave this department to others, much more competent than ourselves, who are recognised throughout the country as exponents of the turf, and as authority in stock, pedigree and kind. We yield to no one, however, in our love and appreciation of the horse and his estimable qualities. The noblest of all animals, and the companion alike of men of high and low degree, he has never become contaminated by the moral atmosphere by which he is often surrounded, or degraded below the high rank to which his attributes entitle and assign him.

To the forest, lawn and garden we assign full place. For the preservation of our rapidly diminishing forests we shall continually do battle. Our great interests are in jeopardy—even our supply of drinking water is threatened, from the depletion of our timberlands by fire and axe. It is but proper to state here that the gentleman in charge of this department is the well-known "Olipod Quill," who was connected with the *Agriculturist* newspaper from the start, and a co-laborer with the lamented Downing for many years. Much valuable information will be found in this department.

Our military department is intended to comprise merely a weekly summary of news for officers and soldiers upon the frontier—such news as the castaways would enjoy to receive in a "letter from home;" and we trust that many of them will be inclined to send us in return some account of their hairbreadth experiences among the Indians, the buffaloes, the grizzlies and the antelopes. We of the East are not thoroughly familiar with the varied species of game in the far Northwest, and would like to receive full information especially of the numerous *Cervus* family and of the Rocky Mountain sheep. This department is under the charge of a distinguished army officer.

Our dramatic and art column will be prepared by Colonel T. B. Thorpe, and must at once become popular with all our readers who are interested in these matters. We shall occupy an independent position, and throw our efforts in behalf of competent reform. We shall perhaps even clamor for it.

Our columns will always contain the cream of the latest foreign sporting news.

In a word, we are prepared to print a live paper and a useful one. We shall not be parsimonious in securing the best material for its columns. We are convinced that there is a standard of eminence and usefulness not yet fully attained by any sporting journals in this country. To this we aspire. It will be our ambition to excel; and we have relinquished a life of ease and semi-indolence to take charge of the enterprise. This not of our own free choice, but at the solicitation of many hundreds of friends and strangers. We are ably assisted in our labors by a corps of valuable associates—men of age and experience, all of whom, with single exception, have been identified with leading journals for years.

Mr. SIMON A. ATKINSON, connected with the Georgia press for over twenty years, has charge of the business affairs of the Company.

CHARLES HALLOCK, Managing Editor.

THE CANVAS-BACK DUCK.

IN sharp November, from afar,
From Northern river, stream and lake
The flocks of noble canvas-back,
Their migratory journeys make.
The frosty morning finds them spread
Along the flats of Barnegat,
Where grows the valisneria root,
The duck-grass with its bulbous thread.
But chief where Chesapeake receives
From Susquehannah, brackish tides,
By calm Potomac and the James,
Feeding at will from morn till eve,
Mid those aquatic pastures green,
The ribbon'd grass and bulbous root
Where slant the yellow sedges lean.

By myriads there the wild fowl come
To taste the rich, delicious fare,
The red head and the canvas-back
The widgeon with its plumage rare,
The ruddy-duck, the buff-head,
The broad bill and Canadian goose,
Loving o'er placid shoal or cove
Their winnowing pinions to unloose.

Through all the day, dispersed around
They swim and circle o'er the bay,
And at the eve, in gather'd flocks
To mouth of creeks they take their way,
Where some a wakeful vigil keep,
Others at anchor float asleep.

And when the winter keen sets in,
And frozen is the river's face
To its salt confluence with the bay
The flocks seek out their feeding place.
And where across the ice, a pool
Of open water they discern,
The hungry flocks their flight suspend
And toward the friendly pasture turn;
And there the lurking fowler waits,
(Amid the ice-blocks hid from sight)
With heavy gun and deadly aim,
To thin the numbers that alight.

ISAAC MOLELLAN.

Wild Life in Florida.

A SEMI-TROPICAL PARADISE.

NUMBER THREE.

IN Florida, eighty miles due south of St. Augustine, lies an immense lagoon of salt water, called by the old Spaniards Rio d'Ais, by the Indians Aisa Natcha, and by Floridians Indian River. Called by whatever name it may be it is the most wonderful portion of that wonderful State. Wonderful for its bland and genial climate; wonderful for its birds, beasts, and fishes; wonderful, above all, for its people, who live in such a state of indolence as causes a Northerner to shudder. Situated mainly below the frost line, many tropical fruits reach perfection beneath its burning sun. The lime, lemon, guava, banana, pineapple, citron, and, of course, the orange, in perfection. The climate here is peculiarly adapted to the needs of the consumptive, and he can live here for years in apparent health after other climates have been tried in vain.

People who have tried California, Minnesota, and the various resorts in the Old World, have pronounced Indian River in advance of them all. The difficulties attending a trip here, and the insufficient accommodations, have prevented its advantages—its natural advantages—from becoming generally known. The steamer up the St. John's, from Jacksonville to Salt Lake, a distance of two hundred and seventy-five miles, and a portage of six miles will bring the traveller to the banks of Indian River, at Harvey's, or Sand Point, where boats and guides may be hired down the river to Jupiter, one hundred and thirty miles further. The cost of transportation from New York to Sand Point will be about sixty dollars. The visitor had better camp, and bring with him such articles of need as a camper-out appreciates. An outfit may be purchased at Jacksonville at a trifling advance on New York prices. It was thus that I prepared to enjoy the pleasures of Indian River. The middle of March found me waiting at Harvey's for a favorable wind down the river.

Though the sand that lined the many bays was white as snow, and the palms, with their columnar trunks and dark green fronds, made graceful pictures, I was tired of gazing upon the same ones day after day, and finally persuaded my boatman to visit the upper portion of the river before descending. A nor'west wind had driven the water upon the opposite shore two days before, and left his little boat high and dry, with fifty feet of sand flats intervening between her and navigation. But the wind again hauled south'ard, deluging the western shore with returning waters and enabling us to get under way. As this wind was contrary for a down river trip, we headed for a different quarter, purposing to visit the largest orange grove in Florida, so said to be, and the best. Ten miles sailing in a north-easterly direction brought us to the landing. Did you, reader, ever inhale the fragrance of a cluster of orange blossoms? You remember the exquisite penetrating perfume. Well, add to the cluster tens of thousands more—the efflorescence of two thousand trees. The subtle odor enveloped our boat in a cloud of incense, evoked by the sun and wafted to our senses by a gentle breeze. A mile away we were made aware of the existence of the grove, yet hidden from us by a circling belt of palms. Two thousand trees, in long straight rows, their glossy green tops flecked with immaculate blossoms, a carpet of emerald spangled with snowy stars. In the centre of the grove we found the residence of the proprietor, Captain Dummitt, a log cabin with palmetto-thatched roof. Think of a log cabin in the garden of Eden! But this is but one of the worthy Captain's peculiarities. There is a mystery surrounding him which he never vouchsafes to break. Even in his cups—I should say buckets—never a word is uttered regarding his seclusion from the world. Known far and near as a hard drinker, he is ever the same well-bred gentleman, be he drunk or sober.

He and Tom R. once started down the river to perform some work at the lower grove. Before setting out he gave Tom \$20 to purchase provisions with. Aforesaid provisions are purchased according to his, and, may be, the Captain's fancy. Whiskey, \$17 50; hard tack, "jest to chaw on, you know," \$1 50; pork, \$1. Two bottles of whiskey Tom adds on his own account. The Captain also laid in a choice stock. Thus armed they set sail, burning with an unquenchable ardor for work.

"There's old Bob; 'twould be kinder mean to pass him without a smile," says Tom.

"That's so; let's land."

They land; they "smile;" the smiles broaden into a grin, and the proposition to call the entire male population of that section and have "a reg'lar time" is hailed with universal acclamation. Times, that is "reg'lar times," are much in vogue on Indian River, to the great absorption and waste of Time, the old father. It was rather up hill work drinking the old Captain drunk, but the Southern people are always earnest in a worthy cause, and he was finally deposited upon a heap of oyster shells "dead gone." In the morning he said to Tom, "I presume I was a little intoxicated last evening."

"You were just that, and the dog gondest, too, that I ever see!"

"Well, it's no use working with whiskey around; pass us the bottle."

"It's all gone!"

"Gone! then we'd better be sailing for Sand Point, for I'm d—d if I'll work without whiskey."

This was related to me while I camped near the grove at night, and I give it as I think of it, trusting the reader will pardon the digression.

Twenty-five years ago Captains C. and D. found the grove while hunting. A judicious grafting of the wild trees procured in a few years bountiful returns. The crops have sometimes been enormous—seven hundred thousand in a single year. Over half a million of the largest, juiciest oranges in America! Camping there that night, it was noon the next day before a fair down-river wind came along. When it did come a storm came with it, and we departed, accompanied by the flash of lightning and the

heavy rolling of thunder. After rounding Black Point our little craft drove straight on, heading with the river south southeast, passing Sand Point, Joyner's, Jones' Point, and all the other points on the western shore, six miles of water intervening. We draw near the western shore, and sail along its high pine covered banks, driving before the furious wind with only the jib set. Night comes and finds us still sailing. The moon struggles feebly with the clouds that threaten to conceal her, and reveals the Captain still at the helm. The waves beat against his back as he sits in grim silence, enduring their buffetings with far more patience than my infrequent questions. It is late at night ere he comes to anchor in Elbow Creek, and finds a slight shelter from the tempest. Thankful that, though wet, I could not get wetter, as the rain had ceased, I crawled under the sail, wrapped myself in my blanket, and fell asleep. The Captain never slept aboard, so he waded ashore and "turned in" on the beach. The usual sleep of the camper-out was granted me, long and unbroken, and I was only awakened in the morning by the fall of an oar.

Elbow Creek, with its fantastically worn coquina banks, is selected as the Indian River terminus of a canal to unite the St. John's and this lagoon, Lake Washington being the end of navigation on the St. John's, six miles away. Though I don't take stock in the company, I doubt not its utility if navigation on the St. John's will warrant its being kept open all the year. A sail of five miles across the river brought us to a jutting headland of coquina, supporting a scanty soil covered with a rich growth of beautiful palms, tall century plants, and Lisal hemp. Two crescent shaped bays, one facing north the other south, curved inland, their shores a firm, snowy sand. Landing I soon discovered a small grove of orange trees, being guided to them by their fragrant blossoms. Here I discovered the only evidence of civilization I had seen this side of the river, an object that once must have caused joy in the household, and sadness for its loss. A piano, covered with a few boards, its legs shattered, and its keys rattling in the wind, stood where once had been a home. It was the old story of war's desolation and ruined fortune that accounted for this lone memento of better days in a forest five miles from the nearest house.

At this place is the southern end of Merritt's Island, which parts Indian River, the portion east, between the island and the coast, being known as Banana River, and that west retaining its old name. Cape Canaveral is not far distant, where lives the best man on the river, Captain Burnham, keeper of the lighthouse there. From the light house down I counted six wrecks, thrown upon the shore in a September gale. Making a fire from driftwood, we soon had flapjacks and potatoes enough for our inner man. It was here that I received a lesson in cleanliness I shall not soon forget. I had omitted to provide myself with a dish cloth, and while the Captain was cursing my heedlessness, I went off for some Spanish moss in lieu thereof. What was my surprise upon returning to find the plates dry, and apparently clean.

"Where did you find a cloth?"

"Oh, I took my handkerchief!"

Now, the 'kerchief was the Captain's only article in that line; a very dirty and greasy bandana, which, besides doing duty in a nasal way, was frequently applied to his watery optics, making its cleanliness a matter of doubt. When I remonstrated with him he declared I was "the dirtiest cuss he ever see," and enquired sarcastically if I thought he was a fool. The cause of his wrath, I afterwards ascertained, was not my objections, but that I had overlooked the fact of his washing it, which he had done in the drinking water bucket. The native goodness of his character was made manifest that night, when, after keeping silent all day, he extended his hand with the remark "he guessed 'twas all right."

About fifty-five miles from Harvey's is Turkey Creek where is the only banana plantation of any extent on the river. The huge plants, with their broad green leaves and curiously formed fruit and flowers, were beautiful and picturesque. They contrasted favorably with the stunted, frost-bitten plants I had seen on the St. John's in Decem-

ber. This lagoon is ahead of all northern Florida in everything—fruit, climate, and game. Oranges grow here in three years from the seed; ahead of St. John's by at least two years. There is almost no frost, and no disease peculiar to the region, while game of all descriptions line its shores. We spent two days and nights wind-bound at St. Sebastian Creek, during which time we visited the coast near the place where, in 1710, a fleet of Spanish galleons were driven ashore and lost. We found no pistareens, which Romans tells us were washed up as late as 1770, but found plenty of deer and bear tracks, and pelican and ducks upon the river side without number. The sea grape and cocoa plum grow here in profusion. The former is a stout shrub, rapidly increasing in size as it nears the tropics, with a broad, heart-shaped, satin leaf. The fruit of the cocoa plum is about as large as the common plum, with a white flesh and red skin. It has a pleasant taste. The high sand-ridge, separating river from ocean, is less than three hundred yards across here, and thickly covered with scrub palmetto and gay colored flowers. Standing on its highest portion I can trace the sparkling length of Indian River and look upon the waters of the Atlantic at the same moment. For seventy-five miles one can hear the ocean surf as he sails upon the river. The high bluffs near St. Sebastian have been selected as the site for a hotel, but are not well suited for such a purpose. Near here is Barker's Bluff, named after a man who lost his life there—killed by the Indians, at the same time my friend, Major Russell, lost an arm. A few miles away is an island draped in white, its trees seemingly covered with snow, a circling flight of birds hovering over it, the water around dotted with hundreds of dusky objects, and the same dusky forms coming and going with no cessation in their flight.

"That's Pelican Island," said the Captain. As we approached, the dark objects grew more distinct and assumed definite shapes. The island of about two acres was covered with mangroves, long since dead; every tree loaded down with nests—great, bulky affairs, two feet across and flat. Every tree and nest was completely covered with the limy excrement of the birds, giving the island its snowy appearance at a distance. Each nest contained two nearly fledged young ones, all uniting in giving utterance to the most diabolical and soul-rending sounds, which, added to the cawing of fish crows in search of eggs, and the screaming of eagles overhead, gave one as good an idea of pandemonium as mortal man can conceive. Though standing close together, the captain and I had to shout our loudest to be heard. The ground was covered with young birds huddled together in fright. The eagles and vultures had committed great havoc, and from branches suspended and stretched upon the ground, were the decomposing carcasses of old and young, which, added to the decaying fish, filled the air with odors—not of Araby. The old pelicans were flying overhead in clouds, occasionally alighting on some remote tree to feed the young with fish, which they brought to them in their pouches.

Two months later, in May, I found the young had flown and every nest with a complement of large white eggs. There are two species of pelican on our Atlantic coast—the white and the brown. This was the brown; its plumage of mottled white and gray on the back, dark sides and breast, with a rich velvety brown neck and white head, was not altogether homely. Their long bills, a foot in length, and immense pouches, capable of holding a gallon, give them a very odd appearance.

The approaches to the "Narrows" are guarded by two walls of living green, which, when seen at a distance, seem to be but a few paces apart, leaving but a narrow gateway. As we draw near, however, the distance increases, disclosing a passage nearly a mile in width. Seventy miles it is to the northern end of the lagoon, and above there is a varying width of from three to eight miles. Below the Narrows is a land of plenty.

Here the oysters accumulate in such quantities that they form this narrow passage. A storm is observed gathering, and just as we enter the Mangrove Islands it bursts upon us. Before the north wind we scud with bare poles, and are obliged to exert all our caution to prevent being wrecked upon some of the many oyster reefs that obstruct the channel.

It is ten miles through, and through the gathering gloom we just discern a sheltering point, after long exposure to the gale. With the storm thundering after us, we silently endure the rain, hoping that night will bring relief; but no lull occurs, and we anchor behind a projecting reef and finally wade ashore. Hanging our blankets on the mangroves to windward, we finally start a fire with the aid of light wood splinters, and after warming some flapjacks and thoroughly steaming ourselves, roll ourselves in our blankets and sleep, with sundry awakenings to replenish the fire.

Toward morning the rain ceased, but not till it had wet us through—yes, through, for the Captain said he could feel the rain water "slosh about" in his stomach. I know that, although I had carefully covered myself with my rubber blanket, when I awoke it was to find myself in a puddle four inches deep. Under the circumstances, wasn't it natural that I should desire just a drop of whiskey? I had a quart of the best, which I had entrusted to the Captain's locker, and thought that now, if ever, was the time to use it.

"Captain, in my youth, when very young, and consequently incompetent for such a performance, I signed the pledge. Remember, it was while quite young, and at a very tender age; in fact, I think it hardly valid now, and binding. Then again, I signed off from anything that would intoxicate, and I'm ready to swear that nothing ever

distilled from grain can intoxicate me now, there's so much water in me. I think I'll try a drop of that whiskey."

"The bottle is in the stern."

Quickly I drew it forth; slowly and sadly I returned it—'twas empty. The Captain evaded my gaze, muttering the while: "'Twas so confounded bad I didn't like to have it round, and so I drunk it up first night."

A run of a dozen miles in the genial warmth of the sun restores our spirits—not the *spiritus frumenti*, however—and we land at Fort Capron, an old military post, with a very sharp appetite for breakfast. A hedge of oleanders ten feet in height surrounds the plantation, now gone to decay. The Cherokee rose, and the Spanish bayonet with its magnificent pyramid of honey-scented bells, add their fragrance to that of the oleander. A walk through the deserted orange grove reveals many tropical wonders, such as the India rubber, satin wood, guava, lime, lemon and citron. Vestiges of pineapple plants are shown, which can be raised here successfully. At Fort Pierce, four miles south, is an excellent location for a hotel or boarding-house. The situation is high and airy, securing immunity from those pests of the lowland, the sand-flies. It is opposite the main entrance to the Atlantic, where vessels of not over four feet draught can enter. Directly in front are vast oyster beds, and in December the turtle—the "green turtle soup" kind—swarm in to feed and are caught. Deer, turkeys, quail, in fact all kinds of game; fish, from saw-fish and sharks, to mullets and bass.

And then the climate! Rarely, even in summer, does the thermometer indicate more than 85 degrees. A southeast breeze blows in summer all night long, making the nights cool and comfortable. It is the very paradise for the consumptive, the fountain of youth for him with pulmonary complaint of whatever kind. But two frosts for twenty years have occurred, and those not serious. This description of climate will answer for nearly the whole river, modified only by the slight difference in latitude. The waters of the Gulf Stream lave the coast, tempering the wind in winter. One of the surgeons in the army stationed here during the Seminole war, after sixteen years' service, gave it as his opinion that this immediate country was the healthiest in the United States. Absolutely free from disease, 'tis said that the people are obliged to remove to the next county to die. When better means of transportation are offered the whole river will be the winter rendezvous of thousands of health seekers and sportsmen, who now shiver the winter through on the St. John's.

There is but one annoyance—insects. For real tall and lofty jumping and biting, the flea is unapproachable; but his endeavors are put to shame by the mosquitoes and sand-flies. The flea may be avoided, if hotel-haunted and hog-haunted sections are avoided. The mosquito may be kept at bay at night, his hunting season, by a good "bar;" but unless one is provided with an impregnable skin and a large stock of patience, he will be sure to break some of the commandments over the sand-flies. Snakes are not numerous enough to be dangerous, except in swamps, where the tourist need not go. This, in a word, is the good and bad of Indian River.

Twenty miles below Fort Pierce is the St. Lucie River, coming in from the westward, forming a beautiful bay as it joins the waters of the lagoon. Three miles south of St. Lucie the broad sound suddenly ends, and after a chain of small lakes, as it were, the channel winds through densely-covered mangrove islands, scarcely fifty yards in width.

An adverse wind, and consequently current, kept us at the mouth of Jupiter Narrows two days. We passed the time shooting turkeys and alligators, and watching the graceful "man-o'-war hawks," as they sailed overhead on wide extended wings. The ocean beach presented many attractions; the beautiful sea beans and shells of exquisite tints, besides vast multitudes of birds. Sometimes we would find cocoanuts and fragments of foreign wood, thrown up by the resistless waters. The third day of waiting we entered the Narrows, the most interesting portion of this vast lagoon. From a point a hundred miles north it stretches away southeast, now expanding, now contracting, till from a width of eight miles near its northern end it is here less than fifty feet. Each side of us the mangroves rise far overhead, sometimes mingling their leaves in an arch of living green. Their gnarled roots strike down into the mud in every direction, supporting the trunk in mid-air many feet from the ground. What a number of roots! Roots from the trunk, with minor roots springing from them in every conceivable direction; roots from the branches, and these again with smaller roots of their own. Here, a mile or so in, is a luxuriant hammock, where a man named Peck undertook to subjugate the rank growth, but the mosquitoes and sand-flies proved too many for him, and his bones rest peacefully, etc. Here is a small spring, and the water cask had better be filled.

No sound breaks the solemn hush except the tap of the setting-pole and the ripple of water at our bow, as we slowly forge ahead.

A noticeable feature in the green walls about us is the India rubber. Whenever a clump of palms occurs we find this tree, enfolding in its trunk the stem of a palm. The rapidly growing walls gradually encircle the palm in an embrace of living wood, till finally it is seen only through the interstices in the rubber. As the tops of the respective trees intermingle—the feathery frond of the palm and waxy, green leaves of the rubber—a beautiful effect is produced. Delicate ferns grow in the mesh-work, and gorgeous epiphytes, with flaming spikes of blossom, attach themselves to the branches. Iron wood, crabwood, and many other valuable woods are found along the shore of

Hobbs Sound, into which we emerge from the narrows. Near its entrance we saw the carcass of a manatee, or sea cow, over which a coroner's jury of vultures were holding inquest. From the south end of the Narrows, which are seven miles in length, it is twelve miles to the end of the river. Crossing "Conch Bar," we follow the stakes indicating the channel, and soon see the dome-shaped lantern, and afterwards the symmetrical shaft of Jupiter Light. During all our voyage our course has ever been to the south. Soon we strike the waters of the Lokohatchee, which, coming from the west, unite with Indian River near the lighthouse and run due east, through Jupiter Inlet to the ocean. Rounding the point, we are soon at anchor, and ascend the steep bank to a small house of coquina rock, where we are made welcome.

This was at noon. At night I climbed with the two keepers to the top of the hollow shaft, and looked off from the circling platform upon a scene of absorbing interest. A glimpse of Northern wildness and sterility and Southern luxuriance and fertility, the fragile flowers of the tropics blended with the hardy shrubs and trees of the North. The palm and pine, the oak and orange, mangrove and maple, "Semi-tropical" indicates Florida's status in climate and vegetation. Half Northern, half Southern—a kind of half and half character that extends to more than climate. We have here a land and water view of surpassing beauty. The broad Atlantic bounds the vision east, its shore extending in curving lines from north to south. Down from the north comes Indian River curved in outline—a bay, a creek, fringed with palm, pine and mangrove. From the west comes in the Lokohatchee, charming in parks of pine and green mangrove islands; its windings reveal it in sheets of silver among the trees. A narrow creek leads from it southward toward Lake Worth. As I looked upon this scene I saw no sign of life, save at the cottage, one hundred and fifty feet below me. North, the nearest human habitation was forty miles away; south, one hundred; west, no one knows; the swamps and forests there are peopled only by red men.

The sun's last rays had disappeared, leaving clouds of crimson and gold piled up behind the dark pine forest, as I entered the lantern, where the light was already glowing. I seated myself in the crystal dome and watched the reflected colors as they came and went with each revolution of the lantern. As the lantern revolves every prism catches the rays of light and rends them into their primary colors, paints the colors of the rainbow upon the polished roof, and throws them forward to be re-produced a thousand times in the crystal bars. As the strong light shone forth, I thought of the many eyes gazing upon it other than those of the sailors for whom it was intended. The timid deer, the ferocious puma and wild cat, the bear from his "hammock"—for bears do have "hammocks"—of palms. No doubt the reflected light is visible to the Indians dwelling upon the prairie bordering that mysterious lake, Okeechobee. Toward midnight a little warbler fluttered against the glass, striving to enter. The keeper has often found them after storms. The large plates have been shattered by birds, who were afterwards found lifeless with mangled breasts. Many birds foreign to our country have flown against the glittering, though fatal glass.

Once a year the supply ship visits this place, in its annual tour from Maine to Florida. Other than this visit from Uncle Sam, the inhabitants of Jupiter have few visitors. A few stray waifs from the North drift down upon them, brighten them with their presence awhile, set their sails again and disappear in the gloom of the mangroves. Indian River, once visited, leaves a longing in the heart of the visitant never satisfied, till the sparkle of its waters again gladden his eye, and his tent is pitched upon its sunny sands. Certainly no other section of our country possesses so many natural charms, united with real blessing so easily accessible.

FRED BEVERLY.

CANADIAN MOCCASINS.

EDITOR FOREST AND STREAM:—

In one of your earlier numbers you published an excellent article on moccasins, and I most heartily endorse all that is contained therein. However, as in many parts of the country the skin of the Caribou cannot be procured, and as your article seems to have excited quite an interest among your correspondents, I would say that where Caribou hide is not easily procurable, an excellent hunting moccasin may be made by using common sole leather for the foot, and split, or other cheap leather, for the leg.

The leather for the leg should be light, yet stiff enough to prevent its gathering at the ankle. When first made the foot should be thoroughly rubbed with oil; afterward only tallow, or tallow and pitch, should be used, as the oil softens the leather too much. The foot should be large enough to allow two pairs of stockings to be worn, and must never in any case fit tightly.

Such moccasins are almost entirely used by hunters in Upper Canada; those of Caribou hide being seldom met with. They are manufactured to some extent and may be had ready-made at prices ranging from \$1.25 to \$2. Those sold at \$1.25 are light, have legs of sheepskin and are undesirable, generally; but a fair article may be had for about \$1.75. When made to order they cost about \$3.50.

Moccasins made of deer or buckskin, are utterly useless, except for snow-shoeing or walking on perfectly dry ground, as they are almost as pervious to water as cloth, but a moccasin of soft leather, or better still of Caribou hide, will keep the feet as dry as a boot, and for comfort, there is no comparison.

TRANSIT.

MUGGINS DOES A HUNTING GO.

MISTER EDITER:

Neckst to ridin' a fast hoss on a stepel chase, or settin' up o'nites with a purty gal, or goin' to 'lection, or getten' 'pinted to a post-offs, there ain't nothin' I like better 'n goin' a huntin'. I ken remember when I was a yuthe of tenderage how fond I was of shutin' cats and hens and other targets, and how scart my old gran'mother always was for fear the ball mite go round the target and hit the cow, or break out the winders, or kill some other feller or other; but the temptation to shute at somethin' was so on-resistible that I pade little attention to the old lady's scremes and shreeks, but banged away at everything shoot-able in the neighborhood, till I one day had the misfortin' to shoot old Dekin Swipes in the leg (tis a wonder I hit it, and I don't think I would ef I'd shot for it) and then there was a fuss.

I was arrested for manslaughter in the forth degree, but I noticed a good deal of winkin' goin' on, and I rayther reckon the folks in the naberhood was mostly glad I'd shot the old kanoodle, for they all hated him like pizen, an' so they soon let me off with a verdick of acksidente shutin', but I want allowed to shute any more Dekins—not if they node it.

The greatest hunt I ever hed was one time when I started out with Nick Bemis, one fual, for a week's shootin' in the North woods. Well, it was jest—Did any you ever try it? You never ken tell how much sport you ken git out of a gun till you try. I had a regular mocking-bird. She allus spoke when she was askt to, and she was just a regular buty and wade twenty-five pounds averdypoize, and no mistake.

When some 'o them wezles see that old gun pinted at 'em they turned pail, like they thot it was a cannon. That shows what sensible critters wezles is.

Nick an' I started off as gay as two young buckaneers. Nick had a rifle that would put a hed on a woodchuck at three hundred yards. Nick was a bang up shot, an' often sed that nothin' but the confounded foarse o' gravity prevented his puttin' a hole through the moon.

You can jest imagine what a pare of Nimrods we was. The air was crisp and clear, an' jest frosty enuff to make a feller draw in a long breth an' feel how healthy he was. We started off with our guns on our shoulders, as brave a pair of hunters as ever put powder into a gun. There is somethin' exileratin' in bein' a healthy feller, an' startin' off on a frosty morning with your gun on your shoulder to shute dears and ducks and bears and woodchux and squirrels and bucks and other gaim.

We walked about seven miles the first heat, and then we spide a blew J setten' astride a bush fens, and we both took ame an' fired together. No sooner did we fire than the pesky bird flew away. This give rise to a argument as to which was the best shot; so we begun to blaze away at a tree about ten yards off. After we'd fired about ten rounds I managed to kill a hoss in a lot about forty rods to the right of the tree, and then we took up our line of march for some place where there was more mark and less hoss. I always despized a hoss that would go sneakin' around in front of a gun when shootin' was goin' on.

Nick didn't hit anything—not even a hoss. I begun to discount that yarn about knockin' a hole out of the moon. When we first started out it was arranged that we should dine off the first game we killed; but when it cum to eaten' hoss I passed. Not bein' a French savong my edication in the hoss eatin' line had been neglected. We had a little hard tack an' sandwiches, however, so we made a meal of that, an' then we started on again.

At last Nick spied a dear. He didn't say anything to me—he was awful sly; but he edged around till he got me a lookin' off in another direction, an' then he drew a bead on the butiful gazelle an' fired. I turned round jest in time to see the bark fly off past half a dozen trees, an' then catchin' a glimpse of somethin' lyin' down behind a little nole, I raised up my gun and blazed away too. I was bound to have my share of the gaim, you see.

When we got up to the animal we found it was a yearlin' heifer that had strade off into the woods the winter before an' got lost and dide. There want no fresh venzen about it. We both smiled a kind of mournful smile at each other, an' then we took up our line of march agin'.

Somehow my gun grew heavy. I kept shiftin' it from one shoulder to t'other an' a lookin' around for gaim. There was plenty of ground burds an' chipmuns, an' now an' then a snail, but Nick an' I didn't want no such. We was'nt out for no boy shutin'; what we wanted was noble gaim, like bucks an' eagles an' wolves an' bears. How much I would have given then if I could have started up an African lion, or a rinosseros, or even a noble bisun!

On we went, an' still no gaim. How heavy my gun grew! Deeper and deeper into the woods we went, and yet there was nothin' to be seen worth shutin'. Such luck I never had before. Nick sed the same thing.

"What kind of a country is this, enyway?" I asked, kon-temphusly.

"I d'no," sed Nick, more forcibly than politely; "never was here before."

"Hark! What's that?" I asked, as a sound like distant thunder smoot upon my ere.

"Partridges, by jingo!" sed Nick, looking round in every direction and cocking his gun, ready for action.

Directly we caim upon the flock; but before we could present an' fire they all flew away, and left us to discuss the question as to who first skart 'em off.

We jawed ourselves into a plesant frame of mind, an'

then we toddled on agin'. I never knew a gun to gro so hevy as mine did. I tried every kind of way of carryin' it, an' still it was hevy. About this time we cum in site of the lake, an' right out, about forty rods, was the biggest flock of dux I ever sec. We krawled along kautionly an' got a good ame an' fired together at the word "three." The dux turned round as if they was a lookin' for the bullets, an' begun to swim torge us. We loaded up an' blazed away agin'; the dux rather seemed to like it, for they kept on torge the bank, an' when they got so near we could almost reach out an' knock 'em down with our gun stocks, we fired agin'. This offended the dux so much that they all flew away; but nerry a one was shot, so we had no gaim to eat yet, an' the shaids of nite was closin' in on us, as the ploit says.

Kold, hungry an' weary, we kurlid ourselves down by the root of a tree an' covered ourselves with leaves an' fell asleep. I dreamed I was in the Saint Nicholas Hotel, in the best room in the house, an' that Nick was carryin' a cannon on his shoulders over to Hoboken. Having satisfied my thirst for vengeans by respeatin' this dreme about seventy-five times, I woke up and found it was day lite, an' Nick already up an' takin' site at somethin', an' about to fire. I couldn't see what it was, but determined to be even with him. I amed the same way he did, an' we fired one aster the other—bang! bang!

Then I herd a yel that maid my hair run cold an' my blood turn gray. Nick sprang up, while every hair stood either on one end or the other, and shouted at me:

"You've killed an Injun!"

"Whoop! whoop! yelled the dead Injun agin'."

I waited to hear no more, but seizin' my gun, I started for some other lokality jest about as fast as I could dig through the brush. I think I ran about five miles before breakfast, an' then I struck a clearin' where there was a plenty of blackberry bushes, an' maybe I didn't sail in—O no! I think I eat about seventeen quarts, an' then I felt easier in my mind. If I couldn't shoot gaim, I could eat berries—if I could only find them—sooner than starve to deth. How glad an' thankful I was that blackberries couldn't fly away.

Then I shouldered that heavy old gun agin' an' started back for the woods, expecting every minute to meet a ded Injun or some other object of horror. Hevier and hevier grew that old gun as I staggered along through the woods, and still no gaim.

At last, by the merest chance, I came out into cleared land agin', an' found myself into civilization once more, an' there, rite before me, stood Nick with a big deer on his shoulder an' a grin on his ugly mug.

"How are you, ded Injun?" sed he.

"You don't mean to tell me that was a deer that yelled like that?" sed I.

"Certainly not," sed he, "you killed the Injun an' I killed the deer."

Nick always lies so like the old scratch I couldn't tell whether to believe him or not.

However, we maid up our minds we had shutin' enuff, an' so we bee-lined for home, an' by the time we got there that old gun of mine wade over a thousand pounds. I wouldn't carry it round for another day for all the gaim that ever was invented, lions an' bisuns an' injuns thrown in. Yours satisfactorily, EPHRAIM MUGGINS.

FISHING IN THE BAHAMAS.

EXTRACT FROM J. NEWTON WILSON'S JOURNAL WHILE SOUTH, IN 1862.

I remember with great pleasure the first time I ever visited the Bahamas. Our fleet steamship, the Margaret and Jessie, was triumphantly paddling her way toward the land of Abico. Numerous little silvery clusters, apparently a long way off, suddenly arose out of the blue ocean before us, and we knew them to be islands as if just born from the bosom of the sparkling and peaceful sea. Charming was the scene. Beaches, and little coves of marble whiteness, abounding with thousands of God's handiwork. The shells, which some 'norther' had hurled above high water mark, while on their summit might be observed the useful That Tree, or more aspiring Cocconut, among which exquisitely colored lizards harmlessly played, chasing each other through the shrubbery. We anchored for a day at Green Turtle Bay, and with some of the natives I went fishing among the Islands near by. My oarsmen, who were splendid specimens of powerfully built wreckers, pulled for an hour, and then cast anchor over a dark bottom, for in every instance where I have fished in the West Indies the waters were pellucid and the bottom of the sea clearly visible. Our craft moored, the darkies took in each hand a conch, and striking one against the other the shells broke in small fragments and slowly sunk, thus causing the fish to assemble and await the bait, like chickens lingering for crumbs. The bait, which was conch meat, they ravenously seized, and in many instances when three or four men were engaged hauling in the beautiful victims, one of the crew was reserved with a bright and slender lance or harpoon to drive off the young, and sometimes old and vicious sharks that lurked about, awaiting a chance to lunch on the fish after we hooked them.

Two hours' work and our boat was well laden with numerous varieties of the inhabitants of these waters, some of which the negroes called jewfish, turbot, red jacks, mud-fish, snappers, grunts, market fish, demmies, and last and best of all, the delicious grouper, more than equal to the rock cod while fresh.

West India fishermen use great caution to avoid casting

their lines on Copperas Banks. I have seen negroes become blind for over a day from partaking of the flesh of fish fed in these poisonous grounds. To my taste the fresh fish of the Bahamas are finer than those of our Bay of Fundy, and the natives cook them excellently, served with Spanish sauce and a golden lime.

A WEEK AMONG THE PARTRIDGES.*

EDITOR FOREST AND STREAM:—

The hazy mists of Indian summer admonished us that now was the time for the most beloved of all the sports of the field, and a few hurried preparations found a party of four jolly but eager sportsmen on their way to the famous partridge fields of Charles county, Maryland. Ah! how glorious these golden days of the year, with sky and cloud, forest and field in their richest autumn dyes mingling in melancholy harmony.

The first rays of dawn scarcely blush the east before the stubbles are reached. The dogs—see how they bound, quartering their ground exactly. There! He stands, while from afar another catches the faintest scent of the hidden covey and arrests herself in an instant. How beautiful they look, motionless, transfixed. No pencil less gifted than Landseer's could do justice to that scene. Slowly you approach. A moment more—a whirl, and with lightning speed down the valley to yonder brook with overgrown briar they all wing their way. No, not all; one less, which faithful Nellie lays at your feet. He is a fine bird, and right well have you shot to single him out from the rest. You have marked the spot where they stopped. Now comes the sport. Eagerly you press on. Your friend takes one side of the branch and you the other, while in the centre Reno and Nellie slowly work. Stop! they stand simultaneously. Mark! and a partridge darts from the covert, which your companion cuts down in fine style. A step further and another. This time it is your luck. He goes whizzing and it is yours. Again and again the unerring nose marks the place where the couching game is ready to spring, and again and again, with varying success you stop midway in his flight this swiftest of birds. A count between you shows ten birds. It is time to desist; the balance must be left. You call your dogs off. It is yet early, and in the distance another field shows birds must be there. Yes, you are not mistaken. The kindly farmer in gathering his rich harvest, like Boaz, was not unmindful of those dependent on his bounty. There they go, dashing down, snuffling the wind. Already they have changed their face from head erect to nose close to the ground and tail vigorously wagging from side to side. They are trailing the birds. Let them alone, they will soon make them out. Yes, there they are, there is no mistake. What marvellous instinct, what intelligence! Advance cautiously, they will not flush the game. This time they take to the adjoining field, covered with tall sage grass and a few scattering pines, where they hope to hide in security. Alas! they are mistaken. You pursue. What a magnificent field for them; the beau ideal of the partridge sportsman. How the dogs go to work, and point after point with unobstructed aim gives you an opportunity to try your highest art. My friend, think not it is work for the merest tyro; a keen eye, a steady nerve, an instinctive response of finger are necessary to bring them down in fine style. And then how enamoured you are with your own skill. It is already eleven o'clock, and the warm sun has driven the birds to some shady nook or stream. Let us go likewise; it is useless to hunt until two when they will return for their evening meal. By the side of some ancient oak, from whose roots gushes a limpid spring of cold, delicious water, you lunch and smoke and talk, until the shadows of eventide commence to lengthen themselves over the field. The work begins again, and in love with nature, in love with your noble setters, in love with yourself, you shoot through the purple sunset beyond the hills, through the mellow twilight, through the deepening dusk which has come too soon, while ever and anon the only sound which breaks the stillness is the plaintive fraternal note of some more fortunate one calling his brother, now lost to him forever. Tired, and yet invigorated, you reach home long after dark, where your companions are already waiting. Soon the groaning board is spread, and you amaze yourself with an appetite unknown to city life. The evening is spent before the blazing fire, and as you sit in semi-circle, with its glowing flames reflected from each ruddy face, you recount the many incidents of the day—this magnificent point of Nellie, this astonishing retrieve, and that wonderful long shot, or vary the occasion with a friendly game of euchre, the consoling pipe, and if you have been thoughtful enough, with a glass of nut brown ale, until the old clock on the stairs tells you it is time for bed. And then such refreshing sleep!

So day after day passes, each like the preceding, and yet each different, and you return home a stronger and may perhaps a better man.

S. L. P.

*The partridge of Maryland is the quail of the Eastern States.

—Years rush by us like the wind. We see not whence the eddy comes nor whitherward it is tending, and we seem, ourselves, to witness their flight without a sense that we are changed. And yet time is beguiling man of his strength as the winds rob the woods of their foliage.—WALTER SCOTT.

—By subscribing to the FOREST AND STREAM for one year a pair of skates for a boy or girl, or for any one can be secured. All sent free of expense. See advertisement of skates, croquet, cricket, archery, foot ball, Remington, Sharpe and Ward Burton rifles, shot guns, &c., &c.

From *Harpers' Magazine*.

AN ODE TO A NOSE.

OH Nose! chief feature of the human face!
To whom each varying visage justly owes
Its quaint excess of ugliness or grace,
'Tis meet to give thee prominence and place,
And make thee, too, the feature of my song;
Oh, yes the feature of my song, oh Nose!

Then tune thee, organ, though in senseless strain,
Accompanying with a light catarrh,
My wheezy Muse shall join the strange refrain,
And blow the bellows for thy fa, sol, la.
Alack, that in our first acquaintance, Nose,
We should so readily have come to blows!

I'll follow thee, my Nose, in blind reliance,
As dauntless seamen track an unknown main—
Bid the wild winds and angry waves defiance,
With thee for compass, dial, index, vane;
I'll mock when dire vicissitudes arise,
With thee, my Pole star, aye before mine eyes.

Thy ruby light beams forth like beacon blaze,
Or heat of inward "crater" all aglow;
Thou art a censor of the public ways,
In whatsoever path thou chance to go.
Thus Sheridan, chief of Wits and Beaux,
Erst made a nosegay of his gay nose.

He filched the subtle hue from ruddy wine.
And robbed the mellow punch bowl of its bloom,
Until at length his nose grew aquiline,
Through being bent for want of beaker-room.
A nasal bridge of such portentous size,
Might well sustain a punch between the eyes.

And yet indeed thou art a goodly Nose—
No common snub or overgrown proboscis,
But such a nose as everybody knows
Is fitted for the functions of its office.
Here, then, I pause; I've wasted words enough
On one that seems acutely "up to snuff."

Oh most sagacious Nose! most potent Nose!
When friends desert and bright presages fail;
When life's best hours are fraught with bitter woes,
That fain would make the stoutest hearted quail;
When naught transpires to succor or befriend.
Thou art sure, my Nose to turn up in the end.

Thus words are vain to trumpet forth thy praise—
One brazen note from that strange lute of thine,
One of thy deep sternutatory brays,
Would do thee justice more than pen of mine;
Yet if my muse doth fail in aught to please,
He fain will make my devoirs with his knees [sneeze].
CHARLES HALLOCK.

AUTUMN IN NOVA SCOTIA.

NUMBER THREE.

IT was a cool gray morning, and our overcoats were uncommon comfortable, as we rattled away from Purdy's door in a strong wagon, driven by a young man who combined in one the offices of guide, driver, cook and general attendant. The roads were good, and our nag a most energetic roadster, doing well all the time, and putting forth tremendous speed up hill and down, when Nat, our above mentioned man, reached out and pulled the animal's tail. It was a novel way of bringing out speed, but was as promptly effective as pulling the throttle of a locomotive. Our way led by a brook, full of trout it was reported by Nat, and the view was limited on either hand by spruce clad hills. The clouds hung low, and the huge volumes of smoke from charcoal burnings soon mingled with them. The weather was not doing much, but had a sullen low lurid air that assisted its power to do just as it might happen to please.

An hour's drive brought us to Sutherland's Pond, and soon we were out in the only boat on the pond. It was not all that one could wish. One end had been long under water and was as slippery as the way of the wicked. The other end was fine and dry, well seasoned in fact from lying high and dry under the hot summer sun, so well seasoned that there was a want of intimacy between planks intended to be co-operative, and it took a deal of old rope to so far compromise these breaches as to prevent fish from coming in upon us in a mode not provided for by Waltonian counsel.

Huddled in the slippery end, hoping to keep the dry end in its more familiar element, the air, we essayed to throw our flies, sometimes did so, and as frequently threw ourselves into the bottom of the slimy boat. Our efforts were manly, but quite unappreciated; no fish rose. We tried fly after fly, and denounced the pond as a fraud. Nat drew breath between his assiduous bailing, and defended it. Mr. so-and-so caught a basket full, as did Mr. so-and-so. Encouraged, we braced ourselves and did our duty, blamed the pond, and lost faith in Nathaniel. He said we should come in the spring, in June, when flies bite; but every one says "you must come in June," and we did not want to go home and come again, nor were we quite resigned to remain until leafy spring.

Despairing of fly fishing we sent Nat for the despised earth worm, and sat wondering which would come first, rain from an impending cloud, or the subterranean worm, when the sun seemed to take compassion upon us, and gave a look of encouragement through the rent clouds. A little air sprung up; it was mild and pleasant, while with line lying loose and fly hanging over the boat, six inches above the surface, your correspondent sat watching the play of a small fountain like leak that let the water in upon our feet. It was still not an entrancing moment; facts were very real, and rather in opposition, when a blessed little trout popped up and made most spirited efforts to catch the penda fly,

even if he jumped into the boat for it. The little fellow failed after several ambitious leaps, but failed bravely, and his example aroused us. Nathaniel rejoined us and we drifted with the wind, casting on all sides with varied flies. The clouds lost their gloomy hue, and as the water grew brighter the fish rose, languidly at first, going back with only a swirl to show where they sought the fly, then with more eagerness, until their real spirit seemed to be aroused, and they took our flies, as Nat said, like June, and the click of the reels and the hiss of lines that followed the splendid dashes of the fish were music to our ears.

One after another, one at a time, two at a time, the beauties came into the net until our baskets were taken off to ease our shoulders, so full that some fine fellows got their heads out, and wiggled clear of basket and boat. We could well spare them. From a selected few we lunched in the shelter of the woods, and after our drive homeward, a second hunger demanded trout for supper, while goodly portions went to Purdy's neighbors and none of the delicate flesh was wasted.

Before the open fire again, our host said we must go to Fountain Lake, and the next morning found us on our way, favored with one of the autumnal days when all the elements of summer seem to combine in an effort to impress bright memories of the passing season.

Purdy went up a short cut to join us and bring our wagon home, as we were to remain in camp. After a few outlying clearings were passed, the road entered the unbroken forest, all fresh with dew, and adorned here and there with the first scarlet and golden leaves. We had hardly entered this shade when we met Purdy returning. He motioned us to halt, and called us to leave the wagon and join him. When we reached him he pointed to the soft mud in the roadway, and in it, clearly printed were the knuckle-like tracks of a large bear, and among them, often in the large tracks the little footprints of a cub that had trotted along after its dam. They had not been long gone, for the morning dew was brushed off, and there was reason in Purdy's saying that he did not wish to go on alone and unarmed. A she bear does not permit her cub to be hurried or worried, and once raised a good deal of consecutive killing is called for to place her *hors du combat*.

A hunter needs reserve shots to feel justified in forcing a contest when a cub is about, and a cool hand must deliver them to arrest the brutes.

We uncased our guns and leaving our noisy wagon behind, stole on with the faint hope of getting a shot at madam. The deep tracks were in the road for some three miles, but we saw nothing of her, or of her little follower. Where the outlet of Fountain Lake was crossed by a wide bridge bear tracks were all about, they evidently appreciating both road and bridge as very convenient for the little infant Bruin's "learning to walk."

Our camping ground was near the water, and not far from the road, in a fine dry hardwood forest.

A more beautiful pond than this need hardly be sought. Irregular in form, with bays and points that through all the day are charming in light and shade, with a great variety of rich foliage, evergreen and deciduous, surrounding it, it was a place to linger near. Leaving the building of our camp to Nathaniel, we took our rods and went out on a raft built by Purdy, and no better craft was ever made for fly fishing. It was about twelve feet long, eight wide, with a tight floor and plank sides. One could go about on it as on a dock, and when it was anchored all the radius of many yards could be covered with nothing to endanger the back cast. Parts of the lake were not deep, and through the clear water springs could be seen pushing up little circles of moving sand. These were in deep round pits, from five to thirty feet in diameter, and several feet deeper than the surrounding bottom. They were easily found by seeking circles clear of weeds, and a fly carefully cast over them rarely came in without one or more of the bright silver trout that characterize clear and sunlit waters. The trout were not large, few weighing over one pound, but for gameness and pluck, they were second to none. It was the perfection of fishing. As the raft drifted slowly about, the eye fell on nothing that suggested aught but undisturbed nature. None of the annoyances of summer were present, and from the rising of the mist that unveiled the lake at dawn until the last sunset glow faded away, and the moon came up from the tree tops—it was just such a scene of peace as men long for when the hurry and rush of modern life seem to overrun and distance life itself. Here we camped under fragrant balsam boughs, and watched the sparks from our camp fire rise among the tree tops until they seemed to become stars, and the stars and their blue field hung nearer to us than they do when lamps glare, and ambitious roofs rise in monotonous sky line. From this nest we arose at dawn—it is easy to rise at dawn when fresh air sleep gives rest without languor—and went to our trout at the lake. The mist hung over the water, but beyond it the pointed tree tops caught the early dawn; under the haze the lake was placid, stretching in perfect repose into the mystery of the white drifting cloud that opened in wreaths and each moment disclosed new beauties, and then coquettishly snatched them away only to reproduce them with more light and greater charms. Just before us, the only tangible point in the mist and its reflectors, a large male loon floated in his suit of slashed velvet, than which no more fit figure could have appeared, if summoned by the spirit of the place.

He eyed us boldly, turned slowly to and fro, and then sank, leaving nothing to mark the water-line but the circles that widened from the spot.

From dawn to day, amid lake and forest, the transformation scene is one of wonderful beauty, and when in autumn

the early light falls upon the prismatic colors of the hardwood foliage, there are lights and effects that pen and pencil can only recall to those who know them—they cannot be presented.

All these places so pleasantly remembered—now we are again far away from the Cobequid range—and the lakes and streams we so enjoyed, are easily reached, and their pleasures can be shared by any ladies who are strong enough to dance a german, and we are sure the day is not far distant when many a fair dame will seek health and new interest in these rambles, and get in blue flannel more impressions of the beauties sown broadcast, than can ever be gained by drawing silken trains in parlors or garden paths. They will bring home the forest rose of health, and know a firmer step from climbing the ways that lead to the woodlands.

Few of us but would go with more pleasure on our annual vagabondizing could part at least of our rambles be shared by wives and sisters, and there are few places where so much of wild life can be approached and enjoyed by ladies as in many of the resorts of Nova Scotia. The people are kind and friendly; at the farm house inns more comforts are obtainable than in any corresponding places we have found in extended journeys.

Expenses are very moderate, and the disposition to get the traveler's bottom dollar is not yet evident.

It will be many years before the sports of Nova Scotia will be exhausted, and may we wish that the best favors may fall to the rifles and rods of the readers of the FOREST AND STREAM.

L. W. L.

HEDGE HOG vs PORCUPINE.

EDITOR FOREST AND STREAM:—

In number thirteen of your paper appeared a very interesting article on "Hedge-hog Shooting." Now I write for information, I want to know whether I am right or Mr. Hersey in regard to the animal. Have we strictly speaking a hedge-hog among us? That is, is it indigenous to this country? In my travels I have never seen one.

We have the white Canada porcupine (the common name *Rodentia* comprising the genus *Erethizon* family *Hystriidae* F. Cuv. *E. dorsatus*) in abundance throughout all our northern wooded region.

And where is Ossipee Mountain? There is a lake I believe by that name somewhere in the southwestern part of Maine. Was that the scene of his sport?

His description of the habits of, and the locality where he found his animal, corresponds to a certain extent with my own experience with the other hog, the porcupine.

In the old country there is, and they may have perhaps down South the *Erinaceus*, the little fellow (he only measures about ten inches) that when danger threatens rolls himself into a round compact ball, presenting his needlelike weapons in all directions to his enemy. The porcupine, a very sluggish animal is too clumsy for that movement, though they do sometimes thrust their heads into a hole or against a tree, presenting only their posterior extremities with flat bristling tails ready to slap a score of their screw-like spears into the face and eyes of their assailant. The hedge-hog feeds mostly on snails, slugs, mice, frogs &c., and sweet fruit when they can get it. He is also a hibernating animal, that is lays torpid in his warm nest during the winter. The porcupine will I think eat anything from a trapper's old moccasin to an axe helve, and roams the woods (in his sluggish way) at all hours and all seasons.

In winter they feed for the most part (when they can find them) on two trees alternately. Hemlock, *Abies canadensis* and the basswood or linden, *Tiliacea Americana* and their trail, a well beaten path from their hole in the rocks or hollow tree or under a stump to these trees, can be easily found. They feed on one of these trees for several days in succession, and then try the other for perhaps the same length of time. And I have seen large hemlocks almost stripped of their twigs and smaller branches by a single animal.

Of what earthly use they are I never could tell, only to the Indians who sometimes eat them (as they will eat anything, even an owl), and who do use the quills in large quantities in their ornaments.

We had an old Indian camped near us (too near rather) in the "Big Woods, Wis., and he certainly was the laziest rascal I ever saw. Though the deer were abundant that season he was always two constitutionally tired to hunt them, but would poke around and find a porcupine trail anytime, and it was said that he lived alone on these stinking animals, during the winter of 1856-7 having killed and eaten himself sixty of them.

The porcupine is about two feet in length with a flattish tail of about seven or eight inches. He partakes largely of the worst characteristics of the hog family, being very unclean in his nest or house. He gets very fat and very strong (whew! tremendous strong,) in the fall and sometimes reaches the weight of twenty pounds, and I do not know but more.

I said stinking animal, for of all the awfullest smelling places, next to a he skunk, is a porcupine's den after a winter through—faugh, I can smell them yet.

JACOBSTAFF.

—Most American travellers throw away much of their reading matter at their journey's end. But in England, at each station, can be found a box fastened up, very similar to our letter boxes, but sometimes larger, into which the traveller puts his papers, books, &c. Those are in turn collected by men who carry them to hospitals, homes for old men and women, and similar institutions, where they are gladly received.

Woodland, Lawn and Garden.

HEDGES AND THEIR USES.

No. X.—THE ENGLISH HAWTHORN, (*Crataegus oxyacanthus*.)

"Make the faire blooming of the hawthorn tree,
Who finely clothed in a robe of white,
Fills full the wanton eye with May's delight."

WE pass now to the consideration another plant used for hedges, ornamental screens, and picturesque grouping on the lawn, both for beauty and use. It is quite astonishing that so valuable an addition to fallow grounds, our excellently well-tilled farms, our fine grass lands, our orchards, and even grazing lands, as a good substantial hedge, should be so little valued. We are very happy to be able in this paper to say a word or two in answer to a respected correspondent from Pennsylvania, in which he says: "Our forests are rapidly melting away before the axe of the pioneer in search of a home. Our wildernesses and dense woods are no longer. They were—their glory has departed. The beautiful cooling shades of our quiet woodlands yield themselves up to the woodman's axe, and the broad glare of a July sun has forever, we fear, put to flight those sylvan retreats. Cannot something be done to stay this great desolation?"

One has only to pause for a moment and look this sad effect of a great love of "progress," as it is called, fairly and squarely in the face to see that our fine forests are rapidly falling before an everyday increasing population, who, like our corporations, have no souls, and never stop to think that there is a day after to-morrow. What shall be done, then, to stop this march of desolation which is absorbing our fine forests and laying waste our cherished woodlands? Soon all these fine large forest trees—the oak, the hickory, the ash, and the lighter woods—the pines and walnuts—will be wanting for our floating palaces and our ships. Where can we find a substitute for all these? Nowhere. Heretofore our fences have been made from our forests, but we cannot expect, with any reason, that this is always to be the case, and we must, as a natural result, look to our numerous fine hedge plants to fill up this gap.

We think that very few have fully estimated the value of our common fences. Turn your eyes for a moment to the wants of the great West, where we find, at the lowest estimate, we want three miles and a quarter of fence to each quarter section of land, and this will be found just sufficient to enclose and run two partition fences through it. In this estimate we leave our lanes and roads, which often have to be made before we have, in western phrase, a "well fenced farm." Just here comes in our English and American thorn for these partition fences, and that they can be well used we have not a single doubt. When the subject of "live" fences was first placed before the farmers of this country for their consideration very few had heard of such a thing as a live fence, and scarcely one man in ten knew the English Buckthorn from other forest shrubbery. In 1840, in conversation with quite an intelligent Illinois farmer, on most other subjects, he laughed outright at my inquiry as to "live hedge fences." "You can't do nothing nhow, stranger, with these little shoots—a hedge fence. Ha, ha! don't you believe it. Nonsense; I've no time to give to green apple sprouts; all moonshine." Ten years after this my old friend, who so contemptuously turned up his nose at my inquiry, has since learned that even he—"an Illinois farmer," as he boasted—could have been, and was, mistaken in his estimate of the hawthorn for a hedge on the prairies of his native State. He now says: "One of my grave misconceptions with regard to the use and availability and fitness of the buckthorn for hedge-enclosing fences has given way to my practical connection with the same. I have used these and the osage orange for fencing for ten years, and now (1850) I am satisfied I can use no better fencing material than I have in the osage orange and the English thorn."

It is very true that the English hawthorn failed to give satisfaction in the days of its first adaptation to the uses of the hedge, and while some few successfully cultivated this plant others made a failure. This was not to be found in the plant so much as in the man, as future operations and experiments have quite successfully shown. Much of the dissatisfaction given to the hawthorn was the result of lack of culture of the right kind after the plant had started. Many English professional hedgers—experts, as they called themselves—made some "big blunders," and became discouraged at what they did not do, notwithstanding what they did do was bad enough, and charged it upon the country as "not fit to grow an English thorn." They attempted to give laws and theories upon American gardening about the years 1840 to 1850, and great was the ignorance and impudence possessed by them. Under the culture of these humbugs the hedge soon became a choked up mass of weeds, grass, briars, and wild raspberries; literally clogged and choked to death with many kinds of noxious weeds. Then, after this period of three or four years of neglect, just when it needed true scientific nursing and careful culture, along comes a burly English "gardener and hedger," as he calls himself, with a huge pair of shears, and he "goes in," not to prune, but to cut and slash, and if there is anything left of the poor neglected hedge he "finishes it up," and goes on to the next plantation.

The traveller through the States of Ohio, Indiana, and Illinois, and many of our older States, will rejoice in the view of many beautiful English hawthorn hedges. This exhibition of wealth and beauty shows us the fact that in

the hawthorn we have a good reliable material for partitioning and enclosing large tracts of land, and that all we want to know in order to possess these two elements is how to plant, train, and cultivate the same so that it may prove a success.

In the first attempts with this plant, in the days of "long, long ago," the seeds were procured from England and planted. In later times the plants were, at a very small cost, imported and planted, and now these plants can be raised here in any quantities, and are ready for the hand of the planter at any time, and are of a superior quality.

In order to have a good buckthorn hedge the ground should be prepared in the same manner—by deep trenching and mellowing—as for the osage orange. In fact, the treatment given to the orange will not fail if given to the buckthorn. The plants should not be too closely together; but as soon as set I recommend the mulching of the same deeply with leaves, straw, or, if I can have it given me, tan bark. After the starting of these plants the future trimming is the main thing to be carefully carried out. For the first three years but little is to be done, but this little is all important.

Culture.—Keep the hedge entirely free from weeds of every kind. If possible, as it will be on prairie land, run your cultivator as often as once a week each side your hedge, and let the boys follow after with a narrow hoe and remove every green thing from the row. Let all the shoots grow that push upwards, as you will want them next year. When you mulch deeply this treatment will probably be unnecessary. During the first year let your hedge grow untouched, and firmly fix their rootlets in the earth. Next year you can with safety apply your pruning knife by cutting the hedge row back to within two or three inches of the ground, and the next year, or wherever they have sent out new shoots, cut them back again to three inches of the starting place of these shoots, and *always be careful to leave from one to three inches of the new wood.*

Some have recommended that the hedge be trimmed the first season of planting. My own experience has led me to adopt a *let alone theory* for the first year. By pursuing the above you cannot fail in securing a permanent, beautiful, and strong hawthorn hedge, such as will delight the eye in summer and winter.

In our last paper we spoke of the osage orange in general terms as a good plant for the hedge. We are quite well aware that notwithstanding the great value of this plant for hedge use, it is comparatively not sufficiently understood. We have no doubt, from personal observation and information grounded upon conversations with men who have used the same for hedges, that it will, if properly treated, stand our winters, certainly as far north as Chicago. We shall devote a special paper to the treatment of this plant in the course of this work.

OLLIPOD QUILL.

—ORANGE CULTURE IN FLORIDA.—Trees can be had at some wild groves for the getting. At others, ten to twenty-five cents each is the price. An ordinary sail-boat will carry thirty to seventy-five trees, averaging two inches in diameter, and a round trip of twenty to forty miles can be made with a load in three or four days. If judiciously taken up, carefully handled, and properly planted, from January until March, and the sweet bud put in in May or June, they will grow three or four feet the same year, and sometimes will bear the next. Nearly all will bear the third year, with proper attention, and the fifth will reimburse all expenses. From the present stand-point, looking through the experience of others, and taking success as a guide, and error as a warning, a straighter and shorter path, (fast becoming a plain, well-beaten highway,) can be taken to success. Sweet seedlings, from three to five years old, cost twenty-five cents to one dollar each, according to age and size. They are hardy, rapid growers, and usually bear the seventh year. The effects of budding or grafting is the same on them as the sour tree. Field crops are usually made three or four years, widening each year the space between the rows and trees.

The past has presented no difficulty in the way of orange culture, which energy and good judgment will not overcome.—*Rural Carolinian.*

SLEEPING IN A COLD ROOM.

HALL'S *Journal of Health* says that cold bed chambers always imperil health and invite diseases. Robust persons may safely sleep in a temperature of forty or under, but the old, the infant, and the frail should never sleep in a room where the atmosphere is much under fifty degrees Fahrenheit.

All know the danger of going direct into the cold from a very warm room. Very few rooms, churches, theatres, and the like are ever warmer than seventy degrees. If it is freezing out of doors it is thirty degrees—the difference being forty degrees more. Persons will be chilled by such a change in ten minutes, although they may be actively walking.

But to lie still in bed, nothing to promote the circulation, and to breathe for hours an atmosphere of forty and even fifty degrees, when the lungs are always at ninety-eight, is too great a change. Many persons wake up in the morning with inflammation of the lungs who went to bed well, and are surprised that this should be the case. The cause may often be found in sleeping in a room the window of which has been foolishly hoisted for ventilation. The water cure journals of the country have done an incalculable injury by the blind and indiscriminate advice of hoisting the window at night.

The rule should be everywhere, during the part of the year when fires are kept burning, to avoid hoisting outside windows. It is safer and better to leave the chamber door open, as also the fireplace—then there is a draft up the chimney, while the room is not so likely to become cold. If there is some fire in the room all night the window may be opened an inch. It is safer to sleep in bad air all night, with a temperature over fifty, than in a pure air with the temperature under forty. The bad air may sicken you, but cannot kill you; the cold air can and does kill very often.

Natural History.

THE SEA LIONS AT THE CENTRAL PARK

A VISITOR to the Central Park happening to be in the neighborhood of the Menagerie about half-past three P.M. would naturally be drawn by the crowd to a large tank containing the two Sea Lions. It is their dinner hour, and if a favorable position to witness the meal can be obtained, (for the spectators are early on the ground), it would prove extremely interesting. Some time before the approach of the keeper, the lions are on the *qui vive* and manifest their impatience by repeated barks.

When the food, which consists of different varieties of fish, such as cod, herring and weak fish, (the cod weighing sometimes as much as four and a half pounds), is finally brought, they swallow it with a decided gusto dispensing with the process of mastication. When the meal is finished they show their satisfaction by dashing about in the water for two or three hours, after which they remain on the platform until the next morning. These Sea Lions, *Eumetopias stelleri*, were placed on exhibition last April and are natives of the Pacific Ocean, north of the equator. Their color is of a reddish brown, their hair is straight and coarse, without any growth of under-fur, the nose, palms, soles, and digital flaps naked and black, whiskers cylindrical long and whitish, ears short pointed and curled, eyes large, iris black surrounded with a white ring, the fore limbs large and triangular, terminating in a thick membranous flap and situated almost in the centre of the body. The hind limbs are broad, the width at the toes nearly equaling the length of the foot, toes terminating in strong cartilaginous flaps deeply indented, the three middle ones having well developed nails, the outer two provided with horny disks or rudimentary nails. The hind feet are always directed forward when the animal is at rest.

Their mode of locomotion on the ground is by raising themselves on their fore limbs and placing the hind limbs forward. The larger of the two lions measures about nine feet in length and five feet in girth. The length of fore flipper is twenty-eight inches; hind flipper, twenty-four inches; weight, about nine hundred pounds. Their bark, which is very peculiar, can be heard distinctly in the night at the distance of nearly a mile.

Having given this much space to our sea lions, a brief description of the genus may not be out of place. The color varies from pale yellowish brown to reddish brown, and varies much not only according to age but also according to sex. Full grown males measure from twelve to fifteen feet in length, and weigh from twelve to fifteen hundred pounds. The females seldom attain more than one quarter the weight of a male. About the first of April they commence to visit the breeding grounds, the old males going first and selecting their places on the island. Shortly after the females follow and as soon as a female reaches the shore, the nearest male goes down to meet her and escorts her to his plot. In a few days after landing the female gives birth to one pup, weighing about six pounds. The period of gestation is about twelve months. They exist a long time without food, remaining during the breeding season some two months on the shore without going into the water, consuming their own fat, finally leaving at the end of the season, greatly emaciated. One lion has remained in the menagerie over thirty days without eating, being sick at the time it was received. The sea lions that are seen in the travelling menageries of this country are mostly procured by the fishermen in San Francisco Bay and sold to Mr. Woodward, of Woodward Gardens, San Francisco, who disposes of them again at the rate of one dollar per pound.

W. A. CONKLIN.

—It is almost impossible to rear a young hippotamus, but it has lately been discovered that the mother suckles her young under the water, and in future it may not prove so difficult a task. Out of eleven produced in Amsterdam only one lived, and when nine months old it brought a thousand pounds to go to America; but the man who bought it stopped in London and exhibited it at sixpence a head at the Crystal Palace, and while there the Crystal Palace caught fire, and the only hippopotamus ever reared in Europe was roasted.

—The Parisians have anticipated our own movement in the matter, and are now constructing an aquarium in the Champs Elysées to rival those of Brighton, Sydenham, and Berlin. The aquarium proper is to be supplemented by a museum of fishing utensils, and an antediluvian department where extinct fishes are to be represented artificially with the natural surroundings of the periods in which they lived. The scheme will be carried out on a great scale, and it is expected that the aquarium will be completed by June of next year.—*Appletons' Journal.*

—An English rural sportsman being asked by an old lady with rather confused ideas as to horses and dogs, if his dog was a hunter, said "it was half hunter and half setter: he hunted around till he found food, and then set down to eat it!"

—Two beautiful engravings given with every copy of FOREST AND STREAM. See advertisement.

—There is good sleighing now pretty much all through Canada, and the curling clubs are preparing for this favorite winter pastime.

—Persons who may wish to get up a club, for the FOREST AND STREAM, can select any article on our list of prizes. There never was such an opportunity to secure a fine rifle made by the best makers in the United States. See advertisement.

The Kennel.

—The silent system of dog-breaking, as practiced by the best trainers abroad, will be found very interesting, and give some of our noisy sportsmen a thorough insight into the method of training pointers, setters and other breeds of dogs. We quote from a gentleman in the *Field*:—

"The kennel consisted of about thirty pointers, setters, retrievers, and about half a dozen cross-bred setters and retrievers, rough, hard, wiry-looking animals, which the keeper told me he used for winter shooting, and for that work preferred them to all others, as they stand the wet and cold better than any other dogs, and are most useful in making a varied bag. After breakfast on the morning of my arrival, at the keeper's neat and comfortable cottage, I was introduced to Tom the breaker (who scarcely does anything else, and indeed he has his hands full), who was told to take out three brace of setters, and away we went to the hills. The way they worked, and the quiet, artistic manner in which they were handled, perfectly astonished and delighted me. The heather was first rate and birds plentiful; and I am told that in these islands they never pack and lie well to dogs even till the end of the season, which, of course, is a great thing for dog breaking. After luncheon we had out three brace of the half-bred ones. They certainly were not much to my taste as far as their appearance went, but their breaking and performance were beyond all praise. They were taken out in couples, and when we got on the ground one brace (only nine months old) were uncoupled and sent to work; they quartered their ground well, went at a good pace, and found their birds in good form, but without the style and dash in their gallop of the true-bred setter, and without that beautiful working of the stern which is so expressive in my favorite breed, the setter. These dogs, although so young, were quite perfect in backing and standing, and if a hare jumped up or crossed their path, they dropped as if shot without a word or a sign. These half-bred ones can all be worked like regular retrievers, as, if called to heel, they never offer to move without an order under any circumstances whatever.

Tom commences his work at six o'clock in the morning by taking the whole team out on the roads for two hours' exercise, and they are then allowed to run about, play, and enjoy themselves pretty freely; but after breakfast the day's drill commences by three brace at a time being taken out; one brace is set to work, and the other two to follow at heel in couples. When a point is got they are dropped instantly, and not allowed to move from that spot one single inch till the birds have been sprung, and they get a beckon with the finger to come on. One reason why Tom gets every dog in his hands to such perfection is that he never allows a single fault, however trivial, to be overlooked, and will have the lesson, whatever it is, perfect before giving it up. He is possessed of great patience, untiring walking powers, and wonderful perseverance; and, although he is strict almost to severity with his dogs, he soon gains their confidence, and they all love him, and yield him implicit obedience. After the spring breaking is over, and birds beginning to nest, Tom takes all his dogs by turns to some ground where the birds do not nest, and which is a resort of the old cocks, and there practises them in dropping to shot (an old horse pistol, which makes a wonderful report)—not ten or a dozen times only, but fifty times if it is necessary, until they all drop as a matter of course instantly, and without a word or a signal. Dog-breakers may say we can all do this; so they can; but how often do we see it, and how few there are who will take the pains and do the hard work which it entails? There is no holloaing or noise with Tom—his is the silent system, and no mistake; and he possesses more tact, innate knowledge, and real love of the art of dog-breaking than any man I have ever seen, and I hope next spring to see him and some of his team at some of the south country meetings, when the old stagers must look alive to hold their own. After the regular grouse shooting is over, Tom, who is an excellent shot, kills from eighty to a hundred head of all sorts of game every week over his dogs. Practice makes perfect, and here they get it to the truth."

—That beautiful suburb of St. Louis, Cote Brilliante, has just been stirred by a ripple of excitement. The house of Colonel Hawk is concealed by dense shrubbery. Night before last it happened to be occupied only by Miss Clara Hawk, a young lady of twenty, and a female house servant. About midnight Miss Hawk, being suddenly awakened by unusual sounds, saw a man in front of her window, who had already moved the blind, and was about to effect an entrance. She seized a revolver, which she had under her pillow, and fired a shot at the intruder, wide of the mark. A second shot, before she had recovered her aplomb, was equally unfortunate. The pistol not only failed in its deadly mission, but sent its ball through the palm of the young lady's hand. The thief attempted to beat a retreat. But this was not so easy. A huge dog which guards the premises had been aroused by the heavy skirmish fire, and now appeared on the scene by way of the left lower entrance. The thief made for the nearest tree, and consoled himself where he would be safe from the attack of any dangerous domestic animal, and also far enough from the house to be secure from ordinary pistol practice. The occupants of the house were terrified, not knowing the number of assailants, and not quite certain of the fidelity and powers of their out-door auxiliary. Neither was there any appearance of assistance from the neighbors. The dog kept his place under the tree; the man kept his seat in the branches, and if he had any partners they made no apparent effort to relieve him; so the hours dragged slowly away until morning, when the dog, fully satisfied in conscience by his long vigil, retired to his kennel, and the thief got down from his perch and stole away in the early dawn. Miss Hawk in the morning coolly told the story to the neighbors, and, coming into the city, had her hand dressed.

—*St. Louis Globe.*

—If ever there was a good excuse for not getting a paper out on time it is that offered by the *Panama Star and Herald*. The editor says that the Government troops were keeping up a continuous fire on the door of his sitting room, and half a dozen shots did not vary three feet in striking. "To this annoyance," he says, "we must attribute our delay in getting out this edition, for it is difficult to persuade men to work under a steady and dangerous fire."

—Schools subscribing to *FOREST AND STREAM* can get

The Horse and the Course.

—The great race at Ocean View Park, San Francisco, Cal., for a purse and stake of \$2,000 for all ages, \$2,000 entrance, closed with eight nominations; four of which came to the post. Distance, four mile heats. Nett value of the stake \$20,000. The day was lovely in the extreme, and by 12 o'clock the grand rush had fairly set in, and an immense assemblage of vehicles, horse and foot came down over the hill leading to Ocean Park. Conveyances of all descriptions form the four-in-hand drag to the mule cart blocked up the way. Suffice it to say it was the grandest event ever seen in California, and at half-past one, at a moderate estimate, there was upwards of 12,000 people in the Park. The starters were Thad. Stevens, of California; True Blue, of New York; Joe. Daniels, of Michigan; and Mamie Hall, of California. In the first heat Thad. Stevens took the pole, True Blue next, Mamie Hall third, and Joe Daniels on the outside. Mamie Hall won the first mile, with Thad. Stevens second, and True Blue third. Second mile—True Blue first, Mamie Hall second, Joe Daniels third. Third mile—True Blue first, Joe Daniels second, Thad. Stevens third. Fourth mile—Joe Daniels first by two lengths, True Blue second, Thad. Stevens third. Time of heat, 7:45. The horses started for the second heat at five minutes to four. Thad. Stevens won the first mile by three lengths, True Blue second, and Daniels five lengths. On the second mile the relative positions of the horses were about the same. On third mile all of the horses crossed the score in close company, Thad. a neck ahead. On the fourth mile Thad. and True Blue were neck and neck, Joe Daniels crowding on the last half. True Blue shoved ahead and opened a gap of five lengths, which he held in crossing the score. Time, 8:08. In the third heat Thad. took the lead again, True Blue and Daniels running neck and neck. The second mile was a close run between the three. At the first quarter of the fourth mile, True Blue failed, fell behind, and was speedily lost in the distance. Thad. pulled out at his best and parted company with Daniels, crossing the score nearly ten lengths ahead. Time, 7:57. The race was now between Stevens and Daniels, the first favorite in the great race, True Blue having been distanced through the misfortune of putting his foot in a gopher hole, and was lying disabled on the track. He was soon removed and the course cleared for the final heat. A capital start was effected, but Thad. Stevens soon pulled four lengths ahead, and was gaining steadily, when the horses disappeared in the gathering darkness. On the first mile Thad. Stevens passed the score thirty yards in advance. The crowd awaited anxiously the reappearance as the foaming steeds came down the home-stretch. At the second mile Thad. Stevens had about the same advantage. Again the clatter of hoofs was heard, and Thad. Stevens came dashing in thirty yards in advance, the winner of the heat and race. Time, 8:20.

—The autumn running meeting at Point Breeze Park near Philadelphia took place on November 13th. The day was very cold and the racing was of a more than average order. The first race was a hurdle race, purse of \$500, distance two miles over eight hurdles. There were three entries, George West, Tammany and Crown Prince. The horses had an even start, after the first hurdle had been jumped George West took the lead and maintained it until six hurdles were passed, when Tammany rushed to the side of George West, both horses jumping the last hurdle together, when it became a race on the flat, George West now showed his excellent form and won the race by a length. Time, 4:31. The second race was a dash of a mile, for a purse of \$500. Three horses entered and started, Lizzie Lucas, Hattie O'Neil and Ortolan. Lizzie Lucas ran from end to end on a heavy track in the fast time of 1:46½. The third race was for all ages, mile heats, Minnie Mc, Artist and Hattie O'Neil started. Minnie Mc took the lead on both heats, and won very easily as she liked in 1:54—1:54.

—The fall meeting at White Plains, Westchester Co., N. Y., came off on November 13th. The track was in excellent condition. The first trot was for a purse of \$300, for horses that had never beaten 2:50, mile heats. Five horses started, Lela Blanche distanced all of them and won the race in grand style. Time, 2:41½. The second event was for a purse of \$500, for horses that had never beaten 2:26, mile heats, best three in five in harness. Four horses started, Joe Brown winning the first and third heats, Blanche the fourth and fifth heats, and the second a "dead" heat between Joe Brown and Charley Green, when darkness coming on, the race was postponed. The second day Blanche won the sixth heat and race. The second race was the purse of \$400, for horses that had never beaten 2:35, mile heats, best three in five, in harness; \$200 to the first. Entered nine horses, five of which came to the post. Ella Millard won the first heat, Tanner Boy the second and fifth, Fred Tyler the third, Ben Smith the fourth, and then Tanner Boy and Ben Smith made a "dead" heat in the sixth, when darkness coming on, the driver of Tanner Boy has claimed the race; it is undecided.

—If the complications with Spain do not become serious, it seems to be probable that the government will send out a vessel this coming spring to Behring's Straits.

—There died lately in Paris Jules Pierre Verroux, an ornithologist, who has been attached for quite a long series of years to the Jardin des Plantes. M. Verroux was a member of the firm of the Messrs. Verroux, so well known to all naturalists. American ornithologists when visiting the fine collections at the Jardin des Plantes have often availed themselves of M. Verroux's services.

Athletic Pastimes.

Secretaries of University and College Athletic Clubs will please mail their reports not later than Monday in each week.

—Skates, croquet, cricket, archery, foot balls, Remington, Sharpe and Ward Burton rifles, single and double-barrel guns, books and engravings offered to subscribers. See advertisement.

—The organ of Harvard University out-door sports, the *Advocate*, gives certain reasons for not sending delegates to the Foot Ball Convention held recently in New York. We have read it carefully and fail to see the "fundamental" or "vital" points in their rules which would prevent them from joining the Convention. If they wish to act the part of playing a "solo," no one will interfere with them. It appears to us that if Harvard would reconsider their determination and join the Convention, the additional strength and morale they would give, would add materially to the furtherance of Athletic Pastimes throughout the Union. We quote:—

"It seems to us that the result of the Convention fully justifies our action. It shows how fruitless it would have been for us to have asserted our rules before the representatives of the other colleges, whose games all differ so radically from ours, while resembling each other in all vital points. In the light of this result we fail to feel, as Yale does, that 'it seems a little strange that any college priding itself on foot ball should refuse to send delegates to a meeting whose prime object was to adopt a set of rules which should be entirely satisfactory to all the colleges concerned, and to place foot ball on a firmer and more scientific basis than has heretofore existed.' Undoubtedly the prime object of the Convention was to adopt such a set of rules, and for this very reason—that we saw not the remotest chance of the attainment of this object, if we had any voice in the matter—we declined to join the Convention. We are modest enough to think that the loss from our action in this, if loss there be to any one, will be ours. We here reprint our Rules:—

RULES OF THE HARVARD UNIVERSITY FOOT-BALL CLUB.

1. The number of players on each side shall be not less than ten and not more than fifteen.
2. The grounds shall be not less than 350, nor more than 450 feet in length, and not less than 225, nor more than 325 feet in width.
3. There shall be two end boundaries and two side boundaries.
4. The two end boundaries shall form the goals. To win a game, the ball must strike the ground beyond either goal, passing over it on the fly; but no game can be won on a fair lick.
5. When the ball passes over either side boundary, it shall be considered dead; and the player first holding it shall be entitled to a fair lick, and shall carry the ball within the bounds at right angles to the boundary line at the spot where it first struck.
6. When the ball passes over either goal, in any manner other than to win a game, it shall be considered dead, as in No. 5, and may be placed anywhere within a line drawn parallel to the goal, and ten feet distant from it.
7. The winners of the toss shall have either the warning kick or the choice of goals. The warning kick shall be taken from a point half way between the two goals.
8. Any player is allowed to catch or pick up the ball. No player is allowed to run with or "baby" the ball, unless pursued by an opponent, and then only while so pursued.
9. No player is allowed to throw or pass the ball to another player, unless pursued by an opponent.
10. No lurking, striking, hacking, tripping, nor butting among the players is allowed.
11. Any player, when on the adversary's side of the ball, must either walk toward the ball, or must walk toward his own goal, in a line at right angles with that goal. Any player not complying with this law shall be considered as lurking, and shall not be allowed to touch the ball until he has reached a point on his own side of the ball.
12. A match shall consist of five games. The side winning three games out of the five shall be the winners of said match.
13. Each side shall appoint an umpire, who shall select in turn a referee.
14. It shall be the duty of the umpires to settle all disputes, see that the rules of the game are complied with, name the victors in all matches, and perform in short all the ordinary duties of an umpire.
15. The referee shall be applied to when the umpires disagree, and his decision shall be final.

Yale's organ asserts that the games of the different colleges differed materially. To us, the differences in the Rules of the colleges at the Convention seemed trivial; the variations being chiefly in the details of the game, such points as the length of the grounds, or the distance between the goal-posts. We should gladly make such changes as these in our Rules, if so inter-collegiate matches could be arranged. But our game differs so fundamentally from that of the other colleges, that no compromise could be effected. We must either sacrifice entirely the principles of our game and learn a new one, or abandon all thought of inter-collegiate matches. We have chosen the latter alternative."

—At the annual athletic games of the Toronto Cricket Club, held in that city on the 8th instant, T. C. Blake walked a mile in nine minutes twenty-eight seconds; J. Buchanan made a running high jump of four feet nine inches; and Mr. Henry ran a mile in four minutes fifty-two seconds.

—A correspondent favors us with the following review of the base ball season at Princeton College:—The ball season of 1873 was ushered in very inauspiciously for Princeton College. With only four men left from the preceding year, and five to select, the chances for success seemed very limited. But with an energy which has always characterized the action of old Nassau Hall, and a Captain more truly devoted to and efficient in his labors, few nines can claim an equal. The men were selected and

trained to such a degree of perfection that they reaped the rewards of their labors, and have a record to show of which Princeton may well be proud. Since the opening of the season the Princeton nine have played nine games with amateur clubs and four with professionals, of which it has won nine, as follows:—

May 5.—Princeton vs. Chelsea, Brooklyn.....	12 to 1
May 21.—Princeton vs. Yale College.....	10 to 9
May 22.—Princeton vs. Harvard College.....	3 to 1
May 24.—Princeton vs. Resolute (professional).....	6 to 2
June 7.—Princeton vs. Lafayette College.....	26 to 11
Sep. 27.—Princeton vs. Irvington, N. J.....	31 to 7
Oct. 1.—Princeton vs. Chelsea, Brooklyn, (11 innings).....	15 to 14
Oct. 16.—Princeton vs. Trenton.....	47 to 3
Oct. 18.—Princeton vs. Yale College.....	18 to 4

Defeats, four, as follows:

May 10.—Princeton vs. Yale College.....	2 to 9
June 12.—Princeton vs. Athletic (professional).....	6 to 22
Oct. 14.—Princeton vs. Atlantic (professional).....	3 to 16
Nov. 7.—Princeton vs. Athletic (professional), 5 innings.....	0 to 5

Total runs, Princeton, 179; Opponents, 104.
Base hits, Princeton, 181; Opponents, 114.

Among this list, it will be noticed, are four intercollegiate games for the college championship, of which Princeton has achieved three victories, that over Harvard being the finest amateur game on record. Time and space will not admit of a critical description of all the games played, yet the last is deserving of a somewhat lengthy description, as showing the improvement of the Princeton nine since last spring, when they met the Athletics and suffered a most disastrous defeat.

Friday, November 7, was the occasion of the second meeting of the Princeton and Athletic clubs in the base ball arena. The weather was very dubious, the clouds being dark and lowering. At twelve M. the game commenced with the Princeton boys at the bat, who failed to score a run. The professionals began by their first man retiring at first, when, by the good batting of Anson, and the poor playing of the centre fielder and short stop, they placed four runs to their credit. The next inning was a repetition of the first as regards totals, though G. Mann, by a fine two base fair foul hit, and Williamson, by a poor throw of Anson, got bases. The Athletics yielded the "ash" in one, two, three order, Woods making a fine one hand pick up in this inning. The third inning passed with still no runs for Princeton, as also the visitors were compelled to retire with equal success, though two men had reached bases, Jacobus catching a line ball and making a double play after one hand was out. In this inning, through error, the Princetons succeeded in getting the bags filled, with no men out, when by poor batting and a fine display of fielding not a man succeeded in crossing the plate. The Athletics were again served with a whitewash, making the total 4 to 0 in their favor.

Rain began to fall at this stage of the game, but play was continued until the close of the inning, which was a repetition of former blanks for Princeton, while the "blue stockings" added one more run to their score. Thus, with the totals at 5 to 0 in favor of the Athletics, the game was called.

It is to be regretted that play was interrupted, as it bid fair to be a good game. Though the college boys were somewhat out of trim from want of practice, they need not be ashamed of their exhibition of playing, and we predict for them an untarnished record next spring in their intercollegiate games. The following is the score:—

PRINCETON.					ATHLETIC.				
PLAYERS.	R.	IB.	P.O.	A.	PLAYERS.	R.	IB.	P.O.	A.
Beach, c.....	0	0	1	0	McGeary, c.....	0	0	6	1

CHAMPION.

—The Columbia and Rutgers colleges played a match game of foot ball on Saturday, November 15th, on the grounds of the St. George's Cricket Club at Hoboken. Columbia won the game. The following are the names of the twentys:—Columbia—King (captain), Cornell, Adams, Hurry, Walbridge, Bach, Radford, Leonowen, Kent, Weeks, George, Simmonds, Root, Lindley, McMain, Morewood, Field, Smith, Rhodes, and Price. Rutgers—Lydecker (captain), Hendrickson, Fischer, Van Aken, Walser, Martyn, Wyckoff, Ross, Kamble, Anderson, Lyall, Davis, Price, Fuller, P. Vansant, Watson, Vreeland, Stotts, Hawhurst, and H. Fuller. The judges were Mr. Faston for Rutgers, and Marshall for Columbia. Referee, Mr. Johnson.

—A foot race for \$1,000 a side and the championship of America, between John Allison, of Connecticut, and Henry Crandall, of Niles, Michigan, was run at Washington Park, Providence, on November 14th, and won by five inches by Allison. Distance, 125 yards; time, fifteen seconds.

—The Chicago Billiard Tournament is progressing, and meets with success. On November 14th Ubassy beat Snyder, the score standing 400 to 321. The winner's average was 5 60-68. His highest run was 57.

In this day's playing John Bessunger defeated Peter Snyder in 71 innings, scoring 400 to Snyder's 331; winner's average 5 45-71. Largest runs—Bessunger, 45 and 44; Snyder, 40 and 36. In the second game, between Garnier and Slosson, Garnier won the lead. The game was closely contested and interesting throughout, first one and then the other leading, and each doing considerable safety business toward the close. Garnier finally won in his forty-fourth inning, scoring 400 to Slosson's 390; winner's average, 9 1-11; Slossons, 9 3-43. Largest runs—Garnier, 42, 50, and 77; Slosson, 44, 37, and 40.

The first game at night was between Ubassy and Joseph Dion, and attracted the attention of a large audience. In stringing for the lead Ubassy won, and started off with a run of 3, Dion following with 12. In the ninth inning Ubassy ran 56, and in the next 30, turning his first hundred, Dion making only single counts. Ubassy turned his second string in the twenty-second inning, his score standing 221 to Dion's 67. In the thirty-second inning Ubassy, with a run of 59, turned into the homestretch, and in the forty-sixth inning, with a run of 26, won the game. Dion, who turned into his first hundred only in the twenty-ninth inning, picked up toward the last, his score standing at the close 230. Ubassy's average was 8 16-23.

On November 15th the first game was between Garnier and Snyder, and was easily won by the former in thirty-six innings, the score standing 400 to 108. Winner's average, 11 1/4. Largest runs—Garnier, 82, 45, and 58. Snyder only made three double numbers, 19 being the largest.

The second game was between Slosson and Bessunger, and was close throughout, Slosson winning by 400 to 351; winner's average, 6 26-29.

—On November 17th the first game was between George Slosson and Peter Snyder. Slosson won by a score of 400 to 108. The second game was between Cyrilie Dion and Maurice Daly. Daly won 450 to Dion's 250. Daly's largest scores—32, 39, 34, 62, 94. Daly's average was 11 15-35, and Dion's 7 1-7. The first game in the evening was between Garnier and Joseph Dion. In the thirty-seventh inning, with the score standing Garnier 329 and Dion 168, the latter got the balls together, and, by careful nursing, made 124 points, the second best run of the tournament. In the forty-third inning he made 27; but Garnier followed with 32, and ran the game out, Dion being 344. The winning average was 8 24-47th; Dion's average, 7 15-47th. The largest runs were—Garnier, 82, 50 and 43; Dion, 124.

—The Athletic Association of the Stevens' Institute of Technology of Hoboken, at a meeting held Nov. 12, elected the following officers:—President, S. D. Graydon, '75; Recording Secretary, H. A. Beckmeyer, '76; Corresponding Secretary, J. M. Wallis, '76; Treasurer, H. Duane, '76; Captain of the Foot Ball 20, J. E. Denton, '75; Captain of the Base Ball 10, W. F. Zimmerman, '76. The Directors of the Association are as follows:—Denton, '75; Vail, '76; Kingsland, '76; Zimmerman, '76; Richards, '77.

—The Foot Ball 20 of the Athletic Association of Stevens' Institute on Saturday last played a match game on the fields at Hoboken with a 20 from the College of the City of New York, which resulted in a victory to the Stevens' men, who scored three out of the five games. Time, one hour and ten minutes, from 2:30, P. M. A. M. C.

The Magazines.

THE FIRST GRENADIER OF FRANCE.—The colonel of the 46th of the line (French) has re-established an old tradition in his regiment. On June 27th, on the heights of Oberhausen, Lotour d'Auvergne, first Grenadier of France, was killed by the lance of an Uhlan, and died with his face to the foe. His loss was deeply deplored by the army, and all the soldiers subscribed a day's pay to purchase a silver urn, in which was placed the heart of their deceased comrade. For a long time this urn was carried at the head of the company by a sergeant who answered, "Dead on the field of honor," when the name of Latour d'Auvergne was called at muster. This old custom has now been renewed. Latour d'Auvergne belonged to the house of Bouillon, as did Turenne; he joined the army in 1767, fought against the English, and first distinguished himself at the siege of Port Mahon. He accepted the revolution, and fought as a captain in the army of the Alps, and he afterwards commanded the "Infernal column," composed of 8,000 Grenadiers. In the year '93 he was nearly being dragged before a revolutionary committee and executed as a noble, but his soldiers saved him from the scaffold. He embarked on board a Breton vessel, was captured by the English, and sent to the hulks. On returning to France he was offered a pension and took to study. While thus engaged he learned that the only son of an old friend had been taken by the conscription, and he insisted on replacing him; he joined the army of the Rhine, commanded by Massena, and though fifty-three years of age, distinguished himself nearly every day. Bonaparte wished to make him a general of division, but he refused to accept any grade, and hence the title conferred upon him by Carnot, of First Grenadier of the Republic. Bonaparte added a sword of honor. It was with great difficulty that the veteran could be persuaded to accept these distinctions, and Napoleon declared that, had he been king of France, he would have made Latour d'Auvergne a marshal. A week afterwards he fell. The urn containing his heart was at a later date deposited in the Pantheon, but it was withdrawn during the restoration, and afterwards became a cause of litigation between two branches of the family—for it was worth 60,000 francs!

—A complete set of the best English cricketing implements can be had by subscribing to FOREST AND STREAM.

CARRIER PIGEONS FOR WAR COMMUNICATIONS.—The *Allgemeine Militärzeitung*, at the close of a series of articles on the use of pigeons as letter-carriers and the importance of their use in modern warfare, calls attention to the fact that the events of the Franco-Prussian war have demonstrated that even large and well armed fortifications may find themselves cut off from all communication with the outside world. Metz and Paris were examples of this, and the absolute want of communication, which prevented a

concurrence of action, or agreement as to the operations to be made, is to be regarded as the main reason for the final capitulation of the Rhine army. Had they been acquainted with the value of the carrier pigeons before the war, our cotemporary argues, and established a mail route between these two important fortresses, the communication between them would have remained unbroken, and the issue of the whole campaign perhaps less unfavorable for the French. In view of the important services rendered by the winged letter-carriers, even in their imperfect organization, during the siege of Paris, the French government, at the suggestion of General Ragou, has determined to establish pigeon stations in most of the French forts. In the Jardin d'Acclimatation at Paris several thousand trained pigeons are housed, the breed of which will be distributed among the various forts as soon as possible. The recognition of the importance of the use of pigeons as letter-carriers is not confined to France. Germany has established a central depot at Berlin, under the direction of Dr. Bodinus, and post-stations at Cologne, Metz, and Strasburg. Should satisfactory results follow here, pigeon stations will be established at all the Prussian forts.—*Army and Navy Journal*.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, traits, species, governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

M. N.—See our third and seventh numbers. Also editorial on the subjects.

H. N.—Gatlin gun entirely beyond our range of subjects. Address Schuyler, Hartley & Graham, New York.

MEADOW LARK, Washington, D. C.—We are making up some prizes for our friends. See this week's issue.

THOS. S. STEELE, Hartford, Connecticut.—No practical sportsman doubts the ability of a good gunsmith to make a hard shooting breech loader out of a pair of fine quality muzzle loading barrels.

X. X.—1. Charges of breech loaders may arise from over sensitive cartridges. 2. Never heard of a similar case. 3. From your own account we regret to say your carelessness was manifest.

INDIGENOUS, Buffalo.—Your experiences are novel. On the Pampas and the banks of La Plata, some foreign European plants, notably the thistle, have almost overpowered indigenous vegetation.

M. L. JR., Mobile.—An excellent mounting to secure shells to a block. is to make one of starch, gum and whitening, mixed into a paste with alum water. 2. See answers to correspondents of this day.

DUNCAN, Lexington, Ky.—Red head shooting on the Chesapeake, and on the bay side of Capes Henry and Charles, will not warrant any one taking the journey until the month of December.

W. LLOYD JEFFRIES, 34 Devonshire street, Boston. The Vixen sailed over a regular course for a prize, distance 28 miles, in 3 h, 19 min. 04 sec. The Alert and the other yachts sailed over a regular course for prizes.

D. P. K. LORING, Amherst, Mass.—The price of the beagle would be \$35 in New York. Will answer more fully in our next issue; by that time we shall have received a letter from our London agent.

W. H. S., Washington, D. C.—Canvas backs are very plentiful on the Susquehanna near Havre de Grace. Place no confidence in market gunners; go to a respectable hotel and acquaint the landlord with your wants.

J. D. U., Maysville, California.—Dr. Wallace, of Colchester, England, is the best English authority on silk worms. He wrote a prize essay on this subject, received by the Entomological society. 2. There is an oak feeding silk worm, called Bombyx Yama Mai.

Two Boys, Forty-third street.—Small paper boxes, such as are made for jewellers answer very well for shells; they must be square. For very small and delicate shells small glass tubes can be used. Sheets of talc, neatly cut, may be used instead of glass.

G., Baltimore. In the time of Linnaeus the brown rat was unknown in Sweden. Its advent then dates from about 100 years ago. Something very curious about the rat is that though he will devour every other smaller animal he leaves the mouse untouched. Would be glad to hear from you.

A SCHOOLMASTER.—Most English schools have a professional to give instructions in cricket. Very often the masters themselves are adepts. Would take great pleasure in recommending a competent person to you in the spring. Feel most gratefully the compliments you pay us. We write for schools.

C. F. F., Sheriff's office, Montgomery county.—The best work on training dogs, &c., is the "Shot Gun and Sporting Rifle," by "Stonehenge." You can procure it at Routledge's, 56 Walker street, N. Y. Price about \$2.

F. A. BROWN, Boston, Mass.—You ask, will a fox climb a tree? A fox cannot climb a tree, unless he can run up the butt, say not more than five feet, and so get on the first limb. If the first branch be ten feet from the ground he could not get there even if hard pushed by hounds. The sole and claws of the fox have no power of elongation or great retraction.

E. A. WHITING, Central City, Col. Ter.—1. From \$50 to \$75 you can get the gun you mention, of the very best quality. 2. Messrs. Smith & Squires, 523 Broadway, are respectable and reliable dealers. 3. A \$45 breech loader is not as good as a first-class muzzle loader. At equal prices the breech loader is far preferable and more serviceable.

This week we have received an unusual amount of questions but without signatures to them. Some of the questions asked are leading ones, which we should only be too happy to have replied to, but under our positive rule, unless all correspondence to us is duly authenticated with signature and address, it shall hereafter go into the waste basket.

W. W. S., Brooklyn.—No. 59 West Thirty-first street, and 211 Wooster street, New York, are the very best places. But go yourself for the first time with your horses. Principle a sound one. Never allow a smith to burn the horse's hoof to fit the shoe instead of working up the shoe to fit the hoof. It is wise in anticipation of a coming frost for our readers to have their horses' shoes pointed and caulked in time.

SETTER AND POINTER, Fall River, Mass.—We cannot warrant or guarantee dogs; but this we will be happy to do for any of our friends: place you in communication with our London agent, H. Herbert, the breeder and raiser of the celebrated stock dog Tartar, who will purchase the setters at different kennels. His opportunities and judgment are of the very best.

WATER-TIGHT.—Out of many recipes recommended, we think this one perhaps the best: In a pint of best winter-strained lard oil, dissolve a piece of paraffine the size of a hickory nut, adding the solution with a gentle heat, say 100 or 140 degs. F. The readiest way to get pure paraffine is to take a piece of paraffine candle. Rub this solution on your boots about once a month; they can be blackened in the meantime. If the oil should make the leather too stiff, decrease the proportion of paraffine, and vice versa. Another composition for leather is: Melt together 1 lb. tallow, 1/2 ounce neatfoot oil, 1 oz. of rosin, 1/2 ounce lamp-black, a table-spoonful of linseed oil. Should be rubbed in repeatedly the boots or other articles to be warmed. It is said to be perfectly water-proof and not injurious to the leather.

—Boys' single and double barrel guns can be had by subscribing to FOREST AND STREAM. See advertisement.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOV. 20, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Managing Editor.

SPORTSMEN VS. POACHERS.

ALL true sportsmen will read the following account of a trial, which we take from the *New York Herald*. It is idle to suppose for a moment that the preservation of game and fish acts detrimentally to the poorer classes. The poacher will never work, and is always ready and willing to take his chances in private preserves to kill game and fish in all seasons. For what benefit? Certainly not for his poor wife and family. Sometimes, as in this instance, the poacher gets his just deserts. Stock the forests and streams once again with game and fish suitable to the land and water, and the production of food from these sources will be within the means of all.—

"The South Side Sportsmen's Club vs. John Kortright.—This action was tried at Riverhead, and presents some interesting features for sportsmen and owners of fishing preserves on Long Island. The plaintiffs, the well known shooting and fishing club of which Recorder Hackett is President and John E. Devlin counsel, own some nine hundred acres of sporting preserves in the town of Islip. The defendant is a fisherman of Amityville, some fifteen miles west of the club grounds. On the night of Sunday, 16th of March last—a windy, rainy, tempestuous night—he, in company with three other Amityvillians were detected by the club's boatman on watch, in drawing a net in Connetquot Creek, into which they had sailed and rowed from the South Bay. This creek composes part of the waters of the club, in which it owns the exclusive right of fishery under the Nicoll patent. The club, determined to protect its property and fishing privileges brought a separate action against each of the trespassers. The jury was out all night, and in the morning rendered a verdict of \$25 for plaintiffs, which, as the title of the club to its property came in question, is understood to carry full costs in each of the suits. These will amount to about \$150, besides defendants' expenses and loss of time in attending court, and their own counsel fees, making up the pleasant sum of about \$300 for one night's fishing. The value of the fish taken was about \$10. A rather poor investment, but another illustration of the truth that "The way of the transgressor is hard." A venerable piece of documentary evidence was produced on the trial, being no other than the original patent issued by King William III., of England,

to William Nicoll, in 1697, of a tract of land some ten miles square, extending from Blue Point on the east to near the present village of Islip on the west, with the South Bay for its southern and the country road running through the middle of the island for its northern boundary. This interesting piece of parchment, with the great seal attached, is in the possession of and was produced on the trial by Mr. William Nicoll, now residing upon and still owning a considerable portion of the land granted by the Crown to his namesake and ancestor. His patent is liberally worded, and shows that the colonial gentlemen "in favor" in those days kept a good lookout for the main chance and were "learned in the law." Here are some of the things granted in addition to the land:—"Marshes, pools, ponds, lakes, fountains, waters, water courses, rivers, rivulets, runs, streams, brooks, creeks, harbors, coves, inlets, outlets, fishing, fowling, hunting, and hawking." The club was owner under this patent, and the Judge held that, although, as claimed by the defendants, in the Connetquot Creek the tide ebbed and flowed, the Crown had a right to and did grant to Nicoll and his grantees the exclusive right of fishery in these waters, and that this right belonged to the club, and had been violated by the defendants, for which they must respond in damages. The Game laws limited the recovery for exemplary damages to \$100, and it is understood that most of the jury were in favor of awarding that amount, but that one of them, who did not think that the owners of trout streams, on which they had expended thousands of dollars, had any rights which a Long Islander was bound to respect, kept his eleven stubborn fellows—cold, hungry, and uncomfortable—out for an entire night.

"The result of this trial is encouraging to gentlemen of means fond of outdoor sport with gun and rod, because they can now rest assured of protection in the enjoyment of their property, and that their fishing privileges will be respected and reserved for their own and their friends' enjoyment."

THE ENGLISH HORSE QUESTION.

READERS of FOREST AND STREAM, may have noticed, that from time to time, we have touched on the horse question in England. Notwithstanding a parliamentary committee, with Lord Rosenberry at their head, has been convened to study this particular subject, the decrease of horses in England, we were rather inclined to think that complaints were directed toward the scarcity of pleasure horses, as hacks, hunters, or carriage horses, than toward any dearth of agricultural or working animals.

From a more careful study of this important subject, we are forced to admit that the matter is a grave one, and that there are strong reasons to suppose that unless greater attention be paid to the rearing of horses in England, the consequences may be quite serious. "Some ten years ago," says an excellent authority, "a fair horse for cart, harness or saddle might be bought for £30 to £40; to-day, he is worth double the money. Any kinds of horses fit to drive in a carriage, providing they are sound, are worth to-day in London £150. If they are anything like fine or handsome, the figures for a pair will go as high as £400. It seems of all the things which have notably increased in price in England, the noble horse is now at the top of such augmented values.

Testimony of well known dealers in London, Tattessall's among them, declares that in the last ten years, the price of horses has increased more than thirty per cent., and in some cases, such as of hunters, 100 per cent. The reason assigned by the horse merchants is the growing scarcity. It has become more profitable to raise sheep and oxen than horses. One of the leading dealers in England, in reply to a question put to him by the committee said "If you told me that you would give me £400 for a pair of carriage horses that you dare put your wife behind, and give me a fortnight to get them in, I would not guarantee to buy them." It seems that to make up for the dearth of horses, foreign animals are imported, and this very strange practice is in vogue. Young English horses are sent abroad to the Continent, kept there for a certain time, and then shipped back again to England as foreign horses. This scarcity of horses includes every variety of horses, from the huge brewer's horse to the diminutive Shetland pony. Here again there comes in a peculiar quality of the horse as to his size, which is worth noticing. Under-sized animals are required to work in coal mines, in England and Scotland, and the want of such animals is a serious inconvenience. Importation of horses from Iceland have been noticed in the United States, as arriving in England, undoubtedly to be used for underground work.

Some peculiarities essentially English of a remarkable character, have apparently cramped the trade in horses. We might imagine a revolution in the United States, under similar circumstances, as it would kill the dicker and swop, the highest aspiration and birth-right of our own free born Yankees.

The law of selling or disposing of horses seems to be as follows: *Chambers' Journal* is our authority. "Any person buying or selling even a single horse is compelled to pay a horse dealer's license of £12.10." An instance is cited of a man going into an English county to buy pigs, who seeing a likely pony, and thinking he could turn an honest penny by it, he bought it, and bringing it home, made ten shillings by the sale of it. A gentleman bought the pony, exchanged him for a horse, and was immediately held liable to pay \$12. 10, a horse dealer's license.

It seems curious that particular licenses should be required for selling a horse in England when none are required by a person who disposes of a cow or ox.

The guarantee question on warranty, valid for six months, is another impediment to the horse trade. It renders a horse liable to be returned at any time. In Ireland no such extended warranty exists, nor is a license requisite.

Very interesting information was obtained by the committee in regard to the cost and management of the large London omnibus lines. Almost all the horses used, were found to be foreign animals. They are generally from five to seven years old, and cost about £34. They lasted on an average four and a half years, some fully five years, which we think if any thing is slightly below the experience of New York omnibus lines.

In a late number of the *London Field*, we saw announced that fifty horses would be sold every day for a certain number of days, these horses having been purchased by the Government some time prior, at a high cost, for the use of the army during their late summer manoeuvres. These horses were employed for army transport and artillery service, and were bred almost all of them in France. The history of the purchase of these horses was as follows: A dealer was commissioned to purchase horses in 1872, contracting for 2,000 horses, for the army, and of this number 1,500, at least, were foreign animals, bred in Normandy, and were derived strangely enough from English stock sent to France some forty years ago. They cost about £42 each. So scarce then were and are now horses of this class, that in order to procure them, should England be engaged in war, she would be obliged to provide her artillery and trains almost entirely with imported horses.

Some of the evidence given by practical cavalry officers was as follows: that if it had not been for this importation of foreign horses, there would not have been any army manoeuvres at all, and what is even stronger, Col. S. G. Jenyns stated "that if a war broke out tomorrow (in England) and you had to get 7,000 horses for the combatant branches alone, they would all be unbroken horses, and before they were really broken, the war would be over." Racing matters were thoroughly overhauled by this committee, and though we do not agree with some very strong authorities, men familiar with horses, we give their conclusions which were as follows: and they were "that the world did not want race horses. It wanted horses fit for harness, and horses to carry a good weight, and as for the army; it wanted horses that could take the field and stand fire, and that administrators of Queen's Plate appear to have lost sight of these objects." No one doubts but that England produces scores of animals which are weedy and leggy.

Certain taxes in England, discriminating between agricultural and sporting horses act too detrimentally in the raising of horses. For example, one authority states that "if a farmer allows his son to ride one of his farm horses to a hunt, the duty must be paid for it, the same as if it was a regular riding horse."

In 1872, about, 859,358 horses paid duty in England. In 1870, 7,200 horses were sent to Germany and France, in 1872 only 3,383. To-day imports far exceed exports. Last year 12,618 horses came over to England. The reason for the scarcity and high price of horses does not apparently arise as much from any marked diminution in the number of horses, raised in England, as from the increased demand. Instead of railroads having diminished the carriage of goods by horses, they seem to have increased it. In England wealth has augmented enormously, and more people ride and drive. Merchandise alone in the cities, not counting the transportation of passengers by omnibuses and cars, consumes more horse-flesh than was used perhaps in the whole of England fifty years ago. The remedy for this scarcity of horses we think lies in less legislation in regard to the whole matter, and turning more attention to the breeding of useful, instead of ornamental animals.

In the United States, the total number of horses, according to the estimate made in 1872, was 9,222,470. As to states, Indiana had the largest number, 1,049,400, and of the Eastern, Middle and Southern States, Rhode Island had the least number, some 14,700. The total value of the horses is estimated at \$684,463,957, an average price of \$74.24 per horse, the New Jersey horse being held the highest, at \$127, and the Texas horse at the lowest, some \$37. Of mules the number is estimated at 1,310,000.

From the taking of the census of 1860 up to 1872 the increase in horses, notwithstanding the enormous quantity of animals killed during the war, has been in round numbers, about 1,750,000.

To conclude this interesting subject, the question naturally arises, can we ever hope to send some of our surplus stock to England, in order to fill up the void in horses which is so apparent there. Putting aside the poorer qualities of animals, which would be worthless in England, there is no doubt but that from certain sections of this country, occasionally good horses could be procured, which might even after cost of shipment allow some small margin of profit, but while France is so near, we should think the business would at best be a precarious one.

That our working horses are improving every day at home, there is little doubt about, but as to their docility, or a thorough acquaintance with breaking them, we think we have much yet to learn from England.

—The "St. Louis Ledger" is the title of an illustrated independent journal to be published by John S. Hay for the Ledger Publishing Company, the first number of which will be issued on the 25th of this month. As this paper is to devote some portion of its space to sporting intelligence, we shall be compelled to receive it into the fraternity, and we feel, from our personal acquaintance with the manager, that he will make it worthy of the place accorded to it. St. Louis, with a half million of people ought to support one illustrated paper like this—that is if all the inhabitants take it. Terms \$5.00.

LAKE OKEECHOBEE.

SOME time this winter our Florida correspondent will revisit and thoroughly explore this almost unknown lake, and we hope then to give our readers a minute description of it and the surrounding country. Meantime we are pleased to be informed through the New York *Herald* of the discoveries made there by C. K. Allen, of St. Mary's, Florida, and four companions. The letters of our own correspondent have already brought us to within one mile of its shores, where, entangled in the cypress swamps and deserted by his Indian guide, he was persistently pushing his way through, guided by the sound of waves beating on its shore after a storm.

To reach this point he had travelled forty-five miles from Indian river, an inlet on the Atlantic coast two hundred miles south of St. Augustine, floundering through swamps and quicksands, and meeting no human habitation. Just here we take up the narrative of Mr. Allen, who reports that after encountering the like difficulties, his party finally gained the edge of a bayou which floated them to the lake; and once upon its bosom, no farther obstacles to progress were encountered.

From the first two or three miles out from the shore, they were terribly annoyed by mosquitoes and flies of various kinds, from which they could only in part protect themselves by thick veils over faces and hands. But at eight miles distance the insects were no longer troublesome. Three miles from the shore they found shallow water—five feet—and sundry low islands inhabited by immense alligators. At a distance of eighteen miles from the shore, the water became clear and bottom was found at 170 feet. Here they discovered a group of three islands; the largest about six miles long, and four miles wide. The northern portion of this island was a barren, rocky waste, which extended back from the shore nearly a mile and a half, to the base of a line of rocky cliffs, about one hundred and fifty feet high, which extended across the whole width of the island. To the south of these cliffs is a magnificent forest, composed chiefly of large mahogany, palmetto and laurel magnolia. Many of the latter trees, being in full bloom, presented an enchanting scene. This forest extends over the whole of the southern portion of the island, except to within a few hundred yards of the shore, which at every point is sandy and covered with rocks.

In the forest spiders of a gigantic species were found. One was seen which was fully two feet long. It had long and very strong looking limbs, and would have weighed three or four pounds. In its head, which was jet black, were several eyes, each surrounded by a bright yellow and scarlet circle. The body was encircled by bands of scarlet, yellow and black. Altogether the spider presented a very brilliant appearance.

Upon the largest island, north of the cliffs, the explorers were surprised to find heaps of stones, lying in such a position as to resemble ruins of some kind of structures. None of the ruins were extensive, and the structures must, therefore, have been of small dimensions. Similar ruins, if such they were, were found in great numbers upon the small island, north of this one. Upon the summit of a cliff which stands upon the eastern shore of the large island, the party found a large heap of stones lying in a semicircular form, and facing to the east.

The length of these ruins was nearly two hundred feet. In front of this semicircle, and about fifty feet from it, was a large heap of stones, nearly twenty feet square. The ruins found on the plain below, and upon the small island, were much smaller than those found upon the cliff, being only from five to ten feet square.

SALMON IN THE HUDSON.—It will be gratifying to those gentlemen who have pressed the matter of stocking the upper waters of the Hudson with salmon upon the attention of the United States Fishery Commission, through the columns of *FOREST AND STREAM*, to learn by the subjoined letter that their wishes have been cheerfully acceded to:—

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, November 11th, 1873.

EDITOR *FOREST AND STREAM*:—

I am perfectly willing to place a good lot of Sacramento salmon in the Hudson River. Seth Green has 250,000, and I will tell him to so dispose of a portion.

Very truly yours,

SPENCER W. BAIRD, Commissioner.

—Sir Samuel Baker was announced as ready to appear before the English Geographical Society sometime about the beginning of this month. It is to be regretted that on account of his illness—an inflammation of the lungs he was prevented. After Sir Samuel, as far as regards learning something about Africa goes, we think we should like to hear Lady Baker.

—We thankfully acknowledge the receipt of a valuable paper from Prof. Gill, of the Smithsonian Institute, which, together with other deferred contributions will appear in our next. Our friends are making earnest, and we think very successful endeavors, to make this paper a valuable one. We could not anticipate such generous aid.

—There is a monthly journal published in Chicago devoted exclusively to bee culture. It is called the "Bee Journal."

—The Assiniboine River is frozen over—so are parts of the Red River.

—A pair of skates for Christmas and New Year's, with a copy of *FOREST AND STREAM*, can be had by every subscriber. See advertisement.

THE SCOTCH HERRING FISHERY.

THAT gifted stonemason Hugh Miller, who was not only observant of stones and strata, but looked at men, manners, and customs—at birds, beasts, and fishes, and wrote wonderfully about them, has left us a charming narrative of the Scotch herring fishery; and his chapters are vividly recalled by hearing of the late great haul of herrings made from Ross, Argyle, and Inverness, on the coast of Scotland. The total yield this year will be no less than 700,000,000 of herrings, worth to the fishermen some \$7,500,000. It has been a year of blessing to these hardy toilers of the sea.

No light work is it to catch herrings. The Scotch coast, with all its nooks and indentations, its locks and friths, is a dangerous coast, and often precipitous cliffs overlook the sea. Squalls, driving storms, blown from the German sea, often dash the frail fishers' crafts to pieces, and many a brave and honest man is shrouded in the seething waves. Even in quiet weather there is constant danger of sudden storms, which burst on the sea without a moment's warning. A fishing fleet may quietly glide out of the harbor, the brown sails tinged with the warm color of the setting sun, and before midnight may be scurrying along under the black sky, with a howling sea behind them, their only safety lying in making some distant harbor.

The dangers of herring fishing are increased by the fact that it must be mainly prosecuted at night time, the fisherman being then forced to meet the storm in the dark. In a second a boat may be swamped, or may be driven against an iron bound coast. A brave, manly set are they, these Scotch fishermen, and accustomed to brave dangers. He has been brought up—

'Where the Northern Ocean, in vast whirls,
Boils round the naked melancholy isles
Of farthest Thule, and th' Atlantic surge
Pours in among the stormy Hebrides.'

It is now twenty-six years since one fair day, from a single village, there started out a fleet just about this season. The boats went out with a gentle breeze, nor had there been any warning of bad weather; but before morning on the coast more than one hundred of these fishermen, from a single little place, were drowned. Some of the details of this sad event are most touching. Out at sea one fisherman, when the storm had spent its force, picked up fifteen blue bonnets floating on the water, the owners of which must have all perished near the same spot.

This is the gloomy side of the fishing question; but it has a more cheerful one. When the pale grey light rises over the east and steals over the seas there is a mass of silver lying at the bottom of the fisher's boats, and as they near the shore on the shingle stand the wives and bairns, expectant of their husbands' coming. Nonchalant and possibly tired, too, is the fisherman. But up there in the cottage there is breakfast for him, and there, too, is his welcome bed, on which he stretches his tired limbs and dreams of wondrous hauls of fishes.

St. John, in his "Field Notes and Tour in the Sutherlands" says, describing the scenes of herring fishing:—"Sea birds innumerable attend on the herring boats, finding it easier to pick up the dead fish, whether whole or in pieces, which fall into the water, than to dive after the living ones. All these flocks of birds enliven the scene—some, like the gannets, dashing down from a height into calm water, and almost invariably catching a herring; others attacking and diving into shoals far down beneath the surface, while the gulls, for the most part, feed on maimed and broken fish. Every bird, too, seems to be trying to scream louder than the rest, and such a Babel-like mixture of sounds can scarcely be heard anywhere else. Altogether it is a most interesting and animated scene, and to see it in perfection it is well worth while to take the trouble of passing a night in a herring boat instead of in one's bed. In fact, I can truly assert that two nights spent many years ago in herring fishing have kept an honored place in my memory, and are looked back to as among the most amusing of my outdoor adventures."

Whence the herring comes from, and its habits, are every day better understood. Formerly, these fish were supposed to have inhabited the great Polar Basin, and that from thence issued annually as bees swarm from a hive, and that once touching the northern shores of Scotland and Sweden they went back again to their icy home. Now, it is pretty well proven that the herring never travels very far; that, for instance, those which spawn on the shores of the Baltic or on the Scotch coasts never leave those seas. This view is strengthened by the fact that the herrings on the several coasts, differing more or less in appearance and size, never intermingle much, each colony or school having its appropriate station.

We are pleased to notice that a change has come slowly, it is true, but certainly, over the Scotch fisherman. From a creature a slave to drink, whose existence was marred by the use of whiskey, whose boat loads of fish were always at the mercy of some creditor, dating from the last ten years, he has become more careful of his own health and of his means. He has now learned to save money, to keep his fishing smack in good order, to care for his garden, to improve his cottage, and he sends his children to school of week days; and when the fish do not call him to sea goes with his lads and lassies of a Sunday to the kirk on the sea cliff. To-day the pounds and shillings wrung from the stormy North Sea at the peril of his life are no longer wasted at the tipling house over rummers of usquebaugh, for he is reclaimed. Who would not wish such a fisherman, and all other fishermen, luck?

—A finished gentleman: a dead man.

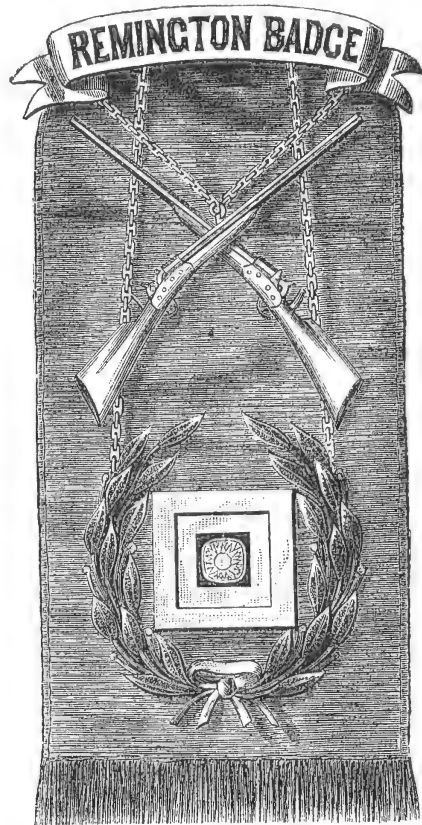

LAST RIFLE MATCH OF THE SEASON.

THE first competition for the Remington Diamond Badge for long range firing, presented by Messrs. E. Remington & Sons, took place at Creedmoor on Saturday, November 15th, under the following conditions:

Open only to members of the National Rifle Association; weapon, any breech-loader not over 10 pounds in weight, trigger not less than 3 pounds test pull; telescopic sights excluded.

Distances, 500, 800 and 1,000. Position, any. Rounds, 7 at each distance, with privilege of two sighting shots. The twenty highest scores at 500 yards alone, to compete at 800, and the ten highest at the distance, to compete at 1,000.

Entrance fee, \$1. The badge to become the personal property of any member winning it three times.

This very elegant badge, a cut of which we give, was made expressly for the Messrs. Remington & Son by Messrs. Kellogg & Decker, of No. 28 Bond street, and was designed by Mr. Decker. The badge is of Roman gold, is in fact a perfect target. The bull's eye is a single handsome diamond. The Centre and Outer are shown by delicately enamelled lines, and a laurel wreath gracefully surrounds the whole. Above it, as supporters, are two Remington rifles crossed, accurately modelled after the originals, and neatly *ciselled* in the best jeweler's art. A scroll surmounts the whole with the inscription "Remington Badge." The whole decoration is suspended by a gold chain of the finest links. The badge does credit to the good taste of the Messrs. Remington, of Mr. Alford, and to the skill of Messrs. Kellogg & Decker, the jewelers.

The day was dull and overcast, consequently at 1,000 yards a much less elevation was required than had been found necessary during practice, when the sun shone brightly, a fact which some competitors did not observe in time to redeem their scores.

The effect of light wind atmospheric pressure upon the elevation required to be given upon a rifle is one to which sufficient attention has not been paid by either rifle manufacturers or members of the National Rifle Association. The latter are rapidly finding the necessity of understanding the subject, but are hampered, however, in their efforts to improve themselves, from the fact that their rifles are not sighted in such a manner as to enable them to form any definite theories. Many of our best rifles are sold without any distance being marked upon the rear sight at all, and those that are marked are simply divided into divisions of 1,000 yards—divisions, too, which are not adapted to the conformation of the ground at Creedmoor, and the only way of moving the sight being by slipping it up and down with the fingers. This, of course, makes any change in the elevation to a great extent a matter of guess work, and prevents any accurate record being kept by the firer, without which he will always be more or less in the dark. What is wanted is a sight divided into minute divisions and sub-divisions, plainly marked by either fractions of an inch, or degrees and minutes, and the sight moving with a screw, so that it can be set as desired. It is understood that Messrs. E. Remington & Sons have decided to manufacture some improved sights for long range firing, which will be ready by spring, and it is to be hoped that they will produce something which will supply the existing deficiency.

Among the competitors at the match several had spirit levels across the barrels of their rifles, just behind the foresight. The effect of allowing the sight to deviate from the perpendicular is very great, but it would seem as if some better way could be accomplished than by a glass level, which is objectionable from its liability to fracture, as well as from the still greater fault that in using it the eye is obliged to watch more objects than can well be kept in focus. In conversation among the experts at Creedmoor yesterday, it was suggested that a small pendulum having a moveable bar with an aperture, the pendulum being hung

look after in the contemptible pot-hunters who make a practice of trapping wood duck for the New York, Boston and Portland markets. These gentry, however, are being looked after this fall by the "Forest City Shooting Club," and as the law lays a penalty of two to five dollars for each duck so taken, their profits, if detected, will hardly be large enough to induce a continuance of the business next year. This organization was formed on the 26th of June, 1871, by twelve gentlemen of this city, and after a prosperous life of two years, has at present a membership of fifty-three, and is quite well off, in a pecuniary point of view, having among its members gunners of all classes, from the fox and deer hunter of New Hampshire on one side, to the sea duck shooter of Pine Point on the other, with a medium of woodcock and snipe men, each ready and willing to give all the aid in his power to others less thoroughly posted in his particular branch. This club will no doubt be, as all sporting clubs should be, a means of doing a large amount of good to others as well as to themselves.

The club officers are at present—Charles Day, Jr., President; Jonas Hamilton, Vice President; Frank W. Smith, Secretary; Frank Merrill, Treasurer; Roscoe G. Hall, Chairman Executive Committee, any of whom would be glad to give all the information in their power with regard to shooting matters in this section to any brother sportsman.

—We beg herewith to acknowledge the receipt of a brace of canvas back ducks from our Wisconsin correspondent, Richard Valentine, Esq. The gift, we are free to say, with all deference to the giver, was the more acceptable, because it completely identified the fowl of the Koshkonong with those of the Chesapeake, the bill being a good two-and-a-half inches in length from tip to base, and not the curved stumpy bill that indicates the variety of redheads, with which the canvas back is so often confounded by inexperts. There was its glossy saffron-colored head, peaked at the top like some farm house gable, a neck of the same hue swelling gracefully at the shoulders and blending with its cape of slaty-black, its back and breast of mottled grey, and wings of the same color tipped with hues of India ink. Faith, 'twas a goodly bird, comely to look upon and luscious to the taste, and by the grace of — the cook, not spoiled in the kitchen, but rare ripe and done to that degree that the juice followed the knife! As it was served, so was it carved, *secundum artem*, each breast first gashed lengthwise and basted with the juice of a lemon squeezed from its golden rind and seasoned with Cayenne pepper and salt; and when this *sauce piquante* had imbued the whole, two longitudinal strips were cut for the ladies, while the wings with their full proportion of breast were laid upon the plates of the gallants. *En passant*, a glass of Chambertin.

The accompanying letter says: "Our duck shooting for this season closed on the first of November, when the weather came on cold and blustering, freezing Lake Koshkonong over and the river also in some places. While it lasted, the sport was very fine, Mr. Ira Bingham, of Koshkonong, alone killing over 700 canvas backs. Should like to see some of you eastern sportsmen out here, either in spring or fall."

A generous wholesouled fraternity are the western sportsmen, and their latch-string hangs always out. It is time we of the east cultivated their acquaintance more. We have no end of invitations for our readers to "go west" in the season of greatest sport, and in due time we trust the FOREST AND STREAM will become the humble medium of making the sportsmen of both sections better acquainted with each other and their favorite hunting grounds and varieties of game.

—Speaking of canvas-backs, *To-Day* has a very intelligent article from the pen of Harry Waring, from which we quote:—

"The canvas-back, the largest and gamiest of all ducks, has given Chesapeake shooting its greatest celebrity; yet there are many varieties in its spacious inlets and bays.

The red-head is scarcely inferior to its more famous congener, and they are often seen in flocks together. This duck has often been charged with the theft of the other's food, the canvas-back feeding on the celery-like roots of a long grass, a species of *valisneria*, which it secures by diving and on re-appearing at the surface, is attacked by the red-head, who easily robs it of its hard-earned spoil; for the nobler bird, exhausted by its efforts under the water, is unable to chastise the impudent forager.

The black duck, likewise highly valued by the epicure, the widgeon, teal, sheldrake, steel-head, butterball and numerous others are often pursued by the sportsman in the absence of canvas-backs, on the wise principle that 'half a loaf is better than no bread.'

A few years ago canvas-backs showed a marked decline in numbers, and their absolute slaughter from the murderous sink-boats and swivel guns led to the enactment of stringent laws for their protection. Although they are but little used at present, a brief description of the sink-boat may interest the reader.

The sink-boat or battery was a long, narrow box, about large enough to contain a man and two or three guns. It was loaded with old iron, so that it could be sunk nearly flush with the water's edge. From stem, stern and sides floating wings projected, which, rising and falling with the waves, prevented the water from rushing into the battery. The unwieldy machine was usually towed to a place on the flats where the ducks congregated, and the shooter, after loading his guns and placing them in the box, with their muzzles resting on its edge, lay down on his back in the bottom of the concern. Numerous decoys were anchored in the water around the battery, and some were even placed on its broad flats. Here, unseen by the ducks, unless they were immediately over him, and patiently gazing into the dim sky, the gunner eagerly listened for the rustling of wings or the splashes that denoted the settling of the doomed birds. Then, barely elevating his head above his prison-cell, he blazed away.

The swivel-gun, a huge blunderbuss-looking affair, se-

cured in the bow of a boat, that brought down whole flocks at a single discharge, was another invention of the sportsman's enemy. Between this and the sink-box, ducks in the Chesapeake threatened to become as rare as buffalo will soon be in Kansas; but the good effect of their partial abatement are already visible in the increasing numbers of the birds.

In order to relieve the innocent red-heads of the charge of highway robbery, preferred against them by Mr. Waring, we offer the opinion of experts that the red-heads eat only the leaves of the *valisneria*, and the canvas-backs only the roots. After the latter have dived and brought the plant to the surface, the red heads regale themselves on portions that would otherwise be wasted. This is only one of the many wonderful compensating schemes ordained by Nature.

—Boonville, Oneida County, in this State, is a good centre of operations for deer shooting. We have had the pleasure of a visit from Mr. William Bonfield, a well known hunter from this region, who says deer are plenty now in Herkimer County, some twenty-five miles from Boonville. The Hurlbut Hotel, at Boonville, is a good house, and Mr. George M. May, the proprietor, is fully prepared with horses and wagons to take sportsmen to John Brown's tract. Excellent guides can be found at Boonville, among whom are Brinkerhoff, Courteny and Barnes. Take Central Railroad to Utica, thence Utica & Black River Railroad to Boonville.

—Our friends continue to send us accounts of good bags of game made this month:—

At Blooming Grove Park, one gun, three days, a 200 lb. four pronged buck, 15 grouse, and 7 ducks.

At Summit Lake, New Jersey, three guns, two days, with a fox hound and setter, 16 ruffed grouse, 8 woodcock, 7 gray squirrels, 4 rabbits, and one red fox.

—A large party of Brooklyn gentlemen went to Pike Co., Penn., last week, to shoot ruffed grouse in the Beech Woods, they were accompanied by two brace of setters and one Clumber spaniel. It is their intention to stay a week, and we hope to have the report of their success next week.

—At Cobbs' Island, Va., there were seven sportsmen last week meeting with fair success. Very few young brant this year, geese plentiful, black duck and broadbills in immense numbers.

—At Mockhorn Island, Va., a party of six are camped there—all Baltimoreans, weather cold, clear nights, killed 22 black ducks, 18 brant and 7 geese, besides numerous bay snipe.

—At the northern end of Chincoteague, a famous place for redheads in January, a party of Philadelphians are shooting geese and brant.

—At Currituck, (old Club), there were eleven gentlemen present last week; Foster, of Shinnecock Bay, is down there with a large party superintending. There were two swans killed with rifles. Shooting, especially of black duck and geese, never was better.

—John Krider, the veteran sportsman of Philadelphia, shot a crow with a white neck at Lake Mills, Iowa, recently. We are in receipt of the following letter dated Lake Mills, Winnebago county, Iowa, November 7, 1873:—

EDITOR FOREST AND STREAM:—

I have for the last three years been hunting in Winnebago county, Iowa, and stopping at a small village by the name of Lake Mills, which is located in a large belt of timber and surrounded by lakes, where the hunting is better than I have ever seen in any other place where I have hunted. We have here in the spring and fall snipe, woodcock, field plover, curlew, morble, godwit, rail, yellow leg plover, black bellied plover, pinnated grouse, ruffed grouse, sharp tail grouse, quail, sand-hill crane, the whooping crane, snow goose, white frontell, and Canada goose, with all the ducks except the black duck. Deer are found about a mile from the house that I live in. Elk are killed about thirty miles from here, and bear also. Then we have two kinds of wolves and a variety of foxes. The furs that the trappers go for most are the otter, mink, coon, skunk, and badger. Squirrels and gophers are not hunted. We have wild pigeons and reed birds in great numbers, but no person here shoots them. So you see that our sportsmen have no occasion to go to the west for sport. If you want, you can kill a hundred chickens per day; this I know, for I saw it. But for the larger game, such as the elk, deer, etc., I don't care for it. There are hunters here that go out for the winter with a large wagon with a cover and all the traps and implements for camping. One passed through the town to-day, and don't expect to return before March. Two others started last week. I was out yesterday to see an old trapper fix his traps, something I had never seen before. He had about twelve traps, in which he got four muskrat, one mink, one badger and one skunk. The badger and skunk were alive, and it amused me to see him take them from the trap. The badger fought hard, and the skunk let him have two shots. Yours, etc.,

JOHN KRIDER.

—A bear was killed last week near Yarmouth, Nova Scotia, which weighed 513 pounds, and yielded 16½ gallons of oil.

—The sportsmen of Gorrie and Wroxeter, Canada West, killed 9,010 squirrels in a single hunt about the close of last October.

—The Germantown *Telegraph* says that bears and deer are numerous in the lowlands of Centre county just now, being driven from the mountains, probably, by scarcity of food. Panthers, also have been seen: In Clearfield county, also, four bears have been killed lately and others seen.

—A good many mink are being caught on the Upper Ottawa this fall, and old trappers prophesy a very remunerative season.

—A correspondent at Peace Dale, Rhode Island, says: "Quails are quite plentiful here, and there has been some good snipe shooting, two guns having killed 57 in one afternoon."

—An extract from a California letter, dated October 29th, says:—

"A week ago, last Saturday, I went to Novato for ducks. In the morning, just before the tide began to come in, we could see these ducks sitting out on the flats, and as the tide rose they commenced to fly in. About nine, A. M., the first ones came. They flew in numbers, varying from one to seven, and came along as fast as I could load for them. I never had birds fly better; and, although I did not get but two at a shot and think I must have lost some thirty, as but few cripples were saved, I killed eighty teal and reached the wagon at one, P. M." GEO. S. ESTEY.

—Here is a letter from five hundred miles west of the Mississippi. It makes us feel just as Adam did in the Garden of Eden, when he was surrounded by all kinds of game and had no gun:—

BISMARCK, Dacotah Territory, Nov. 8, 1873.

EDITOR FOREST AND STREAM:—

During the summer months geese, swans, brant and ducks visit this country to nest and rear their young.

After the nesting season is over they afford plenty of sport to the hunter until the small pond-holes or lakes are closed by the action of cold weather, when they migrate to more congenial climes. During the fall months we have plenty of snipe and plover, with the wild hen or prairie chicken; so you can see that we have an abundance of feathered game, and that of the rarest kind. Elk are often seen within a mile of our little town in droves of a hundred and upwards. Deer of the black-tailed species or variety, are very common, and the market is consequently well supplied with venison.

Antelope are as plenty as dogs, and they are very numerous here as well as in any other Indian country.

General Custar, who is in command at Fort A. Lincoln, directly opposite this place, has a fine pack of fox hounds, which, together with the Russian hounds, presented to him by the Grand Duke "Alexis," give an antelope no chance whatever when they once get after him.

Buffalo have not been in this immediate neighborhood for the past six years, but they are at the present writing in the vicinity of Fort Buford; and from all accounts, they are slaughtering them by the thousands for their hides alone.

It seems a pity, for it certainly will not be long until this noble beast is exterminated.

Should you, or any of your friends visit this country, would be pleased to entertain you, or them, to the best of my ability, and furnish any information in my power.

"EDGAR."

—The New Jersey Sportsmen's Club held a field day last week at Fairview, New Jersey. The unfavorable weather prevented many of the members and friends of the club from participating in the sport. The birds were more than the average quality, and the shooting excellent. The champion badge was won by Mr. G. Watson, who, shooting at twenty-five yards, killed all his birds. The handicap challenge cup was won by Mr. Kelly, he killing four birds out of five. The following is a summary of the shooting:—

First.—A tournament open to all members in good standing for the champion badge of the club. The shooting to be under the English rules. The contestants to be handicapped between twenty-five and thirty yards, to shoot at ten birds each from five traps, 1½ ounce shot, use of both barrels. Entrance fee \$5, which includes cost of birds.

I. Skidmore, 26 yards rise—1 0 1 1 0 1 1 1—8.

G. Watson, 25 yards rise—1 1 1 1 1 1 1 1—10.

W. Hughes, 30 yards rise—1 0 0 1 1 1 1 0—7.

R. Buckman, 30 yards rise—1 0 1 1 0 0 0 1—6.

A. Hughes, 25 yards rise—0 1 1 1 0 1 1 1—7.

S. Kelly, 26 yards rise—1 1 0 0 1 0 1 0—5.

J. Brightly, 27 yards rise—0 1 0 1 0 1 0 0—6.

F. Endicott, 26 yards rise—1 1 1 0 1 1 1 1—9.

J. Felker, 30 yards rise—1 1 1 1 1 1 1 0—8.

A. B. Gage, 27 yards rise—0 1 0 1 0 1 0 0—5.

Second.—Match for the handicap challenge cup, the shooting to be under the English rules; five birds from five traps; 1½ oz. shot, one barrel.

R. Buckman, 26 yards rise—1 0 0 1 0—2.

F. Endicott, 26 yards rise—1 1 0 0—2.

J. Felker, 26 yards rise—0 0 0 1 0—1.

J. Brightly, 25 yards rise—0 0 0 1 0—2.

Mr. Kelly, 25 yards rise—0 1 1 1—4.

Dr. Banks, 26 yards rise—1 1 0 0—2.

There is a party made up of members of this club to shoot quail and wild fowl in southern Virginia.

—The well-known Canadian pigeon shot, J. Ward of Toronto, has been trying his hand at sparrow shooting in England with some of the crack shots there. In a match at Oldham, near Manchester, between Ward and Hough, of Bolton, the conditions were to shoot at 50 sparrows each, use 1½ oz. of shot, stand 20 yards from the trap, the bird to have a boundary fall of 40 yards, £25 a side. The betting which was brisk, was six to four on Ward, who won a closely contested match by a score of 32 to 31. Ward also shot a match with T. Harrison of Oldham; conditions, 50 sparrows each, with 1½ oz. of shot, 18 yards rise, 40 fall, for £55, Mr. Ward staking £30 against £25 deposited by Mr. Harrison; score—Ward, 21; Harrison, 16.

—From the Dundee (Scotland) *People's Journal* of October 25th, we take the following:—

"Last week the Dundee Highland Volunteer Regiment closed their shooting season. A novel feature was that

instead of the usual bull's eye and centre, the figure of a man was painted on the regulation third-class targets, and the competitors had to fire a shot every thirty or forty yards, running in a ziz-zag direction for nearly half a mile the time allotted being five minutes, and if they hit the figure of the man it counted four, while if they hit the other part of the target it only counted two. The competition also embraced the usual target firing, seven rounds at 200, 500 and 600 yards, Wimbledon conditions and no sighting shots. The arrangements were under the charge of Capt. Don. The following were the winners:—

	Yds.	Yds.	Yds.	Skirmishing.	Grnd

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

COAST FISH.	LAKES.
Bluefish, Skipjack, Horse Mackerel, Black Bass, (Alicopterus nig and archagan.) (two species.)	Weakfish, Squetang (Trout) Otolis. Pickerel, (Esox reticulatus.)
BAYS AND ESTUARIES.	SOUTHERN WATERS.
Striped Bass, Rockfish. (Labrax lineatus.)	Trout, (Black Bass.)
Pompano.	Drum, (two species.)
Snapper.	Kingfish.
Grouper.	Sheepshead.
Rockfish.	Tailorfish.
	Sea Bass.

—We offer a line of the finest fishing rods to subscribers to FOREST AND STREAM. See advertisement.

—All questions and facts that relate to the habits of the speckled trout and black bass, *salmo fontinalis* and *grystes nigricans*, are so interesting that the subject will never become trite so long as new generations arise to learn the lessons that others have learned before them. Therefore, although much has been said in these columns, they are always open for any new light that offers. Our own opinion as to the "fly" question in bass fishing is based upon personal tests and investigations made in all our waters, from Dacotah to Florida, and cannot be changed; yet while we do not wish to appear obstinate or pedantic in asserting that opinion, we are nevertheless gratified to say that it is confirmed by all authorities accepted as competent to decide. Therefore, to ourselves, as well as to those of our readers who have taken part in the discussion, the value of the subjoined testimony from an official source, which unfortunately the writer wishes to be kept private, will be felt and acknowledged:—

EDITOR OF FOREST AND STREAM:—

Having observed an article in one of your papers of a late date under the head "Will Black Bass Take the Fly?" and as I profess to have had some experience in that regard, permit me to occupy a paragraph or two in your interesting columns in the discussion of this subject, as I may, perhaps, have it in my power to throw some little light thereupon.

Black bass will most certainly take the fly; but to a very limited extent, indeed, in the waters of the Potomac or its tributaries. This peculiarity in the habits of the Potomac bass may appear strange or paradoxical to some of your piscatorial readers; nevertheless, it is undoubtedly true, and accords not only with my own experience, but also with that of all of my angling friends with whom I have conversed upon the subject. In a letter which I addressed to the *Turf Field and Farm* newspaper a year or two since upon the subject of the bass in the Potomac, I took occasion to notice this circumstance, and to account for it upon the supposition that the bass, being a new comer in the waters in question, and finding a superabundance of food therein, such as minnows, crayfish, etc., were, in consequence, not necessitated to rise to the surface of the water in order to seek their prey; but I observe by a letter in your columns from a correspondent in Ohio, that a similar reluctance to take the fly characterizes this fish in his section, and inasmuch as the Potomac bass was originally brought (by Wm. W. W. Shriver, of Wheeling, W. Va.), from the Ohio river, I think it possible that the habit in question may prove to be universal with regard to this particular species of bass. A somewhat imaginative writer (as I think) states in one of his profound ichthyological efforts, that a large number of bass were taken with the fly near the village of Williamsport, on the Potomac. Being well acquainted in that vicinity, I made diligent inquiry upon the subject, but was unable to gather the slightest information concerning this rather remarkable exploit. After repeated efforts, I have taken but a solitary individual with the fly. This fish was captured with a Red Ibis fly in the South Branch river—a tributary of the Potomac.

In other waters, such as the lakes of Minnesota, the rivers, creeks and fresh water lagoons of Florida, I have taken the black bass with the fly in immense numbers. In Minnesota I employed the Red Ibis fly exclusively. I found a warm, cloudy day, the most propitious for this species of amusement—"a warm but not too bright a sun," as good old Walton was wont to say, when treating of the subject of fly fishing. I also preferred a gentle breeze, just sufficient to throw the surface of the water into small ripples, as tending to conceal the movements and gestures of the angler from the observation of his prey. As well as I recollect the fish rise best to the fly in that section during the months of June and July.

In Florida, also, I frequently used the Red Ibis fly, and in the absence of this I was accustomed to make my flies of the deep pink scapular feathers of the roseate Spoonbill (*Patalea ayaya*), and found them a most seductive lure. When the water was cloudy or slightly turbid, I frequently mingled some feathers of the white heron with those of the rare and beautiful birds above named, the combination answering my purpose most admirably. I sometimes also

improvised a good trolling bait by cutting off one of the pectoral fins of the bass, including a small strip of the yellowish or orange colored skin at its base.

During the "Billy Bowlegs" war in Florida, a regiment of the native volunteers co-operated with the Regulars, and I have frequently observed these natives (or "Crackers" as they were jocosely called) rig a novel and outlandish sort of a fly which they termed a "bob" made by attaching a piece of deer's tail to three hooks tied back to back, and with this contrivance they were quite successful in taking bass (or black trout, as they termed them) upon dark, cloudy days.

In conclusion, permit me to remark, somewhat irrelevantly perhaps, that of all the 'fresh water members of the family of the *Tabridae*, of which I think there are at least four species or varieties of species within the confines of the United States, the Florida bass is beyond all comparison the most worthy of the angler's notice, being a bolder biter and a much larger fish than any of his congeners that I have ever angled for.

Should this article prove acceptable, at some future time I may have something more to say concerning the black bass, as the subject seems to be at present something of a *questio rerata* among ichthyologists and scientific anglers.

—We saw a muscalonge last week at the stand of Middleton, Carman & Co., in Fulton Market. It weighed some twenty pounds. Probably it was the last one of the season. As we surveyed his beautiful proportions, his peculiar whitish complexion, and his massive and not greatly elongated head, we wondered how anglers could ever confound him with the green, alligator-headed pike. Surely those who have ever compared the two together, or eaten of their flesh, could not make this error. "An overgrown pickerel," indeed! However, if there is difficulty in classifying the muscalonge, there is equal confusion among the savans in naming him, for Agassiz and Lesuer call him *esox estor*, while Thompson and Gill insist that he is *esox nobilior*. If there be anything in a name, the latter fits him best, for in beauty of form, in game qualities, and in excellence of flesh, he stands at the head of the family; besides, he is the Goliath among them all. For some reason unexplained, unless it be by reason of his nobility, he is a rare fish. In the St. Lawrence, at the Thousand Islands, and in the Upper Mississippi, both waters celebrated for the muscalonge, one will not kill more than one of these to a hundred pickerel. Sometimes they grow to an immense size. The largest we have ever heard of is vouched for by our correspondent C. S. Clarke, who says that in 1840 he saw one at the mouth of the Calumet river, Michigan, which had just been captured in a seine, that was six feet long and weighed eighty pounds. The mouth would have admitted a man's leg; it showed a perfect *chereux de frisé* of teeth, the canines at least an inch long!

—Maine papers report the land-locked salmon as very plenty in the head waters of the St. Croix river this fall, large numbers of them being caught in the pool below the dam at the outlet. These fish are not in season now, and we call the attention of the State Fish Commissioners to this violation of the law.

—A favorite correspondent writes as follows:—

EDITOR FOREST AND STREAM:—

In your first number a correspondent asks, "Did you ever go fishing with a shot gun?" I have, and it was in this wise:

In many Western lakes and rivers may be found a peculiar fish, known to local anglers as the dogfish, mudfish, or lawyer, the latter name being probably given it from its rapacious habits. It is in general aspect something like a large chub or sucker, but has a truculent and savage expression of countenance, and devours everything it can master. Its jaws are extremely hard and long, so that a hook penetrates them with difficulty; it fights long and hard, and when caught is good for nothing, as they say in those regions, "that even the hogs won't eat dogfish." One use I found for it, however, and that was to cut a strip from its white belly to troll with for pickerel.

This fish, *Amina calva*, belongs to the order of *Ganoids*, and is in scales, fins, and the force of tail allied to the extinct fishes of an older world, and it is curious that most of these representatives of the earlier periods are found only in Western waters—the garfish, the paddlefish, and the mudfish.

Well, this disreputable branch of an old family comes in the spring into shallow waters to spawn, and one day, many years ago, being with a friend on the drowned prairies to the south of Chicago in pursuit of snipe, which we found not, we found hundreds of these dogfish on the submerged prairie, and opening fire upon them we soon had quite a number. Being hungry, we thought we would try to eat them, in spite of their evil name. So we took them to dry land, built a fire, roasted them in the ashes, and really gave them a trial. I must add that even with the sauce of hunger we found it impossible to make much of a dinner.

—Near the Little Falls of the Potomac, in an humble cabin, is now lying upon a sick bed, Josiah Payne. He is said to be in the seventy-eighth year of his age, and has been a hard-working fisherman for forty years. But more than that, he has lived the life of an honest man, and has always deserved the highest respect of his numerous friends. Our correspondent, Mr. Charles Lanman, has known and fished with Mr. Payne for twenty-five years, and several years ago embodied in an imaginary letter the leading facts and some of the experiences of his old friend's life. Among the noted anglers who fished with Payne

were Daniel Webster, 'Gen. Geo. Gibson, Governor Geo. M. Bibb, and Hon. J. F. Crampton, the British Minister. Miss Dix, the philanthropist and Miss Frederika Bremer the authoress, also visited him on one occasion.

—We have received from Mr. Albert A. Mowry, of Putnam, Ct., a very ingenious little contrivance for fishing through the ice in winter, which is quite an improvement upon the ordinary tilt or tip-up. It consists of an upright and an arm, the line passing over the end of the latter down into the water. When a fish bites, the line is cast off, the arm falls, and at the same time automatically hoists a little signal flag on the upright. We think we can readily recommend this, even without a trial.

—Mr. Mowry also sends us the following poem in praise of the bull-head or cat-fish. He calls it an "Ichthyc," which is appropriate. "Pouts as big as your feet," is classic:

"Some sing the praise of the toothsome shad,
Which maketh the heart of the epicure glad;
And say they're the best fish to be had.
Well, I'll own myself, they are not very bad.

But talk not to me of shad or trout,
Or any other kind that are hawked about;
Put on my plate, if you please, horn pout.
From the depths of Quadic, just caught out.

To be sure, the color of his skin is black,
The curved lines of beauty he too doth lack,
And horns stick out from his sides and back,
As long and sharp as a twelve ounce tack.

The skin, however, you do not eat,
But the flesh within which is white and sweet,
And cleaves from the bones so slick and neat;
Which fact alone beats the shad complete.
Especially if the pouts are as big as your feet.

Yachting and Boating.

HIGH WATER, FOR THE WEEK.

—Mr. Ashbury's steam yacht Eothen, owner in command, was off the Port of Pernambuco on the 16th of October. Mr. Ashbury is on a trip to all the navigable ports on that side of the South American Continent, and from thence to the Cape of Good Hope.

—The steamship City of Paris, which arrived at this port on November 17th, reports speaking the yacht Enchantress, N. Y. Y. C., Captain Fairchild, hence for Cowes, on the 14th inst., latitude 41 54, longitude 58 14, with loss of foretopmast.

—A party went from New Rochelle to New Haven, a few days since, in search of a stolen sloop, found it, took on board a good supply of wine, and started to return. During the night the wine vanished and a new light appeared, and taking it for Fort Schuyler, they steered for it, and kept steering for it, and the harder they steered the further the light seemed away, but they regarded the phenomenon as only an optical illusion. At length daylight came to their relief, and they found themselves in Boston harbor. Their Fort Schuyler light was a Boston steamer which they had been following all night. By taking on board a new skipper, who don't like champagne, they managed the next day to get home all right.

YALE COLLEGE, Nov. 18, 1873.

EDITOR FOREST AND STREAM:—

The fall regatta at Yale has been a success, and entire satisfaction is expressed both by spectators and contestants. We also have the pleasure of stating that both the style and effect of the rowing displayed in our late races are superior to that of past years, which is evidence that our principles are good and that they are being taken up by our college oarsmen. Our principle drawback is the scarcity of coaches, there being only one or two in the University to look after the various crews.

A new addition to the entries of this year was the appearance of the two juvenile crews from Hopkins Grammar School and Gen. Russell's Military School. Both crews pulled a plucky race, though their style was quite defective from a lack of coaching. This was the first race of the day, rowed in six-oared shells, their course being two miles with turn, the Russells winning in 14 minutes 16½ seconds—Grammar School time being 15 minutes 23½ seconds.

WESLEYAN UNIVERSITY, Middletown, Ct., Nov. 13, 1873.

EDITOR FOREST AND STREAM:—

The boating record of this college is short, having sent our first crew to the annual regatta in '72. We were represented in that regatta by a Freshmen Crew, which won the victory in 17 minutes 7 seconds. At the last annual regatta at Springfield we had a University Six, who were only two seconds behind the winning crew. The boating spirit still grows. We will have two crews at the annual regatta of '74.

Our aquatic sports ended for the season in a Scrub race on the 25th of October, between three six-oared boats. The '76 crew in gig, '75 crew, in old practice shell and the University Crew. The University were to pull 3½ miles, while the others were pulling 3 miles. The course was up by the island and return. The current was exceedingly swift, which made the great difference between the time made and that made over the same course last June. Some

mistake was made in placing the upper stake boat for the University Crew, and they were compelled to row nearly 3½ miles. '76, won the race. Time, 24m. 19sec. University second. Time, 24m. 57sec. '75 last. Time, 27m. 36 sec. We have recently purchased from Yale two six-oared shells, one double shell and two single shells. Our annual regatta next June promises to be one of interest.

SOWETH.

A single scull race for the Southworth Cup, worth \$300, was the second, there being five contestants. This was the most exciting of all, owing to the honor attached to the winning of this beautiful and valuable prize, which was won by Cook '76, in 15 minutes 29½ seconds, over a two-mile course with turn. The next struggle was the barge race, in which were four entries, viz.: '74, '75, '77 and '76 of the Scientific Department. This was a fine race, and won by '76, S. S. S., in 13 minutes 33 seconds, two miles with turn.

The last race of the day was between the six-oared shell crews of '74 and '76, which afforded a splendid opportunity to test our new stroke. The '74 crew, on a general average, was older, heavier and stronger than '76 crew.

The crew of '74 had rowed together several weeks while '76 had had only two days, and this taken up by coaching. The two boats were started, '74s taking a good lead on their superior strength; but they were gradually gained on, quietly passed and easily defeated in 19 minutes 23½ seconds, over 19 minutes 43½ seconds.

I will just add a list of all the different times of the crews:

Shell Race, Russell's and Hopkins.—Prizes,—Six badges, value, \$60.

Single Scull Race—R. J. Cook, '76, 15m. 29½s. W. C. Hall, S. S. S., '75, 15m. 18½s. A. Wilcox, '73, 15m. 33½s. W. Martin, '75, 16m. 55½s. J. A. Vernon, S. S. S., '75, 17m. 17½s.

Barge Race—Time—'74, 14m. 24½; '75, 13m. 42s.; '76, S. S. S., 13m. 33s.; '77, 14m. 36½s.

Shell Race—'74, 19m. 43½; '76, 19m. 23½s.

Prize for the single Scull Race, Southworth Cup, worth \$300.

Prizes for Barge Race, six silver goblets.

Prizes for Shell Race of '74 and '76, six gold badges.

Yours truly,

R. J. ELAY.

—Speaking of the next annual College regatta, the Amherst Student says:—

"We begin to look forward to the races of the coming year. What are the prospects of a crew? Have we men that are, or will make first-class oarsmen? And how are finances? are questions which arise in Colleges, which have, and have not sent crews to Springfield. But these questions cannot be definitely answered, until the Regatta Association has held its convention, and announced its ruling, as to who are eligible for a college crew, and determine the place where the next regatta will be held. One or more of these points are of vital importance to every College, and they are not decided until about three months before the regatta. It is reasonable to suppose that every College would like to be represented at the annual College Regatta, and that they may be well represented it is necessary to commence early, and have men training long beforehand; but no man will give up his time to exercising when it is very uncertain whether he will be allowed to row, regardless of his capabilities. Some Colleges, doubtless, could send a first-class crew, if they were allowed to select their men indiscriminately from all the under-graduate departments; but would prefer not to send any, rather than a poor one, which would be their best, picked from one department. Again ten men may have worked steadily in the gymnasium for six months, and then when the place for the regatta is fixed upon, it is so far away, that the expense of sending a crew will be too great. All trouble of this sort could easily be avoided, were the Convention held in the fall. Sometime in November, would be early enough, and by that time Colleges will know where their strength lies, and how they want matters arranged, so that everything could be settled then, as well as six months later, and it would be a great advantage in many ways. As most Colleges have a short recess in the latter part of November, a Convention could be held then, and everything within its province settled at that time. As Springfield is the most central point, it would be the best place to hold a Convention. We hope other Colleges will agree with us, that this change is desirable, and aid in carrying it into effect."

—The "Halifax Rowing Club" has just been organized at Halifax, Nova Scotia, Chas. F. Vose, President, Peter Hogan, Treasurer, Will Craigen, Secretary.

THE RED RIVER RAFT.

THERE is now a certain prospect that the great raft, which has been an obstruction in the Red River, in Louisiana, ever since the advent of white men in this country, will soon be removed, and that navigation will be opened from Shreveport, La., to Jefferson, Texas. The history of the raft and the attempts to remove it is exceedingly interesting. In 1805 the obstruction of logs reached one hundred miles. Since that time rafts have formed at various points in the river near Shreveport. One of these was removed by Captain Shreve in 1830, by the help of a Congressional appropriation, and another between 1840 and 1844, under a government contract by General Williamson. In 1851 the raft region extended only twelve miles, and at that time Captain Fuller, aided by a Congressional appropriation of \$150,000, attempted to remove it. At the end of two years, however, the appropriation had been exhausted and nothing accomplished, and the work being abandoned the obstruction began to increase. The present raft region extends thirty-five miles, from a point forty miles above Shreveport to the Arkansas State line, and contained, before the present work commenced, nearly fifty rafts, from one-eighth of a mile to a mile in length, and occupying the entire width of the river, navigation only being accomplished through the bayous around the raft, but as these were only available at very high water navigation

was insignificant. In 1871 the attention of the Engineering Department was again directed to this work, and an appropriation of \$10,000 having been made by Congress, the work of preliminary surveying was intrusted to Lieutenant Woodruff, who completed it in 1872, and submitted plans and specifications for the removal of the raft, whereupon an appropriation of \$150,000 was made. The plans were accepted, and Lieutenant Woodruff reached the raft region in January last with a snag-boat, two crane-boats, and all the requisite machinery for his work. The following description shows the difficulties to be overcome:—

Logs, roots, and snags of every description had been crowded and jammed into a tangled mass, becoming more compact each year as the pressure from above increased. Annual freshets had brought down mud and deposited it in and over this mass until in places the raft itself had become entirely covered with earth, small islands, or "tow-heads," thus being formed. Upon these tow-heads were growing trees, usually willows, three feet and more in circumference.

In addition to the removals of logs by sawing and cutting, blasting powder was used, but it did not prove of any use. Dynamite was then tried, but failed, refusing to explode even with an electrical exploder. At last nitro-glycerine was brought into use, and it never failed to do its work thoroughly. All that remains to be done now is the blowing out of some tow-heads and improving certain points in the channel, which will be accomplished in a few weeks. The obstruction of centuries will then have been removed by the skill and perseverance of Lieutenant Woodruff. The saddest part of the record of this great work is that Lieutenant Woodruff has not lived to finish it, having died of yellow fever at Shreveport October 1st.—*Chicago Tribune*.

A BUFFALO FIGHT.

THE challenger advanced from the herd to within some four feet, getting angrier and angrier as he came. Suddenly there was a crash that had in it something Homeric. One rattling onset of that kind leaves one in no doubt as to why the short stout horns of the buffaloes have a splintered appearance at the apices. Then there was a long, steady push, in which every tendon of the huge bodies of the buffaloes was strained to the utmost. Then there was a strategic easing off, then a sudden gladiatorial thrust which pressed the huge heads to the ground in an even balance of strength. Neither beast dared relax a muscle or retreat an inch, for fear of that fatal charge upon the flank, or that dangerous twist of the neck, which means defeat.

A momentary relaxation of the tremendous strain only resulted in the shaggy heads coming together again with a dull thump, and a renewal of the dogged pushing which might have moved a freight train. It was a matter of lungs and endurance, and the white froth began to drop in long, tenacious strings from their lips, and the red eyes to glare dimly through what seemed clots of blood. I could hear the labored breathing where I lay, and see the tendons stand out across the thighs and along the thick necks.

But this dead set of strength could not last always. Every moment of time was telling disastrously upon the shorter wind and decaying strength of the old crusader, who still fought for the loves of his youth. His foot slipped, and the intelligence of this slight disaster seemed to reach his antagonist quicker than a flash of light. No gladiator ever used his advantage more suddenly. There was a huge lunge, a sound of horns slipping from each other, a spring forward and the horn of the younger bull had made a raking upward stroke through his antagonist's flank. The fight now became brisk. Again and again the old one turned and tried to make the old stand of head to head, and as often his more active antagonist caught him behind the shoulder. With the red agony of defeat in his eye, and the blood trickling from the long wound in his flanks, he still refused to be conquered. With failing strength and limbs, which refused any longer to serve him, he finally stood at bay, with open mouth and hanging tongue, unable to fight and disdaining to retreat. His antagonist pushed him and he yielded doggedly. He made no attempt to shield his flank, and pitifully endured all that came. The original plan of non-interference was abandoned, and the young lords gathered around him, and snorted and shook their heads, and gave him an occasional dig in the ribs by way of expressing their contempt for him. The cows came and snuffed at him, and indulged in spiteful feminine butts and walked away. Their manner implied that they had always regarded him as a disagreeable old muf, and they were glad he finally understood their heartfelt sentiments in regard to him.

Through all this the old fellow stood unresistingly, whipped, but still obstinate. Gradually they all left him to himself, and the herd wandered further away. He did not even look around; he was probably forced at last to accept his sentence of banishment, and go and live as long as he could alone, and fight his last fight with the coyotes and die.

—The Dean of Westminster having issued a circular proposing to place a memorial window to Cowper and George Herbert in Westminster Abbey, Mr. George W. Childs, the Philadelphia publisher, asked permission to bear the whole cost of the memorial, and his offer has been accepted. "This generous proposal," says the *London Spectator*, "shows that kink of love for English literature and genius which does infinitely more than mere commercial relations to bind the two countries together; and we may at least admit that, in this case, an American has quite eclipsed English generosity, which seldom goes so far afield in search of the opportunity of appreciating kindred merit."

WHOLESALE—Swell Customer—"Ya-as, this is neat. Auh, I'm wather 'xtwavgant 'n 'umbwellahs!—never go out without one—somebody's; and never go home with one—anybody's. Ya-as. Now—ah—what do you charge for these by the gwoss?"—[*Punch*].

—When spring comes round, the croquet sets, which may be had by subscribing to the *FOREST AND STREAM*, will come into use most opportunely. See advertisement of prizes in to-day's issue.

—Men of intellect dislike fish; they prefer a meteor course.

—The forecable is the sailor's heaven, his tarry home.

Art and Drama.

REHEARSAL FOR A GRAND ITALIAN SUNDAY CONCERT.

A PEEP BEHIND THE SCENES.

CHARACTERS enter, and although the weather is exceedingly warm, they all look as if they were threatened with a chill; they seem indeed as if they had all been suddenly awakened from a sound sleep and stood in a draft of cold air. The pianist is behind time, and the basso growls in undertones—he only goes down to his lowest notes before the footlights. The mild tenor breathes forth scarcely perceptible indignation. The soprano, with a shawl over her shoulders, that half envelopes her head and the entire lower part of her face, shivers out her impatience, and then sinks into an old, worn-out easy chair and marks the passing moments impatiently with her little foot. A more dowdy second-hand, shiftless looking crowd, it would seem, never came together. At last the pianist makes his appearance. He has a piece of hard biscuit in his hand and smells of cheese. Strange as it may seem, he inspires by his *entree*, for his expectant audience enliven at once. Down goes the shawl of the soprano, her eyes brighten, she rushes up to the piano, turns over a page of music, and is congratulated graciously by the basso; compliments as light and flimsy as bits of colored paper enliven the air. Then comes a momentous silence, and the pianist strikes a chord or two, when the pianist, looking at the written music before him, discovers he is very near-sighted, and is tediously long in getting out his spectacles. Then, to the impatient protests, he can't decipher the many pencil marks "for change" that have been put upon the original score. The prima donna again assumes a languid position, supporting herself, indeed, by the assisting arm of a broken-down rocking-chair. The mild tenor arranges on the left, short plump contralto vocalizing over his shoulder; Aldermanic basso profundo, bald-headed, striding up and down beating an irregular measure with his fists, now fast, then slow, upon the various articles of furniture as he passes.

Basso, with preliminary clearing of his throat, addressing pianist with an important tone: "I shan't sing all this, it's too long. Make a few chords here, then play these bars, and join on to this (turning the page). You must play that passage by heart, and I shall pin these pages together so that you make no mistake, or else good bye to my solo. Now—begin." (All essay to sing, coming in one after the other, then—halt!)

Imperious basso (to pianist): "You must compose a prelude, so that we all begin together." (Pianist plays a few bars and ends with some chords, and all start again together).

Basso (waving his hand): "Piano—pianissimo." Soprano faintly hums her part, till becoming excited by some imaginary dramatic action suggested by the words, suddenly swells her voice to its full power, and pounds on pianist's shoulders to stimulate his speed, and rushes on with basso till the *allegro* becomes *prestissimo*. Contralto makes two or three futile efforts to chime in, and nervously clutches the arm of pianist and produces a *rallentando*, when suddenly—halt! as bang go basso's fist and feet, and perspiring copiously, he trots off to the window to ventilate his displeasure. "Can't sing, impossible (turns deprecatingly to accompanist) piano don't follow."

Soprano (soothingly): "Have a little patience. (To accompanist). Never *ritardando* till you hear us do it. Play this chord."

Pianist (remonstratingly): "But its bound."

Soprano: "No matter; we want it played."

Contralto: "I can't sing in this key (to pianist, doubtfully). You couldn't transpose this a tone lower?"

Pianist runs his eye over the music a moment and begins in another key—thum, thum, thum, etc., etc.

All: "That's it!"

Music proceeds very smoothly till tenor and contralto have a long note to sustain. Pianist keeps time well marked. Bass and soprano ecstatic, making roulades, trills and bronchial gymnastics *ad lib.*, accompanied by a mimic pantomime and prolonging their slow agony—ca-a-a, etc., when tenor and contralto simultaneously stop, breathless, and soprano's hands fall like hammers upon the back of pianist. General halt.

Basso (assaulting player): "Slower, slower; have you no ear? Listen to me."

Pianist: "Tenor cannot hold that note; I follow him. It is the principal part."

Mild Tenor: "Consider the length of that note."

"Impetuous Basso (in an undertone) "No artist. Has no heart."—(aloud) "I have sung in every opera house in the world, and always sing this so."

Soprano: "Let's try from here" (pointing).

Obstinate Tenor: "No. The more we sing it the more of a muddle we shall make of it. It will go well enough."

Basso (contemptuously): "It don't go at all."

Then commences a grand quarrel, in natural voices, the pitch being on decidedly high keys. The astonished listener is confounded with the query, how so many disagreeable and ear-rending notes can come from throats which, a few moments before, uttered sounds as solemn as the murmurings of the Norway pine in a storm, or as do the larks when they greet the morning sun. The voices are now decidedly unmusical, the piano disappears early in the contest, but the action is magnificent. The men become Salvis and the women Ristoris, when at the critical moment—the moment when blows would seem to be imminent—a waiter appears with some cheap wine and lager, the frown disap-

pears from flashing eyes, the voices mellow down into twitterings of courtesy and kindness. A nip is taken of the refreshments, compliments are passed that roll so glibly from Italian tongues. The basso and soprano lock arms, and kiss their hands to the mild tenor. The contralto and the pianist have a few confidential words, and in another instant the rehearsal for a Grand Italian Sunday Concert is at an end.

—The appearance of Miss Clara Morris at the Union Square Theatre on Monday night was of course the dramatic sensation of the moment. The "Wicked World" at the Union Square is in every particular as far removed as possible in sentiment and plot from the "wicked world" that Miss Clara Morris has been heretofore identified with on the stage. To pass from the fetid atmosphere of the "Magdalens" into the pure air of beautiful ideas and poetical diction is a change indeed, and curiosity was on tiptoe to see the result, evidenced by a most crowded house. Though the play ran in London for several weeks, it appealed to a national sentiment of the English audiences—viz., a taste for fairy tales at Christmas times—that has no response in this country. In fact, we think it almost preposterous to put a play on the stage in this city the chief characters of which are supposed to be of dream land. Our people are imaginative enough in money speculations, but never take stock in fairies. They are too skeptical and materialistic for such pettynonsense. We have no opportunity this week to treat that part of the performance which only interests us, or allude to Miss Clara Morris' ability to take a higher range of characters on the stage than has heretofore been displayed in the generally most questionable nothings in which she has appeared. What the stage wants is an actress who can portray the higher passions of the human soul—a woman who can call forth admiration by swaying the heart and firing the imagination by rendering Nature in her sublime and most serious moods. In the "Wicked World" (the name is a misnomer) Miss Morris certainly has but little of this opportunity, and we think, on the whole, the management will be disappointed in the final verdict of the public. Mr. Marston, the scenic artist, was deservedly called before the curtain. He was evidently the favorite of the evening.

—At Wallack's we have the fourth of the comedy series, the presentation being the favorite comedy of "Ours." It is quite unnecessary to say that the theatre is nightly crowded with an enthusiastic audience.

—The complimentary testimonial to William N. Griffith, which takes place at the Brooklyn Academy of Music November 21st, bids fair to be the social event of the season. Tickets are already in great demand. Mr. Ower Marlowe, whose *Captain Hawtree*, in "Caste," created such a sensation some few years ago, will make his last appearance on the stage on this occasion, he having decided to confine his efforts hereafter to reading. We trust that both Messrs. Griffith and Marlowe will be completely successful in their new vocations.

CINCINNATI, November 16th, 1873.

—At Robinson's Opera House during the week the largest possible audiences have been delighted by the Lydia Thompson Burlesque Troupe. On Monday evening the house was so full that before half-past seven the sale of tickets had to be stopped. The troupe gave on Monday, Tuesday, and Wednesday "Mephisto;" Thursday, "Robin Hood;" Friday, "Blue Beard;" matinee, Saturday, "Robin Hood;" Saturday evening, "Aladdin." They remain all next week.

—At Wood's Theatre Lawrence Barrett, the young tragedian, has not met with the reception his talents deserve. The panic seems to infuse the spirit of sadness into the people, and so they turn to something more mirthful than the tragedies of Shakespeare to cheer them. He appeared during the week in "Richelieu," "Hamlet," "Marble Heart," "David Garrick," "Home," and "Richard III." I am glad to say that he will be here all next week. W. L.

A GREAT BIBLIOPHILIST.—The late Rev. E. Goodrich Smith of Washington, D. C., formerly chief clerk of the Patent office, collected, previous to his death, one of the best private libraries in the country. It comprised upwards of fourteen thousand volumes of English, French and German works, nearly all solid and valuable, and many of them old and rare. In theology, Egyptology, and philology it was very rich. Three thousand of these choice volumes have passed into the possession of the Harvard University. Yale University School has received the bequest of two thousand excellent theological works. Six hundred of the rarer class of works on general subjects will probably be sold to the library of Congress. Among the collection were many books of famous anglers—Isaac Walton, Cotton, Bethune, etc.

The Canadian Government have sent a steamer to supply the wants of the destitute colonists at Anticosti Island, some four hundred souls in all.

—All the goods offered as prizes by the FOREST AND STREAM are of the finest quality. The Panic has allowed us to secure the best grades of goods. See advertisement as to prizes, skates, rifles, cricket, archery, books, engravings, fishing rods, &c.

The long evenings are now coming, and the children should have good games to help pass them pleasantly. *Avilude*, with its birds and their descriptions, is the best ever published. Sold by all booksellers and toy dealers, or sent post paid, on receipt of seventy-five cents, by West & Lee, Worcester, Mass.
"From its meritorious character deserves the widest circulation."—*Banner of Light*.

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

BOOKS.

MANUAL FOR RIFLE PRACTICE; Including a Complete Guide to Instruction in the Use and Care of the Modern Breech Loader. By George W. Wingate. With diagrams and illustrations. New York: W. C. & F. P. Church. 1873. Second Edition.

This most excellent work is fortunate in having for its compiler Capt. Wingate, who, as secretary of the National Rifle Association, and as one of the original founders of Creedmoor, not only thoroughly understands the theory of the rifle, but happens to be at the same time one of the best of its practical exponents, as may be readily seen from the accounts of the Creedmoor matches, published by the FOREST AND STREAM, where the author's name is always to be found among the best of our marksmen. The book has a double end in view of not only teaching the rifleman the theoretical reasons for every step taken, but to show him in the simplest language how to practically carry such lessons as are given in the Manual, into use on the rifle range. A great many people desirous of being proficient in any manly exercise, are exceedingly dubious as to their faculty of acquiring any small amount of skill from reading books. "How to learn French without a master," involving the purchase of a book, may perhaps give some very slight smattering of the true Parisian accent; but "How to learn to swim or fence without a master," very naturally causes people to be quite sceptical, even after the most diligent course of study as to their capabilities of taking to the water or handling a foil. Rifle shooting is however an art which combines intimately both theory and practice, and it is surprising how little of each is requisite to convert a "muff," a person who never could even touch a barn door with a bullet, into quite a fair marksman. How and where to get exactly such instruction is to be found then in this manual. From actual experience, Mr. Wingate having taught many of the National Guards how to shoot, he is enabled to impart information in the most thorough and natural manner. As we are constantly in receipt of letters from correspondents not only in regard to the absolute manual of the rifle, but as to the proper laying out of rifle ranges, with questions as to construction of butts, &c., and as all these subjects are treated in an exhaustive way by Captain Wingate, we know of no better book to recommend than this Manual of Rifle Practice. It is not to be supposed that the book under review is entirely devoted to the instruction of the soldier. It will be found of practical use to every sportsman and marksman. Questions of trajectory, theories of projectiles, sighting, judgment of distances, effects of wind, suggestions to marksmen, and all information as to how a rifle range is to be built, are given by Captain Wingate. Of no less importance are the full details in regard to the cautionary measures to be used on a range to prevent accidents, found in the manual. Within a small and handy volume, the author has happily condensed all that a marksman wants to know in regard to breech loading rifles and rifle practice.

HESTER MORLEY'S PROMISE. By Hesbia Stretton, author of the "Doctor's Dilemma," &c. New York: Dodd & Mead.

As a work of fiction, this romance will be approved for its elevated tone and lack of the sensational element that makes the entire capital in so many novels of the day. The scenes of the story as they pass under our eye, with their varying lights and shades, are true and invigorating. We like the ending of the book much better than its beginning. Bitter experiences are often but the pathway to a better and brighter life. The work is a healthy and commendable addition to the light reading of the day.

THE LITTLE CAMP ON EAGLE HILL. By the author of "Wide Wide World." New York: Robert Carter & Bro.

This is one of quite a number of interesting serial tales for our young folks, and so pleasantly is it written, so cleverly is the story told, that even our "older folks" may derive instruction and amusement from its pages. It is not a dry, prosy story, but one of every day life, in which is clearly shown that for all who have the will to do good, to even the young children around them, there is an open way provided. We wish most heartily that the world had more men after the style of Mr. Murray, whose trip to Eagle Hill will be read with great pleasure by all.

FLAMMARION'S ATMOSPHERE; The Atmosphere. Translated from the French of Camille Flammarion. Edited by James Glaisher, F. R. S., Superintendent of the Magnetical and Meteorological Department of the Royal Observatory at Greenwich. With 86 wood cuts and 10 chromo-lithographs. \$8; cloth, \$6. New York: Harper & Bros.

In this superb work one can scarcely imagine how so much of the artistic beauty of illustration can be done at a cost so comparatively low as the price of this book. Thanks to the Messrs. Harper for the introduction of such artistic illustrations as those setting forth the grandeur and beauty of the "Aurora Borealis," "The Halo," "The Rainbow," and "The Storm." These pictures are truly superb, and fit to grace an album upon any centre table in the land. This English edition is, we think, not only an improvement upon the matter of the original French, but in point of execution superior.

GOING SOUTH FOR THE WINTER, With Hints to Consumptives. By Robert F. Speir, M. D. Illustrated. Third Edition. New York: Edward O. Jenkins. 1873.

Dr. Speir has made a readable book on this most interesting subject. It is sad to think that consumptives must have a literature of their own, but since, as the author states, fully twenty thousand invalids seek that section of the country south of Richmond, "Going South for the Winter" will doubtless prove interesting to many. Dr. Speir, in the introductory portion of his book, gives the various causes of lung diseases, as arising from bad ventilation, from dissipation, from want of exercise, from over toil, and, especially among women, from tight lacing. He tells of a woman now the occupant of a lunatic asylum the result of having worn too tight stays, and the rather cynical remark made by some one "that all women who lace tightly are insane, and the only difference in this case was that this woman was found out." "Going South" tells of all the various routes to be taken to reach Charleston, Aiken, Augusta, Savannah, and the various towns in Florida most beneficial to invalids. The hotels are mentioned and the various charges made for lodging. The different thermometrical changes in various places are noted, and the book contains many useful hints as to the diet, clothing, and treatment of those suffering from Pulmonic complaints. The book concludes with a brief account of other sanitary points, such as Honolulu, Lisbon, Naples, Nice, Madeira, Havana, &c.

SUB-TROPICAL RAMBLES; By Nicholas Pike. New York: Harper & Bro.

This book, aside from the pleasant narrative, story-telling style in which it is written, is one of more than usual attractiveness, and may truly be called a valuable acquisition to the literature of the times. We find ourselves transported (without any inconvenience) to the island of Mauritius, where the author was for a time resident United States consul. He made good use of his eyes and his pen while there, and gives us the best description of an island little known to the aggregate of American readers. In this cleverly written work, Mr. Pike has placed all of much interest to his readers before them in a full report of its topography, climate, products, society and customs. Several chapters upon the great cyclone of 1868 will be found interesting, especially to the scientific reader. The author also tells us all about the mysteries and curious festivals of the Chinese, Hindoos, and a description of a wedding among the Malabar Indians. This work contains handsome illustrations, and is a credit to the author. It is issued in the publisher's usual tasteful style.

NINA'S ATONEMENT, and Other Stories: By Christian Reid, Author of "Morton House," "Valerie Aylmer," &c.; with illustrations. New York: D. Appleton & Co.

The leading story, Nina's Atonement, is a quite interesting, and somewhat sensational story, one that carries with it quite an interest of the kind found in some of the old-fashioned novels by Charles Brockden Brown. It was written to illustrate the often fatal folly of giving way to indecision. Had Nina felt the full force of her mental reasoning, (see page 23,) she never would have realized the fearful epitome of her character, as it afterwards appears. Everything would have been better or worse. As it was she succumbed to a temptation which a nobler nature would have resisted, while she stood firm where a more selfish nature would have given way, and walked over all obstacles to its end. It was she who learned that to pause midway between good and evil, to strive to reconcile honor and dishonor, truth and falsehood, is the most hopeless problem that a human soul can possibly attempt to solve.

MIND AND BODY: Theories of their Relation: by Alexander Bain, L. D., Professor of Logic, &c., University of Aberdeen, N. Y.: D. Appleton & Co.

We have read no work of the class of thought to which this book belongs that has interested us more than this discussion of the connection of mind and body. The consideration and study of the laws that govern the physical and intellectual man, as seen through the operation of the mind, complex and metaphysical from their very nature, are made very plain and comprehensive to ordinary readers, and so handled that they deeply interest every reader. The chapter treating of the soul, the immortal, the everlasting part of man, together with the theories of past ages, will be found by no means a dry study. The thoughts entertained by great minds and philosophers of different schools from time to time are clearly set forth by Dr. Bain. We commend this work as deserving the candid perusal of those persons who are sceptically inclined, as one of the aids to reflection in which they will find a steady and bright light upon a dark subject, and we doubt not that much good will be derived from Dr. Bain's valuable work upon Mind and Body.

PICTURESQUE NORMANDY: By Henry Blackburn. Boston: James R. Osgood & Co.

This is truly a gem of the first water. It comes to us in beautiful style, both as to typography and illustration, just the thing for a present to a friend. The rambles are pleasantly related; the scenes through which our author passed unfold themselves from the pages of this work like the unrolling of a panorama of beauty and life. We hold a pleasant half hour chat with the painter; we hob-nob the architect. We are well pleased with all the places we visit in company with Mr. Blackburn; Lisieux, Caen, Bayeux, Arranches, St. Lo, Rouens, and other places. Here they pass before us in the very best style of graphic pen-painting. Although not intended as a guide book, yet there is no better work the traveler who intends to visit picturesque Normandy can put in his pocket than the one we now so cordially recommend to his attention. The value of this book is much enhanced in its excellent illustrations. It will be a charming and beautiful addition to any library.

OUR COMMON INSECTS: A Popular Account of the Insects of our Fields, Forests, Gardens and Houses. By A. S. Packard, Jr.: Salem: Naturalists' Agency.

This will be found a very useful guide to all in any way interested in the Horticultural world. The battle of the amateur fruit grower, the lady cultist of the rose, the beauties of the garden, the flowers of the streamlet, in short all who love and cultivate the beautiful either of fruits or flowers, is with the bugs. All such will buy this neat and useful book, published by the Naturalists' Agency of Salem. It is graphically illustrated with four plates and 268 wood cuts, showing these little winged and creeping rascals with their well furnished workshop of cutting and boring tools, and the way they use the same to our vexation and loss of fine fruit, clearly shown. The price of this book is very low compared with the great amount of sound, practical, tried, experimental knowledge it contains.

WHITE ROSE AND RED. A Love Story: By the author of "St. Abe." Boston: James R. Osgood & Co.: pp. 342. Price \$2.50.

This is a continued story or narrative of more than four thousand lines, which strongly reminds one of Longfellow's "Hiawatha," but is, nevertheless, dissimilar. The writer has chosen a peculiar subject for his muse, not, we think, very successfully. While we sometimes find a lack of refinement, or a little of what others would call "a coarseness" of expression, it is, perhaps, a "rough humor" that the reader will tolerate in a work of its kind. There are many passages of clever humor, and many spicy personalities peeping out of well-sketched characters. The story is commonplace. The scene is laid in a Maine forest, in which the woodman first meets his dusky maid. His amours with his "Red Rose," of whom he soon tires, give place to another attachment. Being smitten with the charms of "White Rose," he forsakes his first love forever. These adventures he puts into a somewhat easy and flowing rhyme. This work, though not of great literary merit, will, nevertheless, find many readers.

SHE SPOKE OF HIM. Being the recollections of the loving labors and early death of the late Mrs. Henry Denning. By her friend Mrs. Grattan Guinness. New York: Robert Carter & Bros.

Under the quaint and striking title of "She Spoke of Him," we have a very well written and interesting religious memoir of a young and gifted English lady whose success as a missionary preacher of the Gospel and teacher accomplished much good. Ever ready to give a good word to the poor and down-trodden of earth, she always found her life-work planned and marked out for her. These recollections are the records of a lovely character, in which all missionary laborers, particularly ladies, will find much to comfort them by the way in their labors for the good of their fellowmen. A perusal of this interesting book of recollections will give the reader some entirely new ideas upon the subject of woman's rights, which is still an "open question."

GEOLOGICAL STORIES. By J. E. Taylor. New York: G. P. Putnam's Sons.

We have often felt the want of such a work for young students and others interested in the study of the geological composition of rocks and the stratas of which the earth is composed. When we began the study of a piece of quartz, it was a study indeed, and if any study could be called "dry," this was to us the perfection of the term. Then we were told to "get a hammer, bag and chisel" and go out and fill the bag with bits of stone chips, &c. This study was without help, yet it was thorough. We never heard of such an autobiography as "The Story of a Piece of Granite," or "The Story of a Piece of Quartz." These stories are replete with the same kind of information we worked so hard to acquire. This pleasant and humorous instructor, while it enlivens by the way, imparts the same rich scientific truths which we and many others labored so hard to acquire. We recommend to all who love geology to become the possessor at once of this little work.

IN PRESS.

Robert Dale Owen's Autobiography, entitled "Threading My Way," which G. W. Carleton & Co. have in press, will be particularly rich in reminiscences of General Lafayette, Mrs. Percy Bysshe Shelley, "Slave-Trade" Clarkson, "L. E. L.," and other celebrities of a half century past.

James Parton has recently prepared a brief life of the late Mrs. Parton (Fanny Fern) which G. W. Carleton & Co. will shortly publish as a memorial volume of Fanny Fern, with selections from her best writings. Illustrated by Arthur Lumley.

The Fishing Tourist, Angler's Guide and
Reference Book.

BY CHARLES HALLOCK,

Secretary of the "Blooming-Grove Park Association

ILLUSTRATIONS, CROWN 8VO., CLOTH \$2.00.

Mr. Charles Hallock is one of the few gentlemen who
write a book mainly for the reason that they have some-
thing to write about—have something to tell the public
which the public desires to know. The shortest routes
to pleasure are laid down, and correct information is
given as to the best means of conveyance, the expense
of the trip, the secrets of the commissariat, etc. The
author has avoided the use of technical terms, and thus
made his volume all the more acceptable.—*Turf, Field
and Farm.*

II.**Prime's I Go A Fishing.**

I Go A Fishing, by W. C. PRIME, author of "Boa
Life in Egypt," "Tent Life in the Holy Land," etc.

CROWN 8VO, CLOTH, BEVELED EDGES, \$2.00

It abounds in pleasant episodes, charming and vig-
orous descriptions of scenery and character, is distin-
guished by a refined wit, a droll humor, a strong love
of the beauties of nature, and an enthusiastic devotion
to the piscatorial sport. This book will please all who
admire heartiness of style and exuberance of animal
spirits in their authors. There are some interesting
and well-told stories scattered through the volume,
which exhibits on almost every page the handiwork of
a man of graceful culture and wide reading.—*Boston
Daily Globe.*

Published by Harper & Bros., N. Y.

Remitting Money. Checks on New York City Banks or Bankers are best for large sums; make payable to order of the FOREST AND STREAM PUBLISHING COMPANY, 103 FULTON STREET, NEW YORK. Post Office Money Orders for \$50 or less, are cheap and safe also. When these are not obtainable, register letters, affixing stamps for postage and registry; put in the money, and seal the letter in the presence of the postmaster, and take his receipt for it. Money sent in the above three methods is safe against loss.

FOREST AND STREAM,

IS A WEEKLY JOURNAL,

DEVOTED TO

Field and Aquatic Sports,

Practical Natural History,

Fish Culture,

THE PROTECTION OF GAME, THE PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN

OUTDOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Co.,

103 Fulton Street, New York.

TERMS, FIVE DOLLARS A YEAR,

STRICTLY IN ADVANCE.

The FOREST AND STREAM is a paper which can be read in the family.

It can be read by the ladies and children.

We count many principals of schools as among our contributors.

It will inculcate a love of manly sports with naturalistic study, and has for correspondents and contributors some of the most distinguished naturalists in the United States. Where to find game in any part of the United States makes it the medium of the sportsman.

Every description of game or amusement which is in vogue among respectable people, and of value as a health-giving recreation, is practically encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by those whose instincts are but a grade higher than the creatures they train to amuse them, will find a place in its columns.

Each number contains a paper descriptive of some particular fish, animal, or bird. The FOREST AND STREAM can occupy a place in any gentleman or lady's drawing room, and in the school room, and not be out of place.

Subscriptions will only commence from the date of the receipt of the money. If subscribers desire back numbers we will endeavor to send them, but do not engage to.

There never was offered a better opportunity for

Christmas or New Year Presents.

OPINIONS OF THE PRESS.

The FOREST AND STREAM is a model of typographical neatness, and its contents are sufficiently varied and interesting to secure for the paper a cordial reception from that class of the public to whose taste it caters.—[New York Times.

It is a handsome sheet of sixteen large pages, and is filled with a variety of very interesting reading matter.—[New York Sun.

There is need for a new advocate to make the American people more in love with outdoor life, and FOREST AND STREAM promises to do the work admirably. The various departments are edited with knowledge and skill.—[New York Journal of Commerce.

It is tastefully arranged and handsomely printed, and seems to be well adapted to persons of cultivated tastes.—[New York Tribune.

REMINGTON'S Sporting, Hunting and Target Breech-Loading RIFLES & SHOT GUNS

Long Range Match Rifles for "Creedmoor" Shooting, now ready. The same as won the "Turf, Field and Farm" Badge, Aug. 2, and "Amateur Rifle Club" Badge, Aug. 9. See reports. Unequalled for accuracy by either Breech or Muzzle-Loaders of other makers.

For simplicity of mechanism, ease of manipulation, quality of workmanship and material, accuracy of range, and penetration, WITHOUT COMPARISON.

It is a noteworthy fact that though many different kinds of rifles were used in the several matches, including the converted Springfield, Remington, Metford, Ballard and Ward Burton Rifle, every prize in all the matches was won by those who fired with the Remington rifle, except the last.—From N. Y. Times, June 22, 1873.—(See full report.)

The Remington Rifle won Twenty-two out of Twenty-three Prizes at the Creedmoor Meeting, June 21, 1873.

Also, Revolving, Repeating, Deringer, and Vest Pocket

PISTOL & RIFLE CANE.

Double Barrel Breech Loading Gun

IS NOW READY.
The best ever offered, containing all the most desirable features of the best imported, together with some valuable improvements peculiar only to this gun. Top Snap action, half-cocked, breech opened and shells extracted by one motion.

"GOING SOUTH FOR THE WINTER."

HOW TO GO AND WHERE TO GO.

HINTS TO INVALIDS.

BY ROBERT F. SPEIR, M. D.

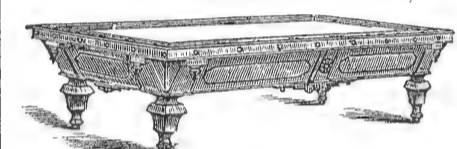

THIRD EDITION NOW READY.

This book is interesting and instructive reading for all invalids, being the experience of a physician in search of a mild winter climate, and giving a description of all points in the South, the humidity, density and dryness of the air, and such other peculiarities of atmosphere as might prove beneficial or otherwise to persons suffering from pulmonary complaints.

The book is finely printed, fully illustrated, and handsomely bound.

THE INN.

THE queer, old-fashioned Inn stood on the heath,
Nine bowshots from the peak-roofed country town;
Steeds halted at its door to gather breath,
Before the sheer rush for the Southron down.
In front, reposed the long neglected pond—
Fissured with mosses—green with stagnant weed—
Around, were old-world flotsam, and beyond
One loop of river, crystal as a bead.
It was deep summer, and the simmering heat
On stile, and stone, and tree, and hostler beat,
But the night gathered, and the air grew sweet.

Sweet, and of summer music redolent;
There piped the blackbird on the bush behind
The parlor lattice, with throat sideways bent,
Whilst imaging his shadow on the blind;
A red-cheeked damsel sang unto her kine
A fireside song in the extremest tone
Of sadness; then the distant clock struck nine,
A lusty horn, at intervals, was blown.
"From London!" went the cry, "the Mail! the Mail!"
And in it dashed—four beasts with foam-flecks pale,
And ribbons knotted around ear and tail.

Booted, and pistoled to the very teeth,
The scarlet guards with ringing heels leaped down,
A glow of pleasantries half hid beneath
The purport of his grave, official frown.
Where had he learned to swear? The roads were vile,
The times atrocious; empires cried for sale;
Yet grief was tempered in the side-long smile
Which hailed the landlord and the proffered ale.
"There"—and his hand convulsively would clench—
"Whether within the dock, or on the bench,
God save old England, and confound the French."

So passed; a smoking cloud of dust alone
Betrayed his passage, leaning to the west.
The Inn, its peace a moment overthrown,
Relapsed again into its dreamy rest.
I heard the landlord's daughter—rooms away—
Fingering the ancient harpsichord;
In tangled cadences I read the lay;
"A Devon maiden dared to love a lord;
And she proved true, but he proved false! Ah, me!"
There was an instant shift of voice and key,
Shut instrument, and wildering hush for me.

The ancient bed with rusted damask hung,
The stern brown pictures in the candle-light,
The coiled canary at the window swung,
O'erpowered me with a weird, fantastic fright.
Low moans came from the panels in the dusk,
And rustling garments trailed along the floor,
The scentless vases breathed anew of musk,
And some one whispered through the oaken door.
'Twas midnight, and from stall and shed below,
The cocks, with outstretched necks, began to crow,
And then, again the bells chimed sweet and slow.

Most ghostlike room—white bed, the couch of peace,
With lavender between the linen set—
Quaint sill, whereon, to charm them to increase,
Full in the moon, stands pots of mignonette;
To-night I am your lord; sheer cleaves the spire
Above the lightless streets; no soul's abroad:
Over the houses, meadow, croft, and byre,
Brood silence and the quietude of God;
And so till morning, hour succeeding hour,
Timed by the sleepless watcher in the tower,
Till sunrise in the east once more shall flower.

—Chambers' Journal.

—The Florida pecan nut is a profitable one for cultivation. For instance, ten acres could well sustain 210 trees, which would yield the seventh year about 300 bushels, making over \$2,000 from ten acres. That is nearly equal to an orange grove.

—A number of rabbit establishments have been started in London. The scarcity of animal food creates the demand.

—Mr. Allen, of Texas, a thrifty farmer, owns five thousand square miles of land in that State, and one hundred and twenty thousand cattle.

—Slow matches are unlike matrimonial ones; they are aided in going off by a re-fusal.

—A vane bird is the "weathercock;" yes, vainer than a peacock.

Wild Life in Florida.

SHOOTING AT SALT LAKE.

NUMBER FOUR.

NOMINALLY three miles in length by two in breadth, this little lake is reduced to half that area in the low stages of water, thus accounting for the landing of the steamer in a creek a mile or more away. A vast plain of waving reeds and salt grass surrounds the lake on three sides; on the eastern, the pine woods come down to the shore, offering the only landing. Having boats of our own we succeeded in evading the extortionate charges of the lightermen, and pitched our tent in the pine barrens, a mile from the lake.

The morning after our arrival I sallied out to taste the pleasures my observations the day previous had prepared me for. The breezy freshness of that morning comes to me now as I write, laden with the odor of flowers and the songs of birds. The quail called from an old field in the hammock; the woodpecker rattled joyously over the pines, and that odd bird, the fish crow, "haw-hawed" from the broad-limbed, moss-draped live-oaks. As I reached the shore, I caused a flutter in the vast swarm of *tringe* feeding there, and provoked the "killdeer," that pest of the shore, to send forth a warning cry. Overhead, the graceful seamews winged their way, anon dipping into the water for food. The fishhawk drew from the lake a mighty bass, but hushed his exultant screams, and fled in sudden terror before the piratical attack of the eagle. Ranged along the shore were the various representatives of the heron family, from the watchful great blue to the wary and graceful snowy heron. Starting up the busy multitude upon the shore, I let fly a single barrel at them, picking up near thirty birds, yellow legs, killdeer, and red breasted snipe. Then, (for I wasn't bloodthirsty at all, and cared more for variety than quantity,) I deposited my birds in a place of safety, and cautiously waded through the long matted grass, the abode of moccasin snakes, to a space swept clean by fire. Scarcely had my feet touched its border, when my ear was delighted with the sound welcome to all sportsmen, "scaip, scaip," denoting the presence of genuine snipe. From every side, before, behind, came that welcome "scaip," as the birds arose at my approach, or at the report of my gun. Wisps of them would launch into the air, whence after a few fantastic evolutions they would return to earth again. I frequently got double shots, and might have loaded myself, but as there was no one near to share the sport, and future wants might need supply here, I drew off early, depositing my booty with their cousins of the shore. This was sufficient for the small birds, and launching my boat and running out from the little creek, I made an onslaught on a flock of coots, (for coots' breasts and drumsticks are good, well broiled,) and then skirted a broad bay, where were feeding large flocks of pin-tail ducks, teal, and scattered groups of black ducks. Without inflicting upon the reader a detailed account of the approach, through blind ponds, and within shot of countless hundreds of busy plover and snipe, I will add that there shortly reposed a goodly pile of well favored ducks in the bottom of my boat.

It was now near noon, and while munching my frugal lunch, I cast about me for some larger game more worthy of my labor. Running my eye along the shore, I saw wherever a sandy reach stood out from the reedy margin, dozens of long, black objects stretched motionless upon the snowy sand. These were alligators which the sun had called from the depths of the lake to enjoy his beams in the open air. There were all sorts and sizes, from the little snapper, a foot long, to the old bull alligator of a dozen feet in length, patriarch of a large tribe. Softly paddling my boat up a crooked creek, I watched the "gators" as they slipped off the banks into the water, where they would remain an instant watching me, then disappear. Soon came my opportunity; rounding a sharp curve, I discovered a nine-footer, fast asleep, with mouth wide open. The vulnerable parts of the alligator are the eye, ear, and the heart,

reached by placing a shot behind the fore leg. This I well knew, but just as I sighted his ear, a snake slipping into the water, distracted my attention a trifle, and the bulk of the charge was placed too far behind. It seemed to be effectual, however, and running my boat alongside, I essayed to roll him in. As his paws were working convulsively, affording no hold, I stuck my bowie knife full into his eye to facilitate operations. This seemed to have an enlivening effect, for he at once commenced a series of gymnastic evolutions that would have struck terror to the heart of Dio Lewis himself. Finding that he was retreating toward the creek, carrying my eighteen inch bowie with him, I seized my gun and stretched him upon his back with quivering paws. Then rolling him into the boat, I soon had him at the landing. As the best time to skin an alligator is while he is warm, and some say kicking, I skinned him at once. Cutting a slit down the back of each paw, and running a continuous line from the under jaw to the tail, just below the bony mail, on each side, I removed the skin easily by pulling from the tail toward the head.

Observing an alligator on my way back seemingly two feet longer than the one secured, I determined to capture him. Rowing cautiously along shore, I at length espied him crawling under water toward a narrow though deep creek. Getting between him and the object he was aiming for, I stopped him, and he finally seemed convinced that the best thing he could do was to lie still. I fancied I could discern a sinister gleam in his eye, that boded evil in case we came in contact. Placing my gun across the thwarts, and pushing carefully toward him, I held myself in readiness for attack at any moment. But he seemed to fancy himself so secure with the slight covering of water over him that the boat almost grazed his side before I had sent the contents of one barrel of my gun into his ear. Contrary to my expectations he lay motionless, and instead of shooting the boat out of reach of his tail, as I was prepared to do, I lay alongside, and passed over his head a noose of stout line preparatory to towing him ashore. No sooner did he feel the line tightening about his throat than he concluded to come to life again, and after a few preliminary kicks and flourishes, proceeded to roll over and over, much to my grief and discomfiture. With strange shortsightedness I had omitted to cast off the line from the bow of the boat, and now that the 'gator was winding it about him with the rapidity of a patent windlass, I suddenly thought of it; but 'twas too late. Bracing myself against the rail of the boat, I held on till my arms seemed about to bid me good bye, and the sides of the boat cracked again and again. Then he stopped, but just as I had dropped the line and started for my gun, he commenced again. This time he untwisted what he had twisted before, and commenced twisting in another direction, and when he had drawn out the last available inch, and I was thinking sadly what a good boat this used to be, and whether my friends would find me before dark, he stopped again. In gratitude for this action on his part I ought to have cut the line and let him go; but no, my blood was up, and I determined to conquer at all hazards. Carefully drawing the gun toward me, I opened a ragged hole in the top of his skull in such short metre that he hadn't time to tighten up on the rope. Then after resting and reloading, I attempted to roll him into the boat. This time he was as dead as it is possible for 'gator to be, I knew; but when, just as I had him poised on the rail, he made a fearful lunge and came down in the boat where I had wanted him, I was astonished. I was so astonished that I immediately jumped out on the other side where the water was leg deep in order to get a better view. When I had looked at him to my satisfaction, I didn't get in. Oh, no. That boat was only built for one; two crowded. Though his head seemed as inanimate as a log of wood, his tail seemed charged with concentrated lightning. A little wriggle and the thwarts would fly in all directions. A short, sharp rap and the boat seemed to crack from stem to stern. If a dead alligator acted thusly, how would one in the "full vigor of early manhood" act? I began to fear I had "missed my calling;" that alligator shooting was not my forte. The more I thought it over, the stronger was my

conviction. By rapid calculation, the boat would go to pieces in just eighty seconds. Then where, oh, where would I be?

It was half a mile to the landing, and deep creeks and bays intervening. My friends were all hunting further east. Seeing just then that he had stopped wriggling, I ventured to get into the boat. I have an impression that I didn't make much noise; and I also have an impression that I made that half a mile in tolerably quick time, and the perspiration that streamed down my face wasn't altogether caused by the heat.

Gathering my birds together, I returned to camp to find my friends engaged in skinning a deer they had just shot, and planning an excursion to a neighboring lake for heron. Notwithstanding my weariness, after placing a pound or two of venison and slap-jacks where they would benefit me most, I was ready, and launched upon the lake just as the sun went down. Having a trolling spoon, I drew forth from their retreat several broad tailed black bass with mouths like steel traps and possessed of the strength of young alligators. After an hour's rowing and wading, we burst through the cane-brake and emerged into a little lake, upon one side of which was a long low willow island, from which scores of herons silently flew away. Concealing ourselves, we waited. Soon they came; by dozens and fifties the immaculate and glossy plumaged birds approached. Then the firing commenced, and continued till each one was satisfied and ready to return. Emerging from the canes, and rowing across the lake we returned to camp laden with birds nearly as large as ourselves. In the soft moonlight we looked strange and ghost-like with our burdens of white. Leaving the preparation of the birds till the morrow, we kicked together the embers, arranged afresh the light-wood knots, and soon had a delicious aroma of coffee and venison enveloping us. Then to our beds of pine boughs, to sleep as only tired hunters can. Such was a representative day at Salt Lake; one of many with varied scenes and incidents.

FRED. BEVERLY.

WILD TURKEY SHOOTING.

HANNIBAL, Missouri, November, 1873.

EDITOR FOREST AND STREAM:—

In answer to your request for an account of a hunt after wild turkeys, allow me to jot dot the results of a day's sport. My usual mode of hunting the turkey is by stalking, while there is a good tracking snow. Many are often killed in the autumn before they are fully grown, when they become comparatively an easy prey to the hunter, who coolly knocks them off from the trees in which they will alight when frightened. They are occasionally hunted by parties who, obtaining sight of a flock, watch them carefully so as not to disturb or frighten them until they go to roost, and deliberately pick them off; but this hardly seems to be sport. The necessary equipments for stalking are a good gun, a turkey call, clothing as near the color of dead leaves as possible, and some knowledge of the habits of the game.

One clear bright morning a trio fully equipped started for a certain portion of the Mississippi River bottoms, some three miles away, the said trio being composed of B., C., and the writer. Some forty minutes' drive brought us to the foot of a once cultivated field, but now abandoned to weeds and undergrowth. B. and myself got down and proposed to skirt the east side of the field to see if we could discover any fresh signs, agreeing to meet C. at the upper end of the field, along the west side of which he was to drive, and in the mean time to keep a sharp lookout for signs.

B. and myself had been on the search but a few moments when we found the trail of two turkeys that had entered the field. Carefully and silently we followed the trail through its devious windings, with our fingers on the trigger, expecting at any moment to see a body of dark glistening plumage rise from some tangled mass of weeds or clump of brush and start away in rapid flight. We had followed the trail but a short distance before it separated, and B. followed one track and I the other. In a few moments B., who was in a position to see the upper end of the field saw a turkey fly across and alight in some tall weeds on the east side. Quickly leaving the trail that he was on, he made his way as silently as possible toward where the turkey went down, but the wary ear of the bird soon detected the noise and took to wing, but too late, for with a steady hand the gun was brought to shoulder, a quick eye glanced over the glistening barrels, a sharp report rang out on the clear frosty air, the extended pinions were suddenly arrested, and with a heavy thud one of America's grandest game birds succumbed to the skill of the hunter. Supposing that B. had flushed the birds that we had been following, I hurried forward to where he stood, and then learned that such was not the case. I also found that C., in the meantime, had reached the upper end of the field, and had seen a couple of turkeys fly across it, and that he had followed a trail which led into the timber on the east. As the flock was scattered he had taken up his position behind a large tree, and with his caller was giving an occasional "keouk" in imitation of the note of a turkey. B. and myself soon joined him, taking up our positions behind trees at a short distance, and waited quietly for the answering call of a turkey. We had not long to wait before "keouk" was heard, and in a moment more, with head erect, and swiftly moving feet, a magnificent gobbler came into view, with eye and ear on the alert to discover his missing comrade. He had hardly approached within range of C. when a mo-

tion of some one arrested his attention, and I will here remark that while a turkey will approach very nearly to a person if he remains perfectly motionless, they are very quick to discover the least movement, and also, if they have the least suspicion about the call note, whenever they stop to look they are very apt, in case there is a tree about, to stop behind it and with just their neck and head extended peer cautiously ahead. The moment he discovered the suspicious movement he turned to fly, and at that moment C. sprang from behind his tree and with a quick aim fired. The turkey had spread his wings to rise, but quickly closing them again as he discovered they would not obey his will he darted forth into the thick brush, running the gauntlet past B. and myself, who gave him a shot each, although at long range. It was evident that he could not fly in consequence of a hit on the wing; but he had a first-class pair of legs under him, and I wish to say that the hunter who thinks a turkey is his meat because he can't fly has a very poor conception of their powers of locomotion, or the ready instinct which teaches them many "ways that are dark." It is then that the sportsman must possess some endurance and have some practical knowledge of turkeyish tricks, and know when and where to look for him, or he will assuredly come to grief, and discover (as the writer often has) that after a long and hot pursuit through tangled weeds and underbrush that Mr. Turkey has given him the slip and made good his retreat. I took up the trail of the wounded gobbler, while B. and C. took up a fresh trail which they had discovered. I followed with swift and wary footsteps for about half a mile, when the trail entered a mass of tall grass. Here I knew full well I might at any moment see the old fellow break cover and dart away. I was following cautiously, when hearing a rustle behind me I turned just in time to see the broad tail of his lordship sliding down from a high log and disappear among the trees. My gun was quickly at my shoulder, but a provoking snap was all the result, while the turkey was going out of sight at a three minute gait. He had cunningly led me into the grass, and then doubling back on his trail squatted beside the log, and as soon as he thought I was far enough away to give him a chance to elude me had darted away. I was quickly in pursuit, and for the next half mile his course did not take him to any good hiding place, but it took him to a fence that skirted an old field. Along beside this he travelled for several hundred yards, endeavoring to find an opening to let him through; but being unable to find one, and all being still, as I was too far away to be heard, he carefully hid himself in a clump of weeds in a fence corner. But this time his strategy was unavailing. When I came up in pursuit he sprang to his feet and started for tall timber. I drew a bead on him, and this time, fortunately, my gun did not snap. A sudden stopping of the swiftly moving feet, and a spasmodic beating of the snow with the broad wings, told me that my aim had been true, and as I stood over that noble bird, with his dark plumage glistening in the sunlight, I said to myself, "Well done." Wiping the reeking perspiration from my face, for the pace had been a hot one, I threw the old fellow over my shoulder and started for the wagon, and in doing so passed up the west side of the field first mentioned, and there discovered that one of the turkeys of which B. and myself had been in pursuit in the earlier part of the day had passed through the field and taken to the timber. I went to the wagon and deposited my burden, and then concluded to return and take up the trail I had abandoned, for turkeys, when in good cover, will often lie quiet for half a day at a time when aware that there is danger abroad, unless they are very nearly approached. I had taken up the old trail, and was following it, when I was met by another hunter and stopped for a moment's conversation. In the meantime, B. and C., having followed their turkey for a short distance and killed it, had returned to the wagon, and were shouting vociferously to me to return, as they were anxious for their lunch, and I held the key. I reluctantly turned back, feeling at the same time that I was missing a turkey by so doing. I remarked to the party with whom I was conversing that I believed there was a turkey not twenty steps away, and I had not gone thirty yards on my return before I heard the discharge of a gun, and turned in time to see a fine young gobbler tumbling to the ground. Will I ever cease to regret my loss?

We heartily ate our lunch, and took our way to the place where the turkeys had first scattered. B. and myself soon struck another trail, and had followed it but a little time when from a fallen tree top another bird took wing. B., who was in advance, fired both barrels, the first without effect, but the second did not seem to be a clear miss. With careful eye I followed the turkey's course, noting its movement and actions. When nearly out of range of my vision I discovered a slight irregularity in its course. A little farther on and the wings stayed their regular motion, and the body plunged downward to the earth. Marking the place as well as I could from such a distance, we hurried forward, and were soon found by C., who had heard the reports. Reaching the place as near as we could judge, we commenced a careful quartering of the ground, and had at last nearly given up finding the turkey when we were approached by a man coming from an open field beyond us. We very naturally asked the question, "Did you notice a turkey fall in this vicinity?" He replied that he did, and judged that it had fallen near to a shanty that stood a little distance beyond on the skirts of the timber. A moment later he exclaimed, "Here is your turkey; what is left of it." And sure enough, beyond a high fallen log lay the

bird, rapidly disappearing down the rapacious maw of a half starved swine of the female persuasion. It seemed that she had stood nearly under the turkey as it fell, and no doubt thought it a good day for her that rained such food, and had fallen to with a will and about half devoured it while we were searching for the place where it fell. Never was the temptation to take the life of another person's animal harder for me to resist than at that moment, and as we stood gazing at that famishing old sow, whose dry and wrinkled sides looked as if they would need soaking to hold water, I suspect that the presence of a small and needy looking family, coupled with the appearance of two or three dirty and half starved looking faces at the door and windows of the aforesaid shanty, whose prospective winter's meat would be taken away from them, was the means of prolonging the life of the offender. But to say that we were mad, and spoke not, would be to draw it too mild. I claim that I am not a profane man, but for the sake of the law and the commandments I trust I may not often be thus tempted. Calling to a little boy who was passing out of the door he came reluctantly forward. We gave to him the remaining portion of the turkey, which we had replevined from the aforesaid swine, and bade him take it to the house. He departed with a broad grin on his dirty countenance, evidently pleased with the addition to the bill of fare which those remains would produce. We then retraced our steps.

Brother sportsmen, as you sit beside your cheery fire and read this sketch imagine for yourselves how, after a long tramp through snow and wood, you finally had your patience and perseverance rewarded with the capture of such noble game, and then to have it retrieved in such a manner.

We were soon on the trail of another turkey. In a few moments it broke cover from a mass of weeds and took wing. Again it happened that B. was in advance, and he quickly pulled trigger, the result of which was a broken wing, which brought him to the ground, and as he darted away through the wood C. sent a charge of shot after him, which brought him to bag. Soon after, C. and myself were on another trail, and had followed it but a short time when another fine gobbler rose from cover. A quick shot from me through the tree tops sent him away a badly wounded bird. He flew some four or five hundred yards and lit in a fallen tree top near where the hunter happened to be who had killed the one that I had first been on the trail of. He very coolly walked him up and shot him. This about ended the day's sport, and at the place where our team was left the whole party assembled, including a couple of country boys, who had driven the turkeys some two or three miles before we struck them. The total count was five for our party, including the one we had (in) voluntarily donated, three for the country boys, and two for the party previously mentioned—ten in all. A good bag for about a half day's sport.

I could give you an account of many a day's tramp after wild turkeys, the inventory of numbers of them being an empty bag and a tired and disgusted hunter, but these are not the stories that sportsmen tell.

HERBERT.

ON THE ELAPHURE OF CHINA.

SMITHSONIAN INSTITUTE, WASHINGTON, Nov. 17, '73.

EDITOR FOREST AND STREAM:—

My attention has been called to a paragraph under the caption of "One who goes to Menageries," in your last number, requesting information respecting the "*Elaphurus Davidianus*;" this I am happy to be able to give.

The animal in question is a deer larger than the stags, and distinguished by its comparatively robust legs, the spreading hoofs, long and bushy tail, and especially the horns; these are very remarkable, and deserve extended notice, especially as their structure has been apparently not understood. They may be compared to those of the typical stags, so far as the main antlers (homologically speaking) are concerned, but with the *brow antlers* extraordinarily developed, branched, and usurping the place of the "main" antlers; in other words, the several elements of the horns, compared with those of ordinary deer, are reversed, the direction of the growth being upwards or forwards instead of backwards, so that what in most deer are the "main" antlers are thrown out of axis and deflected backwards, while those which correspond to the brow antlers of other deer take the place of the "main" antlers, and develop two to four times, according to age.* This mode of growth is unexampled in any other deer, and apparently justifies the generic distinction of the species from the others, as M. Alphonse Milne-Edwards has proposed. The generic name (*Elaphurus*) given by Edwards refers to the stag-like characteristics (*Elephas*, or *Elephus*, being the old Greek name of the stag), combined with a long tail (*oura*—tail; the specific name (*Davidianus*) has been given in honor of the missionary, Mr. Armand David, who discovered the animal. The Chinese name is *Mibou*, or *Sze-poo-Seang* (according to French pronunciation *Tseu-pou-Siang*). The last is said by Father David to convey an allusion to the combination of four characters which are elsewhere separated, that is, the horns of the deer, the feet of the cow,

*The growing antlers of the young three year old exhibit approximately proportions like those of the three year old red deer ("spoxod"), but they are much more robust, and the brow antlers relatively larger; the difference, then, is the result of the disproportionate increase or *hypertrophy* of the "brow" antlers, and corresponding atrophy of the "main" antlers. Trans. Zool. Soc., of London, vol. vii, pp. 333, 336, January, 1871. Further information may be had by reference to the following authorities:—A. Milne-Edwards, Comptes Rendus, 4th May, 1866; Am. Sc. Nat., ser. 5, v, 380; Nour Arch. de Mus. II, Bull., p. 27, pl. 4, 1866; Alcock, P. Z. S., 1868, pp. 210, 530; David, P. Z. S., 1868, p. 210; Swinhoe, P. Z. S., 1868, p. 530; Selater, P. Z. S., 1868, p. 531; 1869, p. 468; Frank, Z. S., vii, 833, 1871.

the neck of the camel, and the tail of the ass; by another writer, apparently with less reason, it is reported to mean "like none of the four," that is, the deer, the cow, the goat, and the horse. The color is a reddish brown, with a blackish stripe down the withers, and with the tail, which is unusually "full," also blackish. The fawn is spotted like those of other species.

The latest information respecting the species has been given by Dr. P. L. Sclater, the Secretary of the Zoological Society of London, in an article on the deer living in the gardens of that Society, and is as follows:—

This fine animal is one of the many of the zoological discoveries which are due to researches of M. C. Père Armand David, missionary of the congregation of Lazarists at Pekin, an active correspondent of the Museum of National History of the Jardin des Plantes, etc. M. David first made known the existence of this deer in 1865 in a letter addressed to Professor Milne-Edwards, having become acquainted with it by looking over the wall of the imperial hunting park, in which it is kept in a semi-domestic state. This park is situated about two miles south of Pekin, and is called the Nan-hai-tsze, or "southern marsh." No European is allowed to enter it. It is stated to contain deer of different species, and herds of *Antelope gutturosa*, besides the Elaphures. M. David saw from the wall more than a hundred of the last-named animal, which he described as resembling a "long tailed reindeer with very large horns." At that time he was unable, in spite of every effort, to get specimens of it, but being acquainted with some of the Tartar soldiers, who mounted guard in the park, subsequently succeeded in obtaining the examples upon which M. Alphonse Milne-Edwards founded his description of this remarkable animal.

Shortly after this M. Henri de Bellonet, Chargé d'Affaires of the French Legation at Pekin, managed to procure a living pair of Elaphures from the Imperial Park and kept them for nearly two years in a court near the embassy in that city. Upon his return to Paris, in the summer of 1867, M. de Bellonet, having heard of our applications to our correspondents at Pekin to obtain living examples of this animal, was kind enough to place this pair at the disposal of the Society upon our undertaking the expense of their removal to this country. This the Council willingly agreed to; and application was at once made to H. E. Sir Rutherford Alcock and our other correspondents at Pekin to make arrangements for their transportation. Unfortunately, however, these animals died before this could be effected; but the skin and skeleton of the male were carefully preserved under Sir Rutherford Alcock's direction and forwarded to the Society, along with two pairs of the shed horns of the same animal. They were exhibited at our meeting on November 12th, 1868, after which the skin was deposited in the British Museum and the skeleton and horns in the Museum of the Royal College of Surgeons.

Meanwhile Sir Rutherford Alcock lost no time in making application to the Chinese authorities for other specimens, and after interviews with Prince Kung and other high officials ultimately succeeded in procuring several young pairs, one of which reached the Society's gardens in perfect health and condition on the 2d of August last, [1869].

The general aspect of the Elaphure is much more like that of the true *cervi* than I had anticipated from the description and figure of M. Milne-Edwards. The only two very noticeable points of distinction besides the horns of the male, which are not at present shown in our animals, are the rather larger, heavier legs, the longer and more expanding toes, and the long tail.

The latter character, however, seems to me to have been somewhat exaggerated in M. Milne-Edwards's figures, the tail in our specimen not nearly reaching the hocks, and though of somewhat different form, being really little, if any, longer than that of the fallow deer and some of the American deer, such as *Cervus Virginianus*.

The mufle of *Elaphurus*, as M. Milne-Edwards has already stated, is quite naked and moist as in the true *cervi*.

The lachrymal sinus is small, and the eye also remarkably small. The muzzle is terminated by a good many single straggling bristles, as in *C. Duvancelli*.

The insides of the ears in this deer are very closely filled with dense hairs.

I cannot ascertain positively whether the usual gland on the outer side of the metatarsus is present or not in this deer, but it is certainly not very highly developed.

On the whole, I cannot consent to take this species out of the genus *cervus*, as I think it ought to be understood. The Elaphure is no doubt very distinct in the form of its horns from every other described species of the genus, and should be placed in a section by itself, just as *Rusa*, *Axis*, *Hyelaphus*, and the numerous other (so-called) genera of some authors. Those who regard these subordinate groups as generic will likewise use *Elaphurus* as a genus. To me its nearest ally seems to be perhaps the *Barasingha* (*C. Duvancelli*), which has likewise a long muzzle, terminated with outstanding hairs, and rather long expanding toes. Like the *Barasingha*, the Elaphure is in all probability an inhabitant of marshes and wet grounds.

M. Swinhoe informs me that the young *Cervus Davidianus* is spotted with white like other *cervi* at its birth, and retains the spotted dress about three months, when these markings gradually disappear. THEO. GILL.

*The imperial hunting ground, or Hae-tze, as it is called, is three miles outside the south gate of the Chinese city; it is a tract of country enclosed by a wall forty miles long.

✕ MIGRATIONS OF SQUIRRELS.

EDITOR FOREST AND STREAM:—

Among the first to visit on my trip West were the B.'s, located at that beautiful and then rising city, Beaver Dam, Wisconsin. Samuel, one of the boys with whom I had been initiated in many a college scrape in earlier years, possessed in a high degree, even then, not only a keenness for fun and practical jokes, but a courage, perseverance, and sagacity in carrying them out, that has enabled him no doubt in a great measure to reach that success he has since achieved.

Here was where I first owned a bear. On my arrival, both the boys, Sam and Charley, were absent on a tramp north, "land looking." But on a previous trip they had brought home a cub bear, about four months old, and one of the blackest and cunningest little rascals I ever saw. He was chained to a post in the yard, was as playful as a kitten and supposed to be perfectly harmless. Mrs. B., whose especial pet he was, as she could apparently do anything she chose with him, always fed him, patted and played with him, came home from church the Sunday following my arrival, and taking a piece of cake in her hand, proceeded to feed little Bruin. The villain sat up, as was his custom, and very solemnly ate it from her hand, then, either on account of the kid glove, which she had not removed, or from one of those diabolical impulses that human kind are said to take on at times, very deliberately bit the hand of his benefactress through and through, his teeth cutting from palm to back. Well, you may well presume there was a scene. Mr. B., a man of few words, but tremendous and determined in action, was decidedly wrathful. He rushed toward me, saying: "Here, young man, remove that animal instantly. Away with him! Let it be your capital, your stock in trade, anything; off with him!" In vain I pleaded to let him remain until the following day, when I might sell him to advantage. No, I must away with him at once, and putting the chain in my hand he fairly drove me out of the yard. And that on a Sunday! Just think of it. Here was a nice scrape to be in. Two churches were just out, and pouring their congregations into the street, and I, a perfect stranger, totting along a cub bear. If ever I felt profoundly streaked, it was then. What in thunder to do I didn't know. Had I had my wits about me I might have hurried to a barn or livery stable and had him housed for the night at least. But the whole matter came so suddenly that I was more than considerably confused. What a figure I did cut, lugging along that bear! Everybody must have seen how cheap I was; the bear was cheap any way, for on arriving at the corner of the business street, I was surrounded by a crowd of boys, among whom towered in ample proportions the proprietor of a Teutonic restaurant. To this gentleman, for the amount of five single silver dollars (and half a dozen tickets to the supper) I transferred my right and title (?) to Mr. Bruin. Thus, you see, for about twenty minutes I was an owner and showman of a beast, and that was full as long as I had any desire to play Barnum. I felt decidedly relieved when the chain passed from my hands and the black whelp was led away.

I told Mr. B. he must settle the matter with the boys on their return, and though they never said a word to me about it, one way or the other, I am afraid Sam never fully forgave me for the part I had innocently taken in the case.

What times we did have among the game that fall! The boys were both keen sportsmen and splendid shots. Quail were plenty, and the snipe and ducks around and among the islands of Beaver Lake, their name was legion. Here it was, too, that I first saw squirrels on "an emigrate," as they call it. Charley had been down to the station one morning and came back nearly out of breath, and asked me if I wanted to kill more squirrels in one day than I ever saw in my life. I replied, "Count me in on a squirrel hunt, but I don't think we'll get quite as many as that, for I have killed a few in my time."

"Well, don't say a word, I just learned it from the engineer, the squirrels were seen by millions twenty miles from here going West. We'll run out about twelve miles, and I guess we'll strike them; if we do, you'll see a sight."

While Charley was getting the traps ready I ran down town and got the ammunition. I got ten pounds of squirrel shot and the rest in proportion.

"Pooh!" says Charley, "we shall want three times that amount; go and get a 25 pound bag."

We took the 9 A. M. freight train, and in an hour were dropped at a watering station. We started for the first piece of woods, about forty rods distant, and before we even got there we began to see squirrels on the fences and the ground; now a single one, then two or three together, hurrying along. On entering the woods I got the first shot at a gray fellow on the side of a sapling. At the sound of my gun—whew! what a barking commenced all over the woods, and the scamps could be seen in nearly every direction on the trees and scudding along the ground. This was only the outskirts of the army. We pushed on, firing as we went, until we must have got into the main body; and then such a sight, thousands and thousands of them!

Squirrels to right of us,
Squirrels to left of us,
Squirrels in front of us,
Chattering and scampering.

Well, there is no necessity for me to tell you how many we killed that day within the distance of a mile from the station. On our way back we picked up the piles we had made of our slain, strung them together on a pole, and it was all we two could do to get them to the railroad.

Of course on our arrival home the story was told. The next day a dozen of the boys started for the place (we had had enough), and will you believe it, all that those twelve men got was four squirrels for their day's work. Not another squirrel did they see. Had they gone father west six or eight miles I think they would have hit them, for word came from the farmers in that direction that they passed there then and did considerable damage to their cornfields on their march.

Now, the before mentioned day's work may not have been very sportsmanlike, as it is termed by gentlemen of the trigger, but who does not recall with genuine pleasure his boyish days among the bushy tails? JACOBSTAFF.

✕ DEER HUNTING IN MARYLAND.

CUMBERLAND, Maryland, Nov. 18, 1873.

EDITOR OF FOREST AND STREAM:—

Your highly prized paper comes every Saturday full of interesting matter concerning the field sports and various athletic games of our country. It is not only interesting on account of the glowing descriptions it gives by means of its correspondents of the splendid hunting grounds of Lake Okeechobee, in Florida, and the primeval forests of Nova Scotia, but it's correspondents are men of intelligence and education, and the valuable scientific information combined with the stories of bag and basket, find an important place in the estimation of your correspondent, if I may so term myself.

To all sporting men and to those who are fond of the good things of life and a jovial landlord, I would recommend the St. Nicholas Hotel, and mine host Samuel Luman, a true disciple of Isaac Walton and a Nimrod of no mean pretensions. It was under the auspices of this landlord that a deer hunt was organized and conducted by William Halland with his eight hounds.

All my preparations had been made the night before, and a ring at the door bell at four o'clock, A. M., notified me that it was time to start. I was soon ready and in the saddle, accompanied by six other gentlemen. A ride of eight miles through the cool frosty air of an autumn morning brought us to our destination. We were told that the dogs had already started.

We selected our stands and I soon had my gun loaded with a heavy charge of C. and H's diamond grain powder, covered by one of Eley's patent wire cartridges for large game. I was satisfied that if the dogs should run in the deer at my stand, that I would be able to damage his hide. My stand was between the Chesapeake and Ohio Canal and the Potomac River, which at this point are only separated by about twenty-five yards, at the end of a ridge called Iron's Mountain, upon which ridge the dogs were to be started.

I had been standing for perhaps an hour trying to catch the least sound indicative of the approach of the deer, when about a mile off I could hear the tonguing of one of the hounds; nearer and nearer came the sound, and faster and faster beat my pulse. I was evidently getting the buck fever and I trembled with excitement, but braced myself for action and thought that now was the opportunity to show my qualities as a shot.

I had not long to wait on the bare hill side. About three hundred yards away was a fine four pronged buck making for the river just ahead of three of the dogs. I saw he would cross the canal about two hundred yards below me, too far for my gun to reach. I ran as fast as I could to intercept him, and as he emerged from the water on my side, (I was probably eighty yards from him), I stopped, steadied myself, and as he paused to jump a fence on the line of the towing path, I fired. Over the fence he went right on his head. Getting up he started off, when my left barrel brought him once more to his knees, but he recovered and staggered to the river bank, where he laid down, and upon my approach, got up and crossed the river. But a shot from another of the party put an end to his travels and our morning hunt. In the afternoon we killed another deer about the same size, and the rest of the day was spent in jollification over our success, and in telling stories of former hunts and camp experiences. In my next I will give the different varieties of game found in this section of country, and some of the prominent characteristics of the same, as often seen by Yours, OBSERVER.

A CHOPPER AT WORK.—The choppers do not stand on the ground, but on stages raised so as to enable the axe to strike in where the tree attains its regular thickness; for the redwood, like the sequoia, swells at the base, near the ground. These trees prefer steep hill-sides, and grow in an extremely rough and broken country, and their great height makes it necessary to fell them carefully, lest they should, falling with such an enormous weight, break to pieces. This constantly happens in spite of every precaution, and there is little doubt that in these forests and at the mills two feet of wood are wasted for every foot of lumber sent to market. To mark the direction line on which the tree is to fall, the chopper usually drives a stake into the ground a hundred or a hundred and fifty feet from the base of the tree, and it is actually common to make the tree fall upon this stake, so straight do these redwoods stand, and so accurate is the skill of the cutters. To fell a tree eight feet in diameter is counted a day's work for a man. When such a tree begins to totter, it gives at first a sharp crack; the cutter labors with his axe usually about fifteen minutes after this premonitory crack, when at last the huge mass begins to go over. Then you may hear one of the grandest sounds of the forest. The fall of a great redwood is startlingly like a prolonged thunder-crash, and is really a terrible sound.—Charles Nordhoff, *Harper's Magazine*.

—Antiquity of rowing: the Ark was guided by a Noah.

THE UNDISCOVERED COUNTRY.

Could we but know
The land that ends our dark, uncertain travel,
Where lies those happier hills and meadows low,
Ah, if beyond the spirit's inmost cavel,
Aught of that country could we surely know,
Who would not go!

Might we but hear
The hovering angels' high imagined chorus,
Or catch, betimes with wakeful eyes and clear,
One radiant vista of the realm before us,—
With one rapt moment given to see and hear,
Ah, who would fear!

Were we quite sure
To find the peerless friend who left us lonely,
Or there, by some celestial stream as pure,
To gaze in eyes that here were lovelit only,—
This weary mortal coil, were we quite sure,
Who would endure!

E. C. STEDMAN.

DYSPEPSIA.

AH me! what mischiefs from the stomach rise!
What fatal ills, beyond all doubt or question!
How many a deed of high and bold emprise
Hath been prevented by a bad digestion!
I ween the savory crust of filthy pies
Hath made many a man to quake and tremble.
Filling his belly with dyspeptic sighs,
Until a huge balloon it doth resemble.
Thus do our lower parts impede the upper,
And much the brain's good works molest and hinder
We gorge our cerebellum with hot supper,
And burn, with drams, our viscera to a cinder,
Choosing our arrows from Disease's quiver.
Till man in misery lives to loathe his liver.

For Forest and Stream.

A PASTORAL PARADOX.

Oh! why doth the Granger grimly groan,
And wherefore the mower he scythe?
Ah! well may he sigh, for his (s)teers are dry,
And for water he vainly crieth.

J. J. R.

THE ADIRONDACK PARK.

EDITOR FOREST AND STREAM:—

Your agitation of the question, "Shall a portion, at least, of the Adirondacks be made a perpetual preserve," is timely and strong. Keep it up. Your theories are correct and your facts incontestable. Mr. Headley disputes the position. He asserts that there is no less water in the Hudson River to-day than when the Indian paddled his canoe in it, a hundred years ago. How does Mr. Headley know? What proof does he give? The case needs something more and better than his naked assertion. If an exception exists in the case of the Hudson, then nature must have some very singular—possibly pardonable—American favoritism. This is a question with which fact has more to do than theory. We are first to know *if* it be a *fact* that the cutting away of forests diminishes the amount of water in springs and water courses.

This *fact*, if established, ought to determine Legislative action this winter in favor of preserving the Adirondack forests. After that, it may be well enough to attend to the *theory*.

Having devoted some attention to the points here involved, let me indicate a few facts which will be admitted to bear upon the question:

A scientific gentleman who has lately traveled extensively in Syria learned from the Savans of that country that within the last twenty-five years there has been a great increase of tree-growth upon the mountains. Keeping pace with this, has also been a marked increase of humidity in the atmosphere, occasional showers and a restoration of some springs, which have long been dry. Observing a cloud wreathing around one of the mountain summits he called the attention of a scholarly Englishman to the phenomenon, who remarked: "Twenty-five years ago such a sight as that was never seen here."

The historian Strabo says that the country of Babylonia used to be in great danger of inundation. To prevent it, required constant precaution and labor. The menace was from the river Euphrates, which became swollen in spring by snows melting on the mountains of Armenia. Not so now.

M. Oppert, a French traveler through Babylonia, recently reports that the volume of water in the Euphrates is much less; that there are now no inundations; that canals are dry; that the marshes are exhausted by the great heat of summer, and that the country is no longer unhealthy by the miasma from morasses.

He affirms that this retreat of the waters can be accounted for only by the clearing away of the mountains—forests of Armenia.

Now, as the Hudson River never does such damage by either flood or fen, no such reason for denuding the Adirondacks can be pressed.

Long ago, that well-known traveler and geographer, De Saussure, proved that the diminished volume of water in the Swiss Lakes, especially Lakes Morat, Neuchâtel and Bienne was due to the foray upon the surrounding forests.

In the time of Pliny, the river Scamander was navigable. Its bed is now entirely dry. Choiseul Gouffier was not able to find it at all in the Troad. The significant fact to read with this, is that all the cedars which covered Mount Ida, whence it rose, as well as the Simois, have been destroyed.

Is this coincidence merely, or effect and cause?

Oviedo, the historian of Venezuela in the 16th Century, says that the city of Nueva Valencia was founded in 1555 at the distance of half a league, (1½ miles), from the Lake of Tacarigua. In the year 1800 Humboldt found that the city was distant 3¼ miles from the lake, and asserts that the retreat of the waters has been due entirely to the destruction of the numerous forests. This authority, it might be rather audacious in Mr. Headley to dispute.

To the same cause Mr. Boussingault directly traces the diminution of waters in New Granada. Sixty years ago two lakes, near which the village of Dubaté is situated, were united. The waters have gradually subsided, so that lands which only thirty years ago were under water, are now under *culture*.

In the Island of Ascension, a fine water-source discovered by Richemont at the foot of a mountain became dry as the neighboring heights were cleared of forest trees, but has been fully restored since the forests have been allowed to grow.

From these and many other facts which might be stated, it is not only fair but inevitable to conclude that *extensive clearings anywhere do diminish the quantity of spring or flowing water in a country*.

It is not claimed that the removal of forests does *always* produce a diminished *rain fall*.

Indeed the pluviometer shows that in some instances the rain fall has increased—as in the experiment at Marmato, Bolivia.

But it is claimed, and susceptible of the most abundant proof, that extensive destruction of forests does diminish, and occasion the disappearance of *sources*, and will in time reduce the bulk of even so vast a river as the Hudson so much as seriously to impair navigation upon its upper waters. Does any one say that the incursions of lumbermen upon the great North Woods are not extensive?

There is one saw mill in the John Brown tract which consumes spruce butt-logs enough to make half a million feet of "fiddle stuff," as it is called, for one piano factory of New York city, annually.

Last June, while I was whipping the waters of the Lower Raquette, one single drive of 200,000 logs went down to Colton and Potsdam. This was only one of many. The havoc goes on remorselessly. What the Potsdam saw millers do not lay low in the forests with the axe, they flood and destroy by their gigantic dam at Raquette Pond. If it were not melancholy enough to row your boat among dead and dying trees for forty miles, each tree a silent but eloquent protest against cupidity, the saddening cup may be filled by the complaints and wails of the smaller millers whose water-power these monstrous monopolists have ruined.

This matter must not rest. Legislature will soon convene. With such a list of advocates of forest preservation as your journal once published, and which might easily be increased to a legion, our legislators might be memorialized on this subject with an emphasis and dignity which they would heed.

Yours truly,

J. CLEMENT FRENCH.

A BANK THIEF.

EDITOR FOREST AND STREAM:—

I think, as you cast your eye on the heading of this letter, you will be inclined to consign my manuscript to the oblivion of your waste basket, from an impression that it was intended for the *Police Gazette*, or some financial journal, but it is not. Just at this time the hunters who have been making game of the bulls and bears in the *wiles* of New York, with little regard to game or any other laws, are doing all that is needed to fill the columns of journals that note breaches of trust (not breech loaders), and, without desiring to add one more to the instances that render bondholders and share-owners distrustful of all their race, I premise by saying that the case now to be stated was in good old specie days, and happened in the secluded woods wherein we do so pin our faith on absence of speculation.

Knowing that in late May and early June there are a few days during which the red maple is so beautiful, and the tassels of the aspens are drooping, when trout bite, and the mosquitoes and flies do not, I went with our chosen friend into the wilderness that lies north of John Brown's tract, and west of the tramping ground of the many who come in from the Adirondack region proper. This was then a glorious place. The guides were trappers—unsophisticated and full of simple wood lore—and the few who went in with them were men ready for hard work, and hard work it was to get in when roads were not, and no chains of lakes made water routes feasible.

We had some fine boating up the Oswegatchie, and on Cranberry Lake, a beautiful water then, but now ruined by being raised by a dam, that has drowned out all the surrounding forest. Desecration it was, indeed, but he it known to the favored who seek information in your columns that team with the hints we all so value, where this back water has set up the inlet, flooding miles of swamp-growth, there remains a tangle in which trout do now find refuge, and the angler who can lead them by dainty work from the maze of trunks and branches will now and then get a fish that will make a worthy record on the scales. From this inlet a two hours' tramp took us, with all our possessions on our backs, to Umpsted's Pond, a small sheet of water; but I would like to own it and its environs as a preserve. In a shell canoe of red cedar I sat with a paddle, while my companion was drowning a large trout that died hard, when a deer came out on a shallow beach within six rods and dipped her dainty feet in the water

with no idea of fear, and lingered about us a long time. It was not shooting season, and we did not disturb her. Often little herds, with fawns, would come out on the shallows, and we watched them with infinite interest and pleasure, but harmed them not. So far all was honesty. Leaving this pond with regret, we tramped nine miles over mountains, carrying all our packs. Snow fell, and so did we. The leaves were wet and greasy under the snow; the snow was slippery above and below, and the tracks we made did no credit to our temperance reputations. It was a hard tramp, and a long one, but in a small pond splendid trout bit during the snow fall, and made our noonday lunch.

We slept that night near Bog River, just by Great Trout Pond (justly named), and slept without soothing syrup or bromide. The next day was cold—no fish; so we set our men at work upon a tall pine, and at even tide eighteen feet of it were in the form of an excellent canoe. The following day was milder. As we were by the river bank an old hunter drifted down with the skin of a panther, just killed near by (howling had been noticed), and the head of a five pound trout; the latter he nailed to a tree as a sample.

In the afternoon we floated down Bog River, getting fine fish, on our way to the ruins of an old dam, made many years ago to gain a flood for running logs, and abandoned when the pine near the stream was cut. Here I was left alone, my friend going on with our guide. The water rushed in volume into a deep boiling eddy, and every fisherman knows how such a pool fills one's mind with bright anticipations, and I felt that good sport was surely mine. With my rod I crept out upon one of the timbers that had resisted many annual floods that were recorded upon its abraded form. From its top I commanded a full sweep over the pool, free from brush, and a perfect stand. Hardly did my hook catch in the whirling stream before a trout seized it, and was saved. The slippery, agile thing was mine, but hard to land. There was no place by me on the log, I had no basket, and it was too big for my pocket. I could not get down with it, and was in a quandary, when I saw below me a shingle beach, cast up by some unusual flood, lowest on the shore edge, with bright fresh grass—as dainty a place to lay my fish as Nature ever provided. It was a long toss, but the fish fell fair, and many a silver sided one followed him. Once and a while they would slip too soon from my hand, and, to use an equivocal phrase, *land* in the water; but more than enough were cast on the green sward. Deeming any further captures a waste, I ceased fishing, crept back dry shod, and sauntered on to meet my companion.

His string was a fine one, and with pride I guided him to my shingle beach and bade him give me congratulation. He looked very politely interested, but rather blank, and I discovered an incredulous smile getting the better of his confidence. I joined him to share the pleasure of gazing upon the picturesque group I had left there; but did my eyes fail me? There was not a fin nor even a trout spot there! I looked all around; there was the dam, and the old log; before me the hill rose in familiar form, and the tree that shaded the fish hung over me, and, by Jove, there were the prints of the fish on the weak, damp grass; but the superb fish—where were they? Police, detectives, where were they? But there were no police on that beat, and my outraged honor was powerless.

I assured my skeptical companion that I had caught many fish, declared I had not been dreaming (how could I dream on the end of a log?), and never had told a fish story. But where were the fish? A closer examination told the story. Just under the water worn roots of the tree that overhung the spot we found a hole leading into the bank—a round burrow, evidently well travelled, and it was evident that its respectable occupant, doubtless honest all his life up to this offence (a great shock to his family and friends, the well-known minks and fishers), had been unable to resist the temptation of my delicious trout, and had deliberately stolen them, or, in modern parlance, become a defaulter to that extent.

It became evident that there was no hope of recovering my treasures. The blamed otter was in his own bank, and suspended; availed himself of sixty days notice, and didn't mind a crowd at the door, even if they were ragged and hungry. It was a lesson to your correspondent, and he assured that if he ever gets any good thing out of a pool he will not put it on a margin again. It remains unknown whether the bank alluded to remains open, but beyond doubt the slippery fellow can be interviewed by some of the reporters, and the real truth, or an authorized statement, obtained.

L. W. L.

A REMINISCENCE OF LAKE SUPERIOR.

THAT indifference to hardships and even to perils of life, so frequently displayed in the Indian character, is to sportsmen a subject of constant remark. Our use of Indians as guides on lake and river, or as we follow their noiseless steps through the forests, makes us look upon them sometimes as wonderful beings.

I remember a little scene which happened under my observation while passing a few months fishing and shooting on Lake Superior during the autumn of '63. The wind had been blowing steadily from the northeast for the previous three days, and the waters of old Superior, as far as the eye could see, were covered with white caps. The thunder of the surf on the shore could be heard many miles inland, for a northeaster on this lake is one of the things to be most dreaded.

One steamer during this fall had laid her bones on the bottom of the lake, leaving only one survivor to tell her sad

history. The blinding snow and sleet hid the bold cones of Porcupine Mountains from view, while away to the east we could faintly discern the rugged face of Fourteen Mile Point. The regular steamers which plied between the town of Ontonagon and the lower lakes, had one by one been obliged to pass the port and run for Bayfield and take shelter behind the Apostle Islands.

Camping out was disagreeable business, and I had returned to the village and the inhabitants were mostly indoors, except now and then a solitary individual who could be seen moving about in the snow snugly encased in his warm capote. Suddenly it was passed from house to house that an object had been discovered far out on the lake which looked like a boat. The news of an object of so much interest on the lake in such a fearful storm soon drew to the beach a large portion of the people.

We leveled our glasses through the blinding storm at the strange object as wave after wave swept it towards us, and many were the speculations concerning it. The clouds of snow grew thicker and thicker, drifting into the most inaccessible parts of our hoods and gathering on to the waves and shore in such quantities that it was difficult to distinguish land from water.

First the object was seen on the crest of a wave, then it sank to reappear on the top of another. Some thought it was part of an ill-fated vessel until it was finally discovered to be some kind of a boat, and on closer examination proved to be one of those most fragile of all crafts, a *birch bark canoe*.

Now we thought it must be capsized as sea after sea swept over it. Now we thought we could distinguish a human form in it struggling to make the shore. When the canoe had approached sufficiently near for us to discover its occupants, there in the stern sat an Indian stripped to his waist clenching in his hand his trusty paddle, while in the bottom of the birch bark sat his squaw, clasping to her breast her pappoose, and vainly endeavoring to shelter her charge from the pitiless storm. In the bow of the canoe was rigged an impromptu sail consisting of a ragged blanket stretched on poles and the company was furthermore increased by the irrepressible dog.

This family of Chippewas (as it was afterwards found) had started from Isle Royal intending to make some harbor on the north shore, but in the thickest of the gale had lost their way, and been driven a distance of sixty miles in this egg-shell to the south shore of the lake. From crest to crest they flew, until they reached the Ontonagan River, (from which the town takes its name), and with a last stroke of the paddle they shot into still water amid the shouts of the gazers.

The Brave without looking to the right or left, or noticing in any manner our anxiety for his safe arrival, hustled his family out of the bark, drew it up on the shore, threw his gun over his shoulder, and with his dog at his heels, disappeared into the woods with as little concern as if nothing unusual had happened. T. S. S.

THE ROCKY MOUNTAIN SHEEP.

CAMP IN GENEVA PARK, COLORADO, NOV. 8th, 1873.

EDITOR FOREST AND STREAM:—

AMONG the many different species of game in a country possessing such a variety there are none so difficult to capture as the Rocky Mountain sheep, or big horns, as they are sometimes called. Living remote from civilization and the haunts of man—ranging along the roof of the Continent, on the almost inaccessible peaks high above timber-line, and endowed by Nature with keen scent and hearing, they are considered by hunters as being the most difficult to approach of any animal among the deer kind. The horns of the male are sometimes of enormous size. I have seen them eight inches in diameter at the largest part, and weighing sixteen pounds. Those of the female are small and sharp, resembling the horns of the goat; in fact, but for the horns, and a fine silky wool at the roots of the hair, they might readily be mistaken for deer. They feed upon the short nutritious grass which grows upon the treeless ridges and ravines along the Snowy Range, and when fat weigh from one to two hundred pounds. The flesh is very much like that of the deer, but juicier and of superior flavor. They are almost constantly on the move, ranging from one mountain to another, feeding as they go, and finding some rocky cliff sheltered from the Range winds, where they lie at night. Sometimes several hundred may be seen in one drove, but generally from two or three to a dozen. When pursued they make a break for the highest point of rocks in sight, where they stand looking curiously at the hunter as he slowly picks his way upward over the debris to get withing shooting distance. When that has been gained, however, the sheep have disappeared; nor does the tired sportsman get another glimpse of his game until he has reached the cliff they have just left, when they may be seen standing on some point higher up on the mountain, and still beyond rifle shot. Should the hunter have perseverance and plenty of muscle, he will probably follow them to the highest pinnacle of the Range to find at last that his climbing has been in vain, and that the game he has been following so faithfully and hopefully have mysteriously vanished from his sight.

The only successful method of hunting the mountain sheep is to get above them, unseen, and, if possible, get a shot before being discovered. In this way the herd get confused, not knowing which way to run, and sometimes four or five may be killed before they recover themselves. Once started, however, pursuit is useless. Throwing back their heads they throw themselves into space as if shot from a cannon, and in a few minutes are miles away, taking leaps of twenty or thirty feet, and hardly ever making a mishap, however rapid and headlong their flight. A.

Woodland, Lawn and Garden.

THE LAWN AND HOW TO MAKE IT.

—“Strength may wield the ponderous spade,
May turn the clod and wheel the comfort home;
But elegance, chief grace the garden shows,
And most attractive is the fair result
Of thought, the creature of a polished mind.—*Courcier*.”

ONE of the principle elements of the beautiful, as applied to the art of laying out landscape gardens, is a goodly sized, well-made, well-kept lawn.

“How shall we construct such a lawn as lies in front of Mr. H.’s fine residence?” said a gentleman to me last April. “I have just purchased some eighteen acres of good land, and it lies in a good situation for forming a good lawn, but I do not know how to do it.”

This apparently frank question deserves an equally frank and explicit answer. Every one well knows the fact that a fine lawn, properly decorated with groups of trees and shrubs, is one of the indispensables of landscape gardening.

I do not mean to be understood, when I speak of lawns, that I refer to many little green spots of ground of from one half to one acre of land, that one beholds in riding through many of our country villages. These I call “plats” of greensward; and there are many of them very well laid out, and answer the end for which they were designed. A small piece of land of half an acre in front of our several dwellings is much to be preferred, if it is well kept and frequently mowed to the same ground when designed and set apart for flowers. These little plats should, like the grand old lawn of many acres, be well and truly made, to give general and lasting satisfaction. We would prefer to trench to the depth of two feet to two and one-half feet the little grass plat that lies before our door.

Having determined to have a “small lawn,” as we call it, with some two or three fine shrubs, such as every family who possess the same are desirous of enjoying, we will endeavor to give you some of our own ideas upon the best manner of doing the same. And first, a large and extensive tract of ground, made into a fine and beautiful lawn, with all the accessory adornments of trees, shrubs, lakes and islands, are elements of the beautiful, however simple they appear to the beholder, that cost money. So with our little bright spot of evenly cut, finely rolled land, the joy of our hearts; this, small as it is, with all its harmony and beauty, this costs money also, but not so much as our grand old lawns. So we say to all our friends: “Stop a bit, before you begin your work on small or large plats, and see how much money you will necessarily have to expend upon the same, to give you something like a realization of your idea and your wishes.

Here is the starting point in fact of your future operations.

Having settled in your own mind that you will spend such a sum of money, begin your operations. It does not follow of a necessity that making a good lawn involves so great an expenditure of money as many may suppose.

I therefore propose to answer for the benefit of my readers the question proposed: “How can I obtain a fine lawn?” The soil which constitutes your lawn must be prepared by deep and thorough trenching, or by very deep and thorough ploughing. Many of our farmers deem it one of the first steps to be taken in order to give them even a good crop of coarse grass. They do not feel assured of a remunerative crop by ordinary ploughing, and sowing grass seed in the ordinary manner.

Many men, no doubt, have followed the thriftless practice to some extent; they have found their mistake in meagre crops of grass, thinking doubtless that all they would have to do in order to realize the fruits of their labor, would be in sowing their fields with grass seed and patiently awaiting the result. One season has generally brought its corrective, and the man who knew how to build a church, did not know how to raise a good crop of grass, with every appliance for the same beneath his hand, except the knowledge of how to prepare his five acre lot.

Some men have pursued the same idea, or a very similar one, as applied to making an American lawn, and as singularly failed. It is quite impossible to obtain a thoroughly good, lasting, even lawn by the “sodding process,” however neatly and evenly the greensward may be laid, it often fails in giving the satisfaction that the trench or deeply ploughed grounds give.

We love to look upon a green and even lawn, with its broad acres of velvety carpet, and we can, if we have the patience to prepare our grounds properly, have before us not perhaps everything pertaining to an English lawn,* but a beautiful, never-failing source of pleasure.

A deep trench is to be made in the first place, and it will be found of great value to the future lawn that all stones should be removed from the same. True, this costs time and money, but you desire that your “labor may not be in vain.” Then do your work thoroughly and well, and you can safely trust a kind Providence for the result. Sunshine and showers, a good season, and all is well with you, for you will reap your reward. By deep and even trenching every foot of your lawn is to be stirred to the depth of three feet at least; four feet would be better.†

The trenching should be commenced at one end of the ground designed for your future lawn, and the earth, to the

*The English lawn derives much of its beauty from the natural humidity of the atmosphere, which our brighter skies and warmer climate do not give us; still, with proper culture, the American lawn will never fail to please and remunerate.

†I have seen the roots of clover and strawberry plants running from two to four feet on good ground.

depth of three feet, thrown out upon the top of the ground, and all the stones you may find, if you desire a smooth lawn. Having proceeded once across the end of your ground in this manner, you will make a second trench, and throw the soil you move back into the first trench you made, and so to the end of the lawn. If it is necessary to add manure it can be done while sub-soiling, and the good judgment of an intelligent farmer will at once determine the quantity to be used. Mr. Downing, from whom I received much of my agricultural knowledge, in answer to the question, “What do you consider the grand requisites for a good lawn?” replied, with much emphasis, “Deep soil, the proper kind of grasses, and frequent mowing.”

These essential requisites, if applied as noted, will give you a lawn every way desirable, and one which will last in all its beauty for years, and such a lawn is worth the making. You must guard against the droughts of our hot sunshiny season by the best natural means you possess, viz.: a thoroughly pulverized, deeply trenched or ploughed soil. Such a soil will safely carry almost any of the grasses through. Remember that grasses have root, and the clovers particularly love to strike deep into the cool, damp soil.

I need not say to any of our New England cultivators, that a surface drought or a “dry spell,” as it is called, has no power over plants whose fibres or rootlets rest in the cool moist under-soil or lower stratum of earth. So with a well prepared lawn soil, if you desire to look upon a beautiful green, undulating lawn, even in mid-summer, take the proper means to secure it by preparing every foot of your ground, whether it is one-eighth of an acre, or garden plat, or your fifty acre lawn. We do not expect all our lawn makers will deem it expedient to trench with the spade according to our directions, as here laid down, but it would amply pay in the end to do so. Deep ploughing will be the means generally used for lawn making for the present; this, with proper draining† and manuring, will give quite a good lawn. We prefer deep trenching to any preparation of lawn grounds we have yet seen. This month and the month of December, if open, are the best seasons for lawn making, and if a finished lawn cannot be obtained in autumn, your ground can be trenched and cleared of stones and then left to rest until the coming spring, when the ground can be ploughed, top-dressed and sown at an early day. We suppose your ground now fit for the reception of the seed. And here the question again occurs, “What seed shall I sow?” You wish for a close, compact turf; you will sow only grass. The best, and seeds usually sown for this purpose are a mixture of “Red Top,” (*Agrostis vulgaris*) and “White Clover” (*Trifolium repens*). These are short, hardy grasses, and will give you satisfaction. They are, in our opinion, better adapted to our climate and soil than any we have ever used. The seed sown as follows: Three-fourths of Red Top to one of Clover. Sow four bushels to the acre—the minimum. This done, finish your lawn by passing over the same some four times with a heavy roller, and you may have a reasonable hope of looking the next summer upon a magnificent, well-made lawn.

As a top dressing for all lawn grounds, the one recommended by Downing is the best we have ever used, and the good effects of the same prove its great value. Downing says “one bushel of guano and three bushels of ashes to the acre, to be applied in March and April.” Rough and coarse manure should be applied as your lawn gains in age, and applied in the fall—October, November and first December—left evenly spread during the winter, and carefully raked off (the coarser parts) by the 5th of April. Lawn grass, when cut, should be left to fertilize the lawn, and should be cut whenever it has attained the height of an inch or an inch and one-half in length.

By following strictly all the above directions you will have a lawn you will feel a just pride in showing to your friends. Try it, and if you do not succeed to your mind, we will tell you “what’s the matter.” OLLIPOD QUILL.

†Of drainage in general and particular, how and when to be used, we shall speak in another paper.

Few people have any clear idea of the extent of forest land in Germany, and most imagine that of the Black Forest little is left except a tradition and a conventional blister of woodland, so-named. On the contrary, in Hanover alone there are 900,000 acres of wood under state management; while nearly a fourth part of the area of Prussia is in forest, although half of that is in private hands. As is well known, the forest administration in particular districts has long been famous, especially in Thuringia and the Hartz mountains. In North Germany generally the responsibilities are allotted in districts among a carefully organized body of officers, presided over by a forest director. The appointments are fairly remunerated; and they are so eagerly sought after that candidates will remain on probation for years at their own cost, or with moderate and precarious pay, in the hope of securing a place in the corps at last. In Austria things are on a somewhat different footing. The Austrian forests are magnificent—so magnificent, indeed, that the forest management has been neglected.

LILY OF THE VALLEY FOR WINDOW GARDENS.—While we are taking up our plants let us not forget to take a few tubes of the Lily of the Valley, the loveliest flower of all Flora’s kingdom. Select large, healthy clumps, and plant them in boxes filled with very rich soil, mingled with one-third sand. Put the boxes beside a warm stove, or on the shelf of the kitchen range. Give them water, at first sparingly, but as the sheathed leaves appear increase the quantity. Too much at an early stage would cause the roots to decay. When the flowers appear, put the boxes into the sunniest location you possess. All window gardeners will be charmed with this lovely gem, and its fragrance is not too powerful in any room.

HYACINTHS FOR WINTER BLOOMING.—Nothing can be more charming and attractive during our dreary winter weather than a few glasses or pots of different colored hyacinths. Success in growing them depends upon a few simple rules which, if followed, will beyond doubt give abundant satisfaction. They will bloom equally well in pots of earth or glasses of water. If the former method is most convenient, fill the pot (a five or six inch one is plenty large) with light sandy soil; then press the bulb into the earth nearly even with the surface; water thoroughly and set away in a partially dark cool place—a cellar or dark closet will do, they should remain there four or six weeks, and need not be watered or cared for. If examined at this time it will be noticed that the roots will have grown so as to fill the pot, while the bulb has perhaps not begun to sprout.

This is exactly what is needed, for the roots must get started first, in order that the plant may have strength to throw up a vigorous and well-filled flower shoot. On the other hand, if potted and immediately placed in the light, the top will begin to sprout and flower before the roots have made scarcely any growth, and the flowers, if they come out at all, look sickly and soon drop off.

After they are brought out to the light they should have plenty of water or the flower buds will wither. They will bloom nicely if the pots are immersed in a vessel of water.

If grown in glasses the same is true in regard to putting away in the dark; the glass should be filled so that the bulb touches the water, and in four or six weeks, if kept dark, the glass will be nearly filled with beautiful white roots; then if brought to the light they will flower in four to six weeks, and will well repay you for all extra care.

As to the varieties, the single are usually the best for flowering, and the unnamed varieties, costing only about half as much as the named, produce as fine flowers, though the range of color is not so great.—*Danbury News.*

The Kennel.

AFFECTION OF THE GREYHOUND.—A farmer turned up a rabbit's nest with the plough, containing her young ones. The rabbits being too young to stand the least chance of surviving, in their exposed situation, they were taken home as a treat for a greyhound bitch that was sucking a litter of six puppies. To their surprise, instead of greedily devouring the rabbits, as they expected, she carried them tenderly and carefully in her mouth to her nest, and seemed to consider them a most welcome addition to her family, bestowing upon them the same fondling caresses, and offering them a share of the same support, which nature had furnished for her own offspring. This the poor rabbits did not refuse, and there appeared no doubt of their doing well. Unfortunately, however, they were doomed to suffer death from their young companions, though not exactly in the manner that greyhounds generally kill rabbits. One after another got overlaid by its rude and robust foster-brothers and sisters, and the poor mother with evident reluctance and regret, saw them carried away, and did not part from them, even when dead, without remonstrating against it as much as she durst.

TRAINING SETTER PUPPIES.

ACCOMAC, VA., November 20, 1873.

EDITOR FOREST AND STREAM:—

Since my last to you from Northampton county, Va., I have been doing very little shooting, waiting for the geese and brant, but have occupied some of my leisure in training a brace of setter pups, some short account of which may be interesting. My experience about breaking dogs is that, with the assistance of an old dog who can play the part of Mentor, the puppies have their natural instincts brought out quite rapidly. In this case you may remember my old dog, Hero, an orange and white setter (you can see him for a mile from his peculiar brightness of color, in the scrub oak), and Hero was "coach" and school master. About the beginning of this month I received an invitation to go quail shooting with Colonel J. who, I think, is the best general sportsman in this section of country. At his request I brought Rapid and Punch, my two youngsters, together with Hero, their father. I stopped overnight with Colonel J., and in the morning early we started for the birds; with my friend's setter we had four dogs. In the first ground—a cornfield of some fifteen acres—the two old dogs taking to the right and left, quartering cleverly, the pups followed each one straight, after the old dog their father keeping their heads well up. Suddenly Hero stopped short, and it was wonderful to see the two little fellows backing up their sire, their back-bones and tails as stiff as pokers, their fore feet daintily raised, the living pictures of old Hero, and as perfect in every respect as if they had been in training for years. I knew by the look of the old dog that there was a bevy of quail ahead. I walked up steadily, all the dogs remaining staunch; the birds rose and I killed three with a left and right. Keeping the pups to heel, I told the old dog to fetch and he returned the birds one by one without ruffling a feather. The Colonel, in the meantime, had found birds, his dog pointing, so he told me, at two cock quails fighting, one of which he killed, missing the other. Over a fence we came to a wood and hoing on the dogs, Hero again came to a point. The conduct of Punch and Rapid had been, so far, admirable, and they were backing the old dog, when suddenly Punch, getting impatient, made an unlucky plunge, running in and flushing the birds. Though not prone to whip dogs in the field, in this present instance, as the puppies were at school, I was forced to inflict a slight castigation on the spot which Punch was the recipient of. I believe I never lose my temper on such occasions, but I could not help suppressing a smile at the contrite appearance of the father and brother of the offending puppy, and the amazement with which they seemed to appreciate the flagellation of a

member of their distinguished family. Here Hero did something which was quite wonderful. He seemed for a moment to hesitate whether my action in the premises was exactly proper, and having after mature thought come to the conclusion that it was, with the utmost deliberation, he walked up to the contrite Punch and knocked him completely over.

As I was keeping a dog school and the Colonel was shooting, his bag far exceeded mine. After this first discipline Punch was a trifle shy and hesitating for a while, and was not anxious to place himself too much in prominence, and no longer backed the father but backed his brother Rapid. The next three points of the puppies were in good style. On going through a swale the old dog got his fore feet in a hummock, his hind-quarters being in the water, pointing at what I thought must have been an English snipe. Rapid and Punch did not exactly understand this, but nevertheless attempted to back him, which was highly meritorious and duly appreciated by me. I however called the puppies to heel, which order they obeyed, when, holding up my finger, I cried "Down charge." I walked into the swale and knocked up a pair of jack snipe, of which I shot one, winging the other badly. The wounded bird flew about sixty yards, I suppose, and fell. Hero retrieved the dead bird, and on sending him after the wounded one he soon got on the trail, and in ten minutes, after quartering all over the ground, brought it to me. All the dogs now were very wet, and I waived them back to the ground we had been shooting over, in order to give them a run and to keep up their circulation, as it was getting cold. In the meantime the Colonel, on the other side of the wood, had failed to find any more bevs, and on joining him, we turned our steps towards home. Just before we came to a cotton field within three hundred yards of the house, near a clump of persimmon trees, the old dogs both stood on a point, the puppies backing as usual. I told Colonel J. to shoot as I wanted to try an experiment with Rapid, as he seemed to be the stauncher dog of the two young ones. The Colonel killed two birds. I sent in Rapid to retrieve them. Rapid had had two months' instruction with dead quail and with old gloves, and was a fair pup retriever. The old dog did not appear to like this usurping of his privileges, so they both started together, the pup leading. He seemed, however, to understand it, and it was a beautiful sight to see the old sire allow his son to go ahead and retrieve his bird, the father following close every one of his son's movements. After picking up the bird, Rapid seemed in doubt what to do with it. Here Hero became the tutor, and led the way up to me. As Rapid raised his muzzle to my hand, with the bird daintily held in his mouth, Hero was apparently telling him what he should do. My companion here remarked to me, "that he had often seen first-class academics, with their instructors, but had never seen a teacher yet who had such facility in imparting information as my good old dog Hero." Our combined bag was five jack snipe, twenty-eight quail, one rabbit, and a plover. I am going to see my old gunner Jake about geese, as he is painting some stools especially for my benefit, and may write you again in a few days. Sincerely yours, C. B.

—The sale of mastiffs on Saturday last attracted a good deal of attention. The dogs were sold by auction at Baker & Chase's. The mastiffs belonged to Mr. McHenry, of Sudbury, Maryland, and were of a fine breed. The old dog was imported and fetched \$60. The female and whelp brought \$50 and \$35 respectively. The male whelp brought the highest price, \$80. Mr. Williams, of Williams & Guion, owns the purest breed of thoroughbred mastiffs in this country, purchased, or presented by a member of the Mastiff Club in England. One of his sons is owned by Mr. Clay of Hackensack.

THE DOG OF MONTARGIS.

IN October, 1361, there occurred a memorable fight between a man, who was known as the Chevalier Macaire, and a dog, which has passed into tradition as the dog of Montargis. The contest took place on the Isle of Notre Dame, in Paris, in the presence of King John. The tradition formed the plot of a play which was presented at the Bowery Theatre a few years ago. The story goes that M. Aubrey de Montdidier, a gentleman of Montargis, in passing the forest of Bondy, was murdered and buried at the foot of a tree. His dog was with him at the time, and remained at the grave till driven away by hunger, and then found his way to Paris to the house of an old friend of his master. In Paris, he did nothing but howl. At intervals he would catch the pantaloons of his dead master's friend, in his effort to drag him out to where poor Aubrey was buried. For some time, the dog was not understood, but at length, connecting Aubrey's absence with the inseparable companionship of the man and dog, and the violent pertinacity of the animal in attempting to draw them after him, they followed, and after a time he led them to the foot of the tree in the forest of Bondy, where they dug the earth away and found the murdered man. There was no doubt that Aubrey was murdered, but there was no evidence to convict any living being with the crime. The eyes of God had seen, and the dog had seen too, but dogs are dumb. A certain Chevalier Macaire had been the enemy of M. Aubrey. Perhaps in consequence of the knowledge, somebody, the friend for instance, had his suspicions of the Chevalier, and confronted the dog with him, thinking, very likely, if the dog had reason enough to lead them to Aubrey's grave, he would have enough to detect his murderer if he saw him. In these conclusions they were right. The dog, directly he saw Macaire, attacked him with an almost invincible ferocity. Wherever he saw the Chevalier he attacked him; and as the friends of Aubrey took care, as may be supposed, to throw the dog as much as possible into the company of the now suspected man, the life of the Chevalier came to be diurnally uncomfortable. To have an

unpleasant dog eternally flying at your cravat and anywhere else lying open to his fangs, may be seriously regarded as the reverse of cheerful. The Chevalier Macaire probably thought so! The conduct of the dog towards this particular man—he being notoriously of a gentle disposition and kind to every one else—quickly became the talk of certain circles in Paris. It was known to the court; it reached the ears of John, and then the king ordered the dog to be brought before him, and the Chevalier to be placed among the courtiers as one of them at the same time. Being at court, the dog conducted himself with perfect propriety for a short time, until he saw Macaire mixed up among the Courtiers, and then, dashing at him furiously as usual, with an awful growl out of his great red throat, he pinned him against the wall. In those days the judicial arbitrament of battle was in full force; the popular belief being that the "judgment of God" would be manifested in favor of the innocent and against the guilty. The known enmity of the Chevalier to Aubrey, the fact of Aubrey's murder, the dreadful antagonism of the murdered man's dog—these settled the question with King John, and it was directed that the man must fight the dog, as the only way to justify himself in the eyes of Paris and purge himself of the suspicion of murder. It was the custom in the middle ages occasionally to try the lower animals for offences with much of the parade and ceremonial bestowed in the cases of their supporters, and from this we may understand that a combat between a man and a dog was not so strange an occurrence after all, away back in the fourteenth century. There was no cathedral of Notre Dame in Paris in 1361, and so the open space of the island served as a capital place in which to pitch a ring for the combatants. The Chevalier Macaire was armed with a strong heavy stick, and the dog of Montargis had his teeth and a tub. This last, which might more properly be called an empty cask, was an ark of refuge for the dog to retreat to and make his springs from. But the dog of Montargis had no use for the tub. He scorned it. He flew with astonishing activity and fury at his opposer, first on one side, then on the other, he dodged under the cudgel, and finally with a terrible bound, fastened his deadly grip on the murderer's throat, and there was an end of the Chevalier Macaire, who lived just long enough to confess his crime before King John and the court. Of course everybody in Paris cried, "Well done dog," and was more than ever satisfied of the truth and justice of "trial by battle." We can readily understand that the faithful dog, having nobly avenged the death of his master, took up his quarters with his master's friend, looked after the rats and was made comfortable the remainder of his days. This is only conjecture, however, because he may have been put in the dog-pound for non payment of the tax; but what is not conjecture is the fact that over a chimney in the great hall of the ancient chateau of Montargis, in France, there is a curiously carved representation of this memorable combat; and as long as the old chateau stands, and the wrought oak wainscoting is spared the inroads of the worm, that carving will stand as the monument of the fidelity of a dog.—*Exchange.*

Natural History.

PECULIARITIES OF ANADROMOUS FISHES.

ONE of these characteristics is the infallible instinct of finding their way back from sea to the river, the tributary of a river or even a small affluent brook where they emerged from the ova. It has been pretty well ascertained that however they may mingle on their marine feeding grounds, when they are impelled by the reproductive impulse towards fresh water the Connecticut shad ascend that river, the Hudson shad again passes up between the New York and New Jersey shores, and that those of the Delaware are again and always will be Delaware shad. So also with herring and salmon.

At Little Russia, a point on the Bay of Chaleur, ten or twelve miles above Bathurst, the stake nets set off from shore sometimes take salmon seeking the mouth of the Restigouche as well as that of the Nepissiguit, and the habitants who attend these nets will point out a fish of each river with as much confidence as a stock fancier would an Alderney or a Durham cow. The salmon—and it is so also with shad—of some rivers are inherently small, or of some known conformation—short or long—of others very large.

Another peculiarity of these fishes, which enter fresh rivers only to spawn—for the sea is their pasture ground where they acquire growth, fat and flavor—is that they are invariably found without food in any process of digestion in their stomachs after entering the fluvial portions of a river. That organ, after they have been in the rivers a few days, becomes a contracted cord, in appearance not thicker than a pipe-stem and filled with a hard cheesy substance, mixed, perhaps, with a little bit of yellow fluid. It is certain that the young of both of the fishes mentioned, until their first migration to sea, feed on flies, their larvae and on aquatic insects, which may be found in their stomachs; but on returning from sea to their native streams, it is solely that they may carry out the law of their nature to continue their species.

"Why then," the reader may ask, "does a salmon or shad rise occasionally to a natural fly or the counterfeit of the angler?" We can only refer such fact to a remnant of an old instinct or recollection of the food they fed on before their first migration to sea and their predatory habit. But the few natural flies they may devour do not, however, appear to distend the stomach in the least; no effete matter is pressed from the vent in handling them.

A young shad, according to Mr. Theodore Lyman, of the Massachusetts Fish Commission, during its sojourn in fresh water from the time its yolk sac is absorbed until it descends the river, is provided with teeth, which the adult shad has not. The naturalist mentioned has even found one or two small species of flies, and the larvae on which they feed in the stomachs of shad fry.

A young salmon, in its parrhood, in its habits, its food and manner of taking it, scarcely differs from a trout, and

to an unobserving fisher taking trout, is scarcely distinguishable from that fish.

A not less remarkable peculiarity than those already mentioned is that the males of both salmon and shad are fecund a full year earlier than the females. Young male shad, it has been definitely ascertained, return to their native river with mature milt the summer after leaving it. The female does not return until the following summer when two years' old. The experiments at Stormontfield, and on other rivers than the Tay, in Scotland, have shown that the male parr before going to sea is fecund and will impregnate the ova of a full grown female salmon. The embryos from such eggs have been kept by themselves in rearing ponds, and are as thrifty as the fry of a pair of mature salmon.

In the early days of salmon culture in Scotland, before breeding establishments like the one mentioned were inaugurated, there was much discussion in sporting and other periodicals between a Mr. Young and a Mr. Shaw as to the time when young salmon set out on their first journey seaward; one maintaining that it was when a little more than a year old, the other that it was not until a year later. Observation and experiment at Stormontfield have shown that the contestants were both right and both wrong; that about half of a brood go down during the spring or early summer freshets when somewhat more than a year old, and the remaining half the spring or summer following. From this it has been argued that males being fecund a year earlier than the females, go first, and the females not until they are over two years old. Taking these rules as a basis, we may infer that it takes two years to produce a male grilse and three years a male salmon; or three years a female grilse and four years a female salmon.

Of course those who have given much observation and thought to the subject are cognizant of most of the facts set down above, but the article may interest the general reader.

THADDEUS NORRIS,
West Logan Square, Phila.

—The Smithsonian Institute has just received from Newfoundland the beak or jaws of an immense cuttle fish captured at Newfoundland last year, which the local papers represented at the time as having a body as big as a hog's head, and arms twenty-seven feet in length, with suckers the size of a dinner plate. The jaws just received hardly come up to those proportions, but may have shrunk by drying.

—St. George Mivart in a series of admirable articles on the frog, published in *Nature*, in speaking of the ability of the frog or toad to inflict wounds and to convey venom, states that this power is not found in any animals which are even near allies of the frogs and toads. This high authority, however, tells of a very perfect organ for both wounding and poisoning discovered to exist in the *Thalassophryne reticulata*, a fish having a superficial resemblance to a frog. Dr. Günther found in this creature no less than four spines, each perforated like the tooth of a viper and each having a sack at its base.

In No. 5 of the *FOREST AND STREAM* we published an account of a poisonous frog, mentioned by Dr. Saffray as the true source of that deadly poison the Wourari. The account given by Dr. Saffray was very positive, and the name *Phyllobates melanorhinus* was given by him to the venomous frog, a native of New Grenada. The same authority says that the naturalist Pison, states the same fact, and that there is also in the East Indies, a saurian called *Laerta Gecko*, from which a deadly poison can be made. In the seventh number of *FOREST AND STREAM* there was a communication in regard to a poisonous lizard in Nova Scotia, and the author of this letter is among the most reliable of our correspondents.

It might be curious if this discovery was made, which is not impossible, that though certain species of the Batrachians would be incapable of imparting their poison by biting, still they might within themselves contain such poison. We should only be glad if some of our readers would give us information on this most interesting subject.

—From the *Bulletin Mensuel* of the Paris Acclimatization Society we take the following:—

"The results of the experiments to produce different colored silks go to show that silk-worms fed on cherry-leaves produce a bright chromo-yellow-colored silk, those on pear-leaves a darker shade of the same color, those on apple-leaves a nearly white silk, but coarser than that of the silk-worms fed on mulberry-leaves. There is an interesting paper on the breeding of ostriches in captivity contributed by Capt. Crepu, who had kept several pairs of these birds. His observations threw much light on the natural history of the ostrich. M. Comber described the mortality which has seized the deer and other animals in King Victor Emmanuel's park at La Mandria. The calamity he attributed partly to over-crowding and partly to the want of shelter and proper protection. In 1865, when the park and grounds were carefully cultivated, 13 deaths occurred. In 1873, the park being left in its natural state, 172 deaths are recorded."

—The sagacity of a parrot is recorded. A lighted cigar happened to fall just under the door of the bird's cage. The fumes soon attracted her attention, and she instantly set about abating the nuisance. Taking a small cup of cold tea which was in the cage, the bird doused the contents on the burning end of the old stump and extinguished it.

—A pair of skates for Christmas and New Year's, with a copy of *FOREST AND STREAM*, can be had by every subscriber.

—What is the difference between a restaurant and a bank? One cooks your hash, the other hooks your cash.

The Magazines.

COCKNEY AND DUFFER.

THERE is a legend to the effect that cockney comes from *cock* and *neigh*, for that once upon a time a true-born John Gilpin went into the country and, as we are told, for the first time in his life hearing a horse neigh remarked, "How that horse laughs!" But being told that the noise made by the horse was called "neighing," he stood corrected. As a matter of course, in the morning a cock crew, whereupon the cit immediately exclaimed, with exultant conviction, that "the cock neighed! In Chaucer, it imports no more than a 'silly fellow' devoid of wit or courage, as in the Reeve's prologue—

"I shall be held a *daffe*, or a *cockney*."

Daffey means a "fool," and has obviously been converted into *duff*, whence the term *duffer*, signifying a "stupid fellow," and in common use amongst the lower orders everywhere. Shakspeare in one passage apparently contrasts the idea of a cockney's cowardice with a swaggering braggadocio, where, in "Twelfth Night," the clown says (Act IV. Scene 1),—

"I am afraid this great lubber the world will prove a *cockney*."

Congrave, whose mind apparently was always intent on the supposed French origin of the word cockney, draws our attention to the fact that the French have an old appropriated verb "*coqueline*," which means to *fondle* and *panper*, as "*coqueline un enfant*;" the participle passive of this verb is *coqueliné*, thence *cockney*! Such are the extremes to which men have gone in attempting to find a derivation for this word; it seems to be as deep-rooted now in our language as it was in Shakspeare's time, and the conservatism of the city is such that in all likelihood it will be found within sound of Bow bell at the millennium. Its origin is shrouded in mystery, and the researches of antiquarians have failed in throwing any light on the subject.—*Saint James Magazine*.

INDIAN SMOKE SIGNALS.

IT is wonderful to what a state of perfection the Indian has carried this simple mode of telegraphing. Scattered over a great portion of the plains, from British America in the north almost to the Mexican border on the south, are to be found isolated hills, or as they are usually termed, "buttes," which can be seen a distance of from twenty to more than fifty miles. These peaks are selected as the telegraphic stations. By varying the number of the columns of smoke different meanings are conveyed by the messages. The most simple as well as most easily varied mode, and resembling somewhat the ordinary alphabet employed in the magnetic telegraph, is arranged by building a small fire which is not allowed to blaze; then by placing an armful of partially green grass or weeds over the fire, as if to smother it, a dense white smoke is created, which ordinarily will ascend in a continuous vertical column for hundreds of feet. This column of smoke is to the Indian mode of telegraphing what the current of electricity is to the system employed by the white man; the alphabet so far as it goes is almost identical, consisting as it does of long lines and short lines or dots. But how formed? is perhaps the query of the reader. By the simplest of methods. Having his current of smoke established, the Indian operator simply takes his blanket and by spreading it over the small pile of weeds or grass from which the column of smoke takes its source, and properly controlling the edges and corners of the blanket, he confines the smoke, and is in this way able to retain it for several moments. By rapidly displacing the blanket, the operator is enabled to cause a dense volume of smoke to rise, the length or shortness of which, as well as the number and frequency of the columns, he can regulate perfectly, simply by the proper use of the blanket. For the transmission of brief messages, previously determined upon, no more simple method could easily be adopted.—*General Custer in Galatz*.

THE FUTURE STATE OF ANIMALS.—In these days, when a flesh and blood school of poetry shuts out heaven altogether, the question of a future state for animals seems more than ever out of place; but eminent writers in all ages have thought the subject worthy of discussion. Landor and Southey evidently believed in a new life for animals after their worldly end. Mr. Jacox, who has an interesting chapter in one of his recent commentary compilations, thinks Landor rather implied that some of his horny-eyed readers might be soulless than that the insect king is immortal when he wrote:—

Believe me, most who read the line
Will read with hornier eyes than thine;
And yet their souls shall live forever,
And thine drop dead into the river!
God pardon them, O insect king,
Who fancy so unjust a thing.

Mr. Charles Bonnet, the Swiss naturalist, settled in his own mind the nature and character of the various paradises to which both man and animals would be translated. Mr. Leigh Hunt regretted that he could not settle the matter, at the same time confessing that he would fain have as much company in Paradise as possible, and he could not conceive much less pleasant additions than of flocks of doves or such a dog as Pope's "poor Indian" expected to find in that universal future. A London car-horse, upon the doctrine of punishments and rewards, is surely entitled to some consideration in the future. Meanwhile, I would like to leave him with his "bus companion in the hands of Mr. Smiles and his "Friends in Council," who have lately taken certain of our dumb animals under their special literary protection.—*Sylvanus Urban, Gentleman's Magazine*.

—Among the officers in charge in Houston during the late war was General Griffin. A freedman, Pomp, was one day conversing with the general, when he spied his former young master, whom he had not seen since the commencement of hostilities. Pomp ran to him, and exclaimed, "God bless you, Mars Charles! I's mighty glad to see yer! How's de ole missis an' Mars John?"

After Pomp had finished his demonstrations of joy the general said, "Pomp, you need not call him master now; you are just as good as he is."

"What!" said Pomp; "me jus' as good as Mars Charles? No, Sah, General Griffin! I may be jus' as good as you is, but I ain't so good as Mars Charles—no, Sah!"—*Harpers' Drifter*.

BARBADOES.—Negro huts are scattered along the sides of the roads all over Barbadoes; in fact, they are as thick all over the island as plums in a pudding. It is said that it is not possible to raise your voice in any part of it without being heard by some neighboring house. These huts are dotted about without the slightest regard for regularity—sometimes a number of them in a kind of promiscuous heap, sometimes one or two by themselves. They frequently have little patches of land or gardens attached to them, but often are set down on the bare face of a piece of stony or waste ground. Sometimes an almond or a gooseberry tree grows close to them, but apparently more by accident than design. Some of the huts are kept nice; others; and many have a pig, or a sheep, or a goat tethered beside them, or in rarer cases even a cow or a donkey. Chickens and turkeys abound among the huts. Sheep have no wool, but a kind of coarse hair, and are of as various colors as our cows—black, brown, chestnut, and pie-bald, occurring nearly as commonly as white. Cows are much smaller than the average size in England. Oxen and mules are the beasts of burden, horses being kept solely for riding and driving.—*Appletons' Journal*.

—According to the latest statistics, the globe is inhabited by 1,228,000,000 human beings, viz., 360,000,000 belonging to the Caucasian race; 552,000,000 Mongols; 190,000,000 Ethiopians; 176,000,000 Malays; 1,000,000 Indo-Americans. 3,642 different languages are spoken, and there are 1,000 different religions persuasions. The annual mortality of the globe is given at 33,333,533, or 91,554 daily, 3,780 hourly, sixty-two per minute, or nearly one per second, or pulsation of the human heart. The average duration of life is thirty-three years, one quarter of the population dying at seven years or under, one half at seventeen or under. Out of 100,000 persons one only reaches the age of 100 years, one out of 500 ninety years; one in a 100 sixty years. One eighth of the male population of the globe are soldiers. The cannibal portion of humanity is vaguely set down at 1,930,000, viz., 1,000,000 in the Polynesian land, 500,000 Niams-Niams, 80,000 in the Niger Delta, 50,000 in Australia, etc.—*Land and Water*.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfits, implements, routes, distances, seasons, expenses, remedies, traits, species, governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

TROUT FISHING, 166 Gates avenue, Brooklyn.—A map of Clinton Co., Pa., can be had by writing to a first-class bookseller in Harrisburg, Pa.

GAME FISH, Seneca Lake.—Is it sportsma-like to fish for brook trout through the ice? Certainly, but not unless you are hungry.

MOHAWK, Nimrod Shooting Club.—Over the powder of course. A piece of card board will answer for the shot wad.

HAND A., St. Catharines, Ca.—A most useful little work on the subject is "Napiers' Food, Use and Beauty of British Birds," Grombridge & Son, London.

F. W. CLARKE, Paterson, N. J.—Rabbits breed all the year round, except, perhaps, in the three colder months. Most likely those you noticed were pairing, as they often live together during the winter months.

G. M. F., Jr.—Many thanks for contribution, which will appear in its turn, say in two weeks. Each subscriber to *FOREST AND STREAM* is entitled to a copy of "Hallock's Fishing Tourist."

L. A., Galveston, Texas.—We think the bird you describe must be the Radiolated wood-pecker (*Centurus radiolatus*). It greatly resembles Wilson's red-bellied wood-pecker (*C. Carolinus*). It is very common in the West Indies.

WALTER G. SMITH, 14 Gallatin Place, Brooklyn.—What kind of a dog is best for partridge hunting? Where can I get one? and what would it cost? Ans. The proper breed of dog for ruffed grouse shooting is the setter. E. H. Madison, 546 Fulton street, Brooklyn, has one for sale.

THOM'S AND HINES, Baltimore.—1. Cannot place our hand on the authority. Think it was in the London *Field* of August, 1872. 2. We cannot recommend the person you name. See the dog yourself before you purchase.

NOBLE, Hoboken.—Glad to have awakened your interest. There are two schools of anthropology—the physical and philological. The first dwells on the external form and anatomical peculiarities of man, the second considers physical peculiarities of less importance than language as an indication of the origin and filiation of races.

JOE E. FISHER, Brooklyn, L. I.—1. What bore do you consider best for quail, woodcock and ruffed grouse shooting? 2. What size shot is best? 3. What part of Long Island do you think is best for the above named birds? Ans. 1. Quail and woodcock, 12 bore gun; ruffed grouse this time of year, 10 bore. 2. Quail and woodcock, No. 10 shot; ruffed grouse, No. 8. B. F. Sammis, Smithville, near Belpoit, L. I. R. R.

S., New Orleans.—The drift is the direction a bullet takes towards the way the groove or spiral is cut. Whitworth made a table; at 100 yards it was 2 inches; at 1,000 yards, 65. The progression of the drift increases perceptibly all the time. Between 100 and 200 yards it was only three inches; between 600 and 1,000 yards it was 11 inches. (See Wingate's Manual.)

A. W., 101 Duane street, New York.—The answer would be too long for our columns. Read "Stonehenge," Shot Gun and Sporting Rifle, page 62. The age of a stag is generally reckoned by the number of points or tines protruding from the main antler. Up to 7 or 8 prongs it is reliable; above that number you must judge by the general appearance of the animal; his teeth, hoofs, &c., will be much worn, and the stag will have a dirty appearance.

A. W.—The woodcock migrated, or moved south, from Orange county about Oct. 25th. They usually go on or about 15th October; they were ten days later this year. They were found this year on their summer ground. This question as to route of migration is interesting, though not treated of in books, so far as we can discover. We have seen woodcock around here as late as Christmas in open seasons. They probably migrate in an irregular path according to prevailing winds, &c. Their food must influence their migration. A dry autumn probably sends them away earlier, as is the case this year. Sorry we cannot answer more satisfactorily.

J. N. U., Pottsville, Pa.—You ask how to make clothes water-proof. Take half a pound of sugar of lead and half a pound of powdered alum, dissolve them in a bucket of rain water, then pour off the fluid with the ingredients dissolved into another vessel. Take your clothes—a shawl is good to try it with—and steep it thoroughly in the solution, letting it stay for a certain time. Then hang it up to dry, but do not ring it out. The water of a rain-storm seems to hang on it in globules and does not go through it. It is an excellent method of making canvas tents water-proof.

Mrs. F., Chestnut Hill, Pa.—Regret to inform you that, although magnificent as to appearance, the Cedar of Lebanon, as a wood, has not the incorruptible power the ancients gave it. It has been grown in England and France, and in the United States. The Deodar has been frequently assumed to be identical with the Cedar of Lebanon. This is a different tree, and may perhaps correspond better with the sublime accounts of Ezekiel. If we remember rightly, specimens of timbers made from the Deodar have been found in India, some of them undoubtedly many centuries old and perfectly sound.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us one subscription and Five Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOV. 27, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their perusal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

This paper sent gratuitously to all contributors.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Managing Editor.

Calendar of Events for the Current Week.

THURSDAY, 27TH.—Barnum's Athletics at the Rink. Festival of Staten Island Shooting Club at New Dorp, L. I. Foot race, \$2,000, Providence, R. I.

FRIDAY, 28TH.—Trotting at Charlotte, N. C. The Rink.

SATURDAY, 29TH.—Trotting at Charlotte, N. C. The Rink.

MONDAY, DEC. 1ST.—The Rink.

TUESDAY, DEC. 2D.—Billiard match at New York Academy of Music, Garnier vs. Cyrille Dion. Pigeon shooting tournament, Toronto; Canada. The Rink.

THANKSGIVING.

IN this practical age of ours we are somewhat prone to regard all festivals, revelries and merrymakings with a philosophic eye.

It seems pretty evident that nationalities must have their days of amusement, for if "all work and no play makes Jack a dull boy," this most excellent proverb is quite as applicable to the community as to the individual. Collectiveness is also a necessity in taking pleasure. We may grieve in silence, but must be glad in company; somebody must be with us to share our happiness. American rejoicing has its peculiarities. What slight infiltration of the old Greek Saturnalia may enter into our uproariousness, may be difficult to determine. Perhaps the different ways in which we amuse ourselves may be owing in fact to the strange assemblages of races and people we are trying to weld into some kind of a homogenous mass, in this new world of ours.

Our country is so large that each section takes its frolic differently. On the Pacific slope there may be a slight smack of the fandango; in Louisiana it may take semblance of a French festival; but here among our more sedate and sober northern people, the holiday, the Thanksgiving, settles down into a day of quiet rejoicing, with the most solid anticipations of roasted turkey and pumpkin pie.

If the older people take their pleasure at sumptuous boards, loaded down with the good things of this earth, the younger people must have their fun with turkey shooting. Strange is it again that all demonstrations of joy must be accompanied by detonations. There is your turkey in a box, with his red crest just on the top of it, like some giant head defending his castle. There he stands some fifty to a hundred yards from you, and how carefully the shooters take their aim. No diamond badge at Creedmoor could cause a greater excitement. Some half dozen rifle shots are fired and the gobler is unscathed; when comes some skill-

ful hand, and "pop" goes off poor turkey's head. Laden with the spoil, the gallant bird is taken home by the crack shot, and cooked; done to a turn, the cranberry sauce, with its ruddy hue, contrasting with the delicate rich brown tint of the nicely roasted bird, a feast is made worthy of a king. Jack who has shot the bird, may have before this performed some meritorious action, and may possibly later in life render himself illustrious, but the memory of that gobler won by his prowess on a Thanksgiving Day will be a consolation to him, and likely to remain as long in his memory as most other things in this world.

Thanksgiving is getting to be each year more and more a day devoted to athletic sports. To-day, in and around New York, and throughout the country, though the grounds be soft, tens of thousands of boys and men will play at base ball, and hardy cricketers will drill in the wickets, and bowl merrily for the last time of the season.

Our current number greets our readers bearing the date of Thanksgiving Day, A. D. 1873. We have too few holidays, provided we could spend them in healthful recreation. Thanksgiving Day is most certainly one of our festivals which is popular with the people, and the inspiration it suggests is that of sociability and merrymaking. The season is the beginning of winter, and throughout most of the northern and western States there is added the fun and frolic of the first snow and the consequent sleigh ride and extemporized parties, and all kinds based on out of door amusements. To the rural districts Thanksgiving may be properly called the American carnival. Now the toilsome work of summer and the severe labor of gathering the fall crop is ended. The barns and storehouses are full, the wheat, the pumpkins, the luscious apples, the nuts, the succulent vegetables invite admiration on all sides, and the most irreverent have a sense of the blessings of Providence, and the heart involuntarily rejoices.

A little reflection makes the conclusion inevitable that Thanksgiving Day and its festivities are not conventional or arbitrary, but the irrepressible desire to mark an era of good feeling that wells up spontaneously in the heart, and is as necessary for our happiness as the air we breathe.

Now it is that separated families get together and sit close, because the weather is cold and the blazing fire necessary for physical comfort. The son who has wandered off, or the favorite daughter who has changed her name and left the paternal roof, come back on Thanksgiving Day to the old homestead, and for the nonce live over their youthful days and make new allegiances of love to kind parents and devoted relatives. Nor are those who have departed forever forgotten; a silent tear is dropped on their memory, and the boisterous mirth is chastened but not suppressed by these sad recollections.

The return of Thanksgiving Day in the country calls forth various devices for amusement. The old rusty gun is cleaned up, and shooting matches of all kinds are extemporized, the most popular and harmonious with the occasion being that of turkey shooting. Doubly hilarious is the festive board when the favorite bird has been obtained "by the best shot," though the expenditure for lead and powder cost possibly five times its market price. These are jolly exhibitions, these turkey shooting matches, and we are pleased to know that they prevail in our rural districts with all the spirit and fire of the olden times, at which often crashes with sharp report some old Queen Ann's fowling piece, that has done a good century's service of wear and tear.

Now ambitious lads have their peculiar sports. They get out their fowling pieces—old flint locks, and "single barls" without any locks, and with a stump tailed dog make the hickory groves ring with the explosions of villainous saltpetre. The objective points are innumerable squirrels, that at first, alarmed by the noise, run into their holes in desperate fright, but presently, finding out there is no harm in the scattering shot, it being so badly aimed, "bushy tails" resume their foraging work, and from their high nestling places laugh and chatter derisively, to the great annoyance of the jolly juveniles. But stump tail barks, the woods ring with echoes, the boys laugh, and the enjoyment, alas! is sweeter than will be found in after life.

There was a cunning old publican, when we were in charge of a boarding school, who got up a Thanksgiving shooting match for the "Academy boys" who didn't go home for a Thanksgiving dinner. It was very kind in him to recollect us when we were left literally out in the cold. We thought well of that old publican because he furnished us at a low price with a fowling piece loaded with shot, and a bird tied to a stake thirty yards away for a prize. We, *infants perdus*, with all our holiday spending money, repaired to his inn, and in presence of all the "Solon Shingles" of the vicinity commenced our grand display as marksmen. The victim, or prize, as you please, was an old game rooster called General Santa Anna, that had lived for years in the vicinity to the terror of all dung hill fowls; but he was getting old now, his feet were gouty, his head out of shape from innumerable fights, and in fact, as we subsequently learned, he had nothing left of the original bird but his indomitable spirit. By the laws of our shooting match with the publican the first boy that brought down Santa Anna was to have him for a prize. We, one and all, pegged away, making the dust fly about the old hero; but beyond this, to him harmless annoyance, he undauntedly faced the fire; in fact, he seemed to like it. Once and a while a stray buck shot would lodge in his neck, or crease his unprotected legs, whereupon he would stand on his tip toes and scream out his defiance, then cuddle down and cluck to us with affectionate notes, as if we were a brood of chickens. The result was, that in piecemeal we fired

away all our Thanksgiving pocket money, and when we departed from the scene of our juvenile exploits old Santa Anna gave a screeching note of derision at our poor aim and harmless shot, and the various Solon Shingles, who, with the landlord, enjoyed our discomfiture, unanimously agreed "that that ere game cock could have stood up agin our fire for six months." And we think he could.

But all hail the festivities of Thanksgiving Day. Under its cheering influence and inspiration we will endeavor for the moment to forget the panic, the unavoidable troubles of a "wicked world," and offer the incense, to heaven of a grateful heart.

A time honored and goodly custom is the keeping of this day of rest. May we—though times have been hard and fortunes have been swept away, though horrid war seems to loom up in the distance—may we still assemble on this and future Thanksgiving Days and thank the Beneficent Giver for all the acts of mercy and goodness he has shown to us.

THE SACRAMENTO SALMON.

THIS journal has already published in general terms, in common with other newspapers, a history of the operations of the United States Fish Commission in California, and its success in procuring and forwarding to eastern waters a large quantity of the salmon ova of the Sacramento. We are now gratified to be able to present our readers with an official account of the same by the kind courtesy of Livingston Stone, Esq., the indefatigable gentleman who had charge of the U. S. Salmon Breeding Camp on the McCloud River. Mr. Stone writes to the FOREST AND STREAM from his "Cold Spring Trout Ponds" at Charlestown, New Hampshire, under date of November 19th, as follows:—

"Our operations this year in getting salmon spawn in California were more successful than they were last year. Last year I received my instructions barely in time to reach the spawning grounds of the salmon by the first of September. The McCloud River, which offered the best facilities for the work, is, as you are probably aware, inhabited only by Indians, and our nearest source of supplies at that time being at Red Bluff, fifty miles distant, it was the middle of September before we could get to work to collect the eggs.

Judging from precedents at the east, where the salmon never spawn before October, we supposed we had plenty of time, but to our astonishment we found on catching the parent salmon that they had nearly all spawned, the season here being at least six weeks earlier than on the eastern rivers, the Minimichi for instance, where the salmon begin to spawn about the 15th of October. It was too late to make a great success that year, so we contented ourselves with taking a few thousand eggs, and waiting till the next to complete the experiment. It was the fault of no one, for after the funds were ready for disbursement at the Treasury Department, not a day was lost in pushing the work to its accomplishment.

This year, however, I started in good season, and on the 19th of August the water was turned on to the hatching troughs and everything was ready for collecting eggs. We considered the day an auspicious one for this event, because on the same afternoon about sundown, with the help of our whole force of whites, and a dozen Indians, we erected a fifty feet flag staff and hoisted a large American flag over the camp.

On the 26th of August we took the first salmon eggs, 23,000 in number, and continued taking eggs from this time till the 22d of September. The number which I was instructed by Prof. Baird, the Head of the United States Fish Commission, to furnish, was one million, but knowing the great liabilities to loss in hatching and transportation, I took two million eggs in all, allowing 500,000 for waste in hatching, and 500,000 for loss in transportation. On the 12th Sept. the first eye spots made their appearance, and on the 20th Sept. I sent eastward the first shipment, numbering 300,009. The balance of the eggs, as they became properly matured for forwarding, was shipped at intervals up to the middle of October, when the last of a quarter of a million was packed and sent to Dr. Slack of New Jersey.

The waste in hatching and transportation was about what was provided for, so that very nearly the stated quota of a million eggs arrived at their destinations alive.

They were sent in various proportions to Dr. J. H. Slack, New Jersey; Mr. James Duffy, Pennsylvania; George H. Jerome, Michigan; Seth Green, New York; Charles G. Atkins, Maine; E. A. Brackett, Mass.; F. W. Webber, New Hampshire; A. P. Rockwood, Great Salt Lake, Utah. Their final destinations are the Susquehanna, Potomac, Delaware, Schuylkill, and James Rivers; Lake Superior, Lake Champlain, Great Salt Lake, and the tributaries of the Mississippi.

Very truly yours,
LIVINGSTON STONE.

It will be perceived that the waters of the Hudson are not included in the distribution designated above, inasmuch as our correspondent had not been advised at the time of writing, of the determination of the Chief of the Fish Commission to include the Hudson, as announced in the last number of FOREST AND STREAM over his own signature. There can be no doubt of the wisdom of Prof. Baird's decision in this matter, for certainly no waters are better adapted for salmon propagation and growth than the clear cold tributaries of our noble river; and those gentlemen who have urged it upon his attention through the columns of this paper are very competent to judge of the whole subject in all its bearings, *ab ova usque mala*. We are informed that

the young fry will be ready for planting in about a month. They should go into spring brooks of a very few feet in width, which are not likely to freeze during winter.

One of our worthiest and best informed correspondents, J. Carson Brevoort, Esq., earnestly opposes putting these fish in the Hudson. He says they are a heavy, slow, and logy fish, that do not take a fly and are not very delicate as food. But for all this, we will not allow our noble river to remain barren of fish. These salmon will serve as fish food and be taken in abundance with the shad in nets in years to come. And albeit they are now coarse in flesh and afford the angler no sport, they will improve in flavor in due time, and also adopt the habits of their Labrador kinsfolk, and rise to the fly as gracefully as the best educated of them all. And if they should herein disappoint these cherished hopes, what of it? We can still go to the St. Lawrence or the Bay Chaleur for our rod-fishing, as we now do, while the poor will be fed on salmon at prices within their reach.

BALL CARTRIDGES.

AMONG the sportsmen and guides of Nova Scotia, there is a great deal of the most direct and practical information to be obtained upon almost all branches of wood craft, and well may it be so, for there is hardly any point in the Province, sea-side, estuary, mountain, or plains, where some game does not exist that is worth all a huntsman's skill.

The rifle is fully appreciated, and at various ranges, and with frequent competitive trials, all kinds of arms are well tested; but the men who go out for large game are very partial to a smooth bore. The Snider rifle is, with its large ball, a favorite, and is carried more generally than any other; still it hardly suits many of the best guides as well as a musket. One reason is found in the fact that moose, when called, are usually shot at short range, and in dim moonlight, or twilight, when the fine sights of a rifle are quite useless.

Beeswanger, the well known guide of the River Phillip region, advises the use of a musket for moose, "with two balls, sir; large balls, sir; one to cut away the twigs and one to kill, sir!"

And Beeswanger should know, for he has killed more moose than any man in the Cobequid, and has some twenty children to follow in his footsteps.

Acting upon his counsel, a number of ball cartridges were ordered at Halifax, and they were so well made that it may be worth while to mention their form. The gun for which they were loaded was a ten bore Scott. The ball used was eleven, and when placed over $3\frac{1}{4}$ drachms of powder and a thick wad was retained by drawing a strong cord around the shell just above it, making a deep and permanent crease. The round form of the ball would endanger wedging and a consequent strain were the cartridge rimmed over, but the crease kept the ball safely in place without forming an obstacle to its egress. It must be understood that the cord was not left on the shell. It was only used to form the crease evenly around it.

A strong double gun is a formidable arm when loaded with one ball and one buck shot cartridge. The ball may be relied upon for ten rods, and at a still longer range with slight elevation, and for snap shots at running game, will do fatal work about as often as a rifle.

The round ball is considered as more immediately destructive than any other. The blow is very powerful, and the "shock" to the animal consequently great, while the flesh and skin will hardly close over the wound to retard bleeding. It is claimed that large game will succumb more rapidly to the ragged crush of such a large ball, and save many a mile of trailing or the loss of game. As to the accuracy of such shooting, the three first shots with the gun mentioned, at forty-five yards, without rest, placed all the balls in one hole, hardly enlarging it, and it was just where it was intended to be.

There are many long arduous tramps taken after large game, when every ounce is to be well considered in arranging packs, and when but one gun can be carried, the use of ball in double guns may enable a hunter to decide upon taking a gun that will bring ducks, spruce grouse, &c., to the larder.

CREEDMOOR.

NOW that the rifle range at Creedmoor has closed for the season of 1873, a *resumé* of the practice which has taken place there, giving the scores made in the different matches, including those of the teams of the various regiments, will doubtless be found of great interest. Heretofore no account has ever been produced of these matches available to the public, so that means could be afforded of making comparisons in regard to the merits of the different regiments as marksmen. Another point of great interest will be the study of the various arms employed and their excellence as deduced from the scores of the winners, and such nice points as how far the military arms have kept pace with the sporting or target weapons. The improvement which has resulted at Creedmoor, taking the first matches and comparing them with the last ones, will be better discoverable when we have grouped together the entire series of matches. This bringing of the scores together has heretofore been a want that has been felt not only by those using the range at Creedmoor, but by all who have been interested in the subject of rifle practice, and the deductions made from them will be sought for by manufacturers of arms not only at home, but abroad.

It is our intention to publish the official score, whether good or bad, and to publish nothing but what is strictly

official. Many remarkable scores have been published as having been made at Creedmoor, which we have no doubt were accomplished by parties whose performances, however, in public have not equalled their practice in private. The only true way is to give the official figures, and by doing so no questions of favoritism or personal influence can arise which might occur did we adopt any other course. We also propose working out a careful comparison of the scores of the winning teams, as also of the best individual shots in these teams, and to place them alongside of the shooting at Wimbledon and in Canada, so that our American riflemen will be enabled to determine not only their exact *status*, but what it is necessary for them to do in order to become the rivals, if not the victors, of the best English marksmen.

To show that our marksmen do not grope in the dark, and are not too prone to be led by precedent, they seem to have come to the opinion that at Creedmoor the tables of elevation and the rules in regard to atmospheric pressure, as affecting the accuracy of aim, and the necessary elevations or depressions of the piece, as laid down by the best English authorities in rifle practice, will require material alteration or modification for use. The purity of the atmosphere, as compared with that of England, undoubtedly makes a difference in sighting, and the variations from light to shade of a bright or a dark day are somewhat less noticeable on this side of the world. Exactly what are these differences can of course only be determined by practice and experience. This important question is being rapidly brought to solution by the amateur Riflemen at Creedmoor, and we may trust by the publications we are about to commence that we shall be able to collate facts which will be of material service.

So far as we are aware, no publication has been made of scores except of the winning teams at the fall competition of the National Rifle Association. This is a matter which many are interested in knowing, and we trust to supply this want by printing all the scores in each of the matches.

The experiment of starting a rifle range was one which was doubtless entered upon by the National Rifle Association with misgivings. Though many of the original projectors were enthusiastic about it, the officers and directors had grave fears as to whether a rifle range would prove popular to the public, or even to the National Guard. Of course the originators of the enterprise had no actual experience in the undertaking, and were doubtful of their ability to manage it successfully. The year's single experience, which has come to so fortunate a conclusion, has done away with all such misgivings. We can safely assert that no public movement of any kind has been instituted which has so rapidly become popular as the National Rifle Association. From its incipency up to the present moment no newspaper, in fact no one, has mentioned the subject save to commend it. To-day nearly all the prominent members of the National Guard belong to it, and on all sides, from the press and the public, it meets with a most hearty support.

The range at Creedmoor has been laid out on an improved model, and is universally conceded from natural causes, aided by judicious improvements, to be superior to the best rifle ranges abroad.

Notwithstanding that all the officers of the National Rifle Association are business men, in order to insure the success of their enterprise these gentlemen have devoted an amount of time and attention to create and carry out this undertaking which can hardly be understood by those not cognizant with the fact that the difficulties were many, and only to be overcome by no small amount of personal sacrifice. It would perhaps be invidious to make any distinction when all have done so well. Especial credit is, however, due to Colonel William C. Church, the President; to the Vice President, General Alexander Shaler; to Captain George W. Wingate, the Secretary; and to General John B. Woodward, who was for a long time Treasurer, and who has had charge of the headquarters tent during the different matches.

It is a matter of congratulation to all concerned that the multifarious business of the range has not only been managed with a liberal spirit, but that the expenditures have been at the same time most carefully administered. The pleasant feeling which exists among the officers and directors has extended to the range itself, and although the managers of foreign ranges at first somewhat appalled the officers of our National Rifle Association by the statement that there was no class of the community so capacious and quarrelsome as riflemen, yet at Creedmoor everything has passed off as pleasantly as a summer day. Those who practiced at the range understood intuitively what were the difficulties and annoyances officers had to contend with, and both officers and men made allowances for them. Whatever differences of opinion may have existed, which were inevitable in the starting of a new enterprise, were always quickly and harmoniously arranged, and on the part of the marksmen the wise disposition was shown of making the best of everything. Occasionally, of course, a grumbler made his appearance, but the vast majority of competing marksmen, by the good humor and alacrity with which they obeyed the laws of the range, have been of great aid to the officers in charge.

Conceding the fact that much the larger majority of those who have used the range this year were to a certain extent unused to arms, it is an extraordinary fact that not a single accident of any kind has occurred, save a marker, who, unnecessarily exposing himself, was slightly cut by a splash from a bullet. This cause of accident has been

dered impossible for the future by an alteration at the butt where the accident occurred.

The effect of the practice at Creedmoor on the National Guard has been remarkable, and will undoubtedly be permanent. Our volunteer soldiers recognize the fact that their rifles are something else than implements, to be used only for the manual of arms in the drill room. During the winter Wingate's Manual on Rifle Practice will receive a careful study, and aiming drill and candle shooting, hitherto but little known among the different regiments, save by the gallant members of the Twenty-second Regiment, will form a prominent feature of the winter's drill. The Seventh, Ninth, Twelfth, Twenty-third, Thirty-second, Seventy-first, and Seventy-ninth regiments have determined that if practice will accomplish anything, to be powerful antagonists at the next general match of the National Rifle Association.

Individual members of the National Guard will appreciate the glory which is to be obtained as the winner of a prize at future contests. It is something which may give him a position well worthy of an honorable ambition. There is no one thing by which a member can bring himself in such honorable prominence as by a display of marksmanship. While affording pleasant recreation for leisure hours it must draw forth at the same time his best military qualifications. When rifle shooting, as a military art, is taken hold of by the whole of the National Guard, as they seem disposed to take hold, a large class of young men will undoubtedly be brought into the ranks who otherwise would hold aloof from military organizations. A healthy emulation will then be excited among the different regiments, and the State will obtain a substantial benefit by securing a National Guard which will not only be enthusiastic in time of peace, but efficient in time of war.

THE CINCINNATI ACCLIMATIZATION SOCIETY.

THE preservation of game and birds and their acclimatization entering particularly within the province of the FOREST AND STREAM, we hail with pleasure any effort made to foster enterprises of this character.

It is wonderful when we think how feeble were the early attempts of this kind. To Philadelphia must be given the credit of having been the first to foster the squirrels in the public squares. We remember perfectly well the time, some twenty years only ago, when if an occasional squirrel was seen in Washington square in Philadelphia, a hundred boys would troop around, and poor Bunny would be pelted with stones. To-day squirrels abound in the Philadelphia breathing grounds, and these pretty animals live the happiest of lives. Such a small matter as the preservation of a squirrel's life may seem to many as insignificant, but their immunity from danger and the interest even the roughest portion of a population take in their movements and preservation, cannot but have had an excellent effect. It has been the better not only for the squirrels but for the boys and men.

The introduction of the English sparrow in New York, is now a thing of the past. To-day the sparrow is part and parcel of this huge metropolis, and the benefits derived from his presence are universally admitted. The Cincinnati Acclimatization Society, has for its object the introduction into this country of all useful, insect eating European birds, as well as the best singers, and to see to it that the imported, as well as the domestic birds have a better protection against the attack of heartless men and thoughtless boys; that the shooting of useful birds be prevented and the destruction of birds nests be stopped, with all legal means at the disposal of the Society. From A. Erkenbrecker, Esq., the President of the Cincinnati Society of Acclimatization, we have received a most interesting letter on the subject of their organization, from which letter we make the following summary: The Society has to-day 250 members, and is steadily augmenting in number. Last spring \$3,000 worth of European songsters of ten different varieties were set free, and the experiment proving a perfect success, as the birds remained and bred, the Society have sent an agent to Germany for another installment of such varieties as had not yet been received. To make sure that these birds when received shall not suffer from the sudden effects of climate, arrangements have been made to house the birds this winter, so that somewhat accustomed to the climatic change, they will be ready for liberation in the early spring. In this way young birds born abroad will have a better chance of existence. The President informs us that the sparrows are becoming very thick in the outskirts of the city, and that next year they will, he believes, enter into the heart of the good city of Cincinnati. The birds spoken of as expected, will arrive very shortly in charge of Mr. A. Tenner, the Secretary.

The Society has issued a number of circulars, in which they call on teachers, parents and lovers of birds to help them in awakening a love for these merry songsters, and to give their aid in protecting the birds, and promoting their increase. No less excellent is the idea of a placard printed on white cloth, to be nailed in proper positions, which reads as follows: "Ten Dollars reward will be paid by the Acclimatization Society of Cincinnati for any information that will convict any person or persons of violating in this vicinity, the State or municipal laws framed for the protection of birds."

Apart from the highly beneficial effect of insect-eating birds in protecting orchard and shade trees, the Society, as may be seen, have not forgotten the more kindly influences the songs of birds exert in all classes. We trust to see other cities emulate the good example shown by the Cincinnati Acclimatization Society.

MORE ABOUT THE NEW YORK AQUARIUM.

AN exceedingly interesting letter has been received by the Messrs Appleton from Mr. W. Saville Kent, of Brighton, England, in regard to the proposed aquarium at Central Park, which is published in the last number of *Appleton's Journal*.

Mr. Kent speaks of the advantages likely to accrue in an educational and recreative point of view by the establishment of a grand aquarium in New York City. Once in working order, Mr. Kent anticipates remarkable results from the stocking of the tanks with the wonderful marine fauna of the West Indies and with species from the Florida reefs, and even from the more remote Pacific. The system of transporting living fish in the United States—the aquarium cars—already pursued by the American Fisheries Commission, Mr. Kent thinks is of wonderful importance as a means of transit, and Mr. Kent predicts that the time may not be far distant when a well appointed aquarium, representing all the fauna of a marine world will illustrate this portion of Natural History quite as thoroughly as does to-day a menagerie stocked with animals.

In speaking of the Brighton Aquarium, the largest in the world, and the porpoises in the monster tank, Mr. Kent thinks there is no reason why the beluga, or white whale, some 15 to 16 feet long, which abound in the St. Lawrence, should not be captured and placed in our tanks. Some exceedingly curious fishes, as the bony pike (*Lepidosteus*) and the paddle-fish (*Polyodon*), remarkable examples of extinct races, and only found in the United States, would, if captured and put in the aquarium, lead to new fields of research. "Another zoological problem," says Mr. Kent, "of the greatest consequence yet undetermined is associated with the embryology of the king-crabs, the only existing group of their class throwing light on the ancient paleozoic eurypteridæ, and forming a connecting link between the spider tribe and true crustacea. One species (*Limulus polyphemus*) is a native of America, and it may yet be left to the aquarium of the Central Park, New York, to furnish through this species the details deciding this important question."

The whole letter is a most excellent one, showing the practical and scientific knowledge of the writer, and we sincerely trust that before six months are over, the constructing of an aquarium in Central Park will be under the supervision of Mr. Kent.

—Since the English Palestine Expedition, under the patronage of Lady Burdett Coutts has been so successful, we are glad to learn that the American Expedition, under charge of Lieutenant Steever, has been most fruitful in its results. Some five months' ago Lieutenant Steever arrived at Beirut, after five months' of exploration, with many remarkable Archaeological and Geographical discoveries. Some 600 square miles of the land of Moab have been triangulated, and elaborate studies have been made of Nebo and Pisgah, and quite a number of rivers and streams unknown to travelers have been found. At an early day the Geographical Society will hold a special meeting, when Lieutenant Steever will lay before the Society some of the results of his five months' explorations. We are pleased to state that numerous additional subscriptions to the fund of the Palestine Expedition have been received, and that many new discoveries are to be expected.

—Poor David Livingstone! There is now no chance for this ubiquitous explorer, for no less than two expeditions are after him. On the west coast Lieutenant Grandy, R.N., left on June 16th from San Salvador in search of Dr. Livingstone, and on the east coast Lieutenant Cameron is trying to head the missionary traveler off. At late accounts Lieutenant Cameron was near the Lake Region with a fair chance of reaching a distant country where he would be likely to obtain information about Livingstone. There will be a wonderful discovery made some day. Whether geographical or not, we are scarcely at present prepared to say, but certainly a mystery will be unravelled.

—It is stated that a line of steamers established between Pensacola and Havana would enable a traveler to go from Louisville to Havana and return within six days.—*Louisville Courier-Journal*.

Yes; it is all very well to say "return," but how about the passengers of the *Virginus*?

—Cuban bonds are being purchased freely in Philadelphia at twenty-five cents on a dollar.

—A horse at Murfreesboro, Tenn., is fond of meat diet and eats bacon and game with great gusto.

—Cattle men say that in no previous season has the grass on the plains "cured down" so finely as the present fall.

—The Patrons of Husbandry now have "Granges" in every State, except Maine, Rhode Island and Connecticut.

—The cultivation of oranges in East Florida has had the effect of enhancing the value of real estate on all the navigable streams.

—Farmers of Tazewell Co., Ill., complain of wolves killing sheep, the wolves coming right up to the barn lots after them.

—A bundle of shingles fell from a wagon on the ferry-boat the other day and struck fairly upon the head of a colored woman, who said, "Y'oughter b' shame to muss a cullud wom'n's har dat away. I wish de shingles fell ova-

Sporting News from Abroad.

"Listening how the hounds and horn,
Cheerily rouse the slumbering morn,
From the side of some hoar hill,
Thro' the high wood echoing shrill."

So sang the grand John Milton, more than two hundred years ago, and long before him, Twice in his rhymed "Treatise on the Craft of Hunting," says:—

"And for to sette young huntiers in the way
To venery, I cast me fyrst to go;
Of which four bestes he, that is to say
The hare, the herte, the wulf, and the wild boar,
But there ben other bestes, five of the chase,
The buck the first, the second is the do'."

So undoubtedly may have thought that elegant assemblage of ladies and gentlemen and fine horses who collected at a railroad station in the West end of London, Paddington by name, one day early in this month to follow her Majesty's hounds from Salt Hill after the stag. We find no notice of the stag or the hounds having been brought up from London in the same special train, which might have been ever so much more convenient. At Bayles' court the stag was found (in his box) all ready waiting, and was turned out, and with some difficulty having extricated himself from the mob, off bolted the quarry, with some hundred horsemen and dogs at his heels. The poor Baron (for so the stag is called) ran along wire fences, through plowed fields, over the London highroad, across a brickyard, and at last was taken in the garden of Mr. Drew's cottage. It sounds a little bit tame when put in this way. A stag is brought on the ground like a show beast in a menagerie van, is let loose and then caught in the midst of a gravel walk, perhaps in the immediate vicinity of a greenhouse. Of the many who started, some thirty huntsmen are represented to have been in at the death, and some nice falls came to the lot of many of the huntsmen. It is kind of a put up hunt of course, adapted to the period, a little bit theatrical, but it is all right we suppose, though it cannot have the full flavor of real hunting, as expressed by Twice or Chaucer. Though on a grand scale, it has the least smack of barbarity about it, and when some future Leckie will discant on hunting morals, he will tell of the time when the last hunt of this nature was held in England.

—Some time ago *Punch* had a most clever picture in regard to driving partridges, which represented several kid glove gentlemen seated on easy chairs knocking over partridges, the birds being sent to them through the process called partridge driving. One of most able foreign contemporaries takes umbrage at this; and declares that it is no easy sport, and describes the process. From our own experience of driving partridge in England we must perfectly agree with the *Field* that it is no easy sport, though in our time no horses or flags were in use; these are more modern complications. The birds flew almost as swift as black ducks on the wind, and we are not ashamed to say that of seven which passed over us during a whole morning we killed only two, and then to our surprise were congratulated at being "quite a decent shot." We cannot say that the sport was an amusing one, on the contrary, it was stupid to a degree. To-day partridge driving, we believe, is becoming more and more in vogue in England. The poor bird are scared up by heaters, while men on horseback with fluttering flags keep the birds going in one line, and from hedges the concealed guns let them have it. We think it an abnormal sport, and to use a French maxim, "*le jeu ne vaut pas la chandelle*." All ultra refinements of sport are unnatural.

—The subject of *refreshing the moors* is now being agitated in England. Some are of opinion that all the old cock and hen grouse should be exterminated; others are in favor of very careful shooting for the year to come. Questions of the introduction of new birds from other sections of the country are spoken about, and there is a dispute whether it is better to produce fresher breeds by the eggs or by placing young birds on the moors.

—A piece of red pepper, the size of your finger-nail, put into meat or vegetables when first beginning to cook, will aid greatly in killing the unpleasant odor arising therefrom. Remember this for boiled cabbage, green beans, onions, chickens, mutton, etc.

—The amount of timber cut on the head waters of the Mississippi River and its tributaries, the past year, was equal to 1,579,000,000 feet. This quantity, estimating the yield of pine land at 10,000 feet per acre, would require the denudation of 155,000 acres, or nearly 250 square miles of land.

—"Do black bass take a fly?" This is a question of a pinion.

—The Brooklyn *Eagle* says:—

Some days ago a match was made between two horse-shoers of South Brooklyn, each man betting \$100 that he could make more horse-shoes than the other within a specified time. The names of the men are John Burns and George Boyle and as both have the reputation of being adepts in the art of horse-shoeing the contest excited a good deal of interest. The match came off yesterday, and was attended by large numbers of horse-shoers and sporting men from New York, New Jersey, and even the neighboring States of Connecticut and Pennsylvania. The men worked eight hours, during which Boyle turned out 11,010 shoes, while Burns manufactured but 11,000, thus losing the match. As an exhibition of endurance and skill, the feat was a most remarkable one, and surpassed anything in the horse-shoeing line ever accomplished in America. Some

The Horse and the Course.

VALUE IN HORSEFLESH.

A CORRESPONDENT of the *New England Farmer* has written an exceedingly sound letter on the horse, and what constitutes a good horse, from which letter we take the following:

We have objections to the statement by Mr. Murray that speed and flight are the standards of appreciation and value. We believe that utility is the standard of value, and that the race horse, whether the runner or the trotter, is almost valueless unless we make his availability as a gambling instrument a standard of value; and it does seem to us that this is the position the reverend gentleman virtually assumes; and we are not alone in this view, as expressed by others.

To a certain extent, however, the stallion may be an exception; its value may depend upon its ability to improve stock. Value in this respect might be real, but the value of the gelding is entirely fictitious.

Now I believe a good road horse is useful, and valuable because he is useful. When I was a boy I remember driving a mare fourteen miles inside the hour, accompanied by a lady, in an English gig, a vehicle with two wheels, which would weigh about 350 pounds, the lady and myself 250 pounds, making 600 pounds. This mare had had no training, no particular care, and was worked more or less every day, in a regular way. Mr. Murray's 2:40 horse on the course has been trained for months; his whole work has been to get ready to trot a mile at his best speed; the sulky he draws weighs 60 pounds, the driver about 140 pounds, making together 200 pounds. The mare I drove never broke in the whole fourteen miles; her pace was one steady trot, with neither skip nor break. Now when the pains taken to get a mile in 2:40 is compared with the achievement of this mare, under the circumstances, it seems to me the 2:40 performance dwindles to an insignificant affair.

I own a mare to-day which I keep to plow, harrow, draw out manure, and drive. She brought myself and wife from South Framingham depot to my house, a distance of ten miles, in fifty-five minutes. She trotted steady the whole way; was harnessed to a common sized top-buggy, drawing about 700 pounds. This was done without the use of whip, without any training, and on only common feed. The same mare harnessed to a double-seated beach wagon has carried four persons from Boston to my house, a distance of twelve miles, in one hour and twenty minutes. I call this mare a horse of value, because a horse of utility; in which are combined speed, strength and endurance. Yet she was never trained, has no pedigree, and is not a perfect horse. I have never driven her so fast that she could not eat as soon as she entered the stable—something a 2:40 cannot do when he has trotted a mile in his best time; but must then have the best of care—two or three men to rub him dry, and everything possible must be done to restore his exhausted energies. This nursing cannot be given to our common business horses. If after a few miles sharp driving they have a blanket thrown over them it is all, and many times even this is omitted. Mr. Murray says that old Topgallant trotted his sixteen miles in forty-five minutes and forty-four seconds. Compare this with the time of the two mares to which I have referred, and it appears insignificant indeed. But when we consider that he had been in training for weeks for this purpose; that everything had been done which art could accomplish to perfect him in this work; then remember that he did not trot these sixteen miles consecutively, but in four mile heats; that at the end of each heat he was rubbed dry, allowed to breathe and rest, and brought almost fresh to the succeeding heat; that it took much longer time to rub him dry between the heats than it took to trot them, so that we shall find the time occupied in accomplishing these sixteen miles was over two hours, with at least two grooms to assist, and that he did not draw over 200 or 220 pounds, and that over ground made the most favorable to the effort—it appears to us that after all it was no very great achievement; that there was really nothing of a useful character, but was simply a gambling operation that made its owner rich, and many others poor. If all the breeders in the country should follow the advice of Mr. M., and produce three minute and 2:40 horses, how profitable would this kind of horse breeding be? Supply and demand regulate prices. In this case what would be the price of a fast horse since every one would be fast? Then let it be understood that although you breed from the fastest horse and the fleetest mare, some of your colts may prove fast, and if not fast they would be worthless, because good for nothing else. But let the farmer ask this question—What kind of horses are most in demand? Common observation, aided by a little common sense, would answer, every day horses; good road horses; horses with good stylish gait; horses that can make from seven to eight miles an hour; horses that have strength to draw our hackney coaches, our omnibuses and our horse cars. We want good stout twelve to thirteen hundred pound horses for our farms, and we want the heavy dray horse of from fifteen to twenty hundred pounds for the cities. These horses have a commercial value, and a degree of utility which the country never fairly realized until last fall, when that fearful malady swept over the country and kept the horse from our streets—suspending commerce throughout the whole country. Now if all the fast horses in the world had been thus afflicted, and our common drudges had been spared, we should have realized no inconvenience.

TROTTER ON THE ICE.—There is every reason to believe that during the present winter there will be more public trotting contests than ever before. All over the country the trotting men are bestirring themselves and promising to bring on an issue soon after the snow commences to fly. The following are likely to be the leading events of the season, and we advise the different Associations to give timely warning of their intentions. Last year several meetings were poorly patronized, simply because the managers did not give sufficient publicity to their programmes. Horse owners like to be posted in time. Toronto, Brantford, Hamilton, Barrie, Orillia, Port Hope, Cobourg, Grafton, Picton, Brockville, Ottawa and Montreal. In addition to these there will be numerous re-unions in the province of Quebec.—*Toronto Sporting Times*.

Anoint the inside of a horse's ears with a drop or two of *knile de cade*, so says a French horseman, (an oily liquid obtained from the wood of *juniperus oxycedrus*), and it will save the animal from annoyance by flies. The oil need not be applied more than once a week, and it is perfectly harm-

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, *Alces Macchis.*) Caribou, *Tarandus Rangifer.*)
 Elk or Wapiti, *Cervus Canadensis.*) Red Deer, *Caracus Virginianus.*)
 Rabbits, common Brown and Grey.) Squirrels, Red Black and Gray.)
 Wild Turkey, *Meleagris gallopavo.*) Quail, *Ortyx Virginianus.*)
 Ruffed Grouse, *Bonasa umbellus.*) Pinnated Grouse, *Cupidoria Cupido.*)
 All kinds of Wild Fowl.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—On Saturday, November 22d, we paid a visit to Hempstead, L. I., and its vicinity, for the purpose of deriving some accurate information as to quail, &c. We stopped at Hewlett's Hotel, an old comfortable house where every attention was shown us. We were told that quail could be found in the immediate neighborhood. Mr. Hewlett proposed to drive us out and verify his statement, and we were nothing loth, as the weather was lovely and it was the finest day for shooting we ever saw. About five miles from Hempstead, passing through excellent quail cover, is a tavern called the Sportsman House, kept by B. F. Sammis, at Smithville, a clean, small house, the landlord having every appliance for quail, snipe and duck shooting, such as boats, stools, &c. We saw a young setter tied up in the barn and proposed to see some of these bebies. Not three hundred yards from the house the young setter (Webster Stock,) pointed; we walked in and killed two quail, and following up the bevy killing another, after which, turning our steps towards a spring swamp, the dog came to a point, when up jumped an old cock, which was killed, also another about fifteen minutes afterwards. We were not on a shooting expedition, but only to ascertain the facts of the case, since, when inquiry is made in regard to game, the reply almost invariably is, "Oh, yes, plenty," which really means that the person has seen one bird or so a week or two before. There is, however, no doubt that in this section the quail shooting is fairly middling, with good cover, easy walking and the brush not above the middle of the body.

—The Staten Island Shooting Association of Port Richmond, although less than five months old, now numbers 116 members, including many prominent residents of the island. Their object is chiefly to prevent the destruction of game out of season, and at their instance several persons have already been arrested and heavily fined. They also devote attention to the propagation of quail, grouse and small game.

—Messrs. Polhemus and Mr. Harry Palmer, of Niblo's, went to Chesapeake Bay last week, and shot a hundred brace of canvas back duck. Heavy work!

—R. Robinson and party, from Brooklyn, killed, in Ohio, over 400 quail in ten days' shooting; three guns, two brace of setters.

—The shooting on the eastern shore of Virginia has not been so good last week, the weather having been stormy and the fowl shy and scattering. Many sportsmen have left the several islands.

—No reports from Chincoteague, Hog, or Mockhorn Islands.

—At Nott's Island, Va., there were five swans killed last week, besides immense numbers of geese and black ducks. Brant are wary and hard to kill, as they refuse to notice the stools. The "calling" is by no means equal to that of the Currituck or Cobb's Island gunners.

—Alpha Phillips, of Bergen Point, and party, left for Raynor's at West Hampton, Long Island, on Friday; geese and duck said to be plentiful. Have not reported yet.

Cor. Bennett is at Barnegat with his yacht Muskodeed and a party of sportsmen shooting geese and black ducks. Birds are plentiful. There are also two other parties there one of which killed on the main land sixty-two quail and two English snipe, to three guns.

—A party of Brooklyn gentlemen killed last week in Pike Co., Penn., forty-one ruffed grouse to three guns. When they left the snow was eight inches on the level. They struck on the tracks of four deer, but failed to connect.

—Havre de Grace, on the Susquehanna, is crowded with sportsmen killing canvas backs. Two gentlemen from Baltimore killed on Monday last forty-seven canvas backs, eight broad bills and seven black ducks.

—A white deer, weighing 160 pounds, was lately shot in Centre County, Pa.

—Did our readers ever see a woodcock "boring?" We have, and this is how he did it: Once on a time we surprised one of these gentry at his matutinal occupation, and so intent was he that he never noticed our presence. We had always supposed that he thrust his long bill into the moist earth and drew out his grub, snipe fashion, and swallowed it; but no, he pegged away vigorously at the ground, something as woodpeckers hammer, digging deeper and deeper, until he actually stood on his head to reach the greatest depth. Then when he had one hole bored he began another, and so continued until he had made nine, as we ascertained by counting afterwards. But never a worm or grub did he draw forth from subterranean sources. He had been merely preparing his little stratagem, setting his traps, so to speak, and when all was ready he laid down on his stomach, with his bill flat to the ground, and commenced beating the perforated earth violently with his wings. Presently a little worm or a grub or other insect came to the surface, and peering above the edge of one of

the holes was incontinently sucked into the long protruding bill. Directly afterwards a red well scoured angleworm was victimized—we could see it distinctly as it passed into the bill—and possibly others would have followed had not our stupid dunderhead of a setter worked up on the scent and flushed the bird.

—We are much gratified to receive from such good authority as the writer the following information of the favorite ducking grounds to which our sportsmen resort for winter shooting. They include the Susquehanna flats, (Havre de Grace,) Spesutic Narrows, Bush river, Gunpowder river, and Currituck Sound:

NEW YORK, November 15, 1873.

EDITOR FOREST AND STREAM:—

Seeing an article in your valuable journal from the Germantown *Telegraph* relative to wild fowl on the upper waters of the Chesapeake Bay, and knowing that the article would lead some of your numerous readers astray, I pen you a few lines. I have shot for several years on the headwaters of the Chesapeake Bay, also on Bush river, where I leased a shore for two seasons.

The shooting at Havre de Grace is monopolized by fifteen or twenty parties who shoot altogether for market, and the tri-weekly shooting is applied to them only and not to parties who shoot from points. There is no point shooting on the Susquehanna flats; all box boating or sink boats. These parties own a sloop, small boat and 300 decoys; each craft is licensed, and quite a revenue is collected, for what purpose I am not aware. The first day's shooting this season they killed thirty-five hundred ducks, canvas backs, red heads, and broad tails, (black heads.) I have had capital sport at this place. I had 300 decoys and craft, but found that the hard labor connected with this kind of shooting was too severe for one who shot for sport only.

The "Narrows," which begin about six miles south of Havre de Grace, sometimes afford good shooting from the shore, either side; but not until after a severe storm do the ducks leave the flats and resort to these contracted waters, to afford sport enough to pay to leave New York, and then the stranger would find trouble in shooting if he was not accompanied by some one known to the land owners.

The shooting on Bush river is from point only. The only shore that I know of for rent is the one owned by Mr. S. Sutton, P. O. address, Perryman'sville, Hartford county, Md. This shore is a good one; the shooting is red-head principally. This shore is opposite the celebrated Leggoes' Point, the extension of Gunpowder Neck, and is one of finest the rough weather points on the Gunpowder. Carrol's Island, and in fact all the points on the Gunpowder, are rented for fabulous prices.

Currituck Sound, North Carolina, is where I wish the general reader to make up his mind that for the finest kind of wild fowl shooting it cannot be equalled in the United States. The variety includes all the wild fowl, embracing the largest, the swan. English snipe in goodly numbers during December and January. Quail on the mainland abundant; no blue noses or stiff limbs when shooting at Currituck; no ice, no snow.

We will place ourselves on one of the steamers of the Old Dominion line, Saturday preferred. We arrive at Norfolk six o'clock Sunday evening, and stop at the "American." I give particulars to insure comfort. Monday morning, 6:30 o'clock we board the little steamer Cygnet, and after a very monotonous trip, reach Poplar Branch at 6 P. M. Here we take row or sail boat, and cross over to the Boston Club House, owned by D. C. Lindsay, who has opened his house for the reception of sportsmen from the North. These marshes join those of the old Currituck Club. Now my dear reader, a few words as to your outfit will not be amiss. Your ordinary field clothes will answer in clear weather; let them be marsh color. You will want rubber boots, high ones; rubber overcoat, marsh color. Your heavy ten gauge breech loader, and powder. Shot can be purchased at Poplar Branch. Don't forget to take some *Ohbejoful*, as that purchased at Currituck is not warranted for medicinal purposes. You will want your light breech loader for quail and snipe, as you can vary the sport by taking the field and looking out for the bay birds that are constantly to be seen around the marshes. There are a great many fish, club by name, but most assuredly the black bass of the South. Thad Norris says these fish, that is the inhabitants of these waters are the *grystes salmoides*, and will take the fly.

The board at Mr. Lindsay's is five dollars per day; that includes man, decoys, skiff, and marshes. Post office address, care of Capt. Cain, Steamer Cygnet, Norfolk, Va. Mr. Lindsay has a large stand of wild geese decoys.

Yours, fraternally,

G. H. WILD.

—Why have wet feet when you go duck shooting, when you can make an excellent preparation to prevent it? Take a quarter of a pound of beef and mutton suet, a tea spoon full of lard, half pint of neatsfoot oil, one ounce of beeswax, half an ounce of Burgundy pitch, and a half ounce of turpentine. Melt up the suet, the lard, the pitch and the beeswax in a pot, stir in the oil, and when off the fire, and cooling a little, put in the turpentine. If you want to be elegant add a half box of blacking to give it a color. Warm the compound and paint the boots, upper and soles. It makes a boot quite water tight, and salt water cannot faze it.

—It is a mooted question among sportsmen whether a muzzle-loading gun can be altered to a serviceable breech-loader. The numerous advantages of breech-loaders are obvious to all, and many a man who has a pair of superior and well-tried barrels, is tempted to endeavor to combine their excellencies with the improvements of the more

modern arm. With what chances of success this can be accomplished is shown by one trial at least, as attested by the letter herewith appended, from a gentleman of no limited experience:—

EDITOR FOREST AND STREAM:—

From every number of your paper I gain hints and ideas that are welcome and valuable, and I shall venture at times to send in return the results of experiments, and personal experience, successful or the reverse, that others may perchance profit thereby.

I have purchased at the price of a good plain gun some experience in altering guns, and if any of your readers contemplate the changing of some well tried muzzle-loading gun to a breech-loader, let me give the advice of London *Punch* to people contemplating marriage—"Don't."

I placed a fine gun, Moore & Sons' make, in the hands of a mechanic who guaranteed a successful alteration, and all that could be done to effect the change was done with a fair amount of ingenious skill, and I have in my gun-case a gun that works well, has an easily managed action, shoots well, but I am afraid to use it. The weakness is the result of boring out the breech for the shell.

The first step in converting barrels is to cut off the breech as far as the breech pin entered; and then the barrels are bored out for three inches to receive the pasteboard cartridge.

The barrels not being intended to lose this amount of metal are left almost always so much reduced at the point where the explosive force is generated, as to found reason for such an amount of distrust as will usually prevent their being used with confidence when charges of any weight are desirable. It will be noticed that the barrels of modern guns are enlarged rapidly toward the breech to afford the proper weight of metal after they are bored out. How far the use of carefully made steel shells will reinforce altered guns I cannot say, but would very much value the opinion of some of your readers who may have found one upon some experience.

L. W. L.

—We were shown by a most skillful rifleman who, to expertness at Creedmoor, adds the peculiar talent of being able to bring down a buck when going at full speed, and more than all that, is a clever gunsmith and an ingenious experimentalist with cartridges and various forms of projectiles—we were shown by this rifle-and-shot-gun Craighton a most simple and easy method of making an explosive bullet. All you have to do is either to cast your bullet with a hollow cylinder in it, or if necessary to drill the bullet out. Then take a number 1 Smith and Wesson cartridge and slip it in, of course lead downwards, the square end of the copper case where the fulminate is, being at the apex of your compound projectile. Don't you see? It is no more difficult than that. Even if you have no bullet mould you can make the hole in your solid ball with a common drill, and slip in your No. 1 Smith and Wesson metallic cartridge. It need not be a nice fit, but only tight enough not to slip out. Our informant told us of two shots made with his bullet this year. With one he struck a buck in the head. On examining the skull of the animal, who dropped as if struck by lightning, he found the whole bone case shattered. In the second instance he hit a deer in the neck, the vertebra was shattered, and the animal hardly moved any distance before he was stone dead. This home-made compound shell seems to us so perfectly simple that we would advise its use. Should any of our readers "try it on" please let us hear of it. Should they kill a grizzly, we would claim a tooth or a claw or two.

—In the N. Y. *Herald* of the 22d November, there is a challenge from a Mr. A. B. Leech, of the Irish Rifle Association, stating that he will select from the members thereof, a team which he proposes to match against a similar number of representative American shots, to shoot in the United States, in the autumn of 1874, on the following conditions: The targets and shooting to be according to the Wimbledon rules. Ranges, 800, 900, 1,000, and 1,100 yards. Rifle, any under ten pounds, and without telescopic sights or hair triggers. Position, any without artificial rest. The American team to be composed exclusively of men born in the United States, and rifles to be used by them, to be of American manufacture. The Irish team to shoot with the Rigby rifle. The match to decide the championship of the world; the Irish team having carried off the Lord Elcho shield. Mr. Leech will require a sufficient deposit, not as a wager, but as a guarantee that the match will be shot. Though this notice appeared in the *Herald*, the National Rifle Association have no cognisance of the same. Should Mr. Leech be desirous of shooting with the members of the National Rifle Association at Creedmoor, the method he should adopt would be to address the President, Colonel W. C. Church, or the Secretary, G. W. Wingate.

—Last Friday a meeting of the Board of Directors of the N. R. A. was held at the New York Hotel, the financial condition of the Association was discussed, and the ways and means were arranged for the coming season at Creedmoor.

—A stag in the Macon Park (Ga.) recently attacked two boys—one white the other colored, throwing the colored boy over a fence twelve feet high, and running one horn through the fleshy portion of the left arm of the white boy.

—"Little Tommy didn't disobey mamma, and go in a swimming, did he?" "No, mamma; Jimmy Brown and the rest of the boys went in, but I remembered, and would not disobey you." "And Tommy never tells lies, does he?" "No, mamma, or I couldn't go to Heaven." "Then how does Tommy happen to have on Jimmy Brown's shirt?"

—James Storey, of Sheffield, England, and W. E. Harding, of this city, run to-day at Providence, R. I., ten miles for \$2,000.

—The New York Caledonian Club will hold an athletic meeting to-day at the New York Athletic Club grounds, One Hundred and Thirtieth street, Harlem.

ENGLISH BILLIARDS.—When men can be found who, like Cook, not only in a match play for, but make such marvelous strokes, what may not happen in the billiard world in the next ten years? It was not uncommon to hear it said that we should never see anyone like Roberts; and we recollect a marker, an old man, at a room in Oxford street, who used to maintain the opinion single-handed against the jeers of almost everyone who frequented them, that "billiards was yet in its infancy, and that before long Roberts's breaks would be thought nothing of." This old man seems truly to have had the gift of prophecy, and we wonder what the old *habitués* of the room in question say to the present handicap which takes place at the Guildhall Tavern on the 8th of next month, where three men are handicapped to give Roberts 120 points in a game of only 500 up, two second-class players give him ten, and four more start level with him?—*Land and Water.*

INTER-COLLEGIATE FOOT BALL.—*Princeton vs. Yale.*—A game of Foot Ball was played at Hamilton Park, New Haven, on Saturday, Nov. 15th, between the Twenties of Princeton and Yale. The grounds were the lower portion of the inclosure of a half-mile track and opposite the judges' stand. The boundaries were well defined by posts and rope, while the turf was all that could be desired.

Princeton having won the toss, chose the extreme end of the grounds with first "buck." A "buck" is when the ball is first kicked and opens a game. The contest was a spirited one for about forty minutes, when the ball became cut, and a delay of twenty-five minutes was necessitated, in order to procure another ball from the city. This interval was not without its benefit to the visitors. Yale had a style of "butting" against a man when in pursuit of the ball, and at first, our rustics (?) were unable to cope advantageously against it, but our men proved themselves apt pupils, and when play was resumed, the orange waved triumphant over many a wearer of the blue, who had "gone to grass." The strength of our play was in keeping the ball in the centre of the field, while Yale worked vigorously on the flanks. The manner in which our boys "batted" and followed up the ball, was the secret of their signal success. The first goal was contested for an hour and twenty minutes, when Beach kicked the ball over the goal and Princeton had started the ball of victory rolling.

This termination of the first goal seemed to take all the "vim" out of the wearers of the blue. Our boys at first acting rather on the defensive, and saving their wind, entered upon the second contest with renewed zeal and vigor. In twenty-five minutes the ball again was sent through the goal by Beach, with the representatives of Princeton in high spirits.

The third goal was won in ten minutes, the ball being forced home from the start, while Yale seemed utterly powerless to prevent their defeat. Elder is accorded the credit of kicking the ball home.

The fourth goal was commenced, but this time the game had to be called at five o'clock, to allow our men to reach the 5:20 train for New York.

The best of feelings prevailed between the contestants, and we cannot speak too highly of the courteous and gentlemanly treatment received at the hands of those whom we visited. We sincerely hope that other institutions, seeing our spirit of brotherhood, may follow in our footsteps, and that each College may form a potent and enduring link in the chain of fraternal affection and generous rivalry.

The players were:—

Yale—Deming and Peters, Post Graduates; Halsted, Stokes, Waterman, Humphrey, Scudder, Bushnell, Sherman, Bristol, Melick, Robbins, Porter, Guern, Dunning, and Henderson, of '74; McBirney, Avery, Grinnell, an Hotchkiss, of '75.

Princeton—Marten and Chambers, Theological Seminary; Beach, Bittenbender, Dersheimer, R. Boyd, Huston, Van Deventer, Cowart, Cooke, and Whittlesay, of '74; Biddle, Elder, Moffat, Lionberger, Hutchinson, and Rodgers, of '75; Dennie, Woods and Sheets, of '76.

Umpires—Mr. Kelly for Yale, Mr. Peckett for Princeton. Referee—Mr. Harvey of Princeton.

CHAMPION.

—An interesting series of quoit matches took place at Cleaver's "Light House" grounds, Brooklyn, November 20th, the occasion being the last match of the season in Brooklyn, and the return match of the series between Brown and Mitchelson, the first of which was won by Brown the previous week. The opening play of the afternoon was a scrub match between Messrs. Hudson and Peck on the one side, and Miller and Woods on the other, the latter winning by creditable up-hill play by a score of twenty-one to nineteen. The match between Brown and Mitchelson followed, with the appended result:—

Players.	Doubles Scored.	Singles.	Blanks.	Total Points.
Brown.....	6	19	22	31
Mitchelson.....	5	17	25	27

Markers—Messrs. Hudson and Rollin.

This was supplemented by a test match between young Brown and the veteran Staylor, which resulted as follows:

Players.	Doubles Scored.	Singles.	Blanks.	Total Points.
Staylor.....	4	13	12	21
Brown.....	5	7	17	17

Markers—Messrs. Miller and Hudson.

—Estimate a toper as you do a reindeer: Take him by his horns.

EDITOR FOREST AND STREAM:—

I send you an account of the Beverly Yacht Club for the season. The club is formed for such yachts as are too small to be admitted to the Eastern Yacht Club, namely, those of thirty feet or under, on the water line, and at the end of its second year numbers over 100 members and about fifty yachts. The yachts are divided into three classes according to their size. There are five regular regattas each year, where prizes are given to the winning yachts with club allowances in each class. There is also in each class a champion pennant which is taken by the first boat without allowance, and held till the next regatta, finally becoming the property of the yacht winning it the greatest number of times. In the following races the yachts are set down in the order of the actual time:

First regatta, June 23, at Beverly.—There was a good southeast breeze. The 1st and 2d classes sailed over a nine mile course, and the 3d class a six mile course. 1st Class. Firefly, Fanchon, Arrow, Surf. The Firefly took prize and pennant. 2d Class. Peri, Water Lilly, Curlew. Peri took prize and pennant. 3d Class. Nora, Bessie, Bluebell, Frolic. Nora took prize and pennant.

Second Regatta, July 12th, at South Boston. There was a light breeze from the southeast. Course for 1st and 2d classes was eight miles; 3d class, six miles. 1st Class. Firefly, White Wing. 2d Class. Peri, Avon. 3d Class. Frolic, Nora, Bessie, Virginia, Pink, Merlin. Firefly, Peri, and Pink took the prizes. Firefly, Peri and Frolic the pennants.

Third Regatta, July 28th, at Nahant. 1st Class was divided into two divisions, sloops and cat-rigs. Two prizes were offered in each division, as well as in the third and second classes, conditionally that over two boats should start in each division. Sloops, Waif, Fanchon, Surf. 1st Class cat-rigs, Firefly, Lady Clara. 2d Class. Peri, Maud Curlew, Water Lilly, Avon. 3d Class. Tulip, Pink, Frolic, Nora, Bessie. Waif, Firefly, Peri and Pink took first prizes. Fanchon, Maud, Tulip, took second prizes. Firefly and Peri took the pennants for the third time, and consequently keep them. Tulip took 3d class pennant.

August 2d, the club started in company with the Dorchester Yacht Club on the annual cruise. The following yachts assembled at Hull: Firefly, Fanchon, Ruby, Surf and Fairy, of the Beverly club. Veritas, Jessie, Cruiser, Kelpie, and Dolly Varden, of the Dorchester Yacht Club. From Hull the fleet proceeded to Cut river, Plymouth, Barnstable, Provincetown, and hence to Marblehead, and dispersed on the 7th.

Fourth Regatta, August 11th, at Swampscott.—Good easterly breeze. 1st Class. Firefly, Ariel, Surf. 2d Class. Peri, Thetis, Water Lilly, and Hebe. 3d Class. Tulip, Frolic, Nora, Bessie, Pink, Sadie. Firefly, Peri, and Tulip took the prizes. Tulip also took the 3d class pennant.

Fifth Regatta, August 30th, at Beverly. This regatta was open to all yachts of thirty feet or under, the yachts were divided and prizes were offered as in the third regatta. 1st Class. Sloops, Fanchon, Waif, Surf, Arrow, Nellie J. 1st Class. Cat-rigs Firefly, Ariel. 2d Class. Lizzie, Peri, Curlew, Water Lily, Hebe, Petrel, and Columbia. 3d Class. Tulip, Bessie, Frolic, Rose, and Pink. The Nellie J and Lizzie belong to the Lynn, Y. C., the Columbia to the South Boston, Y. C., the Rose to no Club, and the rest to the Beverly Club. Fanchon, Firefly, Lizzie and Tulip took first prizes; Waif, Peri and Bessie took second prizes; and Tulip took third class pennant for the year.

Sixth Regatta, September 6th, at Beverly.—For cups presented by William Sohler, Esq.—1st Class. Fanchon, Surf, Firefly, and Ariel. 2d Class. Tulip and Hebe. 3d Class. Pink and Bessie.

The Surf, Tulip, and Pink took the prizes. Several yachts tried to go round from Swampscott, but were becalmed, and arrived too late to start.

The officers of the club are as follows:—Commodore, Edward Burgess; Vice Commodore, Wm. C. Loving; Secretary and Treasurer, Wm. F. Whitney; Measurer, W. W. Lewis; Regatta Committee, Walter Burgess, N. H. Gibbs, H. W. Lamb, C. H. Williams, Wm. F. Whitney.

One of the boats belonging to the club, the Firefly, has made a better record, as far as the number of prizes goes, than any other yacht in the country. She was built last spring by Pierce, of South Boston, for Commodore Burgess. Her dimensions are:—Length on water line, 21 feet 6 inches; beam, 10 feet; draught, 1 foot 10 inches. She sailed last season in six regattas of the Beverly Yacht Club, taking five first prizes and the champion pennant; in four regattas of the Dorchester Yacht Club, taking three first and one second prizes, besides the champion cup; and in one regatta of the Lynn Yacht Club, taking the first prize, making in all eleven first and one second prizes in eleven races.

The Peri was built last spring by Hereshoff for Mr. S. Burgess, is cat-rigged, measures 18 feet on the water line, 8 feet 3 inches beam, 1 foot 6 inches draught, and has taken the champion pennant, four first prizes and one second

prize from the Beverly Yacht Club in five races; also taking the champion cup, three first prizes and one second from the Dorchester Yacht Club in five races.

The Tulip was built in the spring of 1872 by Hereshoff for Mr. S. Burgess, was sold this spring, and was repurchased by Mr. Walter Burgess about the middle of July, after which she won three first prizes and the champion pennant, and one second prize from the Beverly Yacht Club in four races, and one first prize from the Dorchester Yacht Club in the only race she entered.

The Waif was built last spring by Mayberry, of Quincy, for E. W. Codman, Esq., and though she was designed for comfort rather than racing, she took a prize in every race she entered. She is sloop-rigged and measures 28 feet 3 inches on the water line, 11 feet 10 inches beam, and 2 feet 5 inches in draught. All these boats are centre-board yachts.

A MEMBER.

—Our article on American Oarsmen vs. English, which appeared in these columns two weeks ago, seems to have attracted a good deal of attention. We publish from the London *Field* another view of the matter, and let it pass without comment merely saying: Will you have the kindness to exert yourselves a little, in fact just sufficient to give us a trial over here for once, with a good four-oared crew? for it will have to be first-class to win:

"The decision of the Henley Committee to row all four-oared races without coxswains has not given general satisfaction, as it is felt that it is handicapping severely rowing clubs situate in places like Dublin, where it is not possible to get any coaching from the bank, and where men are obliged to rely for nearly all their good coaching on the mentor in the stern.

The crews that have appeared from time to time on English waters from America, to whom we owe the introduction of coxswainless fours, were chiefly remarkable for every fault of form that, in addition to annoying every true connoisseur's eye, prevent men from exercising their full strength to the advantage of their boat's speed. We may fairly lay the account of this general want of form in a great degree to the too general use of coxswainless fours on the other side of the Atlantic; and it is to be hoped that our form may not suffer in coming years from the same cause.

University men, however, are not likely to let themselves be behind the age in any point connected with rowing, and will spare no pains to prevent any new legislation with regard to racing having a prejudicial effect upon either their form or their speed."

EDUCATING YACHTSMEN.—In Hunt's list there are given the names of between two and three thousand yachts, varying from the stately 800-ton schooner of the Solent down to the little 5-ton cutter of the Thames and Mersey. Every one of these is called a yacht. Surely the Board of Trade does not imagine that the masters of all these are ever likely to pass such an examination as they put forward, or to teach these men how to handle a yacht in the fine weather of summer? Why, any one of these men knows better how to sail his little vessel—how to deal with her under any circumstances in which bad weather or other causes are ever likely to place her—than any half-dozen sea-going captains you could find. These latter have to hand over their ship to the pilot directly they come near the coast; whilst the yacht captains who are to be instructed know every nook and corner of the coast, every buoy, beacon, and set of the tide, as well as they know their own names, and nineteen out of twenty yachts never go out of sight of some one or other of these marks. As far as the larger yachts are concerned, some of which do go to foreign waters, let the Board of Trade take care of the owners of these, if it thinks they are such fools as not to be able to take care of themselves. I presume no owner would go a distant voyage in his yacht without being thoroughly satisfied of the competency of his captain; I believe self-preservation to be a more powerful motive than any Government regulation. It must not be forgotten that yachtsmen go in their yachts themselves. A well-appointed yacht, large or small, has guarantees of safety traveling ships could not have. A yacht does not overload, and most yacht-owners consult their barometer and avoid going out in present or prospective bad weather, from considerations of comfort to themselves and others they may have on board. Every yacht carries the owner himself, often his family, all he holds dear in the world.—*London Field.*

—The College *Argus*, Middletown, Ct., says:—

The Wesleyan navy is growing fast, as will be seen when we say that the boat-house (which, by the way, is raised five feet from its old position) contains nine shell-boats owned in college, as follows: University practice boat, just bought from Yale '74, six months old, fitted with sliding seats and English oars; '76, shell, bought from the university; '75, shell; '77, shell, bought from Yale '75; '76, gig; double scull, owned by Blake and Holcomb, '76; three single sculls, owned respectively by Stow, '75, Heermans, '75, and Andrus, '77. The rents charged for use of the boat-house to persons in college will be: For six-oared boats, \$15 per year; four oars, \$8; and pair oars, \$6. Closets extra.

—The rowing season is oar.

—The better part of a potatoe is the *melior*.

—Theatres are honest concerns. They never have short weights.

—A Scotchman is ambitious of ganging hame; a criminal of hanging game.

—We offer a line of the finest fishing rods to subscribers to FOREST AND STREAM. See supplement, with this issue.

—Boys' single and double barrel guns can be had by subscribing to FOREST AND STREAM. See supplement with this issue.

—Every subscriber to FOREST AND STREAM may, in the choice of prizes, have a pair of beautiful engravings 10x14, entitled "Hunting" and "Fishing."

Art and Drama.

THE Academy of Music on Saturday last presented a scene of excitement that has had no equal in the way of a magnificent audience and genuine enthusiasm since the days of La Grange. The occasion was the presentation of Meyerbeer's grand opera of "Les Huguenots." Many things combined for the creation of a genuine sensation. The difficulty of bringing together the numbers of first rate artists that are demanded is almost an insuperable difficulty; this was very satisfactorily overcome on Saturday. There is also a sort of religious influence in the air, called forth by the recent meeting in this city of the Christian Alliance, the revival of the pilgrimages to the shrines in France, the quarrels in Germany and Italy regarding ecclesiastical interference with the civil authorities, and in our own country those elements of serious thought that affect almost every one, found some food for illustrative sentiments in the story of the Huguenots, and the refined circles of fashion had a new kind of stimulus added to the charms of the grandest music.

The ladies crowded the parquette and the boxes, decked out in the grave but fascinating colors of the fall styles. There was something massive in the prevailing tone, for there was nothing "loud" or harsh to mar the general effect, while the waving ostrich plumes gave queenly grace and lightness that was unusually delicate and attractive.

As the opera proceeded the pleasure of the audience was first evinced by flashing eyes; then white gloved and tiny hands dared to affect the motions of applause. The noise of approval was of course a myth, but the softly expressed encouragement evidently cheered on the Italians and gradually added fire to their semi-tropical temperaments, until they began to swell and grow animated, and at last, in the temporary triumphs of the moment, they became in feeling and spirit the realization of the characters they had assumed.

On Nilsson the trembling atmosphere worked wonders. The lassitude and indifference that have characterized so many of her later performances entirely disappeared, and she rose to a pitch of grandeur that partook of the days when she earned her first triumphs.

The action and reaction on the musicians and the audience was to us more fascinating than even the musical harmonies. It is a great thing to see the charming women of our best society gradually breaking away from the stiff conventionalities of fashion and ignorance, if you please, of their just rights, and abandoning themselves for the moment to the enjoyment of intellectual pleasure. In this excellent work the heavenly strains of the Huguenots were an unusual success. By the time the second act was ended the tongues of the ladies broke loose, and their pent up feelings either had to find verbal expression or end in epilepsy. They preferred to talk and keep their senses rather than be unconscious and spoil their complexions, so, without waiting for introductions or any ceremonies whatever, they became universal, and gave expression to their enthusiastic admiration by rapturous exclamations of "divine," "charming," "wonderful," "heavenly."

Then came the spontaneous proposition that the successful artists should come before the curtain; and such plaudits, such patting of kid gloves, such smiles of approval, such delicately flushed faces, and such glorious abandon that some of the really earnest beauties exhibited, were enough to place the grand opera ahead of all other dramatic institutions, and make last Saturday's matinee an event that will be memorable until something more exciting displaces it from recollection.

It would be invidious on this occasion to make comparisons, a general enthusiasm prevailing that seemed to unite Nilsson, Maresi, Cary, Campanini, Maurel, Del Puente, and Nannetti into a unity of representation. Minor faults for the moment disappeared in the general perfection, and when the several artists were, between the acts, called before the curtain, each had an ovation; but Nilsson, it must be said, was, in the matter of answering a complimentary call, more charming than usual. Strange as it may appear, one half of this great triumph arose from the fact that the audience ceased to be cold and formal, and spontaneously agreed to be pleased. In all audiences not English or American this state of mind always makes the opera a necessity, not a fashion.

—The Maretzek Opera Company has gone to pieces. The season has been most unpropitious, and because the manager was under the necessity of reducing the salaries of Mme. Lucca and Mme. Murska they refused to sing. One or two important performances will not take place, and the money for tickets sold will be refunded.

—The "Wicked World," at the Union Square Theatre, is a decided success.

—On Saturday "The Liar" was brought out at Wallack's. The name is the most offensive for a play that could possibly be used. The performance was greeted by a fashionable and crowded house. The management promises a succession of novelties.

—It is promised that the new Fifth Avenue Theatre will be opened on the evening of December 3d, with an opening address from the pen of Oliver Wendell Holmes.

On Friday, the 21st inst., occurred the Griffith benefit at the Brooklyn Academy of Music, Mr. Griffith, a gentleman well known in social circles, having adopted the theatrical profession. The plays of the evening were Victor Hugo's tragedy of "Ruy Blas," and the farce of "A Kiss in the Dark." In the latter piece Mr. Ed. Lamb convulsed the audience with his inimitable personation of *Pettibone*, his

make-up being unusually effective. A vocal interlude introduced Mr. John Clarke in two of his best songs.

—Mrs. Maria Jourdan Westmoreland gave a reading on Saturday last at the theatre of the Union League Club, entitled "Social Myths." She has intellectual ability, a fine personal appearance, and that ease and grace of manner that promise great success. The audience was large and select.

CINCINNATI, November 22, 1873.

ROBINSON'S OPERA HOUSE.

—The Lydia Thompson Burlesque Troupe have been drawing fine house all this week. They gave on Monday and Tuesday, "Sinbad;" Wednesday, "Blue Beard;" Thursday and Saturday, "Kenilworth;" Friday, "Aladdin" and "Sinbad." Monday, November 24, E. A. Sothern as "Dundreary."

WOOD'S THEATRE.

—Lawrence Barrett has been meeting with much better success this week. He appeared on Monday, Tuesday, Wednesday, and Saturday in "Julius Cæsar." The rest of the week he gave to fine houses "Rosedale." Monday, November 24, Furbish's Fifth Avenue Company. Manager Macriley, of Wood's, played *Brutus* to Mr. Barrett's *Cæsar*.

Prices of books inserted when desired.]

BOOKS.

THE CHARACTER OF ST. PAUL. By J. S. Howson, D. D.; 12 mo. 314 pp. New York: Dodd & Mead.

This is a work of a religious character, and as such will find many readers. First to recommend it to the religious community is the subject matter of the work. If any man at the present day is capable of giving an instructive, readable work upon the character of the great Apostle, that man is the Dean Howson. Eminently fitted for his pleasing task, he brings an earnest, devout heart to the work before him. The deep Christian faith, added to the thorough scholarship of the author, will not fail to lead the "blind by a way they know not." All Christian men cannot fail to be impressed with the purity and kindly leadings of this eminently good book. The themes spoken of in this work are St. Paul as living a Christian life in the world, and being not an anchorite, or ascetic, sour professor of a dead gospel. He speaks of his tact and presence of mind, as two remarkable characteristics of the Apostle's success among his fellow men. Again, he notices with much plainness his tenderness and sympathetic heart, helping so many around him to bear with humility the burdens of life. Then of his great conscientiousness, his high-toned integrity, his thanksgiving, his prayerful spirit, his Christian courage, daring "to do all things for Christ," and lastly, his perseverance in his Divine Master's service, even to the close of his life, makes this work deeply interesting to every Christian who would improve his own spiritual condition. We can only say of this work, it commends itself to every reader by its truthfulness and practical power.

HALF HOURS WITH THE MICROSCOPE. By Edwin Lankester, M.D., F.R.S. Illustrated by 250 drawings from Nature. 12mo., cloth, \$1.25. New York: G. P. Putnam's Sons.

A complete manual of a very large collection of objects for the microscope. The story is told in a clear and conversational and practical talk with the young amateur. This work is very plain and easily to be understood. The subject of microscopic examination of minute objects, both in-doors and out-doors, in the field, and by the side of the streamlet has given us, personally, much real knowledge, valuable as a reference in after times, and always amusing. Speaking from practical experience with the microscope, we pronounce this "Half hour's talk" as an indispensable accompaniment to every one who would "look from nature up to nature's God."

THE MODERN BABES IN THE WOODS. By H. Perry Smith and E. R. Wallace. Illustrated. Columbian Book Company: Hartford, and Watson Gill, Syracuse.

We perfectly agree with some other old-fashioned critic, that the title of this book is a singularly unfortunate one, for it designates in no manner whatsoever the character of the contents or the object of the work, which is in reality the most complete guide to the Adirondacks, by long odds, that has ever been published. It gives the minutest details of routes, distances, localities, shooting grounds, hotels, expenses, and in other respects "does" the wilderness so thoroughly and intelligibly, that we see no need of any ambitious person attempting anything more comprehensive or complete, until time has wrought such changes as to render a revised edition necessary. We speak in this matter from a large personal knowledge of the Adirondack region, and, as in all other matters which concern the interest and comfort of sportsmen, are very much in earnest. The book is a fit companion for "Hallock's Fishing Tourist," and resembles it in the care and accuracy of its preparation. "Babes in the Woods," indeed! Why, this book is intended for sturdy, full grown men. It is published only by subscription, and can be obtained as above or by personal application to E. R. Wallace, the author, at Syracuse. Price \$2.50.

SCIENCE OF HEALTH; November No. New York: S. R. Wells.

"Sickly Country Girls," is the heading of an article by Elizabeth Dudley. She not only talks like a "book" upon this subject of the future development of the healthy mothers of our Republic, but understands the whole theory of what constitutes delicate girls, of whom so much is written and spoken, but who are very seldom seen. Our lady friends should read carefully this healthy article in Wells' Monthly, and after reading endeavor to make themselves felt in the world by acting up to its wise suggestions. How many of our weak and sickly girls like those pictured in the above article will lay aside the silken robe, rise early in the morning, and by way of a change help mamma to do the accustomed duties of the family? We fear very few, if any, will feel the necessity for such a beneficial change. The contents of the number before us are as usual varied and instructive. Disease and its treatment, piano-piano meling and many other timely topics make up the sum total of this valuable *vade mecum*.

EDMUND DAWN; Or Ever Forgive. By Ravenswood. G. W. Carleton & Co. Publishers. New York: 1873.

This is a most fascinating book of home life, some of the scenes laid in New York, and written in a plain and easy style. The reader is carried in one portion of the book to Washington in times before the war, where one of the heroes enters political life, and incidents in the old regime of fifteen years ago are cleverly handled. The motto "Ever Forgive" is the leading action in the book, and the *dénouement* shows both ingenuity and familiarity in romance writing. Here and there there is something of sadness about Edmund Dawn which but contrasts with the pleasant ending. It is an interesting book, and no doubt will be received with favor.

THE DEAD SIN, And other Stories. By Edward Garrett, author of "Occupations of a Retired Life." New York: Dodd & Mead, pp. 444.

Why such a singular title should be selected by our author for this work we cannot conceive. We fail to see its appropriateness. But then we do not pretend to know everything. Suffice it to say the author has, notwithstanding the name, given us a half dozen very readable, improving stories of the higher class of fiction. These stories are decidedly good, and should have a place in every Sunday-school library. This will do good, encourage the practice of many virtues that have been for a long time barren of good. We expected much from the perusal of this work; we are not disappointed; this popular book will have a large sale.

THE POETICAL WORKS OF EDMUND CLARENCE STEDMAN. Boston: James R. Osgood & Co.

Every lover of grateful, flowing, polished verse; every one who loves poetry, will welcome, as a valuable and elegant addition to our American poetical works, this new contestant for public favor. Beautiful as it comes to us from the publishers, in outer embellishment, it is one of the few books of poetry in which we are not afraid to look within. Some of these pieces have appeared before the public, and were then favorably received. Our many readers will recollect the "Blameless Prince" and "Alice of Monmouth" as among their old friends. Well, here they appear again, with many other shorter poems. Very familiar with most of the current every day topics of the out-door world, he gilds as with a fire of light every subject upon which he treats. We can recommend these poems as a fitting, chaste and elegant present for the coming holidays.

THE STORY OF GOETHE'S LIFE. By George Henry Lewis. With portrait; 1 vol., 16 mo. Boston: J. R. Osgood & Co.

As a biography we have never seen it excelled. In style it is unquestionably the best ever published of this world-renowned poet. Complete as a whole, the necessary omissions have not lessened the value of the same. We can conscientiously recommend to all desirous of reading the life of the great German poet (and who does not wish to follow him through his works) to buy this one. It is by far the best in print. There is a remarkable vein of candor and truthful speaking pervading this work that at once gives one the idea that he who speaks of Goethe as a great poet, esteems him no less as a great and good man. We think Mr. Lewis, by his treatment of what might in some instances be called imperfections in his character or conduct, shows only amiable weaknesses. He is quite severe, however, upon some of his theories, viz.: See his tilt against the Newtonian Theory of Light. Did we not know we were turning the leaves of an eventful life-history, we should think we were revelling in some charming romance. How truly is his first love affair sketched—the boy-lover of fifteen years—although its ending was not such as he would have had it, was nevertheless disciplinary of good. Gretchen is also the Gretchen of his early love, and much as he thought he loved her, he soon found solace in the affections of another maid.

ELEMENTS OF PHYSICAL MANIPULATION. By E. C. Pickering, Thayer Professor in Physics in the Massachusetts Institute of Technology. New York: Hurd & Houghton, Riverside press.

The preface to this work truly states "The object of all Physical Investigation as to determine the object of certain natural forces, such as gravity, cohesion, heat, light, and electricity." The work proceeds to elaborate by quite a number of experiments, interesting and familiar, the necessity of a work of this kind being almost a *sine qua non*. The whole course of experiments here presented by the Professor can be carried out at a comparatively small expense in any of our colleges, and a large amount of information given and received. Having carefully read this work, and having some previous knowledge of the subjects treated in the work, we pronounce the same, if carefully studied, just the book the student is in pursuit of. One that will give him not only a concise theoretical text, but a thorough understanding of the principles of all the science named within. The rules whereby one is to perfect himself, by the right modes and investigations in all the sciences, are clearly, concisely, and practically given in a manner so plain, that he who studies can learn and learn well what is herein written. We thank the author for placing before us the four years of hard study, and the publisher for the substantial style of the "Physical Manipulations."

WHAT CAN SHE DO? By Rev. E. P. Roe. Author of "Bamen Burned Away." Play and Profit In My Garden." New York: Dodd & Mead; pp. 509.

Every one who has read "Bamen's Burned Away" will with pleasure turn to the perusal of "What Can She Do?" expecting something very interesting and exciting. We think, however, they will not find this work quite up to the literary or graphic standard of Mr. Roe's first book. This work has by no means the artistic or literary merit of "Bamen Burned Away." Still, we cannot in justice call it commonplace. We have, after a careful reading, come to the conclusion that, although it attempts to solve in a satisfactory manner one of the gravest problems of our American social life, it fails in the attempt. A slight analysis of the book gives us a millionaire of to-day, surrounded with all that gold in profusion can give to him, high in social position on account of his wealth; to-morrow bankrupt, fallen from his high estate. False education has made his daughters fit companions only for men of great wealth. In his present state of absolute bankruptcy, for what situation are his daughters fitted? For the wives of poor men, honest, noble-souled, industrious men, whom they in the days of their affluence shunned? Certainly not, for such sensible men would not seek them now. No wonder that their elegant Dundreary suitors drop off one by one; no wonder that Tom Fleming, the exquisite, after a profound strain through his eye-glass at the "old man," should ignore him altogether and pass him on the other side. "O no," says he, "it will not do for a man of my expensive tastes to marry with a poor girl." So what shall our girls do? We refer them to Mr. Roe's book for the solution, a work although not up to the standard we expected from the author, is a good story, taken as a whole, and its readers can get good from a perusal of the same.

ANNOUNCEMENTS.

I.

Hallock's Fishing Tourist,

The Fishing Tourist, Angler's Guide and
Reference Book.

BY CHARLES HALLOCK,

Secretary of the "Blooming-Grove Park Association

ILLUSTRATIONS, CROWN 8VO., CLOTH \$2.00.

Mr. Charles Hallock is one of the few gentlemen who
write a book mainly for the reason that they have some-
thing to write about—have something to tell the public
which the public desires to know. The shortest routes
to pleasure are laid down, and correct information is
given as to the best means of conveyance, the expense
of the trip, the secrets of the commissariat, etc. The
author has avoided the use of technical terms, and thus
made his volume all the more acceptable.—*Turf, Field
and Farm.*

II.

Prime's I Go A Fishing,

I Go A Fishing, by W. C. PRIME, author of "Boa
Life in Egypt," "Tent Life in the Holy Land," etc.

CROWN 8VO, CLOTH, BEVELED EDGES, \$2.00

It abounds in pleasant episodes, charming and vig-
orous descriptions of scenery and character, is distin-
guished by a refined wit, a droll humor, a strong love
of the beauties of nature, and an enthusiastic devotion
to the piscatorial sport. This book will please all who
admire heartiness of style and exuberance of animal
spirits in their authors. There are some interesting
and well-told stories scattered through the volume,
which exhibits on almost every page the handiwork of
a man of graceful culture and wide reading.—*Boston
Daily Globe.*

Published by Harper & Bros., N. Y.

**APPLETON'S
American Cyclopaedia.**
NEW REVISED EDITION.
Entirely re-written by the ablest writers on every sub-
ject. Printed from new type, and illustrated
with Several Thousand Engravings and Maps.

The work originally published under the title of
THE NEW AMERICAN CYCLOPAEDIA was completed in
1863, since which time the wide circulation which it
has attained in all parts of the United States, and the
signal developments which have taken place in every
branch of science, literature and art, have induced the
editors and publishers to submit it to an exact and
thorough revision, and to issue a new edition entitled
THE AMERICAN CYCLOPAEDIA.

Within the last ten years the progress of discovery
in every department of knowledge has made a new
work of reference an imperative want.

The movement of political affairs has kept pace
with the discoveries of science, and their fruitful ap-
plication to the industrial and useful arts and the con-
venience and refinement of social life. Great wars
and consequent revolutions have occurred, involving
national changes of peculiar moment. The civil war
of our own country, which was at its height when the
last volume of the old work appeared, has happily
been ended, and a new course of commercial and in-
dustrial activity has commenced.

Large accessions to our geographical knowledge
have been made by the indefatigable explorers of
Africa.

The great political revolutions of the last decade,
with the natural result of the lapse of time, have
brought into public view a multitude of new men,
whose names are in everyone's mouth, and of whose
lives every one is curious to know the particulars.
Great battles have been fought and important sieges
maintained, of which the details are as yet preserved
only in the newspapers or in the transient publications
of the day, but which ought now to take their place in
permanent and authentic history.

In preparing the present edition for the press, it has
accordingly been the aim of the editors to bring down
the information to the latest possible dates, and to
furnish an accurate account of the most recent dis-
coveries in science, of every fresh production in liter-
ature, and of the newest inventions in the practical
arts, as well as to give a succinct and original record
of the progress of political and historical events.

The work has been begun after long and careful pre-
liminary labor, and with the most ample resources for
carrying it on to a successful termination.

None of the original stereotype plates have been
used, but every page has been printed on new type,
forming in fact a new Cyclopaedia, with the same plan
and compass as its predecessor, but with a far greater
pecuniary expenditure, and with such improvements
in its composition as have been suggested by longer
experience and enlarged knowledge.

The illustrations which are introduced for the first
time in the present edition have been added not for
the sake of pictorial effect, but to give greater lucidity
and force to the explanations in the text. They em-
brace all branches of science and of natural history,
and depict the most famous and remarkable features
of scenery, architecture and art, as well as the various
processes of mechanics and manufactures. Although in-
tended for instruction rather than embellishment, no
pains have been spared to insure their artistic excellence
the cost of their execution is enormous, and it is be-
lieved they will find a welcome reception as an admi-
rable feature of the Cyclopaedia, and worthy of its
high character.

This work is sold to Subscribers only, payable on
delivery of each volume. It will be completed in six-
teen large octavo volumes, each containing about 800
pages, fully illustrated with several thousand Wood
Engravings, and with numerous colored Lithographic
Maps.

PRICE AND STYLE OF BINDING.

"GOING SOUTH FOR THE WINTER."

HOW TO GO AND WHERE TO GO.

HINTS TO INVALIDS.

BY ROBERT F. SPEIR, M. D.

THIRD EDITION NOW READY.

This book is interesting and instructive reading for
all invalids, being the experience of a physician in
search of a mild winter climate, and giving a descrip-
tion of all points in the South, the humidity, density
and dryness of the air, and such other peculiarities of
atmosphere as might prove beneficial or otherwise to
persons suffering from pulmonary complaints.

The book is finely printed, fully illustrated, and hand-
somely bound.

AURORA BOREALIS.

AS SEEN BY A SALMON FISHING PARTY AT LABRADOR, JULY 1873.

MIDNIGHT over stream and shore!
Midnight over Labrador!
Midnight o'er our log hut home,
O'er the breaker's curling foam.
Midnight on the drifting cloud,
And the mountain's mighty shroud;
Midnight in the solitude
Of the unknown savage wood.
Midnight deep, profound and still,
Over swamp and shore and hill.

'Tis a midnight fair to see;
Wondrous in sublimity;
Lingering at our cabin door,
Fast beside the river shore.
Dazzled is the gazer's eye,
With the pomp that fires the sky.

Clouds are flying in mad chase,
O'er the moon's celestial face;
In the blue concave of air,
Stars, like diamonds, flash and glare;
While with evanescent glow,
Springs aloft the Lunar bow.

See, like arch triumphal high,
How it soareth up the sky,
See, like heavenly rainbow bent,
How its gorgeous columns climb,
With majesty sublime.

Now a grander pomp is there,
Flaming thro' the midnight air,
Blazing, flashing, shooting far,
Lovelier than moon or star.
See, the Auroral Boreal show
Fills the universe with glow,
From the horizon to the pole,
See the conflagration roll.

Shooting flames and sparks ascend;
All the hues of rainbows blend.
Amber, amethyst and gold,
Twisted in one gorgeous fold,
Gilding with supernal glow,
Sailing cloud and lunar bow.
Gazing on the skies' parade,
How all earthly splendors fade!

I. McLELLAN.

The Fishes of East Florida.

FROM NOTES OF A NATURALIST.

I HAD always supposed that the fishes of the northern coasts were of better quality than those of southern waters, but an experience of three winters on the east coast of Florida has convinced me of my error. In a day's fishing at Mosquito Inlet, on the Indian River, we often took six or eight species of edible fish, all of which were quite equal to those of the North. They are also very abundant, and not being much pursued are easily caught. This is particularly the case in the Indian River, where the angler might say—

"They are so unacquainted with man.
Their tameness is shocking to me."

The Indian River country is mostly wilderness, and can only be fished and hunted by camping out, which, however, in a Florida winter, is delightful, the weather being much like the finest October days in the northern States. At New Smyrna, near the Mosquito Inlet, there is also good fishing, and there is an excellent hotel, kept by E. K. Dowd, (the Ocean House) mostly frequented by anglers and hunters from the North. Here you are near the fishing grounds, and behind the house stretches away to the south an immense forest and swamp, containing bears, panthers, deer, wild cattle, turkeys, quails, squirrels, and all kinds of ducks and water fowl. The house is clean, the table very good, the host and hostess obliging and friendly, and the charges moderate—about \$14 per week. The route is as follows:—From Savannah, by rail, to Jacksonville, ten or twelve hours; fare, \$8. From Jacksonville to Enterprise, on the St. John, per steamer in two days; two hun-

dred miles; fare, \$9. At Enterprise you hire a wagon to take you through the pine woods thirty or forty miles to New Smyrna; time, twelve hours; perhaps more if the swamps are full of water; fare, \$7. You can employ a day or two at Enterprise (Brook House) in fishing for black bass (here called trout) in Lake Munroe, or in hunting deer or wild turkeys in the woods. The expenses of a trip to Florida will be from \$100 to \$150 per month, according to the habits of the traveller.

During parts of three winters spent in this region I made some notes of the food and game fishes, from which I have prepared the following sketches:—

SHEEPSHEAD, (*Sargus ovis*).—DEKAY.

This is one of the most abundant species, as well as one of the most valuable as food. Though much more numerous than on the coasts of the middle States, they are of smaller size, averaging at Mosquito Inlet and in the Indian River about three pounds. A six pound fish is large, and a seven pound one is rare. The baits generally used are clams (better boiled, being tougher), crabs, fiddlers, and conchs. The latter bait is very tough, well resists the strong teeth of the sheepshead, but is, I think, less attractive than the others. We find the best fishing usually in the channels which run along the banks, upon which is a thick grove of mangrove bushes; the roots of these are in the water, and are covered with barnacles, which attract the sheepshead. From half flood to high water they usually bite most eagerly, though here, as elsewhere, there sometimes comes a day on which fish do not feed—affected probably by the wind or weather.

I am disposed to believe, with Norris, that the sheepshead found on the northern coast are the surplus production of more southern waters. In April, the sheepshead on the coast of Florida become heavy with spawn, and lose their fine flavor. I think they spawn in May. We often take them quite small, only a few ounces in weight. Most fishermen use a hand line, with two hooks resting on the bottom, but anglers find more sport in the use of rod and reel. A four pound sheepshead will make a strong fight, and a pair of them will try the angler's skill to save both. Owing to the hard pavement of enamelled teeth in the mouth, it is difficult to hook this fish, and when hooked his jaws are so strong that few hooks can resist their power. After trying many kinds I have found but two that I could depend upon. One is the hook used at Newport for tautog, and the other is figured in Norris' book under the name of the Virginia hook. It is the best of the two, having a sharp cutting edge to the barb, which gives a better penetration. Sinkers of different weights are required to suit the force of the tide at different times, the sheepshead being a bottom fish. Two, four, and six ounces will be found sufficient. We usually averaged a dozen fish to a line in one tide, even when half a dozen persons were fishing from the boat, most of whom were unskilled. I have taken twenty-five sheepshead in a tide to my own rod, and I have known two anglers to kill a hundred in a day. We used generally to fill a two bushel bag, hanging over the boat's side in the water, so as to bring the fish home alive, and then put them in a car anchored in the creek in front of the hotel.

REDFISH, OR CHANNEL BASS, (*Corvina ocellata*).—CUVIER.

This is a very common and numerous species on the Florida coasts, and is a fish much resembling in habits its congener, the striped bass of more northern waters. It is taken with similar baits, such as shrimp, crab, or a piece of mullet; it fights long and hard on the hook, and in the proper season is an excellent table fish, boiled, cut in steaks, and broiled, or even fried. I consider it after the month of March to be equal to the striped bass. In the fall and winter the redfish is lean and without flavor, but improves in March, and in January it is the best of the coast fishes, as well as the most abundant. At that season it swarms in the river mouths and sounds, and can be taken with almost any bait. It is also found of large size in the surf on the sea-beaches, and can be readily taken by casting a baited hook with a hand line from the shore.

Norris represents the redfish as "stringy, and lacking fla-

vor," while Herbert calls it excellent. Both are right, since its quality varies with the season. Mr. Norris, quoting Holbrook, describes the redfish as of a beautiful silvery color, and iridescent when taken from the water, adding that in the Gulf it is invariably red. I have found that specimens under seven or eight pounds weight have the back of a steel blue, sides golden, and belly white—the larger fish are of a brilliant golden red on back and sides. All have the black spot near the tail, from which the specific name is derived. Sometimes there are two or more spots. The cut in Norris' book gives a correct figure of the redfish, or channel bass. It comes into the rivers with the tide, and is best taken in the channels near the shore at half flood. As in sheepshead fishing, most persons use the hand line, with the bait on the bottom, but I have found better sport with a bass rod and reel to hold sixty or seventy yards of line, using a float to keep my bait within three feet of the bottom. The same hook as for striped bass; this fish has a tough, but not very bony mouth, and is easily hooked and held. In March and April we get them in the rivers and inlets of five to ten pounds weight; later in the season of larger size, say from fifteen to thirty pounds. My largest was taken by trolling with a hand line from a boat in the Indian River, and weighed twenty-five pounds. I have known a dozen to be taken by one rod in the spring, averaging eight pounds, but in summer a wagon load could be hauled out of the surf with a hand line almost anywhere along the coast from Mosquito Inlet to the Indian River.

SALT WATER TROUT, (*Otolitis Carolinensis*).—CUVIER

This belongs to the same genus as the weakfish, or squeeteague of the Middle States (*O. regalis*), differing chiefly in this, that the southern species has rows of black spots on the back, like the lake trout of the Adirondacks, which it much resembles in figure. It is, however, not a salmon, but rather allied to the perches of the order *Otenoid*, of Agassiz. Our southern species is not much esteemed as food, becoming soft and flavorless soon after capture. It is a game fish, and affords good sport to the rod fisher; a very handsome and lively fish, from two to ten pounds in weight, and is taken usually with mullet bait. It is of very rapacious habits, and on a still night in spring and summer the snapping of their jaws may be distinctly heard as they chase the mullets and small fry in the creeks. Holbrook gives a good figure of this species.

THE DRUM, (*Pogonius cromis*).—CUVIER. (*P. fasciatus*), HOLBROOK.

There seem to be two species on the southern coast. *Pogonius cromis* is the black drum, the larger and coarser, sometimes weighing fifty or sixty pounds. *P. fasciatus*, the striped drum, of ten or twelve pounds, is the better fish. They appear at Mosquito Inlet about April, and spawn, I think at that season. The roe of the drum, salted, is a favorite dish on the coast, and was formerly exported in large quantities to Cuba. In Charleston, Savannah, and St. Augustine the drum is the common dinner fish when in season, though I think it much inferior to the sheepshead or the redfish. It is taken in the same way as its cousin, the sheepshead, and with the same bait, and behaves in the same way when hooked, though from its greater size and strength its capture is more difficult. This fish derives its name from its habit of emitting a hollow, drumming noise, principally, I think, in the spawning season. This sound, like the drumming of the partridge, is difficult to trace, as it appears to diffuse itself in space.

THE WHITING, BARB, OR KINGFISH, (*Umbrina nebulosa*).—STORER.

The whiting is considered one of the best of the southern fishes, and is prized higher by the natives than even the sheepshead; perhaps because it is a scarcer fish. We seldom get more than six or eight of them in a tide. The flesh is both rich and delicate, and the average weight about a pound; but its resistance is greater than would be expected from the size of the fish. They are taken in rather deep water on the bottom, with either clam, crab, or mullet bait. The figure in Norris' book is accurate.

RED SNAPPER, or GROUPE, (*Serranus erythogaster*).—CUVIER.

This fish seems to be called by both names in different localities. In east Florida it goes by the name of "snapper," and is known by the large canine teeth and by its rapacious habits; when put with other fish alive in a car it proceeds to devour those smaller than itself. It has large scales, with spines in the dorsal fin, and has been placed by Cuvier among the perches. At Mosquito Inlet they are small—from one to three pounds, but in the Indian River Inlet I have taken them of ten or twelve pounds weight, and I have seen them brought in from the Gulf of double that size. The snapper seems to be a wary fish, and requires finer tackle and more careful fishing than most of the coast species. I have found that a *rather small hook, fine line*, with mullet bait cast from a reel, using a float so as to let the line run off down the current thirty or forty yards from the boat, was the most successful way to de-lude the snapper. It bites sharply, fights hard, and is good eating, either boiled or fried. Color, reddish brown on the back and sides, growing darker after death; belly silvery. Holbrook, in his figure of this fish, gives it rows of black spots on the back.

BLACK GROUPE, (*Serranus nigritus*).—HOLBROOK.

Commonly known on the Florida coast as the "grouper," it is a perch also, and is of the very best quality on the table, being rich and well flavored—a better fish than the preceding, in my opinion. It is shaped something like the black bass of fresh water, the color an olive brown, with dark mottled lines, resembling tortoise shell. At Mosquito Inlet it is taken from two to eight pounds in weight with mullet bait on the bottom. The grouper has a stronghold under the mangrove bushes, or in a hole in the bank, to which it retreats when hooked, and being a vigorous fish often succeeds in reaching its fortress, from which it can with difficulty be dislodged, and the loss of fish and tackle is the result. More hooks are lost by the grouper than by any other fish, but as it affords good sport and excellent food it is a favorite object of the angler's pursuit. A bass rod and reel, with a strong line and Virginia hook, with lead enough to keep the bait on the bottom, is the best rig for the grouper, and, after all, the prospect of getting him is uncertain. He fights so hard that you have to give him line, and if you give him too much he is sure to escape into his hold.

COBIA, CRAB-EATER, or SARGENT FISH, (*Elaeate Atlantica*).—CUVIER.

This fish I have never seen except in the Indian River, where it is a common species, lying under the mangrove bushes in wait for prey like a pike, which it much resembles in form, and in the long under jaw, full of sharp teeth. It derives its trivial name from a black stripe running along its silvery sides, from head to tail, like that on the trousers of a sergeant. I found it rather coarse and indifferent food, in that also resembling the fresh water pike. Size, from two to three feet long.

THE POMPAÑO, (*Bothrolæmus pampanus*).—HOLBROOK.

Most persons who have been in Mobile or New Orleans have heard of the pompano. Perhaps few have seen or tasted it, though it has the reputation of being the finest fish in the world, and brings in the southern markets three or four times the price of any other fish. It is a rare fish, which may in part account for its high reputation, though having had the good fortune to catch and eat a pompano in Florida I am prepared to admit its claims for merit of the highest order. Holbrook is the only writer who, to my knowledge, gives a scientific description of this fish, and he apparently confounds it with the cavalli or crevallé, which much resembles it in appearance. In his "Fishes of South Carolina," he heads his description "The Pompano, *Bothrolæmus pampanus*. Synonyms—*Lichia Carolina*, (DeKay and Storer;) *Trachinotus pampanus*, (Cuvier and Val;) vulgo, cavalli or crevallé; known in New Orleans as pom-pynose."—Page 11.

The fish known on the coast of Florida as the cavalli or crevallé, I take to be *Caranx defensor*, (DeKay) which belongs to the same family as *B. pampanus*, but is of very different habits and merit, and has important structural distinctions.

The pompano has a truncated snout, rather a small mouth without teeth, jaws strong and massive, eye of moderate size, body much compressed and deep, about one-third the length; first dorsal fin represented by six spines; second dorsal soft, and extending to the tail; anal fin extending to the tail also. The pompano is a bottom fish, and is found singly. My specimen was taken in the Hillsboro River, near New Smyrna, with clam bait, while fishing on the bottom for sheephead. It weighed only two and a half pounds, but made so furious a resistance that I thought I had a large sheephead hooked foul. It ran in circles, darted under the boat, fouled our lines, and made fuss enough for a fish of three times its size. As soon as our boatman saw it he shouted, "A pompano! and the first I ever saw caught with a hook in this river!" This man had fished on the coast all his life, and knew every fish in the waters. He had been with us when we caught the cavalli in the Indian River, and named both species at once. My specimen was a splendid creature. His colors were as brilliant as those of a fresh water salmon, but instead of bright silver he was like a bar of frosted silver. This changed after death to dark blue above and lemon yellow beneath. We had him cut in slices and fried, and even under that treatment, which I suspect was not the most appropriate, he was superb. A combination of richness and delicacy of flavor quite unique—like a New Brunswick salmon and Lake Superior whitefish, which, of all the fishes on this Continent, I hold to be the best.

This specimen measured eighteen inches long and six in depth.

THE CAVALLI, or CREVALLÉ, (*Caranx defensor*).—DEKAY.

Belongs to the same family as the last, and much resembles it in appearance. The cavalli has a more pointed head and snout, with moderately large conical and pointed teeth. The mouth is larger than in the pompano, the body not as deep in proportion to the length, the eye is larger, it has two dorsal fins, and at the junction of the tail with the body it is smaller than the pompano. In color it is olive green, and silvery above and yellow beneath. I found it quite numerous at the Indian River Inlet. It goes in schools, swims near the surface, and takes readily a troll, either bait or red rag. It is an active, sporting fish, but of indifferent quality on the table, being dry and tasteless, like the dolphin of tropical seas. Those I caught were of about two pounds weight, but I am told that it grows to five times that size.

It would appear that these two species, from their strong resemblance to each other, are often confounded, and I think it very probable that specimens of the pompano reported to have been taken this year in Buzzard's Bay were in reality cavalli, this being a more roving as well as a more numerous species than the pompano.

BLACKFISH, or SEA BASS, (*Centropistes nigricans*).—CUVIER.

This seems to be the same species which is known in New York as the sea bass, and at Newport as the blackfish. Like the sheephead, those in northern waters are much larger than we find them in Florida waters, so that I am inclined to believe that they breed here and go North in the summer. At Mosquito Inlet they are very abundant, and being voracious feeders can be taken almost at will, and with any bait. Usually under a pound, while off the reefs at Newport I have taken them of six or seven.

SAILOR'S CHOICE, or HOGFISH, (*Hemulon fulvomaculatus*).—DEKAY.**CROKER, (*Micropogon undulatus*).—CUVIER.****BLACK GRUNT, (*Hemulon arcuatum*).—HOLBROOK.****SKIP JACK, young of BLUEFISH, (*Temnodon saltator*).—LINN.**

The above are small pan fish, which can be taken in vast numbers in the bays and creeks, but the larger species being numerous few persons seek for these, though they are all nice eating. The full grown bluefish are numerous on some parts of the coast at certain seasons, as I am informed, as are also the Spanish mackerel, but I have never met with them.

MULLET, (*Magil lineatus*).—DEKAY.

I think there are several species of the mullet here. They are found everywhere in the bays and sounds in immense shoals, and are taken in seines and cast nets in size from half a pound to six pounds. It is a very valuable fish to the inhabitants, since it takes salt better than any other southern species, being equal to the mackerel in that respect. It also furnishes a valuable food in its spawn, which is salted and smoked. It is also used extensively as bait for most other fishes. The mullet appears to subsist upon the minute animals found in the mud, with which substance its stomach and intestines are usually found to be filled. Eaten fresh, the mullet affords a rich and savory food.

SALT WATER CATFISH, (*Galeichthys marinus*).—CUVIER.

Much resembles the fresh water catfish, but is a handsomer fish, both in form and color. It has the barbels pendant from the mouth, and strong spines in the pectoral and dorsal fins, capable of inflicting painful wounds upon careless hands. As to its value as an edible species, I cannot say; they are numerous, and greedy biters, but are generally thrown away, or left for the coons and buzzards. Size in the Indian River, ten or twelve pounds. At Mosquito Inlet, from two to five pounds.

SHARKS AND THEIR CONGENERS.

Sharks are very numerous in these waters, from six to nine feet long—probably the mackerel shark, *Lamna punctata*—Storer. There is a species here called the nurse shark, *Somniosus boeipinna*, De S., which is sometimes taken with a hook; it is about five or six feet long, and its teeth are very small.

Other members of this family are the garfish, angel fish, rays, skates, &c. The garfish, *Pristis antiquorum*, (DeKay) is shark like in form, with a cruel weapon projecting from its snout one-third the length of its body. This is studded with sharp spines on either side, and is used to kill other fishes. The sawfish has a large mouth, but no teeth in it, so he slashes his saw among a school of mullets, killing half a dozen at a blow, which he then gobbles up at his leisure. He is dreaded by fishermen, who disable him by a blow on the saw.

The angel fish is a very bad angel indeed, judging from his appearance, which is between a shark and a ray—a hideous combination.

The rays or skates belong also to this class, and they are of large size and numerous on this coast, particularly the sting ray, *Trygon hastata* (Storer), which is a terror to fishermen. In wading to cast their nets they are in danger of treading on this creature, which lurks in the mud or on the sandy bottom, and when touched strikes with his terrible barbed weapon, making ragged wounds so difficult to heal that they are popularly supposed to be poisoned. These rays are often six feet long, including the tail, and three feet across. They appear to live upon the small molluscs so numerous in these waters. I have seen a ray, when hauled ashore, disgorge a pint or more of these small bivalves.

The torpedo ray, or crawfish, is also found on this coast, which animal carries with him an electrical battery of 250,000 plates, as described by naturalists, capable of giv-

ing a very severe shock to the incautions fisherman.

***Cephaloptera vampirus*.—MITCHELL.**

The great ray, vampire of the ocean, or devilfish, is found also in these waters, although it seldom enters the rivers. This is often fifteen feet in length, and the same in breadth, and is strong enough to drag off a small vessel, when it becomes entangled with the cable, as sometimes happens. In Charleston harbor they are pursued in whale boats, and captured with harpoons, affording great sport. In Victor Hugo's romance, the name devil fish, which belongs to this ray, is wrongly bestowed upon the octopus, or cuttle fish. This great ray, when propelling itself through the water with its immense pectoral fins, which look like the wings of a bat, is a wonderful sight. On its head are two horns, which, with its long tail, complete the resemblance to his satanic majesty. This is a fish, and the cuttle is not.

THE FRESH WATER FISHES OF FLORIDA.

Of these I have less knowledge than of the sea fishes. The species most widely diffused, and also the most valued, is the black trout, or bass, (*Grystes salmoides*). This species is also found in the western lakes and rivers, but in Florida it grows to a larger size; specimens of eight, ten, and twelve pounds being sometimes taken. The native method is with a bob, which is a bunch of gay colored feathers, with two or three large hooks concealed in it. This is fastened to a yard or two of strong line, and this to a stout reed pole. The fisherman sits in the bow of a canoe, which is paddled by one in the stern, and kept at such a distance from the weedy shore that the bob may be skittered along the margin. Out rushes the bass, and cannot well escape being hooked; he is either hauled in by main force, or breaks away. Northern fishermen use the spoon, or sometimes cast with a long line and gaudy flies. Once on the Upper St. John, near the Everglades, two of us took with spoons, trolling from the stern of a steamer, twenty or thirty black bass in an hour or two; they were from two to six pounds weight. Parties who go out from Enterprise upon Lake Munroe in small boats often bring in great strings of bass.

In the lakes and rivers are also found the yellow perch, *P. flavescens*, (Cuvier); sunfish, *Pomotis vulgaris*, (Cuvier); blue bream, *Ichthethis incisor*, (Val.); red bellied perch, *Ichthethis rubicanda*, (Storer); goggle-eyed perch, *Pomoxis rhomboides*, (Linn).

S. C. CLARK.

LOONS UNDER WATER.**EDITOR FOREST AND STREAM:—**

Some interesting notes in one of the earlier numbers of your welcome journal referred to the rapid flight of the loon under water, and recalled to me an occasion when I was witness to the motion of one of these superb birds.

A few miles from St. Paul there was, and still may be, a fishing resort on Lake Minnetonka, and many famous strings of pickerel and black bass were caught by the sportsmen who drove out from St. Paul. Going there with a friend, we concluded, after fishing in the main lake, to try new ground; so a boat was placed upon a wagon, and with it we went to a small pond lying apart from the ordinary line of travel, and after a contest that was not far from an appeal to force with a settler who falsely claimed exclusive ownership of the lake, we were laughed upon it, with an oarsman to row for our trolling. It was, beyond doubt, the first time the fascinations of the modern mechanical baits, spoons, and glittering bits of spinning metal were displayed before the gaze of the myriad fish, and with eager credulity they took them as willingly as our eastern capitalists at that time took ten per cent. western bonds, and they were taken in as fatally. Great rushing, rustic fellows, they did not wait for half a line to run out, but were as dazed by the shining temptations as squaws are by a little finery, and followed them as readily.

Passing a small bay that opened beyond a narrow inlet, we saw a female loon with a little one hiding behind her, and our curiosity to see more of the little family induced us to reel in our lines and paddle toward them. As we slowly approached them, the anxiety of the mother was really touching. She swam alertly about, seeking in vain to hasten the little one toward the concealment of some friendly sedges, and coaxed and pushed it by turn, becoming each moment more alarmed. As the distance between us lessened, she became the victim of fear for herself, and as equally solicitous for her fondling, expressing it by diving hurriedly and coming up, rising half upon wing and dropping again, and with every air of intense maternal anxiety. We continued nearing them, until it was evident that the little convoy would not gain the reeds before us, when, with a desperate plunge, the old bird went under, and in a moment went by our boat, seeking the open pond by the narrow and shallow outlet we were in. The depth was not sufficient to conceal her, and for a few rods her rapid course was plainly discernible. Her form was as straight as possible, making her as sharp as a cigar steamer, and her feet did not seem to be used unless for steering. Her motion, as rapid almost as the eye could follow, was derived from her wings, and probably from both the upward and downward stroke, like sculling. They were powerful, indeed, inspired by fear, and in a moment the dark form was gone like a shadow, seen only long enough to impress us with wonder and surprise at this use of wings under water, and at the result.

The little loony remained like a ball of grey down, reposing lightly on the water, and was not at all impressed with instinctive or imitative fear of us. It swam rather to the boat, and was not unwilling to be closely admired; in fact, it so freely accepted our complimentary criticism that

when, after carefully studying it, we rowed away, it swam in the eddy under the stern until it was dislodged and left behind.

We were not long gone when the fond mother rejoined it, when her demonstrations of delight were as unmistakable as her former distress, and it was a pleasant thing as time and again we passed the bay to see the two playing about in entire contentment.

The loon seems unable to rise from calm water, or to gain elevation in flight unless very slowly, or when aided by a high and opposing wind, and hence I infer their long and pertinacious resort to diving as their mode of escape. One I frightened from a small mountain pond in the "north woods" of this State flew around and around, gaining, like a spiral stair, a little height each time, and labored in alarm a long time before in the calm air it could rise over the lowest cut among the cliffs and escape to some more undisturbed retreat.

Not unfrequently do they rush along on the surface of the water, using their vigorous wings and scattering spray in showers along their course, and beyond doubt their movements below are equally rapid and ready. L. W. L.

THE HUNTER NATURALIST IN NEW BRUNSWICK AND NOVA SCOTIA.

A SUMMER in Acadia, the land of countless lakes and luxuriant forests, will furnish the sketch book with rare scenes, the cabinet with choice minerals, the basket and bag with fishes and game, and impart to the invalid and wearied, vigor, health and hope.

Three months amid the rural and forest districts of the Provinces has convinced me that they possess greater attractions for the tourist, sportsman, and health-seeker than the majority of regions of resort in North America—the Adirondacks, one of my favorite haunts, not excepted.

In these are old primeval forests, grand and picturesque, like the actual forests of my childhood. Here the lumberman has never laid the proud pine low, nor his axe, the destroyer of our forests, sounded amid these solitudes. There are woods in the Provinces where he has been at work, but tarry not in these; beyond are preserved lands where the trees stand as they ever stood, in majesty of growth and beauty of foliage. But penetrate the Maine and the Adirondack wildernesses to their desert heart, even there will be signs of the lumberman and his axe, the scourge and curse of our woods. The lumberman is not satisfied with robbing our wildernesses of their pride and beauty—the trees—but must fire valley and mountain, leaving the latter bald and bare as the head of a Franciscan monk, obstruct rivers with floating logs and ugly dams, fill trout streams with tree tops and sawdust, and build his saw-mills and human habitations on the most eligible camp sites on stream and lake. In a word, seeming to delight in defacing and marring nature in her every member. Come, ye poets, artists, naturalists and hunters; ye lovers of primeval forests, to the Acadian woods!

"This is the forest primeval, the murmuring Pines and the hemlock, bearded with moss and in garments green, Which Longfellow immortalized in his 'Evangeline.'"

Here, too, is some of the finest scenery to be met with in any land. Its sky scenes may not be so soft and subdued and sunny as those of Italy, but are not so monotonous and quite as enjoyable. The tourist in search of wild, bold, broken and rugged mountain scenery, towering and naked cliff views, should penetrate New Brunswick, enter the county of the Restigouche, look upon the outline sentinels of our own Alleghanies, sleepy and silent and hoary with age. It would be hard to find a more wild picturesque region than this. Or does he delight most in half subdued, quiet and rural scenery, then a sail up the St. John river, the Rhine of the New World, whose hills are low and soft in outline and cultivated to the very summits; or down the Bay of Fundy, encircled with green hills and fanned by an eternal sea breeze; or out into the waters of the Bay of Minas, the basin of waters in the garden of Nova Scotia, the rich prairie waters, the cliff-bound waters, and the never-to-be-forgotten tidal waters. Such scenes to the student of nature afford immortal pleasures. Here meets the eye as remarkable a phenomenon, as grand and awe-producing as that of the Falls of Niagara. View this scene at the quiet village of Windsor, on the river Avon. The river is without water, the vessels are high on land, laden with precious freight, sails fanning the face of the breeze, sailors looking seaward, who cry "Ho! water!" Far in the distance appears a little stream of light; nearer and nearer it comes. Ah! it is a rippling rivulet that increases in volume and strength, bounding and leaping past in full glee, filling corner and crevice. Now a brook rushes on like a running steed, now it surges and rolls over the wide expanse, now a river, next a lake, and anon a sea, whose waves beat against the banks and whose waters bear up the mighty ships from their dry beds and on to their destined ports. Yonder is the steamer coming to bear us over the basin to Parrsboro, thirty miles distant, ere the tide goes out twelve hours hence emptying these banks of sixty feet of water and leaving the scene as we found it.

These Provinces abound in mineral wealth. Nova Scotia is rich in gold fields. These have yielded no mean amount of this precious metal already, and yet scientists are of opinion that its main beds of gold have not been discovered, and that the examinations and explorations of the ledge rocks that contain gold on the Atlantic shores, said to embrace several thousand square miles, have been but partially and very superficially made, leaving its rich gold veins yet to be found. Its iron and coal mines are numerous and prolific. New beds are constantly being found

about the Bay of Minas and other ore regions. Here the mineralogists may collect rich and rare specimens. In game, the Provinces are unsurpassed. In these may be found the hunter's and angler's paradise. The sportsman will find the beautiful and attractive forests inhabited by moose, caribou, bear, otter and beaver, their extensive marshes covered with the choicest of game birds—American snipe, golden plover and curlew. There, too, will be met in their haunts geese and duck, also grouse and woodcock, plentiful in certain localities, their rivers and streams filled with silvery salmon and spotted trout.

I shall venture to embrace in five divisions the hunting centres or districts of Acadia. By hunting districts is meant regions remarkable for game. These hunting grounds will not include those parts which do not contain both moose and caribou.

First is the Mirimichi district, N. B. This includes all the wilderness in and about the great southwest branch of the Mirimichi river and its tributaries, together with all that territory in and about all the little Mirimichis. The southwest Mirimichi lies north of Fredericton, N. B., the seat of government, about fifty-five miles. This river and its branches traverse the very heart wilderness of the Province. It is reached by taking the European and North American Railroad at Boston, to Fredericton Junction, which lies close by the dividing line between Maine and New Brunswick. Here change cars for Fredericton on the St. John river, where supplies must be obtained for the wilderness, since there is no place beyond this point where provisions can be bought.

Guides and dug-outs (boats) can be secured at Boiestown, Mirimichi river, (southwest branch) or by addressing the Palmer or Stickney Brothers at this village. John Stickney has no superior as a guide in angling and hunting in this region. One of the Palmer brothers can call moose with much Indian art and success. Both of these have accompanied me salmon fishing and moose and caribou hunting. There is a stage running every other day from Fredericton to Boiestown, which will convey you and your supplies to the Mirimichi river. When up river to "Burnt Hill," the *ne plus ultra* of salmon pools, you can strike off from either side a few miles and find moose and caribou, bear and beaver and small game, or ascend the river twenty miles farther and see many of these animals, together with other fur-bearing quadrupeds, without leaving the steamer. Far down the river I saw the summer camp of a beaver and his fresh work. Bears are so abundant here this fall as to enter the settlements below and destroy both sheep and cattle.

Another excellent district in New Brunswick, and one that embraces a vast wilderness, is the country of the Restigouche river. This is a famous hunting and angling region. By some it is thought to be far superior to the Mirimichi country. The forests of both regions contain the same kind of game, and their streams afford fine sport in salmon and trout fishing. Number 6 FOREST AND STREAM contains a complete guide to the routes leading to this district.

Again, there is the Indian Lake district, Nova Scotia. This is in the vicinity of Halifax, and because of its close proximity is much frequented by English officers stationed at the city. Yet, notwithstanding this, the sportsman from a distance may have excellent success within twenty miles of town in bird or moose shooting. Within this distance there are, too, many excellent salmon and trout centres. The next game district to which I shall refer embraces the wilde ness extending from Yarmouth into the Annapolis country, and lying north of what is known as the lake region of this Province, and only lacks, as Mr. Hallock says, the grand old mountains to make it physically as attractive as the Adirondacks, while as for game and fishes it is in every way infinitely superior. The region north of the lake country is a dense and extensive wilderness, in which game is but little disturbed. The Micmac Indians have always considered this and the lake country one of their best angling and hunting grounds. Here the beaver still builds his dam and erects his house. These animals seem to be on the increase since beaver hats have gone out of fashion. There are also in this region many varieties of fur-bearing animals, such as otter, mink, marten, together with bear, lucifee, and other game animals. These are common to all the districts inhabited by moose and caribou, and the streams will afford fine sport to the fly fisher in killing salmon and trout.

This district can be reached by steamer from Portland to Yarmouth. On angling in these Provinces, see "Hallock's Fishing Tourist," the only complete and reliable work of the kind which we have met—as true to the streams as the needle to the pole.

The next and last district, and one that has not only superior attractions for the sportsman, but as well for the naturalist, artist and resortist, is the Parrsboro district.

Parrsboro, beautiful and romantic, is situated on the basin of Minas, a quiet summer retreat. In picturesque bays, islands, and green hill views, it has never been my fortune to meet its equal. You may bathe in its full tidal waters and walk on the beach of the same sea dry-footed a little afterwards, when the tide is out. And woe betide the mineralogist who dares venture a visit to one of the sister islands that lie half a mile in the bay from shore, if perchance he tarry long, until warned by the incoming waters which are moved by a law as regular, sure and unchanging as the sun, that danger is nigh. He now lifts his hammer and chisel and satchel of minerals, and commences a hurried retreat, but ere two-thirds of the way is reached the water is knee deep. Deeper and deeper it grows,

higher and higher it advances, faster and faster he speeds. His safety now turns upon his casting away that satchel of precious stones. But it contains rare specimens, which have cost much labor to knock out of the rocks. He hesitates; only for a moment, however, and it drops at his feet, and now he leaps through the water and finally reaches the shore wearied and exhausted. This is no fancy sketch, but an actual experience. And yet there is not the least danger from the incoming and outgoing tide. Ladies and children walk these shores, collecting minerals and watching the waters day in and day out without a thought of danger.

Parrsboro Minas is destined to be the Newport of Nova Scotia. It would be impossible to overrate its romantic position. The Ottawa House, kept by an estimable lady (Miss Wheeler), is a first-class summer resort, located with a view to command the sublimest prospects of Cape Blomidon Cliffs, and other mountain peaks, of which there are many, in and about the Basin. Up the mountain sides, at the base of which rests the hotel, are many retreats, where you may rest in the mountain ascent and watch the sail boats near and far on the bay waters, and listen to the song of the birds and the hum of the insects, or examine the entomological specimens that light on bush or crawl on ground. But words fail to describe the pleasure of such scenes. These belong to that rare class of scenery that needs to be visited to be appreciated. Besides its scenery and sea bathing facilities it abounds in rare and choice minerals, and is much visited by mineralogists of all countries. Several of the professors and students of our own universities come here every year. A company of nine students from Yale College collected in four weeks this year nine barrels of minerals. I collected in a day in and about the bluffs of Partridge Island, which is not more than half a mile from the hotels the following specimens: Amethyst in quartz, jasper, red and yellow, stellite, silicious silt, gypsum, agates, copper, iron; and during my hunting tour my wife and children collected many others, and we brought away a keg of these, which adds much to our cabinet. Years ago two rare and remarkable amethysts were found here. One was presented to a French king, who wore it in his crown, and the other is said to sparkle in the crown worn by Queen Victoria. There are, too, many interesting and picturesque drives along the bluffs of the bay, and also one to a newly discovered cave filled with relics of the past.

This region will be found equally prolific in animal life. Portions of its forests are but moose-yards, browsing pasture grounds. I have seen, this summer, upwards of twenty of these pastures in a radius of thirty miles, and the tracks of these animals were as the tracks of the cattle upon a thousand hills. On this same ground, as my Indian guide assured me, four Indians, out of season, during the deep snows of last spring, ran down on snow shoes and killed sixty moose, leaving their carcasses to rot in the wilderness, all for the paltry price their hides would bring. "This is barbarous," as John said, "in an Indian, but there are white men here who practice this mode of hunting as well."

The caribou travel on the hard-wooded ridges, the moss-covered ridges. These are as abundant in their haunts as moose, but since they do not yard like the moose, but pass and repass from yard to yard, feeding as they go, the hunter thinks them not so numerous. While moose and caribou occupy the same forests in this district, they are yet separate. Here, too, other portions of the same forest are occupied by bears. While other animals pass through these bear districts, yet the latter hold and defend them against all intruders.

I met with one of these bear districts near the Bucktagen Plains, thirty miles from Parrsboro, that contained bear trails as well travelled and as numerous as any I ever saw in moose or deer regions. There are many red and cross foxes here, and other fur-bearing animals, including the otter, fishes, martens, &c. These are found along nearly all the streams. There are also in the forest both ruffed grouse and black grouse. The black or spruce grouse (*T. canadensis*) are met only in cedar and spruce swamps. Near Parrsboro both woodcock and duck shooting is good. One of the best snipe, plover and curlew shooting centres in the world is embraced in this district. I mean the famous Lockville and Amherst marshes. These (*Tantramar*) marshes are reached by daily stage from Parrsboro which connects with the Intercolonial Railway, or from St. John by the same railway.

The trip to any of these districts named can be made as quickly as to the Adirondacks or Maine woods, and with much less expense, and where game is infinitely more abundant.

The best guides in the Adirondacks, including boats, cost \$3 per day, while the best guides in Nova Scotia and New Brunswick cost from \$1 25 to \$1 50 per day, gold. The fare from Boston by rail or boat to St. John, will not exceed \$9, while it costs about \$10 from New York to the Adirondacks, and many of these districts are as well adapted to hunting and fishing in canoes as are the Adirondacks to boats. Should any think me over enthusiastic for these Provinces, let them visit them. This is addressed to patient, appreciative sportsmen, and not to grumblers and easy-chair anglers and shooters, who lounge about civilized woods and border streams, and who return to curse the man who wrote on their advantages and beauties.

One of the best guides in all Nova Scotia is John Logan, of Half Way river. He is a most competent, reliable and willing guide. I have found him perfectly familiar with the woods and equally acquainted with every species of game therein found. A. B. LAMBERTON.

For Forest and Stream.
CASABIANCA.

TRANSLATED FROM THE ORIGINAL CHINESE INTO "PIGEON ENGLISH."

ONE boy he stop topside that night;
All man hab chop-chop makee while;
He see that fire, he shine so blite,
On muchee man hab makee spoilo.

He No. 1 handsome; allo same Joss—
Spose he wanchee, he can talkee.
That piecee typhoon velly closs,
That typhoon quick, he makee walkee.

By'mby that boy he wanchee go;
That fire he blun he litty hand.
He fader no hab talkee so—
He makee die down side, how can?

He sing out stlong, "Hi! fader, hi!"
This pidgin maskee, wanchee while.
He no saby, he hab makee die,
And no can hear he piecee chilo.

"Hi, fader!" one more teem he cly;
"My wanchee go; what for no can?"—
That gun just now he bobbly high,
That fire he come, he no hear man.

He facee now he catchee hot;
He tallee too commencee blun.
He look all side; no man hab got;
He no got fear—but wanchee lun.

And one more teem he cly so stlong,
"What fashion! My no likey he!
Too mutchee nonsense!" Yet all along
That fire blun junk; he burney he.

All side that junk, he got that fire.
He go that mast, chow-chow that sail;
Chop, chop, he walkee high and higher,
That boy he lookee allosame pale.

Hi yah! What ting! He makee bust!
That boy galah my no can see.
What side hab walkee? Allosame dust:
Look, see that wind, he catchee he.

GLOSSARY OF TERMS.—*Top-side*, on deck, upstairs; *chop-chop*, quickly; *while*, get away, clear out; *allosame*, the same as, like; *joss*, deity; *typhoon*, hurricane, storm; *downside*, below; *pidgin*, business, affair; *no saby*, no save; *bobbery*, row, noise; *blun*, burn; (*r* is generally pronounced *l*); *what ting*, what fashion, what do you mean; *hi yah*, exclamation; *galah*, exclamation; *chow chow*, verb to eat or devour; *maskee*, enough said, finished; *he*, his, her, it, his, hers, she, he, &c.; *my*, me, I, my.

PRACTICAL FISH CULTURE.

NUMBER TWO.

[Taking Trout Spawn.]

HAVING shown how the fish deposit their ova when in a state of nature, we will now explain how the fish-culturist manages to secure all the eggs and impregnate a much greater percentage than the fish can possibly do. We will therefore leave the building of ponds and such other work as may be done only in the spring and summer months, until a more favorable time, and take up the artificial manner of taking spawn by hand, or stripping, as it is sometimes called.

The implements necessary for this operation are: a couple of tubs, a small hand net, or a large dipper, some impregnating pans, a few feathers, and a large net to catch the fish with. This net should be six or eight feet long and fastened to a square frame at the mouth, which should either slide in a groove at the lower end of the spawning place or fit so closely at the sides and on the bottom that the fish cannot dodge past. It is astonishing how quickly a trout's eye can take in the situation and take advantage of the smallest aperture that may be left, even when he is frightened and rushing down a raceway, which has always been open, but is now found to be closed with some large unfamiliar object. The small end of the net is closed with a string, which, when untied, will allow the fish to swim out into the tub and so avoid pouring them out at the large end. When all is ready the net is quickly slipped over the mouth of the raceway, the board covering removed and the fish driven down into the net; water is then put into a tub, placed as near the net as possible, which is lifted from the raceway into it. For this operation a net made of coarse bagging or coffee sacks, is preferable to one that is knit, as it is so fine that in the transit through the air from the pond to the tub, it will hold water, while a knit one will leave the fish dry and floundering, which may cause the death of every ripe fish in the lot.

And here I would remind the beginner that he cannot handle a gravid fish too carefully if he expects it to live after the operation.

Having untied the lower end of the net and emptied the fish carefully into the tub, it will be found most convenient to sort them and put the males in the other tub; take them out with the small hand net or large short-handled dipper, and dip the edge of it in the water, that they may not be injured by being poured in. The object of separating the sexes is that it often happens that their numbers are unequal, or if nearly so, then there may be a scarcity of ripe males, even though this sex should be in excess, and sometimes a male fish will have but a small quantity of milt as a consequence of a former mating, but as one good ripe male will serve to impregnate the eggs of several females, it ordinarily happens that there is enough; still, it is well to be prepared for a scarcity, as there are few things more provoking than to take a fine batch of eggs and have no

milt to impregnate them with; therefore, while it is a good thing to use it freely if plenty, and so make assurance doubly sure, it is better to spin it out and make it go as far as possible if the supply is limited.

As for the manner of holding and manipulating a fish, there are almost as many ways as there are operators. A person will soon find a way in which it is the most convenient for him to do it, and this will soon become his fixed manner from which he will find it hard to deviate; there are certain rules however that must be observed and on which all agree. Force must not be used; if the eggs or milt will not flow freely at a light touch, the fish must be put back in the pond to ripen. Do not grasp a fish anywhere on the abdomen or gills, but take it up with one hand on the strong bony arch behind the gills, and the other grasping the tail between the vent and caudal fin; here the fish is solid and is not easily injured by pressure. Never handle a fish with a dry hand; if one should jump from the tub or be dropped to the ground by any mischance, always wet your hands before touching it, then the slime will not rub off from the fish; it will stick to a dry hand, and it is that which causes finger marks to show so plainly on a fish that has been handled; these marks often become sores covered with a fungoid growth which generally kill the fish. The slime on a trout is necessary to its existence, and they never have as much of it at any other season as they do during the spawning period. The loss of this slime or of a few scales is much more serious to them than a clean cut. If a trout should be taken carefully from the water and laid in a dry towel, dried off gently and quickly and then let go in the water, he would swim off apparently all right, but in the course of a week or ten days would look woolly, and in a few days more would die.

Wherever this woolly fungus grows, the flesh beneath it appears ulcerated and the edges highly inflamed. I will refer to this again under the head of diseases of adult trout, and in the mean time make some microscopical examinations of it, provided I get a better instrument than the one I have; and now will try and get back to the subject of taking spawn. How easy it is to digress on such a subject!

If the day is cold, as it generally is, the tubs can be taken to the hatching house in order to work comfortably, as a lively fish in numb fingers may make sad work if it slips into a pan of eggs.

My manner of handling a fish is to put both hands in the water with the backs up and take the head in the right hand with the thumb and second finger grasping the fish behind the gills, leaving the forefinger free, the other fingers will keep the fish from going through the hand without pressing too much on the gills; the left hand grasps the fish by the tail below the vent. A male is usually taken first, and if ripe, will yield a few drops of clear white milt; if it is of any other color, or has a streak of blood in it, it is not good. Bloody milt will come if too much pressure is used, but will be so sometimes without it. It requires but a few drops of milt to fertilize a pan of eggs, yet we take all we can get; if the water is slightly tinged with good milt it is sufficient. It was formerly the custom to put a little water in the pan and then strip a male fish so that the egg as soon as taken could absorb milt, but now I think it is the custom of most operators to take the spawn by what is known as the Russian or dry method, in which it makes little or no difference, which is taken first.

The fish is stripped by a slight pressure of the forefinger of the right hand. Other operators hold a fish so that they use the thumb instead of the forefinger and some use two or three fingers.

More care must be used in handling the female. If the eggs feel hard, like shot, put her back, for if ripe the eggs will generally flow if she is held in position over the pan. Holding in position is, with the head and tail thrown back as she bends herself when depositing her own eggs. If ripe, the belly will feel soft and the eggs, by changing their positions at the touch, will show that the tissue that enveloped them is ruptured. This is the condition in which the shad and herring are when called "shotters" by the fishermen, and I would advise opening a fish to see how the spawn lays before attempting to take it. A trout has the spawn in two layers, each enveloped in a thin membrane, and in the last stage of its development it reaches from the vent to the pectoral fins, almost behind the gills.

The female must be pressed more slowly and carefully than the male, as well as oftener. Commence the pressure at the pectoral fins and do not allow the finger to move faster than the eggs; hold the vent under water, if you use any, and after moving the finger an inch or two, repeat the stroke, but do not press near the vent or the fish may be permanently injured.

If the fish struggles do not squeeze it, and if, as is sometimes the case, one proves obstinate, put it back in the tub and try again. The male is stripped from the ventral fins to the vent.

Spawn and milt are taken according to your judgment. After the first pair are stripped, that is, if the water is "thick" enough, you can handle several females in succession; if not, use more milt, give the pan an occasional light shake, or stir the water with a feather, or tail of a fish so as to bring the contents in more immediate contact, and after the bottom of the pan is well covered, take another; a common milk pan will take four or five thousand to completely cover the bottom. After the operation is finished the pan should be left undisturbed for half an hour; it requires about this time for the eggs to "free."

It has been said that the eggs when first taken were furnished with a glutinous matter which caused them to

adhere to the pan and to each other, but we now know that this is caused by the absence of water between the coverings which causes them to stick to what they touch by the pressure of the water, and as they fill, the pressure on the inside causes them to "free." As soon as this happens the eggs are washed from all superfluous milt—for they will take no more—by being placed under a small stream and the water changed repeatedly.

Taking spawn may appear to be a very formidable operation as described, and there really is a great deal of skill required to perform it neatly and quickly without injury to the fish, yet I am confident that I could show a person how to do it in a great deal less time than he could ever learn it from written instructions. There is a great difference on these points even among operators of considerable experience, and a beginner must expect not only to be awkward at it, but also to kill many fish. The greatest danger is in using too much force. If the fish are ripe you will know it, if not you may have doubts, and I beg of you to give the poor fish the benefit of them, for if your entertain a doubt of it after you have her in position and have touched her abdomen, then she is not ripe.

There are signs of ripeness that will enable one to form a near guess. There are in the female a fullness of the abdomen, which however looks the same if the fish is gorged with food, and a protruding purple vent which a novice at first sight might think was injured or diseased.

Did you ever see a ripe male? If not, then, you that have caught thousands of trout in season might possibly ask, as many visitors do, "What fish is that?" For in addition to his brilliant fins and deep orange belly, which gets brighter as the spawning season approaches, he appears to be of a rich drab color on his back when fully ripe, and his sides appear darker than usual as you stand near the edge of the pond and look down upon him. The female, if not of a more sober hue appears so by contrast with her gaudy mate. At other seasons the sexes are not so easily distinguished, but as a general rule it may be said that the female's nose is the roundest, and she presents a more corpulent appearance. These signs however are not infallible, and a person of experience will rightly pronounce the sex nine times out of ten without being able to explain just how he does it. If a doubt is raised in my mind as to the sex of a trout, as it is, if I cannot pronounce from the first look, then I would not care to hazard a guess, so subtle is the difference of expression, if that word may be used in this connection. It is as if one were to pronounce on the sex of human faces; the majority are unmistakable, but occasionally one would puzzle him. At the spawning season there is not the slightest difficulty.

I have not taken spawn from trout in this manner for several years, as I use the invention known as the Ainsworth screens, where the fish deposit their own eggs, and I gather them once or twice a week, or when convenient; but this is matter enough for another chapter.

FRED. MATHER.

SKETCHES IN FLORIDA.

FISHING AT ST. AUGUSTINE.

ST. AUGUSTINE is a quaint old Spanish city, for a long time dull and quiet, but now waking up with the influx of Northern people, many of whom have built stately and beautiful residences for their winter sojourn.

For real enjoyment, St. Augustine far surpasses any other part of Florida. You avoid the bustle of business in Jacksonville, as well as its sharp frosts and hot days; you are not "out of the world," as at Enterprise, nor is it so warm.

The climate is charming; a happy medium; nor is it so variable as at most other places in Florida. Frost is almost unknown; also, extreme heat. You have good hotels, your daily mail, and, though the "morning papers" do not reach you until the afternoon, still, you are "in the world;" while the facilities for boating, hunting and fishing are unsurpassed.

The bay is beautiful, and affords a fine opportunity for sailing. Whether your party tries the "Osceola," or "Belle of the Bay" of Mr. Ivanowski (Neé Sweeney), the "Water Witch" of Captain Walton, or any of the smaller craft in the harbor, you can enjoy a pleasant and comfortable sail under safe pilotage.

While for fishing, one has but to go to the sea-wall, or the long wharf, or take a skiff or canoe, and push out in the bay, and there will be no want of sport.

The only drawback is the universal prevalence of the catfish, which is of all sizes, from the tiny youngster of three inches to the full-grown paterfamilias of two feet or more. These are of a grey color and shaped like their Northern brethren, but covered with a thick tough slime, just as the eels of the north are, and the result is, your hook, line and fingers—and often clothes get covered with this sticky substance. Your hook and line must be thoroughly cleansed, or no other fish will touch it—your hands and clothes are at your option.

Another favorite fishing place is from the bridge over the San Sebastian, just at the back of the town.

At any or all of these places you can catch bass, trout, sheepshead, mullet, flounders, sharks, and many other varieties.

One of the pleasantest amusements is fishing in the surf for bass. The "modus operandi" of this sport is somewhat as follows:—

Remember that I am giving the custom of the country, and shall not be surprised if scientific bass-fishers, who re-

joice in forty-dollar reels and sixty-dollar rods with agate-mounted tips and rings, are somewhat disgusted.

The line ordinarily used is nearly as thick as a cod-line, and about 50 yards long. A sinker, weighing about a half or three-quarters of a pound—with a hole through it—is strung on the line, and is kept there by a large knot on its end. Below this knot, and attached to the line proper by a somewhat smaller cord, is the hook—a cod-hook being generally used, or one a little smaller.

The fisherman is usually clad in an old flannel shirt, woollen trousers and old, loose boots—with a broad-leaved straw or felt hat.

The bait used is a string of mullet, procured at the early market—(price five cents)—which is cut into chunks about an inch square.

Thus equipped, and with the end of the line tied around the waist, or to his wrist, to prevent its escape as it flies out, and neatly coiled in his left hand, to run off easily, and with a yard or two above the sinker hanging from his right hand, the fisherman wades into the surf, about waist deep, and, swinging the sinker around his head, launches it out as far as he can, and then draws it gradually in, so as to keep the bait moving.

When he feels a bite, he gives a jerk, to hook the fish, and, if successful, he puts the line over his shoulder and starts for the beach, going as fast as he can—for if he lets the line slack, he will probably lose his fish.

On emerging from the water he runs out on the beach and drags the fish upon the sand, where he secures it—and, re-baiting his hook, starts for another throw.

The hook, or hooks, (sometimes two or more are used), are put on a smaller piece of line, on account of the abundance of small sharks, which literary swarm in the breakers, where the bass and other fish most do congregate, and are very apt to seize the bait and break the line, carrying off sinker and all, if it breaks above it.

The sinker is perforated so that the bite can easily be felt, the line readily slipping through it.

The surf is about fifty yards from the edge of the beach, there being a line of shoal about that distance, over which the waves break. Between this and the shore the water is shallow; about thigh-deep at low tide, and the fisherman wades out to the bank.

As the tide rises he is obliged to come in, the surf breaking all the way to the shore when the water is two or three feet deep on the bar.

It is not a very comfortable feeling to turn when on the shoal, and see a shark or two swimming up and down between you and the shore—especially, if you have a bite and are making for the beach. But they are very shy, and quickly get out of the way. I never heard of anyone being bitten. They are usually about three or four feet long, and are often caught.

Still they are unpleasant neighbors. I remember one day, before a storm, when the water was dark and I could not see, while standing about waist-deep in this "middle-ground," and fishing busily, feeling a sudden sharp nip on the ankle. I sprang clear of the water, for I thought it was a shark. But it was only a large sea-crab, which pinches powerfully. Fortunately, I had on very heavy pantaloons, so no damage was done—but the shock was tremendous, for sharks are very bold in dark water.

There are many large sharks and sword or saw-fish in the Bay, and during the summer they are caught for the oil contained in their livers. From ten to twenty fish is about a fair afternoon's catch "during the season"—so they say.

Speaking of the bass-fishing in the surf, reminds me of a somewhat ludicrous incident, which is said to have occurred to one of our distinguished Generals, just after the war. It seems, a party were fishing at Brazos, in the Gulf, somewhat in the manner I have just described, and the General feeling a bite, started with the line over his shoulder in orthodox style for the beach, and ran out hauling his line. In course of time the fish was drawn out, and to the amazement of the General and the amusement of the rest of the party, proved to be only about six inches long.

It is needless to say the General's champagne suffered that evening, but the story leaked out nevertheless. So much for the fish.

Quail are plenty in the neighborhood of St. Augustine, and within a few miles deer and wild turkey are abundant; while occasionally one gets a chance for a "scrimmage" with a bear or panther.

As to wild fowl, "their name is legion"—shore birds of all kinds, ducks, geese, herons, *et id omne genus*, can be had with a reasonable degree of trouble.

Enough sport can be found in the neighborhood of St. Augustine to reward the most ardent sportsman, and I know of no place, this side of Humboldt Bay, in California, where so many facilities for hunting and fishing are offered, or where the variety of game fish, flesh and fowl is so great, or where a few weeks may be more agreeably passed by the sportsman.

MONMOUTH.

—A Russian naturalist claims to have found living mammoths in Siberia. He has seen five small ones twelve feet high, eighteen feet long, and having tusks eight to ten feet in length. The brute haunts great caves, and feeds on grass, etc.

—Johnny attends school, which will explain the following short dialogue between him and his father: "Johnny, I didn't know you got whipped the other day," said he, "You didn't? Well, if you'd been in my breeches you'd have known it."

—This is the season of the year when a boy examines the wood-pile in the next yard and wonders why on earth his father don't buy small, straight sticks.—*Danbury News*

Woodland, Lawn and Garden.

RHODODENDRONS.

HARDY VARIETIES. RHODODENDRON. (*Catawbiensis*.)

"Long years ago it might befall
When all the garden flowers were trim,
The grave old gardener prided him
On these the most of all."

AMONG the evergreen plants used for garden, lawn and other decorative situations, where one, six, or a larger number are to be used, commend us to the grand old rhododendron. The king of the city garden, the pride of the village green, the pet flower of every ten by twelve grass plot, and, grandest of all, the flowering climax of every well stocked, elegantly decorated park.

This magnificent flower is so well known, or should be to all the lovers of beautiful plants, that a familiar description of the same would scarcely seem necessary. Yet such is not the case. There are many persons, ladies and gentlemen, too, of good taste, who delight in a well stocked garden, who have never seen a rhododendron in full bloom. Said a lady to me one day, "I saw a very beautiful flower in full bloom in front of a gentleman's house in New Jersey the other afternoon. I wish I knew what it was. It had bright glossy leaves, grew about three feet high, and had about ten short limbs, all covered with an orange shaped leaf, that looked like a leaf made from wax. From the middle of the bunches of green leaves there sprang a large pink colored flower as large as my hand, and oh! so beautiful. I do much wish I knew its name. I want to purchase one, as I never saw a more beautiful plant."

This very natural exclamation of the lady would probably find a response in very many hearts when looking upon this plant for the first time. This would be the case with any one who could spend an hour in the garden of the Messrs. Hovey, near Boston. There your eyes would be delighted with specimens of this beautiful flower twelve feet in height, and in its season of blossom all covered with flowers.

We have been told that familiarity breeds contempt. Not so with the rhododendron. Beautiful! indeed, the more we become acquainted with the rare qualities of this valued plant of the garden the more we love its bright shining leaves, its rich and enduring flowers, and well may the term of a "thing of beauty" be applied to it. Magnificent is a well fitting title for the *rhododendron catawbiensis*. While there are many varieties of this flowering shrub which, with care, can be cultivated to perfection upon the lawn and beneath the shelter of the deepening woody borders of our gardens, we can recommend for hardy culture the *catawbiensis* as perfectly reliable. Plant this kind and you will have a reliable plant. And a "sure thing" in the garden is a matter of much consideration to all our lady friends who love these beautiful flowers. This article upon the rhododendron was written at the express solicitation of two of our lady friends, who know something about garden flowers.

The *R. Ponticum*, and many of the hardy varieties—hybrids—will grow well beneath the shady sides of woods, but we feel that all who do not tolerably well understand their cultivation had better confine themselves to the culture of one or two of the perfectly hardy species. There are thirty varieties of the *catawbiensis*—all hardy; from these they can choose their plants and go to work on a half dozen or a dozen with a good degree of confidence in ultimate success.

Like the azaleas, the rhododendron does pretty well in ordinary garden soil, but is greatly improved in size and beauty of color by a skillful adaptation as near as possible to its natural soil and situations. Make them as much at home in their new home, by a judicious combination of soils, as they were before they were lifted, and your work is done.

There is not a more superb plant than the rhododendron cultivated, and our earnest plea is for our pet plant. It can be planted in pots if you desire it, and you can keep it in the greenhouse in the winter and bring it out in the spring to beautify the plot or garden. Amateurs and others desirous of trying their hand with three or five of these plants, can obtain perfectly hardy varieties from any of our seedsmen.

If we could have but one "garden pet," our choice would be the rhododendron. It is hardy, vigorous of constitution, not liable to insect attacks, possesses beauty and symmetry of growth, and when in flower it pays you a hundred times over for the care you bestow upon it. We have often felt a surprise at the lack of appreciation this flower seemed to command, and were thus led seriously to consider why it was this sparsely cultivated. Perhaps a prominent reason may be found in the fact that considerable care and attention is required to make an appropriate bed, soil, and situation for the growth of this plant.

In hopes of giving our lady friends and, incidentally, others a few reliable hints as to how to prepare a bed for the rhododendron, I will tell them just how I made one for myself last week, and they are at liberty to improve upon my plan as much as they please. If our friends have patience sufficient to induce them to make such a bed as we describe, and sufficient faith in our experience, they will have as good a show of rhododendrons as any of their neighbors.

First, this plant, to thrive well, requires a deep, well prepared soil. Belonging to the family *ericaceae*, its rootlets

are exceedingly delicate, and are always found very fine. Now, whenever you find these delicate rootlets dry, from any cause whatever, you may throw your plant away at once, for however green its leaves may appear your plant is dead.

On what are called the most "unseemly places" you can make your plant bed, as I did mine. The hillside upon which I have prepared a bed for the next spring planting faces the southeast. I first determined the size which I designed for my bed. This I staked out in outline, which I think a good plan, using sharpened sticks six inches long. The bed is of an oval form, in the longest measurement ten feet, in breadth, or shortest, five to six feet. Carefully cutting the sod with a sod cutter, I removed all the same from the top of the bed. This being done I removed the earthy loam and placed it outside the excavation for future use. Then I removed the gravel to the depth of four feet; this gravel you will need to make the side of the lower embankment of your bed, for I made the upper side of my bed four feet below the level of the sod in its original form. From this level, to be determined by the circumstances of the case, by those who follow these suggestions, I, in making my bed, made a level bed, or plateau. This was the foundation, or pit, of my bed. Now comes the filling up process. On a side hill like the one in question you will not often need much artificial drainage. You will, as I did, prepare for a too rapid drainage, which is death to your plant, by covering the whole bottom of your pit with pine needles, or oak leaves, or fine meadow hay, to the depth of from one to two feet. Now pass back again into the pit your loam, and your leaves are fixed, and should be trodden down to make what you have already placed them, about six inches deep from the bottom. Now you are ready to place old sod soil—the soil that should compose the bed, and that which I used was a mixture of one part peat, or well rotted leaf mould, one part of rich loam, and one part sharp sand. Let these be most thoroughly mixed and let lay in a heap three or six days; then fill up all the space left of your bed, level with the former brow of the hill, and outwardly forming a level at the top of the embankment of some two or three feet, which should be sodded to prevent the earth of your bed from sliding down hill. Now you can, after doing this, leave your bed over the winter, and in April, on some bright warm day, spade the whole over preparatory to planting out your rhododendrons.

You can always procure good plants from reliable nurserymen. If you want the cheapest of plants there are always humbugs enough to cheat you out of your money. Having obtained what you believe to be good plants, set them say from one foot to fourteen inches distant in rows lengthwise of your bed, or, a general rule adopted by some landscape gardeners is, "so that they shade the ground by their foliage just touching each other." This is as good a rule, perhaps, as can be given, and I adopt it whenever I set out grounds. If possible to obtain, I prefer to mulch, say two inches in depth, over the plants as soon as set out, with ground tan bark, always easily obtained, and there can be nothing better.

Now let your bed alone, unless the summer should be extremely dry. Two copious waterings with the water pot or hose pipe will be all sufficient, and nine chances out of ten you will not need any water. Because why? You have set out your bed as you should have done, and they will probably live and thrive.

As a protection from frost and cold in winter, we use boughs of cedar, hemlock, or pine, the ends well sharpened, and a crow bar to make holes to receive them, and the boughs firmly set about the bed is a sufficient shelter from the coldest weather. More of these plants are killed from sunshine in winter than from the intense cold. *Protect them well from the winter sun.*

In the course of time, as your plants grow in size, you will of course make new beds by removing from the old bed every other plant year by year, until you have left one or two very large plants, whose value, singly, would pay a large percentage of time, care, and the money expended.

OLLIPOD QUILL.

BINDING LADIES' FEET IN CHINA.—Doctor Macgowan, an American gentleman of great experience in Chinese matters, gives a somewhat different account of the origin of the practice, placing it three centuries later. The custom, he says, is of comparatively modern origin, and owes its existence to the whim of Li Yuh, the licentious and unpopular prince of Keangnan, whose court was in Nanking. He ruled from A. D. 976 to 976, and was subdued and finally poisoned by the founder of the Sung dynasty. It appears that he was amusing himself in his palace, when the thought occurred to him that he might improve the appearance of the feet of one of his favorites. He accordingly bent her foot, so as to raise the instep into an arch, to resemble the new moon. The figure was much admired by the courtiers, who began at once to introduce it into their families. Soon after the province of Keangnan again became an integral part of the empire, from which point the new practice spread throughout all provinces and all ranks, until it became a national custom. Many lives were sacrificed by suicide; those females whose feet had not been bound, were persecuted by their husbands; so much so, they hung themselves or took poison. About one hundred and fifty years after the origin of the practice, we find a poet celebrating the beauties of the "golden lilies," and from his description it would appear that seven centuries ago they were of the same size as those of the present day. According to the upholders of the development theory, such continued compression for centuries should have occasioned a national alteration in the structure of the Chinese foot, but nothing of the kind is observed.—*Alt. the Year Round.*

Natural History.

A HINT TO ENTOMOLOGISTS.

NOW is the time to collect the chrysalides of the large moths. The leaves are off from the trees and bushes, and they may be easily seen. Those of the *Attacus ceropia*, *a luna* and *Arpromethia* are very numerous this fall. Any one who wishes to secure some of those large and beautiful moths, should collect them at once. It is customary to collect them early in the spring, but it is much better to do it in the autumn. During deep snows in the winter, thousands are eaten by the mice.

The *Cecropia* chrysalides are most abundant in the elder thickets near the margins of swamps. They are generally attached to the bushes about eighteen inches from the ground. Those of the *Promethia* are found hanging to the twigs of the wild cherry and spice bush curled up in a leaf. The *Luna's* may be found under the walnut and oak trees on the ground among the fallen leaves. The *Luna* moth is the most beautiful of its genus, and its chrysalides are much more difficult to find than those of other species. When collected, they should be put in a box, and kept in a cool part of the house (out of the way of mice) until the first of May, they should then be fastened on strings and stretched across a room in rows until the moths come out, which will be about the middle of the month. When a moth's wings are fully stretched and dried, they should be caught before leaving the chrysalis from which they suspended. If allowed to fly about a room they soon spoil their wings and are worthless as ornaments or specimens. When taken from the chrysalides they are in a perfect condition, and may at once be prepared for the case or cabinet with all their natural beauty. A dozen or twenty chrysalides may be found in a proper locality in an hour's searching. Ladies as well as gentlemen can easily collect them and prepare the moths as they come out in spring, and arrange them in cases with rustic frames, made of bark or covered with moss, thus making a beautiful ornament.

CURIOUS FORMS IN PARASITIC LIFE.

"Big fleas and little fleas
Have lesser fleas to bite 'em;
The lesser fleas have smaller fleas,
And so ad infinitum.

EVERYWHERE the great earth teems with life. The very ground almost moves with its suppressed vitality, and even the air we breathe leaves on its invisible globules myriads of forms active with life, and bent on the one great work of reproduction. Upon examination it will be found that the minute forms have a great work laid out for them—that of holding in check certain divisions of animal life, and in their turn their numbers are reduced by some "lesser flea." So we find in every case that the elimination is in exact proportion to the production, and every animal, from the highest form to the lowest mass of Algae has its individual exterminator. Thus the lower forms of life are kept within bounds, and the parasite, although a repulsive object, is shown to be necessary to our well being, and even life, and foras one of the greatest powers wielded by Nature.

Some of the most interesting forms of this class are found on the marine animals, where their numbers and great size make it a study of care as well as interest. The fishes particularly are the victims of this necessary persecution, and probably the most common are the little crustaceans known as Fish Louse. Around the gills and on the tongue is a favorite point of attack. Here they attach themselves with their long knife-like claws, and either gorge themselves with the life blood of the victim or live on food that comes from an outside source. In the pouch of the *Medusa*, or sun-fish quantities of little crustaceans of the genus *Hyporise* are found, some clinging to the sides and others moving around as if newly arrived and not yet well acquainted with their future habits. In the division Isopodd, we find the *cymothoada*. They are found on the gills of many of our fishes, and form a no mean enemy, as frequently the continual drain of their "little moustes" causes the death of the fish, and not until then do they desert the fortunes of their victim. They are very curiously formed; the gills have the general appearance of large round membranous plates, placed at the extremity of six pairs of members attached to the abdominal segments, and called false feet. The exact number of feet, however, are seven pairs, which are armed with a long, sharp, and generally prehensile claw, admirably adapted for the work they have to do. The female is a miniature marsupial, as beneath the thorax and attached to the base of the feet is a pouch for the purpose of carrying eggs. Here they are held until they have arrived at perfection, and that important time having arrived, the mother opens the pouch and the brood swim off in search of some unfortunate fish, with whom they can form an attachment. The *Argulus alosae*, a stronger, hard shelled parasite, about half an inch long, is found on the gills of the Alewife (*Alosa vulgaris*). It is protected by a large obovate or obcordate shield, which covers the first two pair of legs; from this extends the long abdomen, supported by three pairs of legs, all of which are fringed with a remarkable substance, resembling hair. The extremity of this strange parasite is ornamented with two short folia, covered by two others, and each as long and as broad as the exposed portion of the abdomen. In other species, however, nothing is seen but the shield, which gives it the appearance of a small shell clinging to the fish.

The small disc-shaped fish louse (*Caligus piscinus*), with its jointed body, is familiar to all sportsmen. It is commonly found on the Cod and any of the deep water fishes. I have frequently taken it from the tongue, where it had grown so large as to almost prevent the passage of food, and in one case, on the Florida reef, I found six in the mouth of a small fish, completely filling it. Considerable force had to be used in removing them, and when it was effected they were extremely lively and would grasp my finger and endeavor to fasten their claws in any crack or crevice. The *Penella filosa*, a long, worm-like creature, with a veritable horny head and bushy tail, is found frequently cutting its way through the sides of the above mentioned sun-fish, and on one specimen figured by Farrel, a large number of the *Parnella sagitta* were found imbedded with their hairy tails, waving to and fro like tentacles, and on them were found numbers of the *Cineras vilatta*, while in the liver of the fish were found immense numbers of *Cysticerci*. Truly he labored under a disadvantage.

Hordes of parasites, crustaceans of the genus *Nebalia*, are frequently found in the stomach of a single fish. Only one species, however, is well known. They are exceedingly minute, and are protected by a cuirass-like shield. The tail is long and finally terminates in two sharp-pointed bristles. Another singularly beautiful parasite, the *P. armul cornis*, has never been found out of the fish. It is about four inches long, the elongated and beautifully variegated red and white antennae, however, making it appear longer still. It forms one of the most striking and elegant of all the crustaceans; having the parasite characteristics.

The whale louse is a common and well known member of the *Laemodipods*. They have no special spot of attack, but cover the whale on any available part, and at some portions of the year so changing its color that the great white mass of parasites can be seen at a great distance. In appearance it is long and thin and resembles a number of hooks hanging at intervals from a stick. The first claw is prehensile, and is attached to the head; the other legs are armed with a long hook, flexible and more or less prehensile.

The *Hermitical* has a slight claim as a parasite. Very fierce and brave, they do not hesitate to attack the inmates of the largest shells or any that suit their purpose, and as they grow rapidly, a constant warfare on the poor Periwinkles is the result. They are easily tamed, and at Tortugas, Fla., we had one that had taken possession of an old pipe bowl. We named him "Diogenes," and for some months shared bed and board with him. But one day, in attempting to climb on the table by a very smooth cloth, he fell to the floor amid the ruins of the old pipe. His nervous system received so severe a shock that the best medical skill the reef afforded was unavailing, and a few days after, it being extreme high tide, he passed away. He is still mourned by a large circle of acquaintances.

Molluscus parasites are quite rare, although the common *Barnacles* are frequently found imbedded in the flesh of whales and deep water fishes. The *Balanus* or sea acorns are immovable in all their parts, and attach themselves to sluggish fishes, where they sometimes so cover the head that the fish becomes blind, and eventually dies. We have several wonderful cases of parasitic "fish," but before speaking of them it would be well to mention the *Echeneidans* or ship-stayers. The members of the family are included in the single genus *Echeneis*, which was translated to *Remora* by Pliny. They are noted for the remarkable disc-like head, covered with an organ capable of attaching itself to anything. Anyone who has seen a shark has certainly had a view of this beautiful creature; generally they are dark blue, and when clinging to the white sides of the shark, with their tails waving back and forth, they present a very striking appearance. They show great affection for their huge consort, as I have frequently, in catching sharks, pulled them far up on the beach before the *Remora* would relinquish its hold. To show the power of the suction, it is said that in Mozambique they capture Twittles with them by fastening a ring to the tail of the *Remora* and holding it by a string. On the approach of a Twittle the string is let out and the fish fastens itself on to the shell and the animal is drawn in. The old writers had a great respect for its powers, as they thoroughly believed that it could stop vessels of the largest size, and it is stated in all good faith that a *Remora* retarded Anthony's galley in the fights of Actium, thus allowing Caesar to obtain the advantage, and Pliny thus moralizes "that such magnificent ships and men should have to bend the knee, as it were, to a fish two feet long. Still another finny parasite is found in close company with the beautiful, as well as dangerous *Physalia* or Portuguese Man 'o War. This little fish I have never seen figured or described, although they are quite common on the Florida reef. At first sight you can hardly distinguish them from the deadly tentacles of the *Physalia*. So alike are they in color, being a deep sea blue.

Here is a wonderful phase in the economy of nature. We find a fish living, as it were, in the midst of death, making its home in the snaky mass of tentacles, the mere touch of which is instant death to fish of twice its size, and sometimes fatal to man. How this mere bubble, far down in the scale of being, can discriminate between its little companions and foreign fish, is a question that is still to be solved. Instinct it cannot be. But still, these little parasites make their home there, while other fish are entangled in the slimy folds and drawn up to be devoured by this mass of life. I have often watched them in the harbor of Tortugas, where, after a storm, they are found in immense quantities. When hungry, the tentacles are ex-

tended to a distance of four feet behind them. The little sail or membrane is lifted to the breeze, and away they go, like the culprit Fay.

"Spring to this craft with a lightsome leap,
And launch afar on the calm blue deep,
The imps of the sea may yell and rave,
And summon all forces beneath the wave."

Soon the tentacles assume a horizontal position, and soon the bits of red and blue shooting through the water attract the attention of an unfortunate sardine. He dashes at the "worm," and is dead! The shock of the thousand stings is fatal. The tentacle is rapidly drawn in, and soon the fish has disappeared in the mass of red blue and white tentacles that form the greater part of the body of this fairy fisherman. I have seen a Hawksbill Twittle, weighing five pounds, completely conquered by one of them, and indeed I nearly lost my own life by accidentally swimming over one. The most serious symptom was dyspnoea, and almost entire prostration of the nervous system, and the red and blue marks or welts I carried to New York seven months after, showing the immense power wielded by one of the lowest forms in animal life. Many other parasitic forms, especially among the *Annellida* or worms, might be mentioned to show the great system of Nature, and the perfect adaptation and fitness of the smallest mite to its peculiar work.

C. F. H.

S. H. WALES, Esq., President Department Public Parks:

SIR: The following are the donations to the Central Park Menagerie since November, 1873:

2 Red-shouldered hawk. Presented by Mr. Henry Steinway and James Halpin.

1 Horned Toad. Presented by Miss Nina Worth.

1 Burrowing Owl from Brazil. Presented by Captain A. W. Lavender, ship Clarendon. This bird alighted on deck of vessel when 100 miles off the coast of Uruguay.

1 Merlin. Presented by Mr. John Sutherland. This bird was captured on board steamship Cuba, 250 miles from Queenstown, Ireland.

1 Red-shouldered Hawk. Presented by Mr. James Halpin.

Fourteen Box Turtles, 1 Eagle, 1 Agave, 1 Yucca, 1 Bald Eagle, 1 Flying Squirrel.

Very respectfully,

W. A. CONKLIN,
Director.

The Kennel.

—Philip Meyers, of Brooklyn, died last week in terrible agony from hydrophobia. He was bitten through the thumb by a small spitz dog in September last. The dog was killed the same day, but was not thought to be rabid. The wound healed, and no ill effects followed until the afternoon of Thanksgiving Day. Then Meyers was taken sick and died soon after midnight.

THE FOOD OF SPORTING DOGS.

IN feeding dogs, as well as horses, an anatomical and physiological view cannot fail to be a safe index to the system to be pursued. By these aids we are led to conclude that dogs are neither wholly herbivorous nor wholly carnivorous, but are so formed as to be capable of deriving nutriment from either vegetable or animal matter. The dog is by nature predacious, and intended to live on the flesh of other animals, but at the same time it is clear that his organs fit him for receiving nourishment from vegetable substances also, and occasionally we see them voluntarily seek it, most likely as a necessary mixture to prevent the frequent tendency to putridity which a diet confined to animal food alone begets. It seems pretty plain, therefore, that a mixture of animal and vegetable matter is the proper food for dogs. On this point I believe most persons are agreed. Not so, however, as to the proportion and nature and quality of each to be administered. In many of the old works on the chase, this system of giving raw animal food to hounds is strongly recommended, and in some cases the steaming entrails of a newly-killed horse were advocated as being the best possible restorative for hounds after returning from an arduous day's work. Bones are good food for poor hounds, as there is great proof in them. Sheep's trotters are very sweet food, and will be of service when horse flesh is not to be had. Bullocks' bellies may be also of some use if you can get nothing else. Some sportsmen are unfavorable to the use of flesh as food for dogs, on the ground that it is injurious to their olfactory powers, but this I cannot but think is an erroneous notion, if only on the ground of what actually occurs in a state of nature. All the members of the canine race, dog, wolves, and foxes, are carnivorous, and, as such, live by means of their exquisite scenting faculties, which enable them to hunt down the animals they prey on, and it would be altogether out of reason to imagine that the pursuit of these natural instincts should frustrate the end for which they were ordained. Flesh, therefore, if not given out of all proportion to the amount of exertion undergone, is never likely to impair the scenting powers. It is only where a superabundant supply of animal food is given to animals out of work, or not taking a proper amount of exercise, that the olfactory powers become impaired, as then the secretions of the body become vitiated, and those of the nose suffer equally with the rest; in fact, by sportsmen, any defects in these latter organs are more readily detected than in any others, except those which are palpable to an ordinary observer. Animal food, therefore, when given in a judicious manner, forms the most nutritious food, and is better adapted for sustaining the sporting powers of dogs, more particularly foxhounds, than any other. The raw flesh of animals appears particularly to increase the courage and ferocity of the participants; and where these qualities are requisite, this mode of feeding will undoubtedly tend thereto, and therefore we consider that it is the best possible food for hounds. Of the varieties of animal matter none answer the purpose so well as horse-flesh. When animal substances are becoming putrid, by burying them two or three feet under ground, the putrefactive process is arrested and the earth tends to sweeten the meat. It is doubtful, however, whether putrid meat is so

njurious to dogs as is supposed; indeed, it may be asked, is it at all so? We rather inclined to the opinion that it is not, and we think facts are much in our favor, for hounds, pointers, and indeed all sporting dogs are notoriously given to eat animal substances in the highest state of decomposition with an appetite and avidity that show it is a natural propensity. Indeed how can it be otherwise? for in a wild state a dog may be supposed to have hunted down some large animal, as a sheep, goat, etc. Having satiated his appetite on it, if he be of a moderate size only, he buries the remainder to hide it from others, and has recourse to what is left when his wants require it. Fresh and wholesome flesh, well boiled and mixed in proper proportions with other food, is absolutely indispensable to foxhounds, and if investigated, the tainted meat supplied to them would, in the majority of cases, be found to be the cause of their sometimes going so suddenly out of condition.—*Cor. Land and Water.*

The Magazines.

INDIAN SNAKE CHARMERS.

DURING our stay at the Sangor bungalow, we had a visit from two *Sapwallahs*, or serpent charmers, who at the same time were ready to sell any kind of reptile. They offered us a rather rare snake, the goulabi, or rose, whose skin is dotted over with coral marks, and a nondescript snake whose head and tail looked so much alike that it was difficult to distinguish the difference. Finding they had no cobra capellos in their collection, I remarked the fact to them, to which they replied, "What would be the use of our bothering ourselves with them, when we can find them just as soon as they are wanted? Would you like to have one? The court yard of your bungalow ought to furnish all the cobras you want, and at short notice." My curiosity was excited, and I challenged them to find me a cobra with the ease or even in the short time they professed to be able to accomplish it. No sooner had I said this than one of the *sapwallahs* stripped off almost all his clothes save his shirt, and taking his tounril (the snake charmer's flute) requested me to follow him. Back of the bungalow there was a piece of ground filled with briars and stones. Taking his instrument he commenced producing a series of the most piercing sounds, interspersed with occasional soft notes, with his body bent towards the ground prying into each tuft of grass, into every thicket. Almost in a moment by a single glance he indicated to me where I should look, and there I saw sure enough a snake just issuing from under a stone. As quick as lightning the snake charmer let his flute fall and seizing the snake with wonderful dexterity, tossed it into the air, and the instant it lit on the ground he had it fast by the tail. After examining it for a moment I found it was an inoffensive snake, a kind of viper. The snake charmer then commenced his work over again, going through the same musical performances. In less than a second the flute was dropped, a second snake was thrown up into the air, it fell, was caught again, and with the most wonderful coolness the *sapwallah* showed me dangling from his hand, the tail held fast between his fingers, a fearful cobra fully three feet long. The hideous reptile twisted and squirmed, but with another most clever motion, the snake charmer held the reptile now behind the head, and forcing open the mouth, showed me the terrible fangs, from whence distilled the venom which was sudden death. I am absolutely positive that there could have been no trick about handling this snake, although I was well aware that in ordinary cases snake charmers play with snakes that have had their fangs pulled out. Presently the Hindoo took a small pair of pincers and drew out the teeth of the cobra. Whether through an accident or to show his indifference to snake poison, the snake had bitten him, slightly it is true, though the blood was flowing from one of his fingers. Apparently not a bit disturbed he sucked the wound and applied to it a bit of black porous stone which he assured me was a perfect antidote for all snake bites. I bought the piece of stone from him. On analysing it I found it was nothing more than a bit of calcined bone of a remarkably fine grain. After the cobra hunt, the *sapwallahs* commenced showing us all their various tricks. One *tour de force* performed by them had a striking resemblance to the famous miracle of Moses before Pharaoh. The juggler, keeping on nothing but his shirt took a harmless snake, put it before our eyes in a basket which he covered up. He lifted the basket up into the air, chanted several certain cabalistic words, while his comrade accompanied him on the tamborine. All of a sudden he took a pliant rod, swung it twice or thrice around his head, then threw it at my feet, where it writhed in the form of a true snake. I watched him as closely as I could, making him repeat the trick twice, yet it was impossible for me to discover when or how he substituted the snake for the stick. The trick was so cleverly performed that credulous people would have readily believed that the transformation was a positive one.

I fancy the way it was done was as follows: The snake charmer of course does not place the snake in the basket, but allows the snake, who is trained to it, to coil around his arm, which is covered by the sleeve of his shirt. Now the skill lies in the substitution of the snake for the stick. With a single movement the juggler I suppose tosses the stick behind him to his mate, while at the same time he throws out the serpent concealed in his arm. I do not think this calls for any more skill than the cleverness displayed by the *sapwallah*, when as quick as lightning he caught before my eyes a cobra, tossed it up in the air, and seized it as it fell by the tail. It must be remembered that a cobra's head protruding from his hole does not offer a place to catch hold of any larger than an inch and a half or so square. I must state that the charmers who exhibited before me were of the highest rank, and were venerated by the native inhabitants. The two rupees I gave them amply satisfied them for a curious series of performances which lasted fully two hours.—[Translated for FOREST AND STREAM from Louis Rousselet's Travels, *Tour de Monde*.]

—We have seen a stick of wood weighing scarcely four ounces fall from a boy's arms, and striking on his toes render him incapable of further action for hours afterward, while the same boy has slipped with a pair of skates, and striking on his head with sufficient force to split that article open, has not only reached his feet unaided, but has given the boy who laughed at him one of the most astonishing whalings he ever received.—*Danbury News*.

RHYMING PROPHECIES.

IT was a proverb in Scotland that if the deer rose dry and lay down to dry on Bullion's Day, there would be an early harvest. Considering the soldier-saint was the chosen patron of publicans and dispensers of good liquor, it seems odd that a shower falling upon St Martin's Day should be supposed to indicate a twenty days' opening of heaven's sluices. Martin, however, when he went in for wet, was more moderate than his uncanonised brother Swithun, commonly called St Swithin; he, as every one knows, is content with nothing under forty days:

Saint Swithin's Day, gin ye do rain,
For forty days it will remain;
Saint Swithin's Day, an' ye be fair,
For forty days 'twill rain nae mair.

Why this should be, has been explained in this wise: When the good Saxon Bishop of Winchester departed this life some thousand years ago, he was, in accordance with his expressed wish, buried in the churchyard, so that his humble grave might be trodden by the feet of passers-by, and receive the eaves-dropping from the abbey roof. Thus he was permitted to rest undisturbed for a hundred years; then the clergy of the diocese took it into their heads to have the saint taken up, and deposited inside the cathedral; but when they set about the work, the rain came down with such violence that they were compelled to desist, and finding the deluge continued for forty days, interpreted it to be a warning against removing Swithin's remains, and therefore contented themselves with erecting a chapel over his grave. As poor robin sings:

Whether this were so or no,
Is more than you or I do know.
Better it is to rise betime,
And to make hay while sun doth shine.
Than to believe in tales and lies
Which idle monks and friars devise.

Mr. Earle, however, has shown that while it is true that St Swithin did leave directions that he should be buried in a vile place, under the eaves-dropping, on the north side of Winchester church, there was no supernatural protest on his part against his relics being removed to the magnificent shrine prepared for them in Ethelworld's cathedral. On the contrary, the weather was most propitious for the ceremony. Whoever was at the pains of inventing the story of the forty days' tempest, misapplied his imaginative faculties altogether, since the phenomenon popularly associated with St Swithin is as apocryphal as the story concocted to account for it. From observations made at Greenwich in the twenty years ending with 1861, it appears that during that term forty days' rain was never known to follow St Swithin's Day; while, oddly enough, the wettest weather came when the saint failed to 'christen the apples.' In only six instances—in 1841, 1845, 1851, 1853, 1854, and 1856—did it rain at all upon the fateful day; and the forty days following showed respectively twenty-three, twenty-six, thirteen, eighteen, sixteen, and fourteen rainy ones. On the other hand, there were twelve wet days out of the forty after the dry St Swithin of 1842, twenty-two after that of 1843, twenty-nine after that of 1860, and no less than thirty-one after that of 1848. Not that any evidence is likely to shake the faith of believers in the ancient notion. Convinced against their will, they will hold their old opinion still, like Hone's lady friend, who, finding her favorite saint's day fine, prophesied a long term of beautiful weather; but when a few drops of rain fell towards evening, veered round, and, was positive six weeks of wet impended. Her first prophecy turned out to be correct; but the obstinate dame would not have it so, declaring stoutly that if no rain had fallen in the daytime, there certainly must have been some at night. There are rainy saints beside Swithin; in Belgium they pin their faith to St Godelieve; in France, to Saints Gervais and Protais, and St Médard.—*Chambers' Journal*.

KEEP THE LEGS AND FEET WARM.

DURING the damp and cold season, the legs should be encased in very thick knit woolen drawers, the feet in thick woolen stockings, (which must be changed every day,) and the shoe soles must be as broad as the feet when fully spread, so that the blood shall have free passage. If the feet are squeezed in the least, the circulation is checked, and coldness is inevitable. This free circulation cannot be secured by a loose upper with a narrow sole. If when the foot stands naked on a sheet of paper it measures three and a half inches, the sole must measure three and a half.

I will suppose you have done all this faithfully, and yet your feet and legs are cold. Now add more woolen, or if you are to travel much in the cars, or in a sleigh, procure a pair of chamois-skin or wash-leather drawers, which I have found to be most satisfactory.

I have known a number of ladies afflicted with hot and aching head, and other evidence of congestion about the upper parts, who were completely relieved by a pair of chamois-skin drawers and broad-soled shoes. Three ladies in every four suffer from some congestion in the upper part of the body. It is felt in a fulness of the head, in sore throat, in palpitation of the heart, torpid liver, and in many other ways. It is well known that a hot foot-bath will relieve for the time being any and all of these difficulties. This bath draws the blood into the legs and feet, relieving the congestion above. What the hot-bath does for an hour, the broad soled shoes with thick woolen stockings, and a pair of flannel drawers, with a pair of wash-leather drawers added, will do permanently; of course I am speaking of cold weather. No one hesitates to multiply the clothing about the trunk. Why hesitate to increase the clothing about the legs? As a preventive of many common affections about the chest, throat and head, including nasal catarrh, I know nothing so effective as the dress of the lower extremities which I am advocating.

The bath is a good thing, exercise is a good thing, friction is a good thing, but, after all, our main dependence in this climate must ever be, during the cold season, warm clothing. Already we overdo this about our trunks, but not one person in ten wears clothing enough about the legs and feet.—*Dio Lewis in To-Day*.

—The Newburyport *Herald* explains that "a tinker's dam" is not profanity, but simply an "enclosure made of bread around the hole to be mended, that the melted solder may be retained till it cools off around the bread. After being subjected to this process the bread is burned and spoiled, and is a fitting type of utter worthlessness."

THE KABYLES IN ALGERIA.—The Kabyles know very little of medicine. If one of them falls ill, he takes the juice of some plant; if he is wounded he makes a paste of sulphur, resin, and olive oil, and applies it to his wound; these and a leather pouch, containing verses from the Koran or certain cabalistic signs, which they wear round their necks, are the only remedies that they ever think of using. Their chief nourishment consists of a kind of hard cake baked upon a clay plate, milk, honey, and figs soaked in oil. Their luxuries are roast meat and *couscousou*. This favourite dish is made in an earthenware utensil standing upon legs, which is similar to our ordinary coffee pot in principle and form, although much larger in diameter. A quantity of olive oil, fat, vegetables, and pieces of meat or fowls seasoned with herbs and spices, are placed in the lower half of the pot, while the *couscousou* which consists of grains of corn steeped in water, then crushed with a stone, and finally exposed to the sun to dry, is put into the upper division, which is perforated with small holes at the bottom. The utensil is then placed over a slow fire, and the steam which rises from the various ingredients in the lower half of the pot gradually impregnates the *couscousou*. When the latter is sufficiently cooked it is turned into a wooden bowl and the meat placed on the top.—*Gentleman's Magazine*.

Answers To Correspondents.

[We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfit, implements, routes, distances, seasons, expenses, remedies, traits, species governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous communications not noticed.]

D.—See Agassiz's Journal in Brazil; Ticknor & Field. It is fully explained.

ROSENBAUM, New Jersey.—Quails can be obtained by addressing C. J. Fox, Galatea, Saline county, Illinois.

E. T. H., Lynn, Mass.—For full information of Umbagog and Rangeley lakes, in Maine, see FOREST AND STREAM, Sept. 18th, page 21.

W. S. H., Brooklyn, L. I.—"Is there any shooting at Barneget?" Yes, wild fowl; but it is very cold; on the main, fair quail shooting; near Tom's river, good cock shooting.

CORNSKIN, Memphis.—"Is there a man in the United States, Daley by name, who makes breech loaders?" Yes, Messrs. Seeoverling & Daley, No. 84 Chambers street, New York.

CLENDENNING.—We can recommend no better book to you than "Proctor's Half Hours with the Telescope." As your glass is a three inch achromatic, it would just suit.

RACINE COLLEGE, Wisconsin.—"When will the FOREST AND STREAM publish the reviews of the cricket clubs in the country?" Ans. We are now preparing the material, and have it almost ready for the press.

RIFLEMAN, Lexington, Ky.—"What is the largest number of grains of powder which can be shot from a rifle without unpleasant recoil?" Ans. About ninety grains, which is about a half more than the regulation charge.

GRIZZLY.—"What is the mountain fever?" Ans. A severe cold peculiar to the Rocky mountains, caused by exposure and over exertion. Its symptoms are flushes, fever, cold in the head, headaches and general debility. It reduces a cast-iron mountain man to a weak and helpless infant in a few days. It in no respect resembles the fever and ague, or the fever prevalent to the Southern States.

COCOON, Baltimore, Md.—Some time ago we replied to a correspondent in regard to the oak feeding silk worm, since which we have come across Dr. Wallace's Prize Essay on the oak feeding silk worm, *Dambija jama mai*. The worm will well feed on the English and Turkey oak and all other kinds. It is advisable to plant some seedling oaks to feed with when they are first hatched.

CHEVAL, Germantown, Pa.—In regard to your question about a naked horse, or one without hair, Brehm, a strong authority, says that travelers affirm that troops of hairless horses are found in a half wild state in Afghanistan. Occasionally some have found their way into India, and thence to Europe. A race of hairless horses is said to have once existed in the Crimea, and that occasionally foals show the old hairless origin. A hairless horse, a kind of *lusus naturæ* animal, was exhibited some years ago at the Crystal Palace.

STAR FISH, Philadelphia.—The Physallia have certainly the power of stinging, those found in the waters surrounding the West Indies especially. Duteste says the effect on his arm when he touched one was as if he had plunged it in boiling water. Mr. Bennet, an English naturalist, affirms the fact, and states from experience that the effects of the poison of the Physallia are quite serious. West India negroes believe that when the "galleys," as they are called, are dead and dried that the poison is as efficacious as ever; but this is nonsense. We should be pleased to have your experience.

COOT, Fordham, N. Y.—"What are the expenses for a sportsman per diem on the several islands in the Chesapeake, and near the capes of Virginia, mentioned by you?" Ans. On Cobbs' and Chincoteague, \$5 a day, for wild fowl, and \$2.50 for snipe. On Mockhorn, Hog and Fisherman's, \$3 a day. We have already given the route. On the Susquehanna by contract, at Nott's Island, N. C., \$3 a day, a good place; at Good Ground, L. I., \$8, for a party of three, including live geese stools. At Raynor's, West Hampton, L. I., \$3 a day. None of these prices include board, but merely gunner, stools and boats.

FRED MATHER, Honeoye Falls.—Your question is partly answered elsewhere. White rabbits, white mice, and white ferrets are albinos, but they breed true, like the pure strains. We suppose that human albinos would breed true, but know of no authentic cases. Melanism is a freak of nature exactly the reverse, where the exceptions are black instead of white. For instance, we have seen a black red squirrel and a white one from the same nest. These were in possession of George A. Boardman, of Calais, Maine, a naturalist of some repute. Melanism does not occur as often as Albinism, and is rarely seen in birds, few instances having been noted.

LITTLE.—Albinism is common with all species of mammals and birds, particularly the latter. In 1872 there was a full grown albino bull buffalo killed on the plains of Western Kansas. Muskrats, mink, otters, foxes, wolves, rats, mice, squirrels, and other animals, are often found in a state of albinism. Albinos are more common with some species of animals than with others, especially in the red squirrel and common house mouse and rat. Animals are never seen in a half state of albinism as birds often are. Blue jays have been seen with head and crest nearly white, the other parts of the body having its natural coloring. A cedar bird, with a white tail, the yellow markings on the tail feathers being perceptible, and quail, robins, swallows, prairie hens, grouse, marsh hawks, and sparrows, particularly the *Passer domesticus*, with their entire plumage mottled with white. Two years ago a milk white red-tailed hawk (*Buteo borealis*) was killed on the meadows near Jersey City. Our correspondent, J. H. Batty, the naturalist, says there is a crow with white wings which is often seen feeding in the meadows near Coney Island. He has often tried to shoot it, but thus far in vain. Albino birds are often hatched from white eggs. The true cause of albinism I am unable to state.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

103 FULTON STREET, NEW YORK.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us one subscription and Five Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, DEC. 4, 1873.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal letters only, to the Manager.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Ladies are especially invited to use our columns, which will be prepared with careful reference to their personal and instruction.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,

Managing Editor.

Calendar of Events for the Current Week.

SATURDAY, December 6.—Louisiana Jockey Club, New Orleans.
TUESDAY, December 9.—Louisiana Jockey Club, New Orleans.
WEDNESDAY, December 10.—Camden Jockey Club, Camden, South Carolina.
THURSDAY, December 11.—Louisiana Jockey Club, New Orleans....
Camden Jockey Club, Camden, S. C.

FIELD CLUBS—A SUGGESTION.

WE have entertained the opinion that a large amount of practical information of the most valuable quality of a zoological or other character was obtainable outside of strictly scientific sources. The exceedingly valuable material furnished to the columns of FOREST AND STREAM by our many correspondents, coming to us quite unsolicited, is the strongest proof we can present that a spirit of research in Natural History, with habits of close observation, exists in the United States to a most marked degree. If learned professors of the Smithsonian and other leading scientists in our universities and schools have been good enough to give our readers information and instruction, conveyed with infinite skill and erudition, we have at the same time derived many advantages from the contributions of persons unknown to fame, with no idea of scientific study, but whose singularly novel and interesting observations in regard to animals, birds, and fishes have lent additional charms to the columns of the FOREST AND STREAM. What has been so persistently asserted by us, that a practical knowledge of Natural History must of necessity underlie all attainments which combine to make a thorough sportsman, are then undoubtedly true. From Labrador to Florida, from New Jersey to California, those who handle the gun and the rod have given us their rich stores of information, and all seem to appreciate the fact that the study of the game or fish they seek, with a knowledge of their habits when noted, not only gives an immense amount of practical information, but adds fresh zest to their manly pleasures.

We feel ourselves called upon to make this general acknowledgment of the value of the labors of all our contributors, and to express to all of them how gratefully the public, both at home and abroad, have appreciated their labors, for English sporting journals and periodicals are copying us with avidity.

There is, however, a method of combining such general advance of intelligence, which, without depriving the FOREST AND STREAM in the least of their valuable services, would be of infinite advantage to many of our co-laborers. In England they have certain kinds of societies, and, regarding the rather pompous titles of "scientific societies,"

they simply call themselves "Field Clubs." In quite an unostentatious way they collect from absolute experiences in the fields, woods, and rivers, in the forests and streams, an endless variety of useful information. The subjects they choose are varied. Some field clubs take up geology, others zoology or botany, some meteorology, others archaeology, but generally all these various branches of study are combined. The sportsman going in the fields, for instance, notes age, sex, general appearance, habits, and effects of season on the birds he hunts. Should he find a bird unknown to the section of country, he jots it down in his book, perhaps stuffs the specimen himself, and at a subsequent meeting of his field club descants on this novel bird, and not only gives but gains information. If he is a fisherman, there are a thousand novel facts which strike his intelligent notice. He learns something about the migration of fish, their methods of spawning, the differences even in the same species as to color, shape, or size, and, carefully recording the facts of his own experiences, imparts it to others. If the field club is ambitious, at the end of the year, their proceedings could be published, and it would be surprising to find what a vast amount of solid facts would be given to the world.

Societies of this character in England, humble at first, counting but a few members at their start, have in a comparatively short time developed into real centres of vast importance and scientific acquirement, and from being simply "field clubs" are now august scientific societies, publishing each year volumes full of the most varied information, and having libraries attached to their societies.

Societies of this character, composed of every element, stimulate the general advance of human culture, and foster a love for that most delightful of all subjects, Natural History. There is no reason why our own readers, the many contributors to the FOREST AND STREAM, especially our friends of the gun and rod, should not establish field clubs in the localities in which they live. The objects worthy of their research exist quite as well in the State of New York as in Nebraska. No country in the world abounds with such magnificent material.

There is nothing which will tend to so fully develop not only among the older, but among the younger people, a taste for ennobling studies as the formation of societies of independent investigation of this simple character. We have canvassed this matter sufficiently to have discovered a nucleus for an association of this kind, and when the matter has been sufficiently discussed by our readers, we shall develop our plans. We ask a careful consideration of our suggestion.

WINTER SPORTS.

WITHIN a period of time covering but a little more than the past decade, the winter sport and exercise of skating in this country was indulged in almost exclusively by the masculine sex, and chiefly by juveniles, and generally by those only who found time to avail themselves of the favorable condition of the ice on such ponds or streams as were located in the immediate vicinity of their houses. At that period adults, too, would, on holiday occasions, take to the ice for a few hours' sport, provided the snow had not placed an embargo on the use of any ice for skating purposes. What a change has taken place in regard to this exercise, however, within the past dozen years! Now thousands engage in the sport where tens only indulged in it, and the fair sex rival their masculine protectors in the skill in which they disport themselves on skates. In fact skating has become a regular American institution, and one which specially commends itself to both sexes and all classes as an exciting and invigorating out-door exercise and recreation. A dozen years ago a lady on skates was not only a rare and novel sight in this vicinity, but any fair one, "native and to the manner born," who in such a way would have dared to brave the opinion of "her set," and to have outraged their peculiar sense of feminine propriety by appearing on a public field of ice on skates, would have been driven forth in disgrace from the sacred circles of "our best society." Now, however, the very reverse rule prevails, for the self same fair one would now be tabooed as "slow" and "behind the times" if she could not gracefully accomplish the "outside circle" or practically illustrate the beauties of the "grape vine twist" and other mysteries of the skating art in the latest style. Now, too, every girl not afflicted with weak ankles, thin or crooked nether limbs, or positive physical inability to exercise herself on skates, is uneasy and dissatisfied unless enjoying herself in the winter luxury of skating on a clear field of ice. At one time a perfect furore for the sport prevailed amongst the fair sex of our northern cities, and no wonder either, for American women, until within a few years' past, have been so much excluded from any participation in the out-door amusements and exercises which European ladies indulge in to such a wholesome extent, that it is not surprising that when the door to such recreation is opened to them they should rush in to enjoy it with almost ecstatic delight, or go to extremes in the indulgence of the too long prohibited pleasure. Now, however, skating has settled down into a permanent recreative exercise for Americans of both sexes, and its present deserved popularity will never relax, we trust.

Looking at skating from a sanitary point of view the benefits accruing from it outnumber its drawbacks to such an extent as to render opposition to the sport on any reasonable grounds futile. Especially is this the case in reference to its enjoyment by ladies, for to them it has been an especial advantage when they have indulged in it with judicious care and moderation. The prominent cause of the delicate and sickly constitutions of American girls, and

especially of our city ladies, arises in a great measure from their entire neglect of out-door recreative exercise. Two-thirds of the lives of fashionable American women have hitherto been passed in the artificial and poisonous atmosphere of their poorly ventilated and furnace-heated apartments. The result has been the preventing of that exhalation of carbon and the inhalation of oxygen which are of such vital importance to the health of every human being. Now it happens that this requisite healthy action of the lungs in the expulsion of the refuse carbon from the blood and the reception of the life-giving properties of the air we breathe, is never better promoted than when the individual is engaged in the vigorous exercise of skating, for while thus causing the blood to circulate healthily to the surface of the body by the muscular exercise, and thereby giving life to the dormant functions of the skin, the oxygen of the pure frosty air is inhaled under circumstances best calculated to invigorate the entire system. The sanitarian rule is, that exercise, to be beneficial, must have the effect of increasing the insensible perspiration, or, in other words, give an impetus to the healthy action of the skin in removing effete matter from the system. By this means the otherwise overworked functions of the lungs, bowels and kidneys are relieved and the diseases which result therefrom, are prevented. It is from the very lack of this healthy circulation of the blood to the surface that individuals unaccustomed to out-door recreative exercises take cold so easily. Those in whom the functions of the skin are in active operation scarcely know what a cold is; and hence the hardihood of those who are constantly inhaling the open air under circumstances of active exercise of their muscles, in comparison to others who in their sedentary habits of life scarcely realise what recreative exercise is. Habitual skaters, who regularly breathe the invigorating atmosphere of winter on a skating pond and thereby make their cheeks ruddy with the newly vitalized blood sent to the surface by the exercise, become proof against colds. It is your housed girls and office-confined young men who become victims of colds, and not the well-clothed and well-exercised skater.

Though we have recently had quite a cold snap, it has not been sufficient to inaugurate the skating season of '73 and '74, and it is not probable that the season will be opened before the middle of December. By that time, however, the skating lakes at Central and Prospect Parks will, no doubt, be in operation. Preparations are in progress at both localities for the advent of King Frost, the skating houses having been commenced this week. Water has been let on at the Capitoline and Union Lakes, too, in preparation for the season's sport. We regret to notice that even at this early period of the season accidents to skaters have occurred in different localities resulting from the risks incurred in skating on Mill Ponds; three boys having been drowned near Highland Falls, in this State, this last week, and a young man in a Mill Pond in New Hampshire. No such danger can result from skating on our Park Lakes, as the water is not deep for one thing, and great care is taken in keeping people off the ice when it is not sufficiently strong.

NEBRASKA.

THERE is always a certain amount of solid information derivable from the Agricultural Reports of a State. If such reports are not always exactly amusing, at least they have the merit of being instructive. The wealth of a country in an agricultural point of view is, however, of the most tangible character. As one reads, it requires but little imagination to see before one's eyes the rich prairies bending under their golden harvests, or the fat kine drowsily chewing the cud, fetlock deep in the succulent blue-grass. Those dryer details of manufacturing or commercial communities, as expressed by so many looms with their thousands of yards of sheeting or so many forges with their tons of iron, or of so many ships, or an amount of money invested in stocks, shares or mortgages, do not present that palpable consistency which wheat and corn, oxen, horses, swine, or sheep give. In the Fourth Annual Report of the Board of Agriculture of the State of Nebraska for 1873, there is, in addition to quite a large amount of excellent information, no end of true Western dash. There is an original impulsiveness about it which has its charm. Why should a great go-ahead State like Nebraska, which was a territory but a few years ago, and a *terra incognita* fifteen years before that, want to be staid, heavy and dignified, or to give us here in our older civilization some intensely prim yet dull facts in the cut and dried guise of an English parliamentary Blue Book? Some idea of the perfectly free and easy manner in which this most clever report is written, may be had from a line or so in the introductory portion. Discussing the most curious fact of that wonderful belt of civilization which is encircling this giant country of ours, one of some three thousand miles long from east to west, by four or five hundred miles in width from north to south, the report scouts at anything like curtailing this huge girdle, and describes the country as "bounded on the north by the Aurora Borealis and on the south by the Day of Judgment."

But our report is not wanting in statistics. See what it says about the Homestead bill and the benefits the vigorous State of Nebraska has gained by this "twice honored bill," as it calls it. Taking the whole number of acres occupied by settlers under the Homestead bill, the report states that up to June 30th, 1873, "the total number of acres of land to which claims had been filed by homesteaders amounted to 25,173,369 acres," which is an area of ground twice as much as is now under tillage in England. Think of such a royal domain, well nigh forty thousand miles square, and

HOLIDAY ADVERTISEMENTS.

THIS journal, the FOREST AND STREAM, caters so directly to the tastes and requirements of those who make THE HOLIDAYS a period of recreation, and has withal obtained so large a circulation among the refined portion of the community who encourage innocuous pastimes, that we cannot but urge upon merchants the advantages it presents as a medium for advertising that class of goods which come within the ordinary list of HOLIDAY PRESENTS. We aim to inculcate in men, women and children, a healthy interest in all reasonable recreation. We believe in providing aliment for both mind and body, that each may be reciprocally benefitted. To this end we devote much attention to reviews of books, especially to such as bear upon those subjects that come within the scope of our observation and effort. Our paper has equal place in the gymnasium and academy. It circulates in nearly all our colleges and universities. It is read by all sportsmen of refined taste and culture, and is sought for and referred to by naturalists and men of science. In fact it covers ground and position never occupied before by any journal in this country, and on this foundation is building a marvellous success.

We shall during the HOLIDAYS give especial attention and place to HOLIDAY GOODS advertised in our columns, and respectfully urge upon Publishers, Booksellers, Stationers, and Dealers in Powder, Shot, Rifles, Guns, Fishing Tackle, and all kinds of Games, our claims upon their consideration and patronage.

THE CULTURE OF THE CINCHONA.

THE importance of an enterprise looking to the growing of the cinchona tree in sections of the world other than South America, can not be overrated. It is a question equally interesting to the botanist, the pharmacist and votary of economic science. In the last number of *Nature* there is an excellent account of the various efforts made to propagate this tree in India and Ceylon, from which we make the following brief summary.

The Dutch government took the initiative steps, directing their efforts to the introduction of the tree in Java. The first cinchona trees sent out to that colony were specimens of the *C. Calisaya* raised in Bolivia. In 1852 the Dutch government sent a Mr. Hasskarl on a mission to South America to procure plants and seeds. The collection made was divided into two parts, one half being sent to Java direct, and the remainder to Amsterdam. In 1856, there were over 260 plants on the island of Java. Many serious troubles attended the early efforts to raise the trees, arising from insects, wild animals, and badly chosen localities on the island. At last in 1860 success crowned their labors, and in 1863 the total number of trees in Java numbered 1,151,180 trees. It was found that the *C. Calisaya*, in Java was the best adapted for the locality, the *C. Pahudiana* containing much less of the alkaloid. The efforts of the British government were commenced as early as 1839. In 1852 the East India company sent to the British consular agents in South America for seeds of the various species, but it was not until 1859 that the matter was fully taken in hand. During this year Mr. Markham proposed a fourfold expedition to South America, and the plan being sanctioned by the Secretary of the State for India, the scheme was carried out. Expeditions were sent to Bolivia, Carabaya, to Cuerica and Loxa in Ecuador, and to New Grenada and to the Chimborazo districts. The illness and privation suffered by the searchers after these trees rendered the task a difficult one. At last a fair stock was collected, but most of the plants were killed during the Red sea transit to India. Once in India, however, the few that survived thrived immediately. At Ootamacuna a station was established in 1860, and in 1861 1,128 fine young cinchona trees were reported as alive. In 1863 the number was 248,166.

The efforts of the British government have not been directed alone to acclimatize the cinchona in India, for in Ceylon in 1863 they had 20,000 young trees.

In referring to India matters (Blue Book of 1870) in the Bengal and Madras Presidencies, no less than four millions and a half cinchona trees are reported.

Experiments with the cinchona have been tried in the South of Europe, in the Caucasus, in the Brazils, Philippines, Australia and Jamaica, but not of sufficient extent to have any significance.

Of all the fine species of trees, the following seems to be the results as to Alkaloids:—

C. Calisaya, only a small proportion realises expectation in its yields of quinine; *C. Hasskarliana* (called a hybrid), which appears to be of little value in respect of alkaloids; *C. Pahudiana*, deficient in the same particulars, but producing a bark which finds a ready market for pharmaceutical purposes in England; *C. officinalis*, which, in British India, appears to be the most generally satisfactory; and *C. succirubra*, which, notwithstanding certain exceptional samples, has not turned out altogether well.

In the third number of the FOREST AND STREAM we published some interesting matter in regard to the cinchona, to which we refer our readers. We should suppose that in some of the Southern counties of California it could be grown with advantage, and would be pleased if any of our California readers would give us information in regard to it.

—The *Western Sporting Gazette* recently published in Chicago, has succumbed to stress of hard times and suspended publication for the present.

—Experiments with the Wiard gun at Boston have been very successful. The balls penetrated fifteen inches of solid iron plates.

SMITHSONIAN INSTITUTION, November 28, 1873.

EDITOR FOREST AND STREAM:—

Judging from the article "On the Elaphure of China," my manuscript, as well as that of my copyist, have "staggered" your printer, and several words have been so disguised that they may deceive the reader. Please make the following corrections:—

The seven bottom lines on page 242 belong as a note to the quotation from Slater's remarks. Read also *Cervus Duvancelli* in place of *C. Duvancelli*.

On page 243, line 16 from top, "natural" for national.
On page 242, line 26 from bottom, "tines" for times.
On page 242, line 21 from bottom, "Elaphos or Elaphus" for Elaphas or Elephas.

On page 242, line 18 from bottom, "David" for Davis.
On page 242, line 17 from bottom, "Mi-lou" for Mibou.
On page 242, line 16 from bottom, "Sseu" for Tseu.
On page 242, line 12 from bottom, ("three year old") for three year old.

On page 242, line 11 from bottom, "Spayad" for Spoxod.
On page 242, line 5 from bottom, "Ann." for Am.
On page 242, line 4 from bottom, "Nouv." for Nour.
On page 242, line 2 from bottom, "Trans." for Frank.

Your printer, by his deeds, confirms what I have been told, that my chirography is not very legible.

Yours truly,

THEO. GILL.

[We are chagrined that our responsibility as editoria manager of this paper compels us to shoulder the blame for such a batch of errors as is charged to our account above. We shall not shirk it, however, but innocently crave the sympathy of those who can appreciate the discomfort of our position. It is no small task to personally supervise all the printers' proofs, and at the same time attend to the general duties and manifold details of a journal which embraces so many departments as this does. Still, we endeavor to do it. In the case in point the copy could not be found when the revises were read, and more frequently errors arise from illegibility of manuscript, and for these we can take no blame. If correspondents will furnish plain manuscript, we will agree to double our care in the proof-reading.]—Ed.

Sporting News from Abroad.

THERE has been quite a sad accident in Rossall school in England which has received no end of comment. A poor little fellow of tender age, but with the pluck and courage of a hero, while playing with his fellow boys in paper chase, the game being over, on his journey home exhausted by fatigue, was caught in a driving storm of rain and hail, and was found the next day dead in a field where he had wandered. The paper chase so common in English schools, though rendered familiar to many by Mr. Hughes' charming book, may perhaps not be well understood by some of our readers. It is a test of speed and endurance. The hare is perhaps the best runner in the school. Provided with a bag full of bits of paper, old copy books or newspaper cut into small shreds, the hare starts ahead of the rest of the boys who are called hounds, and at the expiration of a certain time, when out of sight, commences to leave his trail in the guise of bits of paper on his track, going at the same time at the top of his speed. The hounds then start after him, finding his trail, and pursue him and try to catch him if they can, following absolutely the track designated by the bits of paper. Of course the hare doubles and twists all he can, and will cross brooks if necessary to bring his pursuers at fault. The poor little fellow who came to such an untimely end though but lightly clad, had fallen into a brook or so in pursuit of the game, and possibly died more from exposure than from over fatigue.

It would be unjust from an accident of this character to judge too harshly of those healthy outdoor sports which add so much to the general English education. Such accidents are exceptions. Still it must be evident that when parents confide their children to the master of any school, whether in the United States or England, that they depend on some general supervision which every principal of an institution should exercise not only in regard to the mental but physical training of his pupils. If children whose muscles are not yet strong enough are allowed to mingle with boys of an advanced age, accidents, though rare, may occur. It behooves, then, masters of schools to give strict attention to the amusement of their pupils, and if they have not time themselves, they should delegate their authority to some person competent to direct the boys' sports. To decry all athletic amusements for boys from an accident of this character, would be without reason. Parents might as well say to a school master, "Because a boy was drowned you shall not teach my children how to swim." Yet parents would do well to insist that some necessary supervision should always be exerted in order to insure not only the health but the safety of their children.

—Looking somewhat statistically at the numerous hunting appointments which were all undoubtedly run at the close of last month in England, Ireland, and Scotland, we find that in England during November there were hunting meets of 112 fox hounds; in Ireland, 13; and in Scotland, 7. Of stag hounds, 3 in England, and 2 in Ireland; and packs of harriers who helped to swell up the grand total in England, there were 28 packs; in Ireland 13; and in Scotland 1. What a glorious baying of hounds there must have been, and what a tremendous charge of huntsmen, could we imagine the whole of the men and dogs to have acted in unison; and what a hetacomb of foxes, for we are assured that foxes were never so plenty. Your Englishman carries his amusements with him wherever he goes, and even the Pontine marshes resound with the sharp yelp of the England fox hounds as they chase the fox in and out of the old Roman aqueducts. "Bring your mounts from England,"

this has been given away by the United States in the last ten years. An army of two hundred thousand farmers, each one exulting in his own broad acres, are cultivating them. Between 1860 and 1870, the Nebraska Report tells us that the number of farms in the whole country increased more than half a million, and during the same decade Nebraska farms increased from 2,789 to 12,301, and that during the last three years it has more than doubled these last figures. Is it not something wonderful to think that only nine years ago the Homestead claims were a beggarly 191, and that last year they were over twelve thousand?

From the report of the Commissioner of the Land Office, published this week, we have an excellent opportunity of judging of the amount of land disposed of by the United States ending June 30th, 1873. During the last year this amount of land was no less than 13,030,606 acres. During the fiscal year, ending June 30th, 1873, preliminary homestead entries were made, covering an area of 3,752,347. "In almost all cases," says the Nebraska Report, "each man or woman (for there are many female homesteaders) is head of a family, if not actual, yet hoped for in the near future—(the italics are ours). Speaking of the early attempts of the Nebraska settler to build a shelter, the report expatiates about what it calls a "Nebraska brown-stone front." There is something cheerful, Mark Tapleyish, to a degree, when one learns that a sod house, the sward cut with a breaking plow, and the green turf used as shingles to cover an excavation, is the primitive dwelling used by the settlers, and the report affirms that "it is both warmer in winter and cooler in summer than any house which can be made of lumber."

Descanting on the methods of migration to this happy Nebraska, the report tells us of westward trains full of wives carrying their little ones to their husbands who have gone to Nebraska at first alone to rough it, and amusingly speaks of a car load of babies, shipped, we suppose, by Adams Express, C. O. D., all the little ones being possibly Japhets in search of their fathers. It is as easy to get to Nebraska, according to the report, as it was for the prince in the Arabian Nights who owned the flying-horse, and who only had to press a button in order to be transported some thousands of miles. A Massachusetts man, according to our report, can charter a car at Cape Cod, put on board his clock, his provision of beans, his pumpkins, his wife and children, and without once breaking bulk, keeping house all the time, can be landed in the middle of Nebraska in the midst of the far land, before he is aware of it, with a stock of beans still on hand. It is but forty years ago since the first white family entered Iowa; but to-day, of its twelve hundred thousand inhabitants, but one-third of the present population was born in it, two-thirds have come to it, and one-half were born in the more sterile East, and why should not Nebraska very shortly exult in her millions? Do you want to get rich? Only have money enough to buy some few horses and break prairie at \$3 an acre. You can earn that way \$6, for the keep of yourself and horses will be only \$1 50 a day, and you will be thus enabled very soon to buy all the land you want on this large margin of profits.

The geological data given in the report are most interesting, and fossils abound in Nebraska. In the Mesozoic age lived in Nebraska no less than five species of those reptiles, the *Demosaurus*, as much as forty feet in length, and as to *Ichthyosaurus* they are discovered assuming the proportions of a whale. Here, too, are found the remains of that anomalous creature, the *Rhamphorynchus*, half lizard, half bird. As to fossil animals, Nebraska is a complete geological menagerie. No less than twenty species of the *Oreontides* have been exhumed in the tertiary deposits. In anatomical peculiarities they partook of the character of the camel, the hog and the deer. The early Nebraska buffalo or bison was, too, a third larger than the present animal. At that period, too, lived the *aleurodon ferox*, an animal as large and savage as a tiger. The subjects dear to the FOREST AND STREAM, such as the preservation of the forests, and the methods of planting trees are treated, not only with singular merit, but exhaustively, in the report. Mr. James Morris has an admirable article on this question, recommending the planting of the filbert, the almond, the chestnut, the walnut, the pecan and the hickory, and states that in regard to the cottonwood, the buckeye, the white poplar, the elm, the beach and the ash, there would be no difficulty in making forests of them all over the land. No less excellent is a paper on the same subject by Mr. C. S. Harrison, entitled "Tree Culture." Mr. Harrison, after a most philosophical argument proving the many great blessings tree culture produces in a country of plains, scientifically and practically discusses the entire subject.

Admiring both the vigor of the report, and wishing that the many other agricultural reports which pass thorough our hands were made up of such readable and interesting matter, after its most careful perusal, we are more fully satisfied than ever in regard to the future greatness of this new State, and believe that few other sections of the country present greater advantages for the industrious settler than Nebraska.

—Persons who propose making Holiday Presents, cannot adopt a method more satisfactory than to avail themselves of the advantages offered in the FOREST AND STREAM Prize Scheme. By so doing they will not only secure, through the paper, that which is of permanent substantial value, but a useful article whose intrinsic value is almost an equivalent for their money. You can take your choice of guns, rods, books, pictures, skates, and out-door games in great variety.

says an authority in Roman fox hunting: "Italian horses are not worth a copper. Bring a big, heavy, strong animal, for Roman fences are good solid timber, posts and rails. It don't make much consequence what you pay for your horses, for though you will want two of them, you can sell them again. Roman Princes think nothing of giving a paltry £400 for a hunter.

—At last they have got a good sensation in England. Tired, *blasé* of excitements in the United States, we have deigned to allow our own particular sea-serpent to pay them a visit. Mr. Barnum now being in England may account for the veritable presence there. Young ladies on the pleasant England sea shores have seen him through their lorgnettes, and he, the veritable *serpent*, is so positive a fact now that a picture has been made of him. Mr. Frank Buckland and Mr. Henry Lee, we may suppose, are now on the *qui vive*, delirious with excitement, and Mr. W. Saville Kent may have intentions of enlarging the Brighton aquarium or of converting the whole of the Crystal Palace into a fitting receptacle for the sea serpent. We regret to state, however, that our serpent has very much shrunk as to size. One gentleman saw him only fifty feet long, and raising his head four feet above the water. While another person declared him to be eight feet long. For our own particular American sea serpent to have gone and deliberately shortened himself is a shameful act, and a slur on the country of his nativity, for it is perfectly apparent to every one that this pet Saurian has the power of making himself any size the spectator wishes him to be.

—Though the adulteration of food hardly comes under a review of foreign sporting news, we cannot help but being amused at the row it is making in England. Here in the United States with our free and enlightened Republican feelings, we have learnt to grin and bear most anything; in monarchical England, however, they fret and fume and grumble, and end by not standing it. Most of our readers are no doubt familiar with the story of the quarrelsome man in the coffee house, who on seeing a gentleman eat his slice of cold beef without mustard insisted that he should use that condiment, and ended by saying, "What, no mustard with your beef? Confound it sir, you shall eat mustard." To-day the man fond of mustard would have had to put it in another guise, somewhat like this: "Confound it, sir, you shall eat a mixture of bean flour, tumeric, ginger, and tincture of catharides with your beef." *Land and Water* puts it amusingly this way:

Settling down to housekeeping, we refresh ourselves each morning with a decoction of Maloo mixture and steel filings, sweetened with sand, and we assuage our appetite with alumed bread, larded butter, fresh eggs from Kamtschatka, and ox tails not unacquainted with omnibus life, whilst on our return home in the evening, we partake of Dartmour mutton from Northamptonshire, sanctify it with a bottle of petroleum champagne and some Hamburgh sherry, and top off with Swiss cheese from Ayrshire and a glass of port from any hedge. Then determined on enjoyment, we kick off our brown paper boots, light a delicious Houndstich Havana, loll back in an armchair covered with imitation morocco and stuffed with ash-pit pickings, warm our shoddy-covered legs at a brisk slate fire, mix a tumbler of methylated spirits called whiskey. Next day we are ill; the doctor, shamming interest in our case, writes a prescription in sham Latin; the chemist dispenses it in diluted drugs; the family lawyer, pretending pity, writes our will in sham English phraseology to increase his charges; and just when our sham gold repeater, warranted to last for fifty years, stops, we stop too, and end with these shams of life. Then amidst the gloomy faces of expectant heirs, our shoddy-velvet-covered coffin, studded with lacqued nails, is borne away by dyed horses proudly bearing sham ostrich plumes, false manes, and fictitious tails, whilst hired mourners lengthen out their funeral faces at so much per inch, and cheat at that.

—The French Geographical Society have awarded the following amounts to various travelers: To M. Dournaux-Dupéré, who has started for Timbuctoo, 2,000 francs. To M. Francis Garnier, for explorations of the Blue River in China and the Yun-nan in Thibet, 2,000 francs, and to Messrs. Marche and Compiegne, who are to go to Africa after Dr. Livingstone, 1,500 francs.

—The Japanese government have passed a law forbidding dog fighting. We shall have to go to Japan some of these days in search of a higher civilization. We are perfectly aware that laws somewhat of the same character are supposed to exist in the United States, but brutal contests with dogs, the animals themselves being nothing like as vicious as the degraded spectators who attend such horrible fights, are of constant occurrence. We may enact laws in this country, just as in Japan, but it is doubtful whether we can carry them out as thoroughly as they do there.

—A new cereal has been grown in Oregon which has puzzled the farmers, as it is unlike any grain with which they are familiar. From seven to ten stalks grow from one root to a height of about four feet, and these stalks, or straws, are thin and hard. The radicals are tough and spread widely. The heads are six inches in length and covered with a heavy beard, each filament being five inches long. The grain is double the length of a kernel of wheat, and, instead of being firm and compact, is hollow, the cavity containing glutinous matter. While the grain bears a closer resemblance to wheat than to anything else, the straw looks more like that of rye or barley. Its origin is somewhat peculiar, the first grain having been taken from the stomach of a wild goose by a farmer in Tillamook county nearly three years ago. He was struck with its appearance, and planted it, and the succeeding season sowed the product. He distributed a portion of the second crop among a few friends in different parts of the State, who this year raised small quantities. It will require another year to determine the value of the grain.

Rational Pastimes.

Secretaries of University and College Athletic Clubs will please mail their reports not later than Monday in each week.

THE SCOTTISH GAMES.

The Second Annual Handicap of several members of the New York Caledonian Club took place on the track of the New York Athletic Club, 130th street, Harlem, on Thursday, Nov. 27th. Now that Jones' Wood is being cut up into building lots, the committee of the New York Caledonian Club will find it no easy matter to lease grounds sufficiently large and within easy distance of the city, to accommodate the thousands that annually come from all parts of the Union to witness these noble pastimes. The games commenced at 10:15 A. M., under the superintendence of the committee, A. Cowan, C. G. Nicholson (Secretary), and D. A. Thomson, assisted by members of the New York Athletic Club. The first in order was throwing the light hammer, weighing 14 pounds. Eleven competitors entered, Andrew Rennie casting the hammer 99 feet, which was the best throw; George Goldie second, he was handicapped 5 feet and tossed the hammer 88 feet. The 100 yard race was opened to members of the New York Athletic Club. There were 21 competitors, 5 of which were members of the N. Y. A. C. Four heats were run, M. E. Burris of the Athletic Club winning the first, William McKune of the Caledonian, the second, Samuel Strasburger of the Athletics the third, and Andrew Rennie of the Caledonians the fourth. McKune then came in first and Rennie second. There were five entries for the running high leap, and the match was won by Joseph Edington, who received six inches, Andrew Rennie being second. The next contest was in putting the heavy stone, which weighed 21 pounds. There were seven contestants; John Tasker won at 29 feet 10 inches, John McMillan being second.

There were four entries for vaulting with the pole. M. E. More, who received 21 inches, won, Francis Duke, who received 12 inches, being second. The quarter-mile race was contested by 12 members, and was won by John Downie, who received five yards, Colonel Carmichael, who started on the scratch, being second. There were six entries in the contest at throwing the 56 pound weight. John McMillan threw it 19 feet 9 inches and won, John Tasker being second.

The boys' race of 315 yards had five entries. James Campbell, the oldest looking boy, won the match, Thomas Grassick being second. The one mile walk was open to the members of the Athletic Club, by whom both the first and second honors were carried off, W. H. Stafford and Daniel Stein winning. There were six entries, four of whom were Caledonians. The one-mile race had six competitors; John Downie was winner and William Parker second.

A game of foot-ball closed the sports. The following are the details of the games, and the distances are with handicap included:

THROWING THE LIGHT HAMMER.

Andrew Rennie, 1st prize, 99 feet, scratch.
George Goldie, 2d prize, 95 feet 4 inches, allowed 5 feet.

100 YARDS RACE.

(Open to Athletic Club) in heats.
William McKune 1st prize, allowed 10 yards.
Andrew Rennie 2d prize, allowed 4 yards.

RUNNING HIGH LEAP.

Joseph Edington 1st prize, 5 feet 1 inch, allowed 6 inches.
Alexander Tasker 2d prize, 5 feet, allowed 6 inches.

FINAL HEAT OF 100 YARDS RACE, AS ABOVE.

PUTTING THE HEAVY STONE.

John Tasker, 1st prize, 30 feet 10 inches, allowed 12 in.
John McMillan, 2d prize, 30 feet 4 inches, allowed 12 in.

VAULTING WITH THE POLE.

M. E. More 1st prize, 9 feet 6 inches, allowed 21 inches.
Francis Duke 2d prize, 9 feet, allowed 12 inches.

QUARTER MILE RACE.

John Downie 1st prize, allowed 5 yards.
William McKune 2d prize, allowed 20 yards.

THROWING 56 POUND WEIGHT.

John McMillan 1st prize, 20 feet, allowed 3 inches.
John Tasker 2d prize, 19 feet, allowed 3 inches.

BOYS' RACE.

315 yards. (Member's sons, not over 15 years.)
James Campbell 1st prize, allowed 10 yards.
George Grassick 2d prize, allowed 15 yards.

ONE MILE WALK.

(Open to Athletic Club.)
Daniel Stein 1st prize, allowed 60 yards.
Thomas McEwen 2d prize, allowed 90 yards.

ONE MILE RACE.

John Downie 1st prize, scratch.
William Parker 2d prize, allowed 75 yards.

—One of the Assistant Librarians of the Congressional Library, Washington, D. C., accompanied by a member of the British Legation, walked and ran for amusement and recreation from Washington to Baltimore, a distance of thirty-seven miles, in seven hours and a half. The first nineteen miles, from Washington to Annapolis Junction, they accomplished in the short time of three hours and a quarter.

—A Deerfoot Park, Coney Island Road, N. York, on Nov. 27th, Samuel Jones, of Greenpoint, and Samuel Abrams ran 100 yard heats, which was won by the former in two heats.

—Three of the Boston Base-ball nine received salaries during the past season of \$1,800 each; one \$1,500; the others \$1,400, \$1,200, \$800, and \$500 each, and Addy was paid at the rate of \$75 per month during his engagement.

EDITOR FOREST AND STREAM:—

The Foot-ball 20 of the Stevens' Institute Athletic Association played a match game on Thanksgiving Day with an amateur 20 at Ridgewood, N. J. On account of the shortness of the day and severity of the weather, but two innings were played, and as these were won by the Institute men the victory was adjudged to them. The victors were then provided with a generous dinner, which warmed their souls and prompted speeches from all hands. The boys returned late in the afternoon, well satisfied with the day's sport.

A. M. C.

St. Louis, Mo., Dec. 1st.

—In March of the present year, cricket was dead throughout the West. It is true at the Racine College, Wis. the game had for years been practised by some of the students, and that at a few country places, such as Sasser, Wis., and Decorah, Iowa, the skeleton of cricket clubs were said to exist, and at Detroit, Mich. a club yelet the Peninsula was believed to be flourishing, but withal cricket gave no sign of that life which manifests itself in action. No matches had been played the previous year, and no challenges were out for the coming season. In the month referred to a gentleman of St. Louis, named P. Adair, in the columns of *The Globe* of that city, suggested the formation of a cricket club; his communication called forth others, the result of which was a meeting of cricketers on the 12th of March, and the formation of the St. Louis Cricket Club, with officers as follows:—

President, Hon. Thomas Allen, proprietor of the St. Louis & Iron Mountain Railroad, one of the Alumni of Union College and a munificent benefactor in the cause of education; vice president, W. B. Davenport, Hon. secretary, Harry E. Sharpe, (also a member of the Toronto Club of Canada); executive committee, Cyrus Day, M. D., E. H. Lycett, (also of the Marion Club), J. W. Jeffries, S. L. Southard, (also of the Trenton Club), and F. M. Caddick.

Four years ago St. Louis had nourished in its maternal embrace several cricket clubs, two of which were named respectively the "Saint Louis" and the "Jackson," flourished for a time, but died at last from want of extra-mural opposition. On the organization of the new St. Louis Club, the old Jacksonites held aloof and attempted to revive their club, but in vain. They met and elected officers, and were challenged by the St. Louis, but could not place eleven men in the field. The St. Louis "braves" could nowhere find the trail of an enemy; practice was becoming monotonous; in a moment of frenzy the chairman of the executive committee, Dr. Cyrus Day, published a challenge through the medium of the daily papers, to any outside eleven or to any twenty-two of St. Louis.

St. Georges' day was near at hand and on it according to their custom the St. Georges' Society were to enjoy a picnic; their manager conceived the idea of adding to the attractions of the pic-nic, an exhibition of old England's noble game. With Anglo-Saxon pluck and pride they dared St. Louis to even combat, and were defeated by only fourteen runs. Elated by their unlooked for success (they expected to be beaten in one inning,) the St. Georges' men set to work there and then to collect names and donations for "The Saint Georges' Cricket Club." \$500 and a score of names was the result of half an hour's work, assured the organization of another club and delighted the hearts of the St. Louis men. A match was at the same time arranged to be played within a month, which resulted in another defeat of St. George, this time by twenty-four runs. A third match was played in August, when the St. George won in one inning with many runs to spare, their success being attributable to the magnificent batting of Temple, Dale, and Richardson, the two latter being new men. This last match demonstrated the fact that St. Louis contained cricket talent, good enough, if united, to show a bold front to outsiders. The St. Louis Club at their next meeting sent a message to the St. Georges' Club, suggesting the formation of a united club, to be composed of members of both clubs, with a view to sending an eleven on a tour through Canada, and East, and generally to promote the interest of cricket in the West. The suggestion met with a hearty response; delegates from the two clubs met and elected as officers of the united club; president, Joseph Branch, also president of the St. Georges' Society, and president of The St. Georges' Cricket Club, an English gentleman, (well known in St. Louis for his liberality in every good cause, and as a John Bull,) every inch of him; vice president, Harry E. Sharpe; secretary, Ben Williams; treasurer, Cyrus Day, M. D.; councilmen, W. B. Davenport, T. M. Caddick, Hy. Temple, and A. C. Bagshaw. The doings of the united club belong to another place; this little record treats only of the modest St. Louis Club, and little more remains to be said. The St. Louis challenged the Dragons to another encounter on the 7th of October, to finish up the season, but being unable to bring out an eleven that could win, they chose not to risk defeat. To the St. Louis Club rightfully belongs the credit of the revival of cricket in the West. Clubs have now been formed at Chicago and Cincinnati; Racine and Detroit are anxious to bear a hand in the fray, so that next season promises to be a lively one.

H. E. S.

—The Hoosac tunnel in Massachusetts, which at last has been bored completely through the mountain, though not yet completed for use, is five miles long. It was begun in 1857, sixteen years ago. Its estimated cost was \$3,350,000, and a contract was made to excavate the tunnel and build a double track railroad through it for that sum. In reality it has already cost \$12,300,000, and it will require the expenditure of about \$300,000 more to prepare it for traffic.

Striped Bass, Rockfish.

Sheepshead.
Tailorfish.
Sea Bass.

—We attach much value to the information printed on the first page of this day's issue, and trust it will be appreciated by all our readers and prove of essential service to anglers who contemplate a journey to Florida this winter. We think, with the writer, that the edible and game qualities of our southern coast fish are not sufficiently esteemed, doubtless because they are so little known. Printed information on this subject is most meagre, and the investigations made by naturalists in this department and locality are very limited. We have always been surprised to discover, from personal inquiry of southern gentlemen who are considered proficient anglers, their ignorance of the habits and modes of capture of the numerous varieties of fish within their own waters. The pastime or business of fish-catching seems to be abandoned to the negroes; yet there is a spacious field for the enjoyment of scientific experts, and we shall very much wonder if those gentlemen whose experience has been confined to our northern waters, do not find in the rivers and estuaries of Florida and other southern States a new sensation whenever they enter the lists to test the strength and cunning of the finny inhabitants that abound there. The character and disposition of the forces with which they will have to deal are very nicely indicated in the article we publish. It is no child's play to handle one of those monster fish, and we can fully appreciate the anxiety and pity the perspiration of the angler who is hooked to a fifteen pound grouper or pompano, pulling straight for his lair in the mangrove roots, when it comes to the desperate alternative of break tackle or lose fish. The writer gives sufficient data as to the selection of tackle and bait and choice of ground and tide, to enable the intelligent and experienced angler to practise his rudimentary lessons with prospect of success.

In angling for the bass (misnamed trout) of the St. John River and favorite localities, we will give one hint from our own experience which, if followed, will render success infallible. The angler is supposed to be in a skiff easily handled by a practised oarsman. If the water be smooth and unruffled, the experienced eye will easily detect, at frequent intervals, little jets of spray shoot up from the surface to the height of a foot or so. This means fish. Instantly the angler must cast his fly or draw his trolling spoon over the spot, just as he would naturally do when a speckled trout breaks in our northern waters. He will seldom fail to hook his fish, if the splash of oars does not frighten the game. A quarter of a mile below Palatka is a sand-bar which is a favorite locality in December and January for "those who know," and the best fisherman and boatsman there is George Lucas, whom we are pleased to recommend.

Speaking of Palatka, it is one of the very best headquarters for the sportsman, being centrally located, with fine shooting and fishing in the vicinity, and accessible by steamboat from above and below, with daily mails from Jacksonville. There are two excellent hotels here and sundry boarding houses. The "St. John's Hotel," kept by the Peterman brothers, is as comfortable as could be desired, with most excellent table, and many "modern improvements" not often found in Florida. We are free to designate this hotel, because we wish to advise so as to ensure the fullest satisfaction of sportsmen who place confidence in our recommendation. If the hotel proprietors can profit thereby, they certainly deserve to do so. Palatka is healthy, and the ground absolutely hilly for flat Florida, three-fourths of which, we believe, is actually under water. Steamboats run to Enterprise, and thence to Salt Lake, from which there is short transit to Indian River; also to Tokoi, from which St. Augustine is reached by a sixteen mile railroad of the worst possible description and most tedious rate of progress.

One cannot be too careful in selecting his abiding place in this Land of Flowers, especially if he be an invalid. The four healthiest localities, and affording the greatest abundance of game and facilities for sport are St. Augustine, Palatka, Lake Monroe, and Indian River. At Enterprise, on Lake Monroe, which comprises merely a very good hotel and outbuildings, and a court house located in a swamp and wholly isolated, is most excellent deer, quail, turkey, and snipe shooting; but from Mellenville, on the opposite side of the lake, one can go back thirty miles over a settled and cultivated country, abounding in large orange groves and banana patches, traversed by good roads, and interspersed with beautiful lakes. Game is plentiful, but not so abundant as in the vicinity of Enterprise. We shall give a brief sketch of the St. John River route in our next number.

—The half-dozen attentive friends who have kindly sent us printed accounts, clipped from Hartford papers, of the fish-way at Holyoke Dam over the Connecticut River, will find a full description of the same in our issue of Nov. 13th, page 218, three weeks ago. We fully appreciate the importance of this great and useful work, and have anxiously noted the laborious efforts of the Massachusetts and Connecticut Fish Commissioners, from the first inception of the enterprise, through all the phases of opposition and litigation with which it has struggled, up to the final consummation last October. When the fish-way became a finality, we were immediately advised thereof, and waited only for our regular publication day to announce the fact.

We trust that our readers will not only examine our columns carefully hereafter, but learn to look to us for latest information in matters of this sort; for we claim to be a live paper, and our business relations with Government and State Fishery officers enable us to obtain early possession of facts of interest and value. We hope for great results from the construction of this fish-way to manifest themselves at an early day. The Connecticut is the best adapted river on the Atlantic coast for the propagation and preservation of salmon and shad; it is the longest, the most broken by rapids, the coldest at its sources, and contains the clearest and purest water. It was long ago the natural spawning ground and birth place of salmon, and only became depleted by those causes inseparable from increasing population and ignorant and insufficient legislation. Now for five years past the fishery officers have been assiduously employed in restocking its waters, and the results, so far as investigated, have proved eminently satisfactory and encouraging. Hereafter, with an unobstructed passage from the ocean to its mountain sources, the salmon and shad will have full range. They can plant their seed *ad libitum* on chosen spots, returning periodically to their native spawning grounds—and with both fish and ova protected by judicious laws and watchful wardens, they must continue to increase and multiply until the heart of every angler is made glad, and the poor leap for joy at the abundance.

—Seth Green, who is at present in charge of the New York State Hatching House at Rochester, begs us to inform our readers, who may desire to experiment in the business of hatching out eggs of the salmon trout or white fish, that he will, on application, send a few hundred eggs on the receipt of fifty cents to prepay the cost of mailing them. His object is to teach the American people the art of fish-breeding and to have them learn how easily this may be accomplished, so that every river, lake or pond may be made to abound with fish, as in former times. These will soon be ready for transportation, and all that is necessary to watch the process of their growth is to place them in a shallow wooden box with gravel on the bottom and allow a stream from spring or even hydrant water to flow gently over them from one end of the box to the other. During the season of 1872 and 1873, he made an extensive distribution of eggs, and wishes any person who received them at that time, to report the result to him or to the columns of some newspaper near at hand.

—Down at Smithfield, Long Island, not far from Hempstead, is the trout farm of Mr. Thomas Jeffery, who informed the writer that he was one of the very first to handle and strip a trout on Long Island. His place lies a little off the main road, about a mile and a half from Smithville. He has a series of ponds for fingerlings, yearlings, and two year olds, also a mixture pond with all sizes and ages. As we saw it, no doubt during the worst part of the year, it struck us as having a decidedly antiquated appearance. The ponds were full of dead leaves, and other decayed vegetable and fish matter, including large dead shiners, evidently in a decomposed state, which he had forgotten to cut into pieces so that the fish could eat them. It was a marvel to us how the fish could live at all; as it was, the yearling fish did not weigh two ounces, and the two year olds not more than a quarter of a pound; all of them were dwarf fish. Mr. Jeffery, who is now getting infirm and quite old and afflicted with rheumatism, evidently cannot pay that proper attention to the water and fish which is essentially necessary to success; but with all these drawbacks he has not only built his house, purchased all necessary tools, cut dams and sluices, gravelled and sanded ponds, but also derives a considerable income from fish culture. We asked Mr. Jeffery the reason why he allowed all the debris of vegetation, uneaten and rotten fish to sink to the bottom and poison the water. He replied: "Oh, the first rain will clean it all, and I am getting old and sick." We bade him good day, thanking him for his attention, and at the same time respectfully suggested "that if the preserve was worked on half shares it would relieve him of the burden of labor, and he might still derive the same increase."

—The fishermen on the south side and at the east end of Long Island are having remarkable success this season. A great many codfish are being taken off Fire Island and at other points on the Great South Bay, and on Thursday morning one thousand bass, estimated to weigh at least four thousand pounds, were taken at one haul at the Poose off Southampton.

—Ralph Keele, in *Harper's Magazine*, says of Lake Leman, Switzerland:

"There are said to be twenty-one species of fish in the lake; but of its thirty-six leagues of shore, according to my authority, thirty leagues are so rocky as to give hardly any plants or insects for their food. Leman, therefore, is not so well stocked with fish as many of the Swiss lakes. The professional fishermen go out in their boats at dark, and are generally gone all night. The unprofessionals of the Swiss shore are, I think, the most patient people on earth. I have seen hundreds of them in the course of the summer holding their lines from bridges and quays at all hours of the day and night, and have never yet seen them catch a fish. The hotels of Geneva, at least in the "grand season," are mostly supplied from the sea. The *férra*, which is nearest to the grayling, but, I believe, a species peculiar to this and one or two other of the Swiss lakes, is the fish oftenest met on the table. There is a magnificent kind of salmon-trout, called *truite du lac*, weighing often twenty or thirty pounds, which sometimes graces the dinners of the Beau-Rivage or De la Paix at Geneva. On days when this fish is served he is paraded in all his superb proportions around the dining-room by a white-gloved waiter, in a sort of glorified triumph of sauce and silver, in the genteel hull between the soup and the first wine.

WILL BLACK BASS TAKE A FLY.

ROCHESTER, N. Y.

EDITOR FOREST AND STREAM:—

I HAVE read with increasing interest each article on this subject. I was astonished that such a question should ever suggest itself to a follower of Father Isaac. I have taken black bass from Canandaigua outlet and Genesee river for years with a fly, and I find that I have better success every year. Not by trolling as is the custom, in the St. Lawrence from a boat, but by casting from a boat or wading as the water will permit. Either I have become more experienced or as I have heard said in regard to trout, they have become educated and will take a fly better from year to year if the waters are humanly fished. I have made it a practice to return to the water all small fish and I believe that I have been amply rewarded this year. I never had better fishing in these waters.

The hint that I have aided in the increase of this splendid fish seems insignificant; but if you will think for just a moment and see what the increase would be by returning fifty or one hundred of these fish to the water, you will not be surprised or wonder at my insinuation.

If all anglers would just keep this in mind, return all small fish to the water, there would be no danger of our lakes and rivers being depopulated.

A little care, and a little humanity on the part of the true angler would in a great degree make up for the wholesale slaughter of the pot-fisher. But never mind that, I have thrown aside my bass rod and tackle as a whole, with the exception of dressing my flies especially for bass. I tie my own flies as every angler should who wishes to drink in the whole enjoyment of angling.

In its place I have adopted my Conroy trout rod and trout tackle as a whole, and find that it gives me infinitely more pleasure than the heavier one.

Now in regard to flies; I have tried the scarlet ibis, grizzly king, and many others with some success, but none with the success that I have had with a brown one which I have made and named king fly. In this locality I have taken them from the first of June to the first of October, with this same fly. I think it superior to any other for the reason that I have put others on the same cast and would in nine cases out of ten find them fast to this fly. Also I have taken off the other flies and put on just two of these and would take time after time two bass of a pound and a half or two pounds each at a single cast. That is what I call genuine sport. This fly might not do for other localities, but for these two that I have mentioned, I am certain it has no equal.

These magnificent fish seem to be very gamey here, giving almost as much play as a trout. It is seldom that I let my flies sink below the surface of the water. It is not necessary to with this fly, but the instant that it touches the water, if they are at all inclined, it is greedily taken, in fact I have seen them jump clear out of the water to seize the supposed prize. It looks too much like bait fishing to let them sink below the surface precisely as though it was really bait. When I bait fish I want to bait fish, and when I fly fish I want to fly fish.

Let it then be the aim of every true angler to exert all his influence to keep our lakes and rivers from being depopulated of this magnificent fish. If every angler will catch his fish artistically there need be no fear. If there can be no better laws, let what we have be enforced, and it will greatly aid us in our work.

F. L. KING.

WHAT A FRENCHMAN KNOWS ABOUT SHOOTING IN AMERICA.—In the May number of the Bulletin of the French *Société D'Acclimatation*, we find a report by the Count de Montebello, First Secretary of the French Legation at Washington of what he knows about game in America, and we present some of the principal points of this communication for the edification of our readers!

Speaking of the wild turkey, which he says is found in considerable numbers in Virginia and Maryland, he states that it is an animal which is likely to disappear, as it is very easily taken, especially in the snow. He remarks that he has never hunted the wild turkey, although he has been informed of a flock in the vicinity of Washington, because its pursuit has not the least charms for him, as this simply involves lying in wait and shooting from a covert.

The venison found in the Washington market, he tells us, generally comes from Vermont, the deer being found in large numbers around Lakes George and Champlain, as also in the woods that border the Hudson. He has heard a good deal of the caribou, the moose and the elk, but has not seen any of these even in skins. He apologises for not being able to tell more about the birds and beasts of America, as he is closely tied down in Washington by his official duties, and it is very difficult to learn anything of the animals in a country where all the birds with red plumage are called red birds, and all with yellow feathers, yellow birds; and as far as game is concerned there are as many names for each kind as there are States or even Counties!

He regrets his inability to visit Philadelphia, for the purpose of there meeting Prof. Agassiz, who was not in the city when he had visited it some time previously. If he could only see the Professor he has no doubt of being able to obtain some useful information!

—The Palatka (Florida) *Herald* says that never since the early settlement of this country has the fruit prospect been more flattering. From all sections of the St. John's, Indian and Halifax rivers, and from the interior portions of east Florida, it has most glowing accounts of the bountiful yield of the orange, lime, lemon, guava and shaddock.

Shot Gun and Rifle.

GAME IN SEASON FOR DECEMBER.

Moose, *Alces Melchis*.) Caribou, *Tarandus Rangifer*.)
Elk or Wapiti, *Cervus Canadensis*.) Red Deer, *Caracus Virginianus*.)
Rabbits, common Brown and Grey.) Squirrels, Red Black and Gray.)
Wild Turkey, *Meleagris gallopavo*.) Quail, *Ortyx Virginianus*.)
Ruffed Grouse, *Bonasa umbellus*.) Pinnated Grouse, *Cupidoria Cupido*.)
All kinds of Wild Fowl.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

—At Shokan, Ulster County, a party of three went out shooting forces in what is called the Park Swamp, accompanied by Mr. Sheppard and his hounds, killing 3 dog foxes and 2 vixens in three days.

—Three guns and two dogs, at Deckertown, New Jersey, on the Midland Railroad, last week, counted out a bag of 25 pheasants, 3 quail, 2 woodcock, and 21 rabbits.

—At Montauk Point, L. I., three well known wild fowl shots, shot besides black duck and geese, seven mud geese. We think this must be the goose known by the name of Hutchin's goose.

—At Toronto on Thanksgiving Day, in the pigeon shooting match for the Foresters' challenge tea service, between James Glen, Jr., of Toronto, and Gilbert, of St. Thomas, the latter won, killing eighteen out of twenty-one birds, to Glen fifteen.

—At Miller's Island near Baltimore, there were over 1,200 canvas back ducks shot last week, principally by gunners for the market. Sportsmen have but fair shooting, all the best points and grounds being leased. The Swamp Angels, used by the gunners, are generally of four to six bore and load *ad libitum*.

—At Turkey Point on the Eastern Shore near the mouth of the Susquehanna, there are two points about 100 yards a part and excellent ground to get to before the birds come. Mr. Benton and a friend from Baltimore, killed on Friday and Saturday last 32 red heads, 7 black ducks and 24 canvas backs.

—At Watson Hollow, last week, C. S. Rockwell and party, a well known bear hunter, killed 2 wild cats and shot at a panther, wounding him, but could not follow him up on account of snow drift. The party went out next morning on home-made snow-shoes, but failed to find the track. Snow 18 inches on the level. Very few beech-nuts this year, so that the bears have moved into the Neversink Mountains.

—Judge C. E. P., of Brooklyn, returned last week from a shooting excursion in the southern part of Ohio, where he and three other gentlemen, with two setters, bagged 48 dozen quail and 13 grouse in the course of nine days' bush-beating. This is pretty good work. The Judge will stand a pretty close cross-examination as to the exact locality in Ohio where this was done, but we doubt if he can be induced to commit himself. Gunning in Ohio is apt to be dangerous business unless the sportsman is acquainted with "the man who owns the place."

—Gunnery is not taught, it appears, in Dartmouth College. Several students of that venerable institution being out shooting lately, found a coon in a tree. They shot at the animal 24 times without hitting him, while he sneered at their clumsiness from his perch. At last, coming down, having lost all patience at being killed so clumsily, he went for those literary young men. Long the battle raged. The stock of a \$250 gun was shivered. Coonie died at last, for the odds against him were fearful. He was one of the heaviest characters of his class, and weighed 30 pounds and six ounces over.

We take this from the *Tribune*. Whether the word "class" in the last sentence refers to coons, or to the undergraduates of Dartmouth, we are not prepared to say.

PIGEON SHOOTING.

—A large party of gentlemen met on November 29th at Port Morris to witness a pigeon match between the two crack amateurs, Mr. Ernest Staples and Mr. Louis Livingston, of Columbia county, New York, at 25 single birds, Ira Paine's best, for \$400, 1½ shot, 21 yards rise, 80 yards boundary.

THE SCORE.

STAPLES—0, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 0, 0, 1, 1—Total, 20. Killed, 17; missed, 3.

LIVINGSTON—0, 1, 0, 0, 0, 1, 1, 0, 0, 1, 1, 1, 1, 1, 1, 0, 0, 0—Total, 18. Killed, 9; missed, 9.

Staples won the choice and went to the front first.

Livingston, having no chance, gave up the match when Staples had shot at 20 birds.

—The simultaneous rifle match between Captain Davis' Highland Company, Dundee, Scotland, and No. 2 Company, 13th Battalion, Hamilton, Ont., twelve men on each side, which took place in October, has, according to scores just received, resulted in a victory for the Highlanders by two points. This company has the reputation of never having been beaten in any match, and is one of the best in Scotland. The firing took place at ranges of 200, 500, and 600 yards, five shots at each range. The total score made by the Highlanders was 511, while that of the Hamilton Volunteers was 509. The highest score made by any individual member was by Private Thomas Mitchell, of Hamilton, who made 50 points, three more than the highest score made by anyone in the Highland Company. The lowest score made was 35, recorded for one of the Highlanders. At the 200 yards range Hamilton scored five more

than the Scotchmen, and at 500 yards eight more. The Canadians have no reason to feel ashamed of their score.—*Toronto Globe*.

—Our frequent correspondent, Isaac McClellan, who has been shooting recently in Northeastern Virginia, on the peninsula between the Chesapeake and Atlantic, made his headquarters at the little hamlet of Eastville, which he speaks well of as affording good accommodation for sportsmen. Among other experiences with the numerous varieties of wild fowl, he mentions the swan, which he claims is by long odds the noblest fowl to be found on the coast of North Carolina and the Chesapeake. "It is something like sport," he says, "to drop a bird weighing some eighteen pounds, with a six feet extent of pinions. These great fowl, especially the cygnets, are esteemed very delicious for the table, and far superior to the goose. They collect there in great numbers, and we have seen a line of them extending for more than the space of a mile, and looking like a long reef of breakers, or a ridge of snow-drift. They are hard to kill, and require to be hit with very coarse shot, mould or T shot, before they yield up life. But once drop them in the water and they are easily got, as they do not dive, but reach their food with their long necks in shallow water.

The swans, early in September, leave the shores of the Polar Sea and resort to lakes and rivers in and about Hudson's Bay, where they remain until October. They then collect in flocks of fifteen or twenty, and mounting high in air, in a wedge shape, depart with loud screams for a more genial southern climate. They fly with great rapidity, at the estimated rate of one hundred miles in the hour, which is about double that of the goose. They do not, like the geese, follow the line of sea coast, but fly far inland, usually reaching their feeding-grounds at night; and the first signal of their arrival is given the next morning by a universal clamor. They seem to be greeting each other with their musical notes after their completed journey. When settled on their feeding grounds, they do not forsake them, unless driven away by very severe weather.

In the Chesapeake the wild swan collect in large flocks of hundreds feeding over extensive flats on the duck-grass, worms, insects and shell-fish. They are found from the mouth of the Chesapeake to the capes of Virginia, but do not pass southward of Hatteras inlet. We have seen a few flocks of them in the bays of Jersey, but have never met with them in the waters of Long Island. They feed with the geese, but do not fly with them. When crippled and caught they are easily tamed, and we have had them, at the south, in our door-yards stalking majestically among the tame wild-geese and other domestic fowl."

MALAGA, Gloucester Co., New Jersey, Nov. 12th, '75.

EDITOR OF FOREST AND STREAM:—

Mr. Miller, our secretary, forwarded me your letter of the 7th, making inquiries as to our Game Protective Society. I forward a copy of Acts of incorporation, constitution and by-laws, which will fully explain its object. Our society is yet in its infancy, having been organized only about six months. We have now about 224 non-resident members. Of course, our non-resident membership will largely exceed the resident members, since the residents of other States cannot shoot in the counties coming within the provision of our Act unless they connect themselves with our association. The funds received can be used for no other purpose than restocking.

At a meeting of the Directors, held in the city of Camden, Saturday, November 22d, the President was authorized to purchase 1,000 pairs of live quail, to be put out in March next, in the counties of Camden, Gloucester, Atlantic, Cumberland, and Cape May.

Game, (quail and deer), are quite plenty in this section. Deer in Atlantic, and quail in all the lower counties, with quite a number of partridges. Over 150 deer have been killed in Atlantic County since November 1st within a radius of twenty miles from this place. Season for deer hunting closes December 1st. The writer killed a fine buck in Atlantic county on Saturday last, twelve miles east from these works. A friend, J. E. Sharp, of Philadelphia, and myself, were out yesterday, (Thanksgiving Day), and bagged forty-six quail and two partridges, not open field shooting, but all—except a few covey shots—made in the scrub oak and second growth timber. In haste,

Yours, W. B. ROSENBAUM,

"President West Jersey Game Protective Society."

—An "Old Hand" sends us the following sketch from Dallas County, Iowa:—

The prairie hen or pinnated grouse is lawful game in most of the States between the middle of August and the first of January, but the season closes in reality about the first of November, on account of the birds getting so wild that but few care to hunt them. But for the sportsman who does not mind working for his game and who delights in trying his own skill and the excellence of his gun on a full-grown bird at long range, there are occasionally days on which the sport is splendid. You get up some morning and find it clear and frosty, but you know it will be warm and still for three hours during the middle of the day; so by sun up or a little later you are on some knoll on the edge of the prairie watching; you see grouse flying everywhere from one alone to perhaps a thousand together; they alight in the cornfields mostly, though some come down on the prairie again. Look! yonder come a dozen; they will fly right over you; no, they swerve fifty yards to one side and pass you like bullets, single out your bird, hold your feet in front, and when he is barely opposite, cut loose. Following the crack of the gun you hear a sharp whack as the shot strike and you have tumbled an old cock into the grass.

You have, of course, marked down as many of the birds as possible; let them feed an hour and then drive them up. They will rise very wild and the only object in flushing them is to see them down where they will take their noon-day siesta. Now you may go to the house—or more likely, to your wagon—rest and get through with your lunch so as to be in the field by twelve o'clock, sharp. You go direct to where you marked some birds down in the morning. At about fifty yards ahead up spring the birds with a terrible clucking and rushing of wings. Quick! no time for parley now! cover and cut loose as quickly as you can! There you have winged one and hurt another one that will fly out of sight and die.

If you use a muzzle-loader you will get no more shots there, but you can load a breech-loader before the few that still stick, will rise. When you get these up let the dog hunt the ground for a hundred yards all around where they rose, and he will probably get you a half dozen shots at a thirty yards rise; and if your gun is good and you are any sort of a shot, you will get every one. Now go for that pack of five hundred you saw down on yonder hill-side a mile away. You get half way there when your dog, which is a hundred yards in advance, flushed one. Serves you right for not keeping him in; they won't lay to dogs now. Dash lays down and waits till you come up. You go a little further, when up gets one right under your feet. Hold on! you'll miss entirely or cut him to shreds if you don't give him at least twenty yards. At the crack of your gun there is a cloud of feathers and the bird has disappeared; but there goes another crossing you forty yards ahead; aim two feet ahead and you will bring him. The grass seems to be literally alive with them; and they get up faster than you can take them till you have bagged seven or eight. You go on till you get within three or four hundred yards of "that big pack" when they go off in a body and don't give you a shot. It is now nearly two o'clock and the birds are getting hungry again. However, if you are not too tired you can find some more scattered ones that will add a few to your bag; but after three o'clock it is useless to pursue them; besides you have now bagged ten or twelve brace and ought to be satisfied. If you are not, your attention will be attracted to a few flocks of mallards that are flying over an adjacent cornfield. Repairing thence you build a blind by lacing two corn hills together and cutting stalks and leaning against them. Hurry, for the ducks are coming fast. A thousand have already alighted, and as many more are already hovering over them. Now you are ready. Wait till they droop their wings to alight. Now! There you've brought down, four with one barrel, and one with the other. Now retrieve and wait for another shot. You don't wait long; and so the sport goes on till after sundown, and you have bagged fifteen, and frightened nearly all the rest away. Honk! Honk! remove your cartridges and put in a couple charged with four drachms of powder and one and a half oz. of ones or 00 shot. Lie close now, they have been alarmed and are looking for you. They pass sixty yards to the left; aim at the leader's head and let him have it. There! a lucky shot has broken his neck. The rest hurdle together affrighted and you put your left right in. You hear the charge strike but no bird falls; look sharp! others are coming down. He falls in a slough a quarter of a mile off, but you are sure Dash can find him, and sure enough he does after trailing a long ways. You now go to the wagon tired out and hungry as one ever needs to get. You count your bag and find 19 grouse, 15 ducks and 2 geese, the latter weighing 12 and 16 lbs. respectively.

In conclusion, I will say that this is no imaginary sketch, but is a faithful account of one day's shooting, and is not the best day's work that has been done here either, though it is among the best. In conclusion, I will say that for this late shooting one should use a 10 or 12 gauge not shorter than 23 inches. Use ¾ drachms powder and 1½ oz. of No. 6 shot. Use two pink edge wads on top of powder; or what is better, one wad of new harness leather next to powder, and pink edge wad on that, as the felt wad will blow to pieces if used with a heavy charge.

A HEROINE.—A girl of fourteen, daughter of John Nichols, of the town of Albion, has proved herself made of the heroic stuff. Going into the woods a few days since with a five-year-old brother nutting, they became lost, and were compelled to remain all night without shelter. To protect her little brother, she stripped off her outer garments, and, soothing him to quiet and sleep in her arms, sat through the long hours while her own limbs were freezing. When found the next forenoon she was unable to stand on her feet, but the physician hopes to be able to preserve her life and limbs, a hope which will be heartily re-echoed wherever the story is known.

—Late advices from China say that another of those anti-foreign placards against foreigners has been posted on the walls of Wu-chang, setting forth how the foreign devils entice children to their schools and they are never seen any more alive or otherwise. There is an absurd story about the children being taken to the upper flats of the foreigners' houses, and there being deprived of life, and afterwards of brains and eyes to make up some sort of barbarian medicine.

—"The melancholy days are come" when defunct porkers, with "the ends of their nose and the tips of their toes turned up to the roots of the daises" (where they will never more root hog nor die) are carried through the streets, cob in mouth, to be tucked away with buckwheat cakes.

—Bunches of autumn leaves are said to be very beautiful evening decorations, if a lighted candle be set behind them. If the flame of the candle be allowed to touch one of them the brilliancy of the display is greatly increased.

Yachting and Boating.

All communications from Secretaries and friends should be mailed not later than Monday in each week.

Oyster Bay harbor is to be the winter rendezvous of quite a number of the yachts belonging to the New York and Brooklyn clubs.

NEW ORLEANS, November 29, 1873.

EDITOR FOREST AND STREAM:—

I will send you a little history of our club. The Orleans Rowing Club was projected in June, 1873, to unite the young men of the Cotton Press interest and their friends, for the purpose of fostering good feeling, to encourage boating, and to promote physical culture. The idea was such a happy one that the club was organized the next month, and in August we were established in our boat-house, and had two practice boats in the water, built by Mahoney, of Algiers, and judges say that our native boat builders' work is equal to that of any of the imported boats. Our course is a very pretty one, on the broad bosom of the Mississippi, up the river from our boat-house, of one mile, one and a half, and two miles, so that we may have one, two, three, or four mile races. We have had some friendly trials among ourselves, and the time made was very fair, upon which we shall endeavor to improve. In addition to our practice boats, our worthy President has had constructed for us a four-oared, outriggered gig, with sliding seats, also by Mahoney, of which the boys are very proud, and justly so, as I think she is a lively boat. We have now on our roll ninety-three active members. The officers are:—Samuel Boyd, President; John P. Casey, Vice President; A. M. Summers, 2d Vice President; Patrick McGrath, Secretary; W. Lynd, Treasurer; W. H. Manning, Lieutenant and acting Captain.

Boating has become very popular here of late. We have now the St. John Rowing Club, the Pelican Rowing Club, the Riverside Rowing Club, and the Orleans Rowing Club, organized in the order named, and in our next amateur regatta, in May or September, there will be a grand struggle for the front. These are all the items of interest, and I hope they will please you. "TRICK."

BUFFALO, November 29, 1873.

EDITOR FOREST AND STREAM:—

The rowing season of 1873 has been altogether a remarkable one. Buffalo has not been behind; three of our crews, viz., the Banshees, Buffalos, and Eries taking part in the Toronto regatta, which came off in June, the Banshees and Buffalos entering in the first class race against some well known oarsmen, amongst them the famous McKee crew, of Pittsburg. The regatta was in every way a grand success, five four-oared boats starting off at the report of a cannon, the McKee crew taking the lead and winning the first prize, viz., \$300 in gold, closely followed by the Buffalos, who took the second prize. The first prize in the second class race was easily taken by the Eries.

Our home regatta came off on the 4th of July, and was one of the most important features of the day. Thousands gathered to witness the race, demonstrating the interest the people of our city take in aquatic sports. The prizes offered amounted to \$880, of which \$300 was for the four-oared, and the remainder for the single scull race. For the former ten crews entered, and five oarsmen in the latter. The regatta took place on the Erie canal, and owing to the narrowness of the space but two boats started at a time, consequently the races were pulled on time. The first start was made by the Banshees and Buffalos, the former pulling the old tub used by them at the Toronto race, built by Kingston & Bro., of Buffalo, and the Buffalos using a fine paper boat, built by Waters & Son, of Troy, New York. Their appearance showed good training, as they displayed splendid muscular development. Both crews started off nicely, pulling forty strokes to the minute. The Banshees had pulled but a short distance when they got afoul of a canal boat, and met with two other mishaps before completing the course, the Buffalos coming in ahead; time, 20m. 12 sec.; Banshee's time, 20m. 21 sec.

The next was between the Q. Q. Q.'s boat "Finale," made of Spanish cedar, and built by Elliott, of Greenpoint, New York, and the Black Rock's boat "P. P. Pratt," built by Waters & Son, of Troy. Both crews started off very well with thirty-eight strokes to a minute. However, they were not alongside of each other a great while, the Pratts passing their competitors and steadily increasing their advantage until the race was won; time, 20m. 15 sec.; the time of the Q. Q. Q.'s being 21m. 22½ sec.

The Live Oak's boat "Zephyr" and the Celtic's boat "Tommy Walsh" were next called. From the start the race was a foregone conclusion, the Celtics taking the lead with thirty-eight strokes to a minute, pulling rapidly away from their antagonists, who only pulled thirty-six, and came in a considerable distance ahead; Celtic's time, 23m.; Live Oaks, 24m. 58 sec. This was doing well for a crew that had never practiced but seven times previous to the race, the oldest of the four being but nineteen years of age, the crew that had practiced refusing to pull.

Next came the Niagara River's boat "Bill Farmer" and

the Erie's boat "Wm. Cosgrove," the former starting off with thirty-five strokes to a minute, the Eries pulling thirty-eight and easily winning the race, making the three miles in 22m. and 15 sec.; the Niagara's time being 23m. and 3 sec.

The four-oared races were concluded by the second crew of the Black Rowing Club, which, having no crew to row against, rowed over the course alone in 23m. 21½ sec.

The two mile single scull race was then called. The following were the entries:—"Tura," J. B. Green; "Vixen," Wm. Hingston; "Maud," J. E. Gibbons; "Minnie," C. E. Dunbar; "Ettie," John Dorr. The "Tura" and the "Vixen" opened the race. It was a one-sided affair, the "Tura" coming in about half a mile ahead; time, 17m., against 20m. and 30 sec. made by the "Vixen."

The last upon the list were the "Maud," "Minnie," and "Ettie." The "Minnie" withdrew, leaving but two to start. The "Ettie" came in first; time, 16m.; "Maud's" time, 18m. 45 sec.

About two weeks after the 4th a single scull match was rowed between Hingston, who considered that he was not fairly beaten on the 4th, and Green, both using the same boats, pulled by them in the previous race. Hingston was again beaten, worse than before.

The Buffalos took a hand in the fall regatta of the Riversides, of Rochester. This race was the cause of much excitement in aquatic circles, as the Riversides were considered a "crack crew," and our Rochester neighbors being sure they would defeat the Buffalos. It was rowed on the Genesee River—distance two miles. The Riversides pulled a fine shell built by Roahr. The Buffalos pulled the boat used by them on the 4th, and won the race, coming in about eight lengths ahead; time, 12m. 17½ sec., the Riversides being 17 sec. behind.

The season closed with the much talked of four mile race between the Black Rocks and Hibernia Rowing Clubs for \$200 a side. The Black Rock Club used their paper shell "P. P. Pratt," and the Hibernias a cedar boat, "Wm. Weston," built by Blakey, of Cambridge, Massachusetts. This was a splendid contest, the Pratts getting away first, but were soon overtaken by the Hibernias, who had things their own way to the stake boat, but there met with an accident, from which they were unable to recover, and the victory fell to the Black Rocks, who came in about two boat-lengths ahead; time, 26m. 36½ sec.; Hibernia's time, 26m. 44 sec.

J. C. SNEHAN.

The Horse and the Course.

—It is stated that the horse disease which was so prevalent last year has reappeared in this city, and that the car and stage stables have together some ninety cases are so of sickness. Some alarm has been felt thereat, which we believe is without foundation. On careful inquiry on our part, we have been assured by a distinguished veterinary surgeon that this alarm was groundless. It is true that in some cases where horses were not perfectly cured of the epizootic which attacked them this spring, that these horses have succumbed from lung diseases. At the beginning of the really cold weather, horses are prone to feel the sudden climatic change, and it behooves all owners of these noble animals, whether they be used for profit or pleasure, to be more than careful with them. The car and stage horses are more exposed to take cold than any others, and, as four or five cases only are reported among other classes, we assume that the supposed disease in question is merely cold resulting from standing too long after excessive labor and perspiration. No fatal cases are reported. In England some peculiar cases of horse disease, and of a fatal character have occurred, the animals dying of suffocation in a few hours. Fortunately the cases are quite isolated and no serious consequences are anticipated.

—Mr. Robert Bonner has added to his stable a son of the celebrated Flora Temple, sired by the trotting stallion Mambrino. This four-year-old colt is a striking likeness of his famous dam. His disposition is perfect. He can step at a 2:30 gait.

—At Prospect Park, near Brooklyn, L. I., three races took place on November 27th, and attracted a good deal of interest among the local and general public. The first race was a match of \$200, between Grey Charley and Jersey John, mile heats, best three in five in harness, catch weights, owners to drive. Jersey John won. The second race was for a sweepstake of \$300, mile and repeat in harness, four horses entered. Arnold's Francois won. Time—3:18, 3:11. The third race was for a purse of \$100, mile heats, best three in five, five horses entered. L. S. Sammis' John, Jr., won in three straight heats.

—At Fleetwood Park there were three races on November 27th, which created considerable interest among the friends and owners of the horses engaged. The first race was a match of \$500, mile heats, best three in five under saddle, between Tanner Boy and Joe Clark. Tanner won after an exciting struggle in three straight heats. Time—2:42½, 2:36½, 2:36½. The second race was a sweepstake of \$300, mile heats, best three in five in harness. There were three horses started. J. Lyons' Skinner won. The third race was for \$300, mile heats, best three in five, for teams. This was the most exciting race of the day. B. Wilson's Willie Lane and mate won.

—At Deerfoot Park there were three races on November 27th. The first race was a match for \$500, mile heats, best three in five, to wagons, between Eastern Boy and Plumber Boy. Eastern Boy won the three last heats and race. The second race was a match for \$400, best three in five in har-

ness, between North Star and Rufus. North Star won. Rufus was distanced in the fourth heat. The third race was a match for \$200, mile heats, best three in five in harness, between Nellie and Captain George, to wagon. The latter won the three last heats and match.

—The stallion Wild American has trotted in 1:65. His mane measures 8½ feet.

—The following letter to the London Times from the Earl of Coventry, a breeder and racer of thoroughbred horses, will be found interesting to our gentlemen who keep breeding and racing stables:—

SHORT RACES.

To the Editor of the London Times:—

SIR—The short races which now-a-days prevail have a far greater influence for evil, in my opinion, on the breed of horses than the mischievous practice of running two-year-olds early in the year. I brought forward a motion at a recent meeting of the Jockey Club to the effect that there should be no more races for three-year-olds and upwards of shorter distance than one mile, but it was negatived by a large majority. I have reason to believe that many members of the Jockey Club agree with my views; but Newmarket is a difficult place to get at, and I venture to entertain the hope that in future, measures of importance may be discussed in London.

The number of short races is increasing, for I find that in 1871, out of 1,253 races, 646 were under the distance of a mile; in 1872, out of 1,260 races, 741 were under a mile. I have not included two-year-old races in this calculation, which I believe to be a correct one. We all agree that soundness of wind and limb is the most important element in the constitution of a horse. It is generally admitted that roaring is an hereditary disease, and it is an equally well-known fact that roasters can win over short courses; therefore the Scurry Races, of which I complain, may be regarded as a premium for unsound horses. Admiral Rous, in a letter which he published a short time ago in the Times, says "the breed of horses of which we are so proud will eventually be beaten by the French," and states as his reason for thinking so, "that Frenchmen reject roasters and infirm legs." Can that be a matter of surprise, when it is recollected that in France there are no races under a mile, and in consequence no occupation for roasters and cripples? I think it a great national misfortune that Lord Rosebery's Committee abstained from considering the case of race-horses, because the Turf is the fountain head whence most breeders derive their supply in the shape of thoroughbred stallions. At many of the horse shows I am in the habit of seeing stallions that I know to be roasters, but they have acquired—thanks to the short races—a reputation on the Turf, and their services at the Stud are sought by breeders. Lord Stradbroke, in his evidence before the Committee of the House of Lords, ascribes the deterioration in our breed of horses to "the large sums of money which are to be won by two-year-olds and three-year-olds in short races, and consequently gentlemen have been breeding for speed, and not for endurance." Mr. John Mannington and Mr. W. M'Grane agree with him.

There is plenty of evidence to show that the disease of roaring has been more frequently met with of late years, and we find that the number of short races is increasing. Layers of odds and owners of bad horses are fond of short races; the general racing public dislike them, and I believe that if they were done away with altogether there would be a very perceptible decrease in the number of roasters bred in years to come.

I am, Sir, your obedient servant,
CROOME, NOV. 5. COVENTRY.

HORSE CLIPPING.—There has been considerable discussion among the practical horsemen, as to the benefit or injury experienced by a horse from the process of clipping. A reference to the authorities on this matter will show that the horse in his native plains has always a short coat of hair, and that the winds and rains, which cause him here to throw out an extra protection are not natural to him. If the animal is left to follow his own impulses, even when turned out in this country, he will be all the better for his long coat, for while it has the great advantage of protecting him from the cold, it is not wetted by sweat, because he does not voluntarily gallop long and fast enough to produce that secretion. This natural protection is therefore a decided benefit to the horse when left in a state of nature—but when man steps in and requires his use for such work as will sweat him severely, a long coat is found to produce great exhaustion both during and after having been performing hard work. Now during our cold winters, so long as the winter coat of the horse can be kept dry, he is protected by it—and the slow-going horse, or one only required to perform easy work will be all the better for it—but the moment the pace is sufficiently accelerated to warm the skin the sweat pours forth when at work, and after work is kept up by the matted mass of hair with which the horse is covered. The clipped horse dries off quickly; and it is asserted with a good show of reason, that a short, dry coat of hair is better for the horse than a long, thick wet one. The clipping no doubt removes the tendency to sweat; or if the horse sweats when at work, the secretion ceases when the exercise which produced it stops. Now while we maintain that in such cases clipping may be practiced without injury, we still believe the indiscriminate clipping of horses for the fancy or fashion of the thing, to be wholly unnecessary. At any rate if horses are clipped, their grooms must remember that they need extra attention; a warm stable and plenty of artificial covering; we speak now of fancy horses not used as workers.—*Mane Farmer.*

—When spring comes round, the croquet sets, which may be had by subscribing to the FOREST AND STREAM, will come into use most opportunely. See advertisement of prizes in to-day's issue.

A shopkeeper who recently took it into his head to have a holiday, shut shop and wrote on the shutters:—

All flesh is grass, and grass is hay;
We're here to-morrow, but we're gone to-day—fishing.

—A Volcano has broken out in the Pinto Mountains, ten miles from Eureka, Nevada.

Nervous persons are not apt to receive a deal of sympathy, except those who have suffered from a like disorder.

Art and Drama.

GOSSIP OF THE WEEK.

BY T. B. THORPE.

THE opera under the management of Mr. Strakosch has, for the last week, been a continued surprise and a sort of apparent success. The glamor, however, does not conceal the fact that, while we have had more good artists of fair ability at one time on the stage, and consequently smoother and more complete performances than heretofore, there stands out the usual and melancholy rumor that financially the entire season, so far, and to the end, will be a decided failure. It is difficult for lay members to understand the charm of running in debt for the benefit of these foreign singers, but still more difficult to get at the way money is obtained finally and easily to settle the bills, for we are not aware that any operatic season ever closed in any other way than in disaster. But the managers keep on the uneven tenor of their ways, and go to Europe in the summer to ransack every important capital for "distinguished artists," which, when found, are imported in the fall to this city to fill up the hotels and small boarding-houses in the vicinity of the Academy of Music with colonies of persons, the majority of whom look like organ-grinders enjoying a holiday in not unclean but jaunty clothing. The professional "critics" meanwhile sharpen up their pens and commence, and continue indefinitely, long articles for the press that have, as a rule, the same amount of real information as a string of onions without its continuity, yet like the onions, capable of bringing tears to the eyes of any experienced opera-goer or any good musician. And so goes on this struggle, the really interesting part being the opportunity it gives to "wicked men" of seeing congregated hundreds of New York ladies in full dress, presenting a combination of rare taste, rich costumes, splendid surroundings, and surpassing personal beauty excelling any similar gathering in the wide world.

Speaking of the sex, we propose for a moment to allude to the two most interesting that have appeared this season—not among the audience—but before the footlights. We allude, of course, to Mme. Nilsson and Miss Cary. We have no desire to detract from the artistic reputation of Nilsson, when we say, that from the day she was announced as engaged for our market, she has been the best managed operatic recipient that ever honored us with a visit. A great many superficial-thinking people go into ecstasies over the wonderful sagacity of Barnum as a manager, but the business man of Mme. Nilsson has far surpassed "the Phoenix" in all legitimate and allowable practices. On Nilsson's arrival here all the resources of our "best society" were brought into requisition, and an attempt was made, with some success, to liken her to the immortal Jenny Lind. Gradually the scales are beginning to fall from the eyes of the multitudes, and the suspicion is growing apace, that Nilsson is not the greatest artist that ever lived, and beside not quite equal to Lind in those graces of the heart that induced the Swedish songstress to contribute much of her public life to deeds of Christian charity. Whatever our public may lack in critical knowledge of music, it is always alive and affected by high personal and moral attributes, and once let it be understood that a professional, claiming the highest position, has no other inspiration than dollars and cents, this selfishness soon obscures even great merit, for talents, however brilliant, will never take the place of high moral qualities. Our people can understand perfectly liberality, generosity and sympathy, and through these charming mediums professional talents can only have the best and most appreciative admiration. As a rule, persons of true genius and genuine art are not mercenary; they are spontaneous and most often improvident.

Miss Cary, who has sustained herself so nobly under the trying comparison suggested by membership with Strakosch's troupe, is an American, and if we can get clear of the prejudice which presumes that our native throat cannot equal any in musical accomplishment, then we have in her a person equal to Nilsson in the capacity of reaching a standard of superior excellence, and it rests with our fashionables who profess to make opera a specialty, to take up this young lady and pay her the social respect which seems necessary to place her where she belongs. What reason have these people to wait upon Mme. Nilsson and neglect Miss Cary, socially and morally her equal, and in professional capacity will possibly prospectively be her superior? Miss Cary, from a quarter where we look for but little spontaneous criticism, has been unequivocally and properly pronounced "one of the few great contraltos of the world." This judgment is in accordance with the change which is taking place in musical sentiment, that the contralto notes of either voice or instrument have the power of moving the passions that the altissimo (Nilsson's forte) and bass are entirely destitute of. In other words, those actors who have produced the greatest effect before the Lyceum, Congress or Parliament, have been masters of the lower notes. It was the voice of Burke and Henry, of Clay and Sheridan, even more than their eloquence, that threw women into ecstasies and robbed men of their judgment. The contralto is a gift as valuable as it is rare; where there is one rich voice like that of Miss Cary, there are to be found twenty or more sopranis.

We bespeak then for Miss Cary because she has won such a great success by sustaining herself so splendidly this season, that fair consideration to which she is entitled. The best European musical judge stated recently that the Americans have the more promising pupils in

Europe of any other nationality. Our airs, as they blow from heaven, are not necessarily pernicious to the voice, as we have been made to believe, and we must get clear of that tradition. Adelina Patti was born and brought up in what is now one of the obscurest streets in this city—she is unrivalled. Let these foreign song-birds have just a fair show and no more.

We are getting a little bit tired of their assumptions and manners, quibbling and growling of everything that does not please them. Driving ambitious managers into bankruptcy, disappointing audiences, breaking engagements with impunity, and treating us as if we were under any especial obligations to them, and all this, while they are the needy recipients of a much enduring public.

—The presentation of "Aida," Verdi's last composition, before its performance in any European capital, marks an era in this city of luxurious refinement, or desperate extravagance. Novelty, for the time being, has taken possession of admiration, and we regret the operatic season is not long enough to thoroughly test the genuine popularity of what is claimed to be Verdi's best opera. This much is certain, that an event which in Paris or Vienna, would at once have set the musical world of those great capitals in an excitement, has not created a ripple in New York. The press has given the event less space and less enthusiasm than it usually expends on the most common place sensational play, and the amount of type and fine writing that hails the revival of the "Ticket of Leave Man" leaves the greetings of "Aida" in the shade.

—Edwin Booth ended on Saturday an engagement of four weeks, in which time he performed in fourteen plays, including the sublimest tragedies of Shakspeare and the best plays of the modern school. His success was almost unvarying. If any unforeseen accident compelled Edwin Booth to retire from our stage, tragedy would cease to have a genuine presentation. This monopoly makes the miserable support he always has from the stock company at his theatre an endured evil. Suppose it was possible to announce the conjunction, once so familiar in New York, of Junius Brutus Booth as *Othello*, and Edwin Forrest as *Iago*, and the next night Junius Brutus Booth as *Iago*, and Edwin Forrest as *Othello*. "How would stand the record of the time?" Echo would answer, "Edwin's presentation of the play of 'Othello' was rather weak." By comparisons, we sometimes can get at the real poverty of the stage. The greatest scene in the combination we have alluded to was when the physically little *Othello* seized the physically great *Iago* by the throat, and by his mental power and sublime genius for denunciation seemed to be a giant compared with Forrest.

—Wallack's is nightly crowded by a delighted audience, the attraction being the most offensively named play, the "Liar." It is admirably performed. The passages which brought together Mr. Wallack, Mr. Gilbert, and Miss Lewis were given with charming effect. Miss Lewis must become a great favorite; she commands sympathy and admiration at once.

—The "Wicked World," at the Union Square Theatre, surprises its warmest friends with its constantly increasing popularity. The reason must be the beautiful scenery, the charming faces, and the emotional acting of Miss Morris, for the play is apparently without a plot, without a moral, without anything except fascinating scenes, which pass and repass like the brilliant combinations of the kaleidoscope. If the two "roughs" (Thorne, Jr., and Rankin) and the idiot, that represent the male characters, were left out, we see no reason why the "Wicked World," with a little change, as a refined spectacular piece could not run the whole winter.

—Daly's new Fifth Avenue Theatre, Twenty-eighth street, near Broadway, opened on Wednesday night. Its presumptive popularity was so great, that the majority of the seats appear to have been sold before the ticket office was opened. The theatre will be a success.

CINCINNATI, November 29, 1873.

WOOD'S THEATRE.

—The promise made to the public by Manager Macauley, that the play of "Divorce," at present at Wood's, would be given in an entire new dress, was fully redeemed. It was handsomely mounted, and in the last scene the stage was gorgeous. "Divorce" was given by the Furbish Fifth Avenue Theatre Company. The fact that they have travelled for two entire seasons, playing this one piece, shows that the people appreciate their rendition of it. It will be followed by "Article 47."

—At Robinson's Opera House we have been enjoying a week of light comedy—"Dundreary." It was presented by E. A. Sothorn, assisted by his son Lytton, Mr. Vining Bowers and Miss Minnie Wolton. "Dundreary" will be followed next week by "Sam" and "David Garrick." The largest houses are expected next week to witness the latter piece.

—Harry Robinson's Minstrels were here and gave three performances to rather large houses Monday and Tuesday evenings and Tuesday afternoon.

—On Monday evening Mr. Charles Bradlaugh gave a lecture on "The Republican Movement in England," at Pike's Opera House. It is rumored that he will return soon and deliver a lecture on Ireland.

—Mr. Charles Drew, recently connected with the company at Robinson's, has returned to the Mrs. Oates Opera Company, of which he was the leading tenor for several seasons.

W. L.

—The long evenings are now coming, and the children should have good games to help pass them pleasantly. "Avilude," with its birds and their descriptions, is the best ever published. Sold by all booksellers and toy dealers, or sent post-paid on receipt of seventy-five cents, by West & Lee, Worcester, Mass.

"From its meritorious character deserves the widest circulation."—*Banner of Light.*

New Publications.

[Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.]

BOOKS.

THREE THOUSAND WORDS. A Pronouncing Handbook of words often mispronounced. By Richard Soule and Loomis J. Campbell. Boston: Lee & Shepard.

When we took up this little *multum in parvo*, and carefully examined it, we found our memory rapped many times, and we were made quite sensible of the value of this little four-by-six manual of ninety-nine pages, corrections of some three thousand words very frequently mispronounced; also notes upon allowable cases, in which the reader or writer has an optional choice in the selection of words or phrases. We have much larger, more elaborate, more costly works upon similar subjects, but we do not call to mind one of more real value than this little pocket companion. Lee & Shepard are in the habit of publishing a great variety of good books, "great books," for the people, but this little corrector of mispronunciations should lie side by side with Webster's and Worcester's big dictionaries.

THE PORTRAIT. A romance of the Cuyahoga. By the author of "Bart Ridgely." 16mo. Boston: Nichols & Hall.

The author of this book opens with a life picture which will be long remembered. The lessons of death, come when they may, and under whatever garb they appear, should teach us our own mortality; for it is in vain to try to escape the trials, temptations and vicissitudes of life. The hero of this work enters life under the shade of a bitter experience, the death of his beloved mother. The hero at a very early age finds himself motherless, homeless, and his young life burdened with a great doubt, that grows stronger and stronger as he grows older. He enters the service of John Green, a tavern keeper, as his bound boy. His master joins the Mormons, taking our "Fred" with him. Here he, after a short time, runs away from the former tavern keeper, Green, and finds a home with a kind-hearted farmer. His first trial takes place here, in hearing the farmer's wife say he "was nobody's son." He then leaves his employer, and seeks a home with friends in a neighboring town; here he a few years after establishes himself a "counselor at law." Here he makes the acquaintance of a young widow, who has visited Europe and traveled much, and had seen the portrait of an American gentleman whose lineaments were almost precisely like those of Freddy. She knew the whole history of that portrait, and from that knowledge a most charming romance is formed. This plot, original in itself, is not so well wrought as it might have been from the many materials at hand to make it a more perfectly finished work.

The history of Mormonism years ago will be found quite interesting. The historical Joe Smith, Rigdon, and other old Mormon saints and rascals step out of their frames, and these old dusty portraits become as lifelike as in days of old. We think the character of Fred suffers from the mystery that surrounds his birth. Yet this seems to be the necessity of the author. Belle Morris, a finely written character, is just what we would call "a very fine specimen of true womanhood," frank, sincere, noble, and we do not wonder at the excited state of Fred's feelings at the thought of losing her. We like this book better than "Bart Ridgely," it possesses more life, interest, and although not a perfect work, it would be called at least a "good romance."

ADVENTURES BY SEA AND LAND; Or, Perils by Sea and Land, and Hair-breadth Escapes in all Parts of the World. Illustrated. Philadelphia: Porter & Coates.

This is a beautiful quarto, elegantly bound, and finely embellished. It is one of the books that will find many Christmas and New Year purchasers. It is just the book for the boys, as exciting as "Robinson Crusoe," and very diversified in its contents. We shall only give the outlines referring to the book itself for its illustrated contents. First, the Island of Ceylon is spoken of, and its beautiful forests and sweet climate, amply enjoyed by Templin and his confreres, and their first encounter with the elephant, is finely told; a good surprise, some genuine fun, and the final retreat of the "Big Elephant," is graphically given; and finally, the encounter with the terrific serpent closes the tarry in Ceylon. Then we have the "fire at sea," with its exciting incidents, its perils, and escapes. Thirdly, in the desert, making the acquaintance of the Indians; incidents; not particularly pleased with the savages, who steal their wine, and get drunk on the same; escape; shipwreck and starvation; with other thrilling incidents. The little Africans' wonderful adventures; the Circassian war; the Tschuttski; the Fair of Wishure; Norogolod, &c.

HIS MARRIAGE VOW. By Mrs. Caroline Fairfield Corwin; Author of "Rebecca," &c. 16mo. Boston: Lee and Shepard.

Open this book without a determination to read it carefully and without any other view than to be amused, and you may as well lay it aside at once. It will do you no good whatever. How is this book to be read, and how understood? is the great question in the mind of the reader at the outset. "How far can a man pursue his pleasures, how far can a husband go in his attempts to win the affections, or make love to another woman, while he has an estimable wife at home?" This is about the form, the idea, and as a palliation for this free love, this departure from true marital obligations, a poor sick, bed-ridden wife is deemed to be all sufficient. Well, this is one view of the case, but it does not answer the question, "Is it a sin, a wrong or not so to do?" Although we like some portions of this work, we do not think the public would be benefited by adopting as a code of morals such sentiments as are set forth on pages 81 and 83. At least we should hope not. We should like to give a thorough analysis of the "Marriage Vow," and speak at length of that mythical free love philosophy that pervades the whole. We believe in the religion of love, pure, chaste, soul elevating, but we are disappointed in this work, and to be true to ourselves and the public, we must say that while it is amusing and interesting, morally it is not to be placed before "Baxter's Saints Rest," and many other books of that character.

For \$150, thirty copies one year, and one decarbonized steel barrel, solid breech back action Parker Gun, No. 12 gauge, 7 1/2 to 8 pounds. Price, \$75.00.

SINGLE AND 'DOUBLE' BARREL MUZZLE LOADING SHOT GUNS.

For \$30, four copies, one year, with one American single barrel gun, perfectly safe; blue barrels; walnut stock; price, \$10.

For \$35, seven copies, one year, with one American double gun; fine blue barrels; walnut stock; a handy and reliable gun every way; price, \$18.

For \$50, ten copies, one year, with one double boys' fine twist barrel gun; walnut stock; forward action lock; a safe gun every way for boys; price, \$26.

For \$75, fifteen copies, one year, with double gun, English Laminated steel barrels; handsome finish; walnut stock; case hardened locks; a good and serviceable piece in every way; price, \$45.

BOOKS.

For \$5, one copy, one year, with "Hallock's Fishing Tourist;" price, \$2; or "Wingate's Rifle Manual;" price, \$1.75.

ENGRAVINGS.

For \$5, one copy, one year, two elegant engravings: Fishing and Hunting, Ridaux; price, \$1.75.

Every article is of the finest quality and will be sent free of expense.

Persons getting up clubs can of course secure any of the prizes we offer to subscribers.

To secure these most liberal prizes subscriptions should be received by January 1st, 1874.

Forest and Stream

IS A WEEKLY JOURNAL,

DEVOTED TO

Field and Aquatic Sports,

Practical Natural History,

Fish Culture,

THE PROTECTION OF GAME, THE PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN

OUTDOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Co.,

103 Fulton Street, New York.

TERMS, FIVE DOLLARS A YEAR,

STRICTLY IN ADVANCE

The FOREST AND STREAM is a paper which can be read in the family.

It can be read by the ladies and children.

We count many principals of schools as among our contributors.

It will inculcate a love of manly sports with naturalistic study, and has for correspondents and contributors some of the most distinguished naturalists in the United States. Where to find game in any part of the United States makes it the medium of the sportsman.

Every description of game or amusement which is in vogue among respectable people, and of value as a health-giving recreation, is practically encouraged. Nothing that demoralizes or brutalizes, nothing that is regarded as "sport" by those whose instincts are but a grade higher than the creatures they train to amuse them, will find a place in its columns.

Each number contains a paper descriptive of some particular fish, animal, or bird. The FOREST AND STREAM can occupy a place in any gentleman or lady's drawing room, and in the school room, and not be out of place.

Subscriptions will only commence from the date of the receipt of the money. If subscribers desire back numbers we will endeavor to send them, but do not engage to.

There never was offered a better opportunity for Christmas or New Year Presents.

Remitting Money. Checks on New York City Banks or Bankers are best for large sums; make payable to order of the FOREST AND STREAM PUBLISHING COMPANY, 103 FULTON STREET, NEW YORK. Post Office Money Orders for \$50 or less, are cheap and safe also. When these are not obtainable, register letters, affixing stamps for postage and registry; put in the money, and seal the letter in the presence of the postmaster, and take his receipt for it. Money sent in the above three methods is safe against loss.

OPINIONS OF THE PRESS.

The FOREST AND STREAM is a model of typographical neatness, and its contents are sufficiently varied and interesting to secure for the paper a cordial reception from that class of the public to whose taste it caters.—[New York Times.

It is a handsome sheet of sixteen large pages, and is filled with a variety of very interesting reading matter.—[New York Sun.

There is need for a new advocate to make the American people more in love with outdoor life, and FOREST AND STREAM promises to do the work admirably. The various departments are edited with knowledge and skill.—[New York Journal of Commerce.

It is tastefully arranged and handsomely printed, and seems to be well adapted to persons of cultivated tastes.—[New York Tribune.

Breech-Loading

RIFLES & SHOT GUNS

Long Range Match Rifles for "Creedmoor" Shooting, now ready. The same as won the "Turf, Field and Farm" Badge, Aug. 2, and "Amateur Rifle Club" Badge, Aug. 9. See reports. Unequalled for accuracy by either Breech or Muzzle-Loaders of other makers.

For simplicity of mechanism, ease of manipulation, quality of workmanship and material, accuracy of range, and penetration, WITHOUT COMPARISON.

"It is a noteworthy fact that though many different kinds of rifles were used in the several matches, including the converted Springfield, Remington, Metford, Ballard and Ward Burton Rifle, every prize in all the matches was won by those who fired with the Remington rifle, except the last."—From N. Y. Times, June 22, 1873.—(See full report.)

The Remington Rifle won Twenty-two

out of Twenty-three Prizes at

the Creedmoor Meeting,

June 21, 1873.

Also, Revolving, Repeating, Deringer, and Vest Pocket

PISTOLS & RIFLE CANES.

—OUR—

Double Barrel Breech Loading Gun

IS NOW READY.

The best ever offered, containing all the most desirable features of the best imported, together with some valuable improvements peculiar only to this gun. Top Snap action, half-cocked, breech opened and shells extracted by one motion.

BREECH LOADING GUNS

A SPECIALTY.

We would call the attention of the public to our large assortment of

Breech-Loading Shot Guns,

Manufactured by the following celebrated makers: Messrs. W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); P. WEBLEY & SON, W. W. GREENER, WESTLEY RICHARDS, J. HOLMES & SONS, and other makers.

A full line of fine

PISTOLS AND RIFLES CONSTANTLY ON HAND.

DIXONS & HAWKSLEY'S SHOOTING TACKLE.

To insure good shooting from Breech-loading Guns, we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,

manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn. These shells are the cheapest and best in the market, can be easily re-capped with ordinary caps, without the use of the implements necessary in priming all other styles of shells.

BUSSEY'S PATENT GYRO PIGEON AND TRAP, WITH CASE, AND 100 BIRDS.

THE ST. JOHN.

For Forest and Stream.

FROM the far, untrodden fastness
Of the moss-hung everglade,
From the distant springs that bubble
In the cypress darkened shade;
From pools and rippling lakelets,
Human eye ne'er gazed upon,
Flowing into golden sunlight,
Rolls the beautiful St. John.

Winding far thro' virgin forests,
Where drink unfrightened deer,
By broad and reedy marshes,
Where the heron knows no fear;
Mid groves of tropic richness,
Their verdure never gone,
Flashing as a royal river,
Rolls the beautiful St. John.

Turn a land of endless summer,
Where flowers grace each day,
And bright-hued birds are singing
An unceasing roundelay;
Whose waves are never fettered
By mail of ice laid on,
Reflecting only summer skies,
Flows the beautiful St. John.

Lingering like a truant schoolboy,
Idling on by vine and flower,
Caressed by light and shadow;
Caring not for day or hour,
Seeming loath to leave its birthplace,
Turning back, then flowing on,
Tracing lines of grace and beauty,
Dallies softly the St. John.

Growing broader, flowing bolder,
Wave tossed as an inland sea,
The streamlets of the woodland
In a mighty union free;
Then a noble path for commerce,
That ships float proudly on,
The welcome of the ocean surf
Receives the great St. John.

But for plagues' chills and fever,
And such agitating shakes;
But for scorpions, *et cetera*,
And wily rattlesnakes;
But for the bold mosquito,
And the pizen moccasin!
I'd sadly learn to leave thee,
Thou miasma St. John.

L. W. L.

Winter Sports in Canada.

EDITOR FOREST AND STREAM:—

I send you a short account of moose hunting and trout fishing, as pursued in Lower Canada in winter, and my personal experience of camping out during the severe month of February, when the thermometer marked twenty and thirty degrees below zero, and the snow lay deep on the lakes and mountains.

At Malcartier, some fifteen miles from Quebec, we reach the farthest settlement north of the St. Lawrence. Here commence those vast forests and mountain ranges that extend themselves to the Hudson's Bay. Throughout its entire length it is intersected with numberless lakes and rapid shallow rivers. In this primeval wilderness abound the lordly moose and caribou of our northern climate, while every lake and stream is filled with that fish so dear to anglers—the trout. The smaller fur-bearing animals are also numerous.

The few remaining Indians in autumn strike far into the interior, to return in the spring laden with the proceeds of their rifles and traps. Occasional parties from Quebec, under the guidance of some Indian, make short excursions to the lakes, and return with glowing accounts of the abundance of game and the wild and beautiful scenery everywhere met with. These trips are usually made in summer or early autumn. Few have the courage to face the cold or the imaginary hardships to be endured in winter. I call them imaginary, for without a few of them wherein would consist the pleasures of wild camp life?

The stars are still shining brightly, though a faint glimmer of dawn appears on the horizon. We are up, and hastily completing our preparations for an early start. The big mare stands ready at the door harnessed to the berline which is to convey us and our traps to Roche Platte, some ten miles, before we assume in place our snow shoes and packs. We lay in a good breakfast as foundation for the long journey before us, and then, lighting our pipes and bidding all good-bye, bundle into the sleigh. We wrap the buffaloes well around us, for the cold is intense this early morn, and giving the old mare a touch with the whip we commence to glide over the hard frozen road at a good rapid pace. Our traineau, heavily loaded, follows behind. Phew, how the sharp wind pinches this morning; but we are prepared for it, and only draw our capuchon closer over our heads, and defy it to do its best. We are a merry party. Mr. Neilson, my kindest of hosts, Pat Cassin, our guide and hunter, as genial a fellow as ever drew breath, with an inexhaustible fund of dry humor, and your humble servant. We make rapid headway, and soon come in sight of St. Michel Mountain, whose summit we are destined to reach before many hours. The rising sun just tips it, and reflects back from its white coverlet of snow a glittering as of a huge diamond set in a dark green ground of spruce.

Our road is well defined over the plain by balises, consisting of small evergreens set out on each side at regular intervals; otherwise, the severe storms that sweep over it would completely obliterate all traces of it, and thereby destroy all communication between the few settlers at Roche Platte and the settlements. The snow at this season is five to six feet deep on a level, and where it drifts it is fifteen and twenty feet.

The drive at last comes to an end, and we draw rein before Ned's. We are met with a noisy but cordial welcome, and with the assistance of himself and sons we are soon ready to take up our packs and march. Here on a river point our host has built himself a log house, and cleared the few acres that are adapted for cultivation.

Our snow shoes are buckled on, our packs adjusted, and we take up our line of march towards the clouds above. Now comes the tug of war. Mountain climbing, at no time an easy matter, now rendered doubly arduous on snow shoes, which admit of little foothold, or, I should perhaps say, too much foothold. We tug and pull and perspire, but advance slowly. The point of my snow shoes catches, and I make a dive headforemost into a depth of ten feet of snow, and am extricated with some difficulty by my companions after being almost suffocated. After three hours' hard labor, and a few more mishaps, we reach the top, and call a halt to rest and admire the panorama spread out below us. Far to the south we see the tall tin spires of the churches in Quebec glistening in the sun. The ice-bound St. Lawrence, the Isle of Orleans, and the numerous habitants' hamlets dotting its shores, while at our feet winds the Jacques Cartier in its tortuous course along till lost behind some mountain that rears its snow-capped head high above the others.

Pat now warns us to be moving, so lighting our pipes we reluctantly follow on. Our road now is only marked by an occasional blaze on a tree, which Pat keeps unerringly in view. High mountains encircle us on all sides. We meet with a great many fresh tracks at Lake Michel, which our coming have doubtless disturbed and started off. We skirt the lake to its discharge, and crossing it strike upward again. Another halt is called at Lake Tontari, near our last summer's camp, to prepare the noonday meal. We scrape the upper snow off the lake, and secure enough water to boil our kettle. A fire is kindled on some logs from an old chicot, and we are soon enjoying a hearty meal. The poles only of our old camp project themselves above the snow, which must be here some seven feet in depth. This lake is some four miles in length, and in summer affords the finest fly fishing I have yet found. I have taken in one evening from three to four dozen trout, aver-

aging a pound in weight, some few running as high as two pounds. The lake is surrounded by mountains which rise abruptly on two sides from the water's edge. The echo here is perfect. A person speaking slightly above an ordinary tone of voice will have his words distinctly repeated once from the opposite side. At night, in camp, it was a great source of amusement.

As darkness set in we reached Etienne's cabin, far up in the mountains, beside a noisy, turbulent stream, the outlet of a small lake which we have just passed. We find everything prepared for our arrival—wood cut, a fresh bed of balsam boughs laid, and the snow cleared from inside the stockade. We are at one of the winter hunting camps of Etienne Gros-louis, a Lorette Indian, with whom we had made arrangements for our visit early in the season. He is now far up the Tuilerie River hunting moose.

The cabin is constructed of birch bark, stretched over poles, with sides and back of split balsam. It is open in front before the fireplace, which in turn is surrounded by a paling. This serves to keep the snow from caving in. The site is badly selected; it is in a gorge of the mountains, through which the winds whistle, sending the sparks from our fire high into the heavens. How it crackles and blazes, sending out such cheery warmth this cold night and diffusing a pleasant glow that lights up all the surroundings. We settle ourselves down before it, and former trips and adventures are once more rehearsed, and our prospect for the morrow's sport discussed at length.

This morning it is commencing to snow, and the sighing winds through the spruce, and the distant roaring of the mountains, foretell a heavy storm. Nothing daunted, we make things snug about camp, and prepare ourselves for a day's fishing on the lake. Phew, how the storm sweeps over its open surface. I cut a couple of holes through five feet of slush and ice, dropped in my lines, and then constructed myself a shelter from my buffalo, which I tied between two stakes fastened in the snow, and put myself to leeward. We succeeded in taking some dozen before the rapidly increasing storm drove us to seek refuge in camp. We spent the balance of the day smoking, eating, and listening to the howling storm without. Two whisky jacks are driven into camp, and now sit on the palisades over the fire watching our every motion with curious eyes. What cunning, thieving rascals they are; leave anything eatable out of your sight for a moment, and they pounce upon it, but are off the moment they are observed.

Clear and intensely cold this morning—thermometer down to about twenty degrees below zero. You require to handle rifles very gingerly with bare hands. I am off to a lake below us to look for moose. Can I succeed in finding a yard we may anticipate sport. The moose at this season travels but little. The deep snow, with that fearful crust, confines them to their feeding ground, and soon bring them to bay when pursued, when they fall an easy victim to the rifle of the hunter.

What a death-like stillness pervades everything after the storm of yesterday. The only sound that disturbs it is the tap of an occasional woodpecker; otherwise, apparently devoid of all animal life. I travelled over a considerable extent of country to-day, but no sign of moose. The Indians hunting caribou in the early part of the winter has, I think, driven them further to the north of our present position. Mr. N. and Pat devoted themselves to fishing, but with poor success. To-morrow we are going to try a lake below us, formed years ago by a beaver dam, on the discharge of the lake near us. It is growing colder, and we are compelled to cut more wood for the night. I am too tired to work, and reluctantly follow Pat with the traineau, to draw it in as fast as he cuts it. He selects an old birch, and his lusty blows soon lay it low, and cutting it into lengths of four feet I roll them on the train, and straddling the logs reach camp safely, my dragging feet preventing it obtaining too great momentum.

Pat sets fire to a rough birch near camp, and we watch the flames in their serpentine course rushing upwards. It is too cold to sleep; we sit huddled together before the fire, and are entertained by droll songs and stories by Pat. He has just been telling us of an adventure he had when a young man while hunting caribou, which might have ended seriously. He had started out in the morning with only his rifle, knife, and a mouthful of provisions. About noon he struck a fresh caribou track, and started in pursuit. Twice in crossing a lake did he catch a glimpse of him, but out of shooting distance! He still resolutely followed until the lengthening shadows warned him to retrace his way back to camp, and defer the further pursuit until the morrow. Darkness set in, and with it a gathering snow storm, and he soon found it impossible to follow his track. He now became seriously alarmed, and began devising with himself what he had best do. After some time a happy thought struck him. He was surrounded by balsam trees, and cutting from these sufficient branches he dug a hole in the snow and lining it top sides and bottom he crawled in, and sheltered from the storm anxiously awaited daylight to liberate him from his uncomfortable position. Morning came at last, and crawling out more dead than alive he took up his track, and had not gone far when he met his anxious companions, who had come to search for him.

We look sorry for want of sleep this morning, but make an early start for the lake. We have just returned, and with good success—twenty dozen trout, averaging some half a pound apiece. Out of one hole I took some five dozen, and in a depth of only three feet of water. I attribute our success to the fact that the lake is shallow, and the ice, with the heavy accumulation of snow, has been forced to the bottom, driving the fish into the channel. I caught one—a curiosity. It was about a foot in length, and, as I supposed, had a protuberance growing from each side of its mouth. I seized it, and giving it a slight pull was horrified when out came a frog of good proportions. It had swallowed it headforemost, but had been unable to get the hind legs fully in. We had a rare meal—trout in all forms. The meat is firm and good.

We give up all idea of moose or caribou, and prepare for one more day's fishing. At noon we have taken twenty dozen more, when Mr. N., complaining of not feeling well, we return to camp. What an enthusiastic sportsman he is; fast approaching his seventieth year, he still retains the vigor to enjoy it. He often puts me, his junior by many years, to the test to equal him in agility. It is growing very mild, and we have reason to fear a rain storm, which will place us in an ugly predicament, as it renders snow shoeing almost impossible. We pack up everything preparatory to a start.

At daybreak we are off, and by forced marches we reach Michel Lake. The snow shoeing is horrible, the snow accumulating on the shoes to such a degree that we are obliged to carry sticks to beat it off.

We descend the mountain safely in a series of slides, and are at Ned's just as it commences to rain. We hastily harness up, and at eleven o'clock arrive home worn out with the day's tramp. A good night's rest puts us all to rights, and so ended our trip. Though we secured no large game yet was I much pleased, and have promised myself another such at some future time, when I may have a better report to make.

G. M. F., Jr.

PIGEON ENGLISH.

EDITOR FOREST AND STREAM:—

Of all spoken languages the Chinese is to a foreign tongue perhaps the most difficult to acquire; mainly phonetic in its construction, the slightest difference in inflection may make a vast difference in the meaning of two or a dozen words nearly similar. For example, between *loug sui*, *lung sui*, *loong sui*, *lang sui*, and several other "suis" with nearly identical prefixes, a slight variation in the grunt tells whether it be hot water, cold water, or ice water that you speak of.

Again, if by close study and quick ear one has learned at Hong Kong enough to procure ice water for his table or hot for his bath, let him travel a few miles into another Province and his learning goes for naught. With the same written, the spoken language is very different, and the inhabitants of opposite sides of a river may not be able to understand each other. "Amoy," (gates of the sea,) is, not five miles from its walls, known as "Hai moon," which, I believe means "shut the door;" and as short a distance in another direction gives it another name, which I forget.

Thus foreigners coming to China for trade or other purposes would find, but for a resource, an almost insuperable obstacle to communication with the natives. This resource is that strange conglomeration of distorted words from many languages known as "Pigeon English." Americans, English, Portuguese, Dutch, Spaniards, in short, all nations come to China, and must talk with the natives. They can't or won't all learn Chinese, so the Chinese who are not to be baffled, have with wonderful ingenuity constructed a common language for all to meet on. It is a funny thing, though, to hear a Frenchman trying to talk pigeon English. To a stranger upon first arrival it sounds ridiculous, and he is tempted to class it as gibberish, but he soon learns his mistake.

Words and phrases have fixed meanings. When a China merchant says, "Maskee, my can secure," his word is given and your contract is as safe as a bond could make it. He has said "Enough, I give my guarantee."

Poetry can be written in it, as a very successful parody

of "Excelsior" that has been widely quoted has proved, and the paraphrase of Mrs. Herman's "Casabianca," which I have written, is almost a translation. There is hardly more freedom of phrase than would be required to put the same into French.

Of course many of the words convey no meaning to one not familiar with the language; but they all have meanings, and I give you a glossary:

GLOSSARY OF TERMS.—*Top-side*, up stairs, above, on deck; *chop-chop*, quickly, hurry up; *whilo*, get away, clear out; *allosame*, the same as, like; *joss*, deity; *number one*, first class, perfect; *downside*, down stairs, below; *no saby*, no savez; *maskee*, enough, enough said, finished; *what fashion*, what do you mean? what kind of a way of doing business is this? *what ting*, nearly the same as above; *hi yah*, exclamation; *galah*, exclamation; *chow chow*, as a verb, to eat or devour as a man, something to eat, as "my wanchee chow-chow," I want something to eat. I'm hungry.

The pronoun *he* is made to do duty for all genders and persons, and means he, she, it, his, hers, its, him, &c., as required. *My*, in the same way, means, me, I, mine, &c., and when Mr. Willie Edwin, in his otherwise perfect "Heathen Chinee" says, "Me washee, washee," he makes a great mistake; "My washee, washee" would be correct and beautiful. The word *pigeon* or *pidgin* means most anything, but more generally is used for *business*, as, "no belongy you pidgin," means "its none of your business." "My saby my pidgin," means "I understand my own affairs." "You can catchee you own pidgin," means, "You attend to your own business," &c. The syllable *ee* or *y* is added to most English words, and the letter *r* they cannot pronounce. "Cross" is with them *closs*, "strong" *stlong*. This has a curious effect; when at dinner the waiter asks you to take some "*hee*," he don't mean what he says.

Chinamen at Hong Kong will quickly detect a new arrival by the facility with which he speaks. Says one to me one day, turning with disgust from a newly arrived American, "He belong too muchee damn foolo; he no saby he own talkee." I'm sorry to record that they have not softened down our rough word "damn," but give it its perfect accent, and when one bequeued gentleman calls another a "damned Chinaman," he insults him as does our colored brother when he stigmatises a coffee colored friend as a "d—d nigger." (You can put a dash between those other d's if you wish.)

The amenities of social life can be explained in this "pidgin." I called one evening on a young lady in Hong Kong, and to the boy who came to the door I said, "Miss Malia hab got?" "Hab got topside." "Walkee topside chop-chop, talkee Miss Malia hab got one piecy man downside wanchee catchee he." Returned with the message, "Miss Malia talky alla plopper, can catchee;" so I staid.

A good story is told of a gentleman who, annoyed by a terrific racket in the court near his house, sent his boy to ascertain the cause of the gun firing, cracker popping and gong beating. The boy returned; "Well what ting?" "Oh, smallo ting, sir; one piecee Chinaman catchee bull chilo, he husyband makee chin-chin joss." In other words, a Chinawoman has had a son born; and her husband is returning thanks to God.

Chinamen can quarrel in the pigeon. Said one of them to a Jew merchant in San Francisco, who had treated him with indignity: "Hi yah, my saby you too muchee; you number one damn rascal; you killum Mellica man's Joss." And sometimes they are forced to use it in intercourse with each other. I saw an amusing interview between old "bum boat Sam," our Hong Kong purveyor, a Shanghai Chinaman who understood the pidgin, and a third Shanghai man who did not. Sam couldn't speak Shanghai dialect and the others could not speak that of the South. So the two talked pigeon, and the Shanghai man translated to his friend.

Thus necessity has developed a new language, and a generation of people speak an idiom unknown to the world at large.

PISECO.

LEAVES FROM A SURVEYOR'S JOURNAL

TRAPPING.

AFTER securing the skins of the wolves, we started on our way home, it being too late to go further that day and get back. Upon striking our trail as we passed one of the deadfalls, Ralph commenced again growling about that "dog-goned fisher." After pondering the matter over in silence for awhile, he broke out with, "darn his pokey hide, let's fix him;" with that we returned to the fall, and after much cogitation and mental calculation, together with considerable hard labor, we managed to fix a heavy log to a couple of saplings just over the back part of the deadfall, and so attached to the rear stakes that any violent attempt to pull away or tear down the same would loosen the weight above and cause it to fall. "There," said Ralph, "I'll bet that'll do it." It certainly was a very ingenious arrangement, and I hoped with all my heart would prove effective. We rigged up another one the same way before reaching camp. The construction of a deadfall is well understood, and it is not necessary for me to describe it, for hardly a country boy of a dozen years but is familiar with its composition, and its spindle or figure four arrangement.

The next day Ralph having fixed up his scent drag, started off alone on his trail. A trapper's trail, or line of traps, consists of a line blazed on the trees through the woods along which, at intermediate distances, depending upon circumstances, character of the country, &c., he builds a deadfall, or sets a trap. These lines are generally eight or ten miles in extent, so that they can be gone over, the traps visited, and a return made to camp the same day; though sometimes they reach the distance of thirty or even forty

miles; then the trappers have a camp at each end or often-er, (or a sleeping place at least,) with their main camp either at one end or often a short distance from the centre of the line. Sometimes, if the lay of the country, the lakes, water courses, &c., will allow, the line is laid out in circular form, starting from and coming around to the general or main shanty.

The main shanty is generally constructed of logs dovetailed or notched in at the ends, is built commodiously, sufficient to accommodate three or four persons, fitted up with bunks for sleeping, a fire-place in the middle, if there is no stone chimney at the end, is well chinked with mud and moss between the logs, and a tight roof made from split cedar slabs, and bark. The other or temporary shanties are easily thrown up by driving in the ground a couple of forked saplings six or eight feet apart, across which is placed a pole two or three inches in diameter, and from this slabs of cedar, or any other tree that splits easy, of twelve or fourteen feet in length, are laid to the ground, and these overlaid at the seams with bark. This forms the roof; the sides may be constructed in the same way, or with poles. This makes a comfortable house of two sides and a sloping roof. The fire should be built against a couple of hardwood logs (maple is good) placed one above the other and kept in their position by a couple of strong stakes braced at the back. Hemlock or most any evergreen makes the best andirons, as they burn less easy. A fire place constructed in this way will reflect the heat strongly into the shanty.

When going over the line a trail or drag is drawn by the trapper. This may consist of a deer's head or leg or paunch, or anything fleshy that will leave a scent, so that animals in their roamings about, on crossing this trail will be attracted by the smell and follow it up to the trap. The trappers manufacture a scent for this purpose by placing small fish in a bottle and letting them decay in the sun until a strong oil is formed that when rubbed on the drag, and a few drops placed on the bait or anywhere in the back part of the fall, will prove an attraction irresistible to a mink. For wolf or fox it is better to mix with the above a little assafœtida and oil of anise. The trappers generally go two together, (rarely more, as two can do the work, and the profits are greater,) sometime in September or early October, and having found a suitable region for trapping, built their shanty or shanties, and got in their supplies, they blaze their line and construct their deadfalls to locate their traps. This takes them until about November, when the fur begins to become good. The trapping season lasts until about April, though otter skins are good, I believe, somewhat longer. The most favorable time for trapping is in the fall and early spring. The months of November and March are the best. Of course it varies in different seasons.

The best bait for mink is first any part of a fish, even the head is good, or a piece of muskrat flesh or a bird. The fisher the same; for marten or sable any part of a fowl, a duck or partridge head or a red squirrel, or a hare's leg, in fact they will take about the same thing.

I have but little faith in deadfalls, and few trappers now a days, I believe rely on them to any extent. They use them sometimes of course on the mountains when they are short of traps, but I would no more think of going on a fur expedition without a set of steel traps of different sizes than I would of going without my gun or axe. Deadfalls will only operate (and then not always successfully) with mink, marten and sable; neither otter, beaver or fox, and rarely a wolf, will enter them. Fisher and wild cat are sometimes caught in them, but oftener they tear them down and carry off the bait, and also the marten or any smaller animal you may have previously secured. A good steel trap properly set and attached to the right kind of a spring pole, is much neater and surer, as it secures your prize from the devouring propensities of the larger animals.

For otter the trap should be set on their slides either at the top or, as I prefer, at the bottom, about two or three inches under water. It leaves no scent there and will drown your animal before he has time to perform any act of amputation. As for the other animals, you can generally find a hole in a stump or log or in the bank of sufficient depth to place the bait, then set the trap at the opening lightly covered. A first rate place to set a trap for fox, wolf or wild cat is near where you have killed a deer. It should be thoroughly though lightly covered over with earth, rotten wood or leaves. Traps should be thoroughly and often smoked or rubbed with fresh blood to remove the smell of the human hand, and it pays a trapper to always wear a buckskin glove when handling these traps.

Along the watercourses, lakes, &c., the trapper looks for mink, otter and beaver; the fisher, martin and sable are found only in the heavily wooded and hilly regions. Wolves range all over. It is very difficult to catch an otter in a deadfall, as they rarely touch bait. Ralph unfortunately possessed only one steel trap, and that was an outrageously large one for bear. It took two men, and even then a lever was called into requisition to set it. Although within twenty miles of Ralph's camp we knew of sixteen different otter slides, I don't remember of his catching a single one while we were camped near him. Had he had a score of good steel traps he might have made a small fortune that season among the fur.

And by the way, that is a singular characteristic of these most singular animals. They seem to enter into the enjoyment of the sliding down hill process with all the zest and keenness of merry school children, and whimper their pleasure to each other with equal gusto. The gambols of a party of otters on a slide is a very interesting as well as a

rare sight to see, but I have neither time nor space in this article to particularize on the subject as I would wish.

The life of a trapper is a life of hard work, with a rough time, not a little interspersed, to be sure, with incidents of adventure, often of danger, in their encounters with the larger animals, the bear, the lynx, and more especially the catamount, or the American panther, but fortunately the latter is not often met with now even in our wilder regions.

It was several days after our adventure with the wolves that my attention was drawn by loud shouting at a distance. Upon going to the door, and looking up the river, there we saw big Ralph coming on the ice swinging something in his hand, and yelling at the top of his voice at every step, "I've got him; I've got him; here's the cuss." Upon approaching nearer sure enough there was the *reptile*, a very large full grown fisher, measuring plump twenty-eight inches, with his splendid bushy tail of fully eighteen inches more. He was as black as jet, and in prime order. And wasn't Ralph as tickled over it as a boy with his first knife? Ralph found him with his back broken at the fall we had last rigged up, and without stopping to skin him or to visit his other falls, he had hurried back to our camp, a distance of three miles, to show his prize. Well, that was a big day for Ralph.

JACOBSTAFF.

SKETCHES IN FLORIDA.

UP THE ST. JOHNS RIVER.

TWO winters ago the writer was one of a merry dozen who, on pleasure bent, helped swell the overwhelming stream of tourists who, fleeing from the northern cold, sought shelter in the sunny south. After various incidents of travel we found ourselves in the crowded parlors of the St. James, at Jacksonville, and planned our trip. Two years have wrought great changes since then, even in that sleepy land, and I am pleased that this winter's flock of tourists will find better hotel accommodations everywhere than fell to our lot on that day. Even as it was—Tocoi Railroad and all—that trip is one to be remembered a life time, and all who can make it should do so.

We left Jacksonville on a bright warm morning in the Florence, a comfortable boat, with courteous and obliging officers, and comfortably seated on deck enjoyed the trip exceedingly from Jacksonville to Tocoi. Every mile carried us farther from the frosty north. The St. John is a magnificent stream. Originating among the everglades in the south of Florida, it flows northward nearly three hundred miles, when it bends sharply to the east, and empties into the ocean twenty-three miles from Jacksonville, which is at the bend. For over one hundred miles from its mouth it will average three miles in breadth, expanding occasionally into beautiful lakes. Thus the first day of our trip we were in such wide waters that, except as we approached the landings, we did not get the benefit of the semi-tropical scenery of the banks. But the air was soft and balmy, the sky blue, water smooth and clear, and we, just started and fresh, were in high spirits and enjoyed every moment.

Our first landing was at Mandarin, where amid an orange grove and splendid group of water oaks, Mrs. Stowe has built herself a home. The place is but a hamlet, and after delivering our mail we hurry along; but not until they have rounded a point and shut in the view do the tourists relinquish their gaze upon this sunny southern home. Twelve miles farther carries us to Magnolia. At this point we found a goodly assemblage of guests. The hotel accommodations are the best, the hotel itself is beautifully situated, and a good table, with good attendance, insure a good time. Black creek is a navigable stream for fishermen and sportsmen. On a sunny day its banks are lined with alligators, while fish and game of all descriptions are plentiful. Two miles above Magnolia is Green Cove Springs, where is also a good hotel and boarding house. This is a great resort for invalids, who can enjoy daily a bath in the sulphur spring, which has given the place its importance. This famous spring is situated about a hundred yards from the landing, amid a group of great water oaks, which, covered with hanging festoons of grey moss and mistletoe, add to its beauty more than any artificial setting could to this emerald gem. The spring boils up in great lumps from a deep crevice, and fills a pool some twenty feet in diameter, with its bright but greenish hued water clear as a crystal—a green crystal. Every little speck on the bottom is distinctly visible, even in the deep crevice, which is, I should judge, about twenty feet in depth. The outlet forms quite a little river, and over it a bathing house has been built, and here those suffering with rheumatic or kindred complaints luxuriate in its warm embrace. Seventy six degrees is the average temperature summer and winter, seldom varying from this point more than a degree or two. The water is slightly sulphurous; more perceptibly so in the odor than in the taste, but sufficiently to banish any form of animal or reptile life from its proximity. This, in a country, which snakes are said to frequent, is in itself a great inducement, but I am inclined to think that the snake crop of Florida is vastly overrated. An old hunter told me that he had been out for deer at least three times a week since Christmas, and had not encountered a snake. On the other hand, one of the natives informed me that "there was a right smart chance of moccasins." But wherever else they may locate, the Green Cove Spring is exempt, and the invalid may enjoy his bath without a nervous tremor.

About noon we arrived at Tocoi, or, as we afterwards dubbed it, Decoy, forty-five miles from Jacksonville. This miserable apology for a place contains one old tumble-down house, and two rough board shanties, which latter consti-

tute the depot at the western terminus of the St. Augustine Railroad. This road is fifteen miles in length, and should make an easy approach to St. Augustine. We thought we were nearly there, but we knew more about it soon afterward. Could we have but foreseen the hardships we were to go through with we might have decided not to proceed. Two hours' strolling about or sitting on logs under the shadeless pines used up our time, while a little asthmatic tea kettle of a steam engine was being tinkered into going condition. Finally, ready for its task, it was hitched to two dilapidated boxes on wheels, into which, by tight crowding, we succeeded in squeezing ourselves. The day was chilly, the cars full of cracks and drafts; where there should have been windows but the holes remained; and water proofs and capes had to be substituted for glass. We needed but a rain to complete our discomfort. The road itself is, if possible, more disgraceful than the cars, the rails of pine and cypress (no iron) were worn, chipped, shivered, and rotten. We smashed one flat to the ties, and had a narrow escape from being capsized into the swamp, and had our engine the power to have bumped us along a few feet further, we should have had a serious, perhaps fatal, accident to wind up our pleasure trip. As it was, all hands turned out, and lifting our crazy vans again upon the track we crawled along for nearly five hours, delaying at times to put a new rail on the track, to dip a few bucketfuls of muddy water from the ditch into the boiler, or to cut up a log to furnish nutriment to our wheezy little engine. At last, the fifteen miles accomplished, we reached St. Augustine tired and worn out. May we never have to go over that road again. The road leads through a swampy country, and some of the scenery was almost grand; great cypress trees, with their swollen feet standing in murky pools, and draped with huge "weepers" of grey moss hanging from every branch three to six feet in length; foul turkey buzzards resting upon the lofty trees, or sailing about in muffled, noiseless flight, gave a funereal character to the scenery from which Dante might have drawn his inspiration. I am sure we saw the counterpart of the Stygian pool. And yet it was not all so gloomy. Bright hued flowers, green parasites entwining whole groups of adjacent trees, great bunches of mistletoe on the oaks, and now and then a bright cardinal bird or blue jay flitting among the branches, gave us plenty to admire, and almost whiled away the time, and we had our own internal resources—songs, stories, and hard boiled eggs.

In the morning, after our arrival at St. Augustine, our first trip was to the Old Fort. This venerable pile of coquina is interesting principally because of its antiquity, and from the historical associations connected with it. Started three hundred years ago, it was a hundred years in building. It was owned and garrisoned successively by Spanish, English, United States, and Confederate troops. It was bombarded by Sir Francis Drake's fleet, the marks of whose balls are still visible on its sea face. It has gloomy dungeons, in one of which, discovered some years since by accident, two chained skeletons were found. It has an old vaulted chapel, with its altar and niches for images, now all defaced, and the floor marred and scarred as though it had been used to chop wood on. Our irreverent member thought that the old monks must have had sharp knees from the looks of the floor. The "Old Sergeant," who acted as our cicerone, is a character, and relieved his dry statistics with a dryer humor, peculiarly his own. He showed us a dungeon where two Seminole chiefs—I forget their names—had been confined, and a slit in the wall through which one of them escaped. They must have starved that Indian very successfully before he could have accomplished it. A subterranean passage is popularly supposed to exist, connecting the fort with the convent, but it has not been found. In one of the dungeons the "Old Sergeant sprang upon us what was evidently a pet joke. Pausing in his tale until the loiterers were collected around him, and standing in chilly reverence, he told us of some prisoners who, from that very dungeon, had attempted to escape by burrowing under the walls. He told us of the great distance to be undermined before reaching the moat and liberty—some thirty yards, I believe. Standing with his back to the wall he slowly lighted half a dozen dips as he talked, then turning suddenly aside he threw the concentrated rays into a hole about two feet deep and curtly remarked, "They didn't succeed." With this *coup de theatre* the old gentleman, satisfied that he had ended well, left us to find our way to the outer air and to a stroll through the narrow streets of the town, between the high dead walls and under the projecting balconies, that characterize the Spanish style of building, and give to St. Augustine an aspect so different from anything to be seen elsewhere in the United States. The names of the streets, and the signs over the stores, show the Spanish origin of the inhabitants; for instance, our party were domiciled at Mrs. Mercedes', Mrs. Hernandez's, and Mrs. Seguis', and we shopped at Madame Oliveros'. The Spanish cast of feature prevails, too, and a dark eyed, black haired brunette whom I saw leaning over a balcony carried me back to days gone by, where in old Spain herself I have seen her counterpart. A walk along the sea wall, built of coquina (a concrete of shells), which fronts the town, where the fresh sea breeze brought new vigor to our tired steps, and a cruise among the establishments devoted to the manufacture of palmetto hats, brought our day to a close. These hats are being manufactured and sold in immense numbers. One lady—Madame Oliveros—who has the most extensive establishment, employs fifty women, and her sales in one season, I was told, amounted to seven thousand.

We left St. Augustine with mixed emotions; while we had received the utmost kindness and hospitality from pri-

vate individuals, hitherto strangers to us, and were delighted with the quaint old fashioned town, and charmed with the warm pleasant climate tempered by a bracing sea breeze, we had nothing pleasant to remember of those whose duty it was to look out for the comfort of guests, and we felt that until good hotels, large enough and well enough conducted to furnish some comforts could be added to its present stock, and until some method of getting there free from the discomfort, anxiety, and danger of the Tocoi Railroad can be devised, the invalid should avoid, and the pleasure seeker flee from, it.

Our trip to Tocoi was made in the same comfortless boxes, and a good hard rain was added to the previous discomforts. We got over without serious accident, but the pleasure of the rest of the trip was alloyed by the illness of some of the more delicate, brought on by the hardship of the trip.

At Tocoi we found the "Hattie" awaiting us—a small steamer, but necessarily so, as the rest of our trip was to be made in narrow streams and shoal water. We were very comfortable on board of her. The table was good, quarters clean, and the captain—Charley Brock—a good fellow. Our first stopping place was Pilatka, ten miles beyond, and here we remained until some time in the night, to enable us to pass over the entrance to Lake George by daylight. This gave us opportunity for a stroll about the town, which is the most important settlement upon the river, and to enjoy a most delicious supper at a well kept hotel, the Putnam house.

Pilatka is the head of navigation for the larger steamers plying on the river, and has considerable commerce. Leaving at midnight, we awoke the next morning in the midst of scenery ever to be remembered. The river is narrow, the banks but a few feet off, as the channel neared one shore or the other, and are densely covered with a tropical vegetation. Palms, palmettos, water oaks, and pines are the principal large trees, all festooned with gray moss. The stream is so crooked that at no one time can we see half a mile in advance, thus gliding along with our visual limit constantly circumscribed, we seem to be in the centre of an ever advancing and ever changing panorama; herons, cranes, ducks, and other birds of all descriptions give animation, and if the day be sunny countless alligators dozing upon the banks furnish rare sport to the sportsman. Sometimes great monsters, twelve to fourteen feet in length, are seen, and eagerly shot, and if a large one be shot the obliging captain will stop the boat to secure the head, which, when reduced to the condition of skull alone, is considered quite a curiosity, while the teeth are of beautiful ivory, and are carved into all sorts of trinkets. Our day, though, was cold and rainy, and alligators scarce; few were seen, and none killed. At first the more timid of our lady companions objected shrinkingly to our firing from their midst, but after a few palpable misses they became convinced that our rifles were not dangerous, even to the game, and from protesting against it became rather fond of the sport, and they all forgot that it was Sunday till a sharp rain drove us in and broke up the shooting match; then they expressed themselves!

Just before sunset we entered Lake Munroe, where the river expands into a noble lake, over six miles in diameter. On its western side is situated the town of Mellenville, where we got such beauties of lemons, ten to twelve ounces each, and cheap—four cents apiece. Thence we crossed over to Enterprise. This little place consists of a hotel, a store, and two or three houses, and has a population of perhaps forty. It is the farthest point to which a regular line of steamers plies, but to the sportsman there is still another hundred miles of narrow river, deep lagoons, gloomy bayous, and wild untrodden land, where all sorts of game, such as bears, wild turkeys, deer, and ducks are plentiful, and the waters teem with great varieties of fish. Splendid black bass, ten pounds in weight, abound (they call them trout here), besides bream, perch, and great catfish, from three pounds up to incredible figures. For the benefit of travellers, I would state that the story of the bears here being web-footed is not strictly in accordance with fact. There is a fair hotel at Enterprise. It is clean, beautifully situated near an orange grove, with a fine outlook on the lake, with a fine sulphur spring near by, and a little lake two miles inland, where our fishermen secured a fine string of black bass in an afternoon's fishing, and a woody back country, which, when Tyson goes out with his hounds, will always yield at least one deer, and generally more. From here parties penetrate into the Indian River country, where a bag of a dozen alligators is but an ordinary day's work. The little steamer "Silver Spring," with an experienced captain, takes charge of this part of the ceremony. At Enterprise we succeeded in getting a few oranges. The crop had all been picked and sold, and oranges were not so plentiful in Florida as in New York. Although we saw none of the sweet oranges on the trees (March 20th to 30th), yet we were fully as much pleased with the sight of the wild orange. This fruit, although uneatable, is larger and of a more golden hue than the eatable orange; the leaf is nearly the same, but of a darker, glossier green, and the flower identical. These we saw in profusion. A great drawback to the success of agricultural pursuits in Florida is the latania, or scrub palmetto, growing as a bush from three to five feet in height. Its roots extend in all directions near the surface, like great cables, three inches in diameter, and form an impervious net-work, through which a plow cannot be forced.

Leaving Enterprise at one A. M. we again had a cold and rainy day. Wise through experience, we did not waste our time watching for alligators that would not come out, so made ourselves happy in the cabin. At Green Cove our party broke up, all who could remaining at that lovely spot, and the rest of us parting here and there, as our roads homeward diverged.

PISCO.

"MOTHER CAREY'S CHICKENS."

For Forest and Stream.

DEDICATED TO THE LITTLE CROSS-WALK SWEEPERS.

WHEN storm clouds, with their pinions dark,
Swoop down before the gale,
And wildly toss'd, the staggering bark
Scuds under shortened sail;
As toward the longed for, distant home.
The stout ship ploughs her way,
O'er yeasty waves and scattered foam,
The web-foot wanderers stray.

Light as the bubbles of the wave,
They flutter round the track,
And crumbs of comfort mutely crave,
From weather-beaten Jack;
And none may tell the hidden nest
That waits each tiny form,
Rocked on old ocean's heaving breast,
The nurslings of the storm.

So, when on land, the wintry blast,
Rain laden drives along,
And home-bound men are hurrying past,
With eager heart and strong,
Then "Mother Carey" broods appear
On cross-tracks by the way,
And tiny patterers draw' near,
In search of food that day.

Let not the pittance be denied,
Some crumbs of comfort throw,
As o'er life's waves we safely ride,
If winds blow high or low.
We may not mark the hidden spot.
Where shivering storm-birds dwell;
But bread thus cast is ne'er forgot
By One who knoweth well.

T. W. A.,

Creedmoor.

THE SCORES.—FULL DETAILS OF THE MATCHES FOR 1873.

IN accordance with our intention as expressed in our article on Creedmoor in the issue of the FOREST AND STREAM of November 27th, we publish to-day official scores of the matches at Creedmoor, commencing June 21st, and will continue giving the scores in successive numbers of our paper, until the whole of the scores made are completed. Heretofore, no account has ever been produced of these matches available to the public, so that means could be afforded of making comparisons as to the shooting. It is true that some of the records we publish to-day do not present any very remarkable merit, (we refer to the shooting of various regimental teams,) but it must be kept in mind that before the first general meeting of the National Rifle Association, held in June last, the range at Creedmoor had just been opened. Many of the competing teams used their rifles in the range on that occasion for the very first time, and were without any practice.

Regimental organizations, represented by their teams, when they compare their shooting at their *debut* in June with their later efforts in October, by examining the scores as published by us, cannot but derive great satisfaction from the fact of the rapid progress they have made during less than four months. It will also be a matter of great interest to compare the scores made at the commencement of our rifle practice at Creedmoor with the early Wimbledon contests.

The presentation of prizes by our contemporary, the *Turf, Field and Farm*, by the Amateur Rifle Club, and by the Messrs. Remington, have very much aided in keeping up the general interest at Creedmoor. The good effect of offering some object for competition every week at Creedmoor is manifest. Such matches have been easily arranged, have been closely contested, and have given practice at short range for off hand shooting, and at long range for more careful rifle study.

In an early number of our paper, we suggested the advantages to be derived by the National Rifle Association by offering prizes such as medals, badges, cups, &c., in lieu of money, and we are pleased to state that our suggestions have met with most decided approval. If at Wimbledon a certain amount of pounds, shillings and pence are attached to their contests, it is no reason why at Creedmoor we should blindly follow a very bad example. To show how highly the acquisition of a simple prize is estimated by the successful rifle shot, we need but give the example of the Seventh Regiment. A couple of brass cartridge shells, when won by a member of this gallant corps at Creedmoor, confers an honor on the marksman, giving quite as much satisfaction to the possessor as if it was the decoration of the Legion of Honor. It is then quite evident that it is not the market value of any prize which is the incentive to be skillful with the rifle, but the desire to excel in this manly, sportsman-like and military art.

A word should be said in regard to the excellent service done by the Amateur Rifle Club, whose proceedings will be found in another portion of the paper, where it will be noticed that they have taken the initiative in regard to accepting the Irish challenge. In the Amateur Rifle Club good individual shooting is attended to, but the rifle, the various peculiarities of the arms in use, the varieties of twist, the form of chamber, mechanism, shape of projectile, weight of charge, differences of sights, influences of light, wind and temperature, are all carefully discussed and studied by the various experts of the Club. As with all military organizations and officers at Creedmoor, the name of a manufacturer of a rifle is a secondary question. If a Queen's Anne arm would make a single point better on a match score than the most improved modern rifle, such a gun, no matter what its antiquity, would be used, and the productions of the modern gunsmith's art would be cast aside.

FIRST MATCH.

FIRST MATCH.
OPENING OF THE RANGE OF THE NATIONAL RIFLE ASSOCIATION, JUNE
21, 1873.

This match was open only to members of the Association, and had 45 competitors. Distance, 200 yards; position, standing; weapon, any military rifle; rounds, five, with privilege of two sighting shots.
